Supplementary Report of the Committee on War Memorial—Part VIII

To the House of Delegates, Gentlemen

Since the submission of the first section of the report as printed and in conformity with the last paragraph therein it is desired to submit to the Council and the House of Delegates the following additional information

Of the total number of mothers or guardians of children who are potential beneficiaries of the War Memorial Fund, as established by the House of Delegates, who have the necessary forms completed as of April 12, 1949, to establish the right of the children of the deceased former members of this Society who were officers in the armed forces of the United States during World War II, of a total of 34 submitted 18 have furnished complete proofs, two have been returned but were incomplete and are awaiting completion, and 14 have not been returned The total number of children who are potential beneficiaries is 65 of whom one is already married and therefore ineligible for benefits under the provisions of the rules of the grant Of this total number there are 36 male and 29 female children varying in present ages from 3 to 25 years as shown in Tables 1 and 2

It may be noted that since the completion of the first part of this report the number of eligible children has increased from 62 to 65 and the total recorded number of former members of the Society who were killed in action, died of wounds or disease incurred in the service during World War II has increased from 32 to 34.

The total amount of the War Memorial Assessment as received to date of this report is $182 287 50 instead of the $139,096 as given in the first part of the report leaving an estimated balance of $59,-

712 50 as yet uncollected The estimated expenditures if all of the beneficiaries elect to accept their full quota of the fund will be for each year beginning with 1949 as follows

1949 eight children, $4,800, 1950, 11 children, $6,600, 1951 12 children, $7,200, 1952, 13 children, $7,800 1953, 14 children, $8,400, 1954, 15 children $9,000, 1955, 20 children, $12,000, 1956, 26 children, $15,600, 1957, 33 children, $19,800, 1958, 33 children, $19,800, 1959, 32 children, $19,200 1960, 35 children, $21,000, 1961, 29 children, $23,400, 1962, 43 children, $25,800, 1963, 41 children, $24,600, 1964, 39 children, $23,400, 1965, 33 children, $19,800, 1966, 26 children, $15 600, 1967, 26 children, $15,600, 1968, 19 children, $11,400, 1969, 15 children, $9,000, 1970, 9 children, $5,400, 1971, 4 children, $2,400, 1972, 2 children, $1,200

It will be seen that the total expenditure of 2,800 exceeds the original estimated expenditure of $242,000 as calculated and given in the report of this committee to the Council and the House in 1948, by approximately $86,800 There have been a number of remissions of the assessment for this fund made by the Council to members of the Society because of illness, service in the armed forces, or other causes of financial hardship deemed by the Council to be valid, which will probably still further diminish the total amount collected for the fund.

It is also estimated by your committee that there will be approximately 10 per cent of the total number of children who will not elect to pursue a graduate or postgraduate professional education which will diminish the demand upon the fund by approximately $33,600, and a further 10 per cent who will not pursue a postgraduate professional education which will still further lessen the sum by approximately $16,800, reducing the total probable expenditures from the fund to $278 400

The monies received from the special assessment have been and, as they continue to accrue, will be invested only in securities legal for investment by savings banks and fiduciary trusts under the laws of the State of New York by direction of the Board of Trustees and will provide a diminishing interest return on the investment averaging approximately $4,000 a year for five years, $1,000 a year for five more years, making a total of $25,000, $500 a year for five later years, making a total of $2,500, and then rapidly reducing till the termination but averaging about $300 a year to 1972, thus making a grand total of $29,900 which will be added as it accrues to the fund and thus providing a total of principal and interest for the fund to the time of its expiration in 1972 of an estimated $271,900 This will leave a debit balance of $6,500 which may have to be made up in the latter years of the expenditures of the fund from the general funds of the Society, but which in all probability will be cared for by the diminution in the demands upon the fund

Respectfully submitted,

JAMES F ROONEY, M D, *Chairman*
FENWICK BEEKMAN, M D
EDWARD R CUNNIFFE, M D
MAURICE J DATTELBAUM, M D

Section 12 (*See 105*)

Supplementary Report of the Council—Part IX Committee on Legislation

To the House of Delegates, Gentlemen

The Council Committee on Legislation respectfully submits a supplementary report

The 1949 session of the New York State Legislature adjourned sine die on Wednesday, March 30, 1949 This brought to a close a session that was the longest for a number of years and also one of the most turbulent sessions A record number of bills and resolutions was introduced this year There were 2,673 bills introduced in the Senate and 3,109 bills introduced in the Assembly, making a total of 5,782 Many of the bills were amended and reprinted, resulting in the printed numbers in the Senate running to 3,150 and the printed numbers in the Assembly to 3,564, a total of 6,714. This again was a record number of bills to be reviewed and those reported and followed which were of interest to the medical profession There were also 182 resolutions introduced in the Senate and 194 in the Assembly, making a total of 376 resolutions introduced this year Through the bulletins issued by the Legislative Committee, 109 bills in the Senate and 122 bills in the Assembly were reported to the legislative committees and officers of the county societies and other members of the profession that are interested in this work. Of the 231 bills reported, 87 were concurrent There were 144 individual bills that were followed by the Legislative Committee and reported to the profession

When one considers the number of bills and resolutions that are of sufficient interest to the medical profession to warrant reporting them in our bulletins, it becomes apparent that this great amount of legislative material requires considerable time and study on the part of anyone interested in these matters, if that person is to act intelligently or express an intelligent opinion on them Attention is called to this volume of legislative material of interest to the profession and the amount of time necessary for study and understanding of the material introduced in a single year It is thought that all members of the State Society should be giving more consideration to our legislative program and procedures with the idea of improving our position and of obtaining better results from our efforts Any plans for improving our legislative work should take into consideration this amount of legislative material that must be studied during a legislative session Such plans should also recognize the need for rapid action on a bill that has been introduced There have been occasions where a bill has been reported out of committee, voted on, and passed in both houses, within a week or two weeks from the date of its introduction It can be seen that under these conditions there should be no delay in regard to the study of the bill and an expression of opinion on the part of the medical profession

The preliminary report of the Committee on Legislation lists several bills that were introduced at this session as requested by the House of Delegates at its meeting in May, 1948 It is with regret that we report that the bill, *Senate Int 1656*, introduced by Senator Fino, limiting the activities of the Medical Practice Committee, was not reported out of committee It is also with regret that we report that the Wicks-Lashin Bill, providing for injunction procedure, was defeated on the floor in the Assembly and then, as was to be expected, was not reported out of committee in the Senate The physicians lien bill, *Senate Int 2045*, introduced by Senator Williamson, was lost by vote on the floor of the Senate The Greenberg Bill, amending the practice of medicine by including the words "nervous or mental disorder," progressed to third reading in the Senate The Friedman Bill, amending the Business Law in regard to hospital contracts, was passed in the Senate but did not come to a vote in the As-

sembly The Schupler Bill, placing the practice of anesthesiology under the definition of the practice of medicine, was defeated in committee. The Clancy X-ray Bill was also defeated in committee The above is a summary of the final action on the bills which we were particularly interested in seeing passed.

The chiropractic bill was not brought out of committee until the final days of the session. An effort was made to rush this bill through The bill was reported out of committee and went to third reading in the Senate on Wednesday, March 23 It was voted on on Thursday, March 24, and received 27 votes for and 26 votes against. It was lost at this time as it needed two more votes, or 29 votes, a majority of the 56 Senate votes, in order to pass It was again voted on on Tuesday, March 29 Again it was lost with the same vote as was recorded on March 24. It would appear that only the last minute opposition to this bill prevented its passing the Senate, and it would indicate that it will be necessary for the Medical Society to make even stronger opposition to prevent the passage of this bill next year

The Mailler-Condon sickness disability insurance bill, *Assembly Int. 3063*, passed both houses by party vote and was signed by the Governor This bill is one to which the medical profession was opposed as there are many points in the bill which would appear will be points of embarrassment to the medical profession in the future and also difficulties from the medical angles in administration It is hoped that during the next or some future legislative session, amendments on these points may be introduced and passed Studies in regard to such proposed amendments should be made in the near future

The bill extending the time of postponement of the Nurse Practice Act was defeated. By this action the Nurse Practice Act went into effect April 1, 1949, after some ten years' postponement by yearly action of the Legislature

The bill authorizing podiatrists to carry out compensation work on the same conditions as physicians under the Workmen's Compensation Law was recalled from the Governor after passing both houses, and died in committee

The bill releasing physiotherapists from the supervision of physicians passed the Assembly but did not come to a vote in the Senate It is anticipated that a stronger action will be made along this line next year

The above summarizes the final action on bills with which the Legislative Committee has been particularly concerned during this last session of the Legislature It is to be remembered, however, that at the time of writing this report the thirty-day period for bills in the hands of the Governor is still not completed. As the legislative session this year continued through March 30, the thirty-day period for bills in the hands of the Governor will not be completed until the end of April. The Legislative Committee will inform all county societies of the final action on all bills that we have been following this year, in its final bulletin, which will be issued after the thirty-day period has expired

The Legislative Committee wishes to impress on members of the Medical Society of the State of New York the great amount of legislative matters of interest to the medical profession introduced during the recent legislative session The number of bills in which we are interested is growing each year The pressure from minority groups on many of these matters is becoming stronger and, therefore, the need for continual attention to all legislative matters on the part of the medical profession is greater than ever before It is important for the county societies to emphasize this matter in their programs to a greater extent than ever before It is important that members of the county societies use their influence not only in educating the public on these matters, but in keeping the legislators informed on all matters that are considered important for public health and welfare It is important that the medical profession review its legislative program at these times to consider what improvements can be made that will enable us to be more successful in passing bills that we ask to be introduced and would like to see passed We should consider, also, ways by which we can make known to the legislators and to the public the basis of our opposition to bills that we consider detrimental to the public health and welfare

The Committee on Legislation of the State Society respectfully submits this supplementary report reviewing the results of the legislative session of 1949, and suggests that consideration be given toward strengthening and improving our legislative actions and programs for the future

Respectfully submitted,

FREDERIC W HOLCOMB, M.D , *Chairman*
WALTER W MOTT, M D
JOHN C BRADY, M D

Section 13 (*See 126*)

Supplementary Report of the Council—Part XII Miscellaneous

Belated Bills

In accordance with the Bylaws, Chapter IX, Section 1, belated bills from four members must be submitted to the House of Delegates before they can be paid. Expense accounts are required to be submitted within thirty days after the expenses are incurred, "This time may be extended for any cause by the Board of Trustees and such extension shall not exceed 90 days " As these items were received more than ninety days late, they are respectfully submitted to the House of Delegates with the recommendation that they be approved

1 On December 12, 1949, vouchers were received from Dr Peter J Di Natale of Batavia for attending three meetings of the Planning Committee for Medical Policies, New York City

December 9, 1947	$58 50
March 24, 1948	$59 17
April 14, 1948	$49 28
	$167 95

2 Dr C O E Lindbeck, Jamestown, expenses incurred attending meeting of Subcommittee on Medical Care Insurance, New York City, April 4, 1949—$71 80

3 Dr Maxwell Lockie, Buffalo, expenses incurred as essayist at Seventh District Branch meeting, Canandaigua, October 26, 1948—$11 75

4 Dr Ivan Hekimian, Buffalo, expenses incurred as essayist at Seventh District Branch meeting, Canandaigua, October 26, 1948—$25 35

Section 14 (*See 75*)

Remarks of the President

SPEAKER ANDRESEN Dr Winslow, will you and Dr Reuling escort the President, Dr Leo F Simpson, to the rostrum?

The delegates arose and applauded as Drs Floyd S Winslow, of Monroe and James R Reuling, of Queens, escorted Dr Leo F Simpson to the rostrum

712 50 as yet uncollected The estimated expenditures if all of the beneficiaries elect to accept their full quota of the fund will be for each year beginning with 1949 as follows

1949, eight children, $4,800, 1950, 11 children, $6,600, 1951, 12 children, $7,200, 1952, 13 children, $7,800, 1953, 14 children, $8,400, 1954, 15 children, $9,000, 1955, 20 children, $12,000, 1956, 26 children, $15,600, 1957, 33 children, $19,800, 1958, 33 children, $19,800, 1959, 32 children, $19,200, 1960, 35 children, $21,000, 1961, 29 children, $23,400, 1962, 43 children, $25,800, 1963, 41 children, $24,600, 1964, 39 children, $23,400, 1965, 33 children, $19,800, 1966, 26 children, $15,600, 1967, 26 children, $15,600, 1968, 19 children, $11,400, 1969, 15 children, $9,000, 1970, 9 children, $5,400, 1971, 4 children, $2,400, 1972, 2 children, $1,200

It will be seen that the total expenditure of $328,800 exceeds the original estimated expenditure of $242,000 as calculated and given in the report of this committee to the Council and the House in 1948, by approximately $86,800 There have been a number of remissions of the assessment for this fund made by the Council to members of the Society because of illness, service in the armed forces, or other causes of financial hardship deemed by the Council to be valid, which will probably still further diminish the total amount collected for the fund.

It is also estimated by your committee that there will be approximately 10 per cent of the total number of children who will not elect to pursue a graduate or postgraduate professional education which will diminish the demand upon the fund by approximately $33,600, and a further 10 per cent who will not pursue a postgraduate professional education which will still further lessen the sum by approximately $16,800, reducing the total probable expenditures from the fund to $278 400

The monies received from the special assessment have been and, as they continue to accrue, will be invested only in securities legal for investment by savings banks and fiduciary trusts under the laws of the State of New York by direction of the Board of Trustees and will provide a diminishing interest return on the investment averaging approximately $4,000 a year for five years, $1,000 a year for five more years, making a total of $25,000, $500 a year for five later years, making a total of $2,500, and then rapidly reducing till the termination but averaging about $300 a year to 1972, thus making a grand total of $29,900 which will be added as it accrues to the fund and thus providing a total of principal and interest for the fund to the time of its expiration in 1972 of an estimated $271,900 This will leave a debit balance of $6,500 which may have to be made up in the latter years of the expenditures of the fund from the general funds of the Society, but which in all probability will be cared for by the diminution in the demands upon the fund

Supplementary Report of the Council—Part IX Committee on Legislation

To the House of Delegates, Gentlemen

The Council Committee on Legislation respectfully submits a supplementary report

The 1949 session of the New York State Legislature adjourned sine die on Wednesday, March 30, 1949 This brought to a close a session that was the longest for a number of years and also one of the most turbulent sessions A record number of bills and resolutions was introduced this year There were 2,673 bills introduced in the Senate and 3,109 bills introduced in the Assembly, making a total of 5,782 Many of the bills were amended and reprinted, resulting in the printed numbers in the Senate running to 3,150 and the printed numbers in the Assembly to 3,564, a total of 6,714. This again was a record number of bills to be reviewed and those reported and followed which were of interest to the medical profession There were also 182 resolutions introduced in the Senate and 194 in the Assembly, making a total of 376 resolutions introduced this year Through the bulletins issued by the Legislative Committee, 109 bills in the Senate and 122 bills in the Assembly were reported to the legislative committees and officers of the county societies and other members of the profession that are interested in this work. Of the 231 bills reported, 87 were concurrent There were 144 individual bills that were followed by the Legislative Committee and reported to the profession

When one considers the number of bills and resolutions that are of sufficient interest to the medical profession to warrant reporting them in our bulletins, it becomes apparent that this great amount of legislative material requires considerable time and study on the part of anyone interested in these matters, if that person is to act intelligently or express an intelligent opinion on them. Attention is called to this volume of legislative material of interest to the profession and the amount of time necessary for study and understanding of the material introduced in a single year It is thought that all members of the State Society should be giving more consideration to our legislative program and procedures with the idea of improving our position and of obtaining better results from our efforts Any plans for improving our legislative work should take into consideration this amount of legislative material that must be studied during a legislative session Such plans should also recognize the need for rapid action on a bill that has been introduced There have been occasions where a bill has been reported out of committee, voted on, and passed in both houses, within a week or two weeks from the date of its introduction It can be seen that under these conditions there should be no delay in regard to the study of the bill and an expression of opinion on the part of the medical profession

The preliminary report of the Committee on Legislation lists several bills that were introduced at this session as requested by the House of Delegates at its meeting in May, 1948 It is with regret that we report that the bill, *Senate Int 1656*, introduced by Senator Fino, limiting the activities of the Medical Practice Committee, was not reported out of committee It is also with regret that we report that the Wicks-Lashin Bill, providing for injunction procedure, was defeated on the floor in the Assembly and then, as was to be expected, was not reported out of committee in the Senate. The physicians lien bill, *Senate Int 2045*, introduced by Senator Williamson, was lost by vote on the floor of the Senate The Greenberg Bill, amending the practice of medicine by including the words "nervous or mental disorder," progressed to third reading in the Senate The Friedman Bill, amending the Business Law in regard to hospital contracts, was passed in the Senate but did not come to a vote in the As-

sembly The Schupler Bill, placing the practice of anesthesiology under the definition of the practice of medicine, was defeated in committee. The Clancy X-ray Bill was also defeated in committee The above is a summary of the final action on the bills which we were particularly interested in seeing passed

The chiropractic bill was not brought out of committee until the final days of the session An effort was made to rush this bill through. The bill was reported out of committee and went to third reading in the Senate on Wednesday, March 23 It was voted on on Thursday, March 24, and received 27 votes for and 26 votes against. It was lost at this time as it needed two more votes, or 29 votes, a majority of the 56 Senate votes, in order to pass It was again voted on on Tuesday, March 29 Again it was lost with the same vote as was recorded on March 24. It would appear that only the last minute opposition to this bill prevented its passing the Senate, and it would indicate that it will be necessary for the Medical Society to make even stronger opposition to prevent the passage of this bill next year

The Mailler-Condon sickness disability insurance bill, *Assembly Int 3063*, passed both houses by party vote and was signed by the Governor This bill is one to which the medical profession was opposed as there are many points in the bill which would appear will be points of embarrassment to the medical profession in the future and also difficulties from the medical angles in administration It is hoped that during the next or some future legislative session, amendments on these points may be introduced and passed Studies in regard to such proposed amendments should be made in the near future

The bill extending the time of postponement of the Nurse Practice Act was defeated By this action the Nurse Practice Act went into effect April 1, 1949, after some ten years' postponement by yearly action of the Legislature

The bill authorizing podiatrists to carry out compensation work on the same conditions as physicians under the Workmen's Compensation Law was recalled from the Governor after passing both houses, and died in committee.

The bill releasing physiotherapists from the supervision of physicians passed the Assembly but did not come to a vote in the Senate It is anticipated that a stronger action will be made along this line next year

The above summarizes the final action on bills with which the Legislative Committee has been particularly concerned during this last session of the Legislature It is to be remembered, however, that at the time of writing this report the thirty-day period for bills in the hands of the Governor is still not completed. As the legislative session this year continued through March 30, the thirty-day period for bills in the hands of the Governor will not be completed until the end of April. The Legislative Committee will inform all county societies of the final action on all bills that we have been following this year, in its final bulletin, which will be issued after the thirty-day period has expired

The Legislative Committee wishes to impress on members of the Medical Society of the State of New York the great amount of legislative matters of interest to the medical profession introduced during the recent legislative session The number of bills in which we are interested is growing each year The pressure from minority groups on many of these matters is becoming stronger and, therefore, the need for continual attention to all legislative matters on the part of the medical profession is greater than ever before It is important for the county societies to emphasize this matter in their programs to a greater extent than ever before It is important that members of the county societies use their influence not only in educating the public on these matters, but in keeping the legislators informed on all matters that are considered important for public health and welfare. It is important that the medical profession review its legislative program at these times to consider what improvements can be made that will enable us to be more successful in passing bills that we ask to be introduced and would like to see passed We should consider, also, ways by which we can make known to the legislators and to the public the basis of our opposition to bills that we consider detrimental to the public health and welfare

The Committee on Legislation of the State Society respectfully submits this supplementary report reviewing the results of the legislative session of 1949, and suggests that consideration be given toward strengthening and improving our legislative actions and programs for the future

Respectfully submitted,

FREDERIC W HOLCOMB, M D , *Chairman*
WALTER W MOTT, M D
JOHN C BRADY, M D

Section 13 (*See 126*)

Supplementary Report of the Council—Part XII Miscellaneous

Belated Bills

In accordance with the Bylaws, Chapter IX, Section 1, belated bills from four members must be submitted to the House of Delegates before they can be paid. Expense accounts are required to be submitted within thirty days after the expenses are incurred, "This time may be extended for any cause by the Board of Trustees and such extension shall not exceed 90 days" As these items were received more than ninety days late, they are respectfully submitted to the House of Delegates with the recommendation that they be approved

1 On December 12, 1949, vouchers were received from Dr Peter J Di Natale of Batavia for attending three meetings of the Planning Committee for Medical Policies, New York City

December 9, 1947	$58 50
March 24, 1948	$59 17
April 14, 1948	$49 28
	$167 95

2 Dr C O E Lindbeck, Jamestown, expenses incurred attending meeting of Subcommittee on Medical Care Insurance, New York City, April 4, 1949—$71 80

3 Dr Maxwell Lockie, Buffalo, expenses incurred as essayist at Seventh District Branch meeting, Canandaigua, October 26, 1948—$11 75

4 Dr Ivan Hekiman, Buffalo, expenses incurred as essayist at Seventh District Branch meeting, Canandaigua, October 26, 1948—$25 35

Section 14 (*See 75*)

Remarks of the President

SPEAKER ANDRESEN Dr Winslow, will you and Dr Reuling escort the President, Dr Leo F Simpson, to the rostrum?

The delegates arose and applauded as Drs Floyd S Winslow, of Monroe, and James R Reuling, of Queens, escorted Dr Leo F Simpson to the rostrum

SPEAKER ANDRESEN Dr Simpson, have you anything to add to your report?

DR LEO F SIMPSON Yes, I have a few additional remarks to make, Mr Speaker

Mr Speaker and gentlemen, I am going to limit myself to a few topics that I thought it might be worth while to call to your attention

First, our educational campaign that we are waging against hostile legislation in Washington It is not my intention to list the arguments against such legislation to this House of Delegates That would be carrying coals to Newcastle You are already converts What I plead for is for more and more of you converts to become missionaries in the cause—to labor in the Master's vineyard As missionaries fired with zeal and enthusiasm you will function in the office, in the home, and perhaps on the speaker's platform It was very stimulating for me, at the recent seminar for public speaking conducted in New York by our Public Relations Bureau, to see 175 able doctors, most of them volunteers, stay in the Hotel Commodore from 9 30 in the morning until 4 30 in the afternoon of a beautiful Palm Sunday, and be transformed from converts into missionaries

I must stress that the ultimate object behind all of this campaign is to influence your national congressmen and senators to vote against such legislation This must be done honorably and on the basis of the welfare of our patients and of our country To do this all of your arguments, your speeches, your influence will have to be translated into action—into the writing of letters by innumerable people, by resolutions passed by various civic organizations, by direct appeal to the congressmen, if you know them. If your efforts are not translated into such action our campaign is weakened That is what I mean when I distinguish between converts and missionaries A missionary has knowledge, plus zeal, and he carries through to his goal.

The next topic I wish to speak on is our NEW YORK STATE JOURNAL. It has constantly improved during my term of office I have attended several meetings of the JOURNAL Committee, and have been greatly impressed at the prodigious amount of work of those who make possible bringing the JOURNAL to your offices every two weeks The details and accuracy which are involved, not only in the advertising copy but in the editorials and scientific context, hold me spellbound You know of the fine editorials written by Dr Redway, full of common sense, actuated by high ideals The man, however, who amazed me most was Dr Kosmak. I have reviewed many of the manuscripts which he edited before they were published They were filled with marks of his red pencil, making countless suggestions for their improvement, and he did that alone on 303 articles—one every day in the year, except Sundays If the president of your Society gets a medal, Dr Kosmak should be roundshouldered carrying around those he has already earned On all other matters his judgments are wise and invaluable I know of no more faithful friend of the medical profession or one more deserving of your acclaim.

The next matter I would speak on is our malpractice insurance program. As you know, the Medical Society of the State of New York has a malpractice insurance board which works in close harmony with our insurance company for the welfare of us all. I would advise you to read and to reread the annual report of this board and also that of our counsel, Mr Martin There you will learn most of the causes that have led the Yorkshire Insurance Company to refuse to carry on with us—to put it bluntly, our losses were too great for them. Now we have a new company—one of the best—and it may be our last chance to have one that will enter into a partnership with the State Society If this fails, each of us will have to seek his own protection, and you may depend on it that your premium then will be vastly higher, and your service vastly inferior I would advise all to be insured under our master policy, thereby making it ever more sound, and I would advise all, at any time, to leave all else aside, and to come to the aid of our counsel, should he need you, in the defense of one of your brother physicians

I have spoken of many other matters and of many other persons in my annual report to this House of Delegates, and there is no need to reiterate them here

It has been a very happy year for me and also a rewarding experience to have been your president during the past year I again thank you most sincerely for that privilege

It may be that we are now in a lull before a storm. If it is, so be it! Necessity will make us better fighters, better doctors Like the thirty minute men of New York County, three hundred times thirty will arise throughout the State, and they will be heard. The individual doctor will strive ever harder to give an even higher quality of unselfish service

Let us not be afraid I pass the torch to Dr John J Masterson He is an able and a courageous man He will need the help of all Give it to him with all your heart. (*Applause*)

SPEAKER ANDRESEN Thank you, Mr President! This addition to the President's Report is referred to the Reference Committee on Report of the President, of which Dr Thomas B Wood is chairman

Section 15 (*See 76*)

Remarks of President-Elect

SPEAKER ANDRESEN We now wish to ask Dr McGoldrick and Dr Elliott to escort the President-Elect, Dr John J Masterson, to the platform

The delegates arose and applauded as Drs Thomas A. McGoldrick and Frederic E Elliott, of Kings, escorted Dr John J Masterson to the rostrum

SPEAKER ANDRESEN Dr Masterson, will you make a few remarks?

DR. JOHN J MASTERSON I regret to say they will have to be more than a few I did not intend to make very many remarks this morning, but, in view of the greatest crisis in history that faces not only medicine but our American way of life, I cannot be silent It must be up to you, because you are the leaders of the medical profession in this State and are in a position to carry back to your various county societies our strategy to combat this vicious legislation, to carry on the fight, so I felt that I should go into a little detail as to how we plan to wage it

No one could approach the beginning of a term of office, such as the one with which you have honored me, without being deeply impressed by the unusual responsibilities that lie ahead This would be true even under ordinary circumstances, but it is particularly true now To follow in the footsteps of a man of the distinction of Dr Leo F Simpson and to have the example of his able leadership and wise counsel is reason enough for his successor to feel a sense of humility It is in that spirit that I am preparing to pick up his mantle

You know of the President's recent message to Congress followed in a few days with another bill, more ambitious in its attempt to control the destinies of the people than any yet proposed It calls for government control of medicine, with gentle control

at first. Once the first step is taken, ultimate full control would be inevitable I cannot fathom by what method of reasoning Washington thinks the people are not fit to control the money they earn or unable to make important decisions for themselves Neither do I think they want any more "compulsory hands" in their pay envelope I quote the following from an interview by Senator Taft as reported in the papers of April 15

> I am against the welfare State and I am against socialized or nationalized medicine. The idea, for instance, that people can get their medical care from the government without paying a greater price than they pay today is preposterous No people as a whole can get something for nothing Nothing can so quickly kill the incentive and the production of the people as encouragement to look to the Government as their benefactor and supporter

Mr Truman in his recent message to Congress said the cost of medical care would be less under their plan. After reading the various Hoover reports and the "efficient" methods of conducting many departments of our government, especially the Veterans Bureau and hospital construction program, it is difficult to account for such a statement

We believe compulsory sickness insurance will lead to financial, moral, and political sickness It arouses in the minds of our profession the suspicion that the object of its proponents is not solely the welfare of the public Our only weapons to combat these foreign sociologic concepts are facts and the truth, which we propose to carry to our patients and the public in general. They must know that socialization first controls, and then dictates, and when the citizen loses his sense of social responsibility the State takes over

In the discussions of this latest bill it must very definitely be understood that its effect on the public welfare is our primary consideration In our humble opinion its passage would be catastrophic as far as the health of the people is concerned They would be greatly disillusioned because they are being promised something which cannot be delivered, due to the lack of nurses and hospital beds and the increased demands made on the physicians Its cost would have a tremendous impact on our national economy It has been discredited in the European countries which are now subjects of American bounty We are not in favor of the status quo, and the implementation of the twelve-point program of the American Medical Association will correct any deficiencies in our present distribution of medical care by evolution and not revolution The state of the health of our people is the envy of the world and is being constantly improved by the various agencies, both public and private, that are interested in this work. Only a short time ago the Metropolitan Life Insurance Company stated that a child born today has a life expectancy of seventy years With the glorious record of the achievements of American medicine the medical profession feels that compulsory health insurance would be a backward step, retard research, and would result in lowering the quality of medical care which our people are now receiving It would result not only in the regimentation of the doctor, but the patient as well It would destroy incentive, initiative, and freedom of action and create another enormous government bureaucracy to push the people around and impose a tax burden of an unpredictable amount I don't think any legislation ever proposed in Congress is so vulnerable to attack on account of the grave consequence it would have on the health of our people, our economy, and the ultimate socialization of the state Show me any country with a socialized government where the standard of living is as high as in the United States, which equals our industrial production, where the standard of health of the people, the medical schools, and hospitals compare with ours, and where the individual has the opportunity he has in this country It just does not exist It is our duty to bring this information to the American people

Dr Simpson has referred to our education program, but the real danger is that the people will not be informed in time The program outlined by the American Medical Association and the state and county societies will not win the battle for us unless each individual doctor carries our message to his patients and influential groups in his community We have the advantage in that in each physician's office we have a sounding board to reach our people not possessed by even the Federal Social Security group Generals plan the campaign, outline the strategy, but it is the private in the ranks upon whom the victory depends And we have an active army of 150,000 privates reaching into every hamlet of the country

The danger is that we will fail to make the most of our advantage It would be tragic if at some future date we should be compelled to repeat the words recently uttered by Lord Horder, chairman of the British "Fellowship for Freedom in Medicine," words that surely are echoed by the majority of British physicians Referring to the catastrophe which struck British medicine last year he said

> In January we marched unitedly and effectively, in May, more like rabble, we surrendered! From the very start we have lacked dignity and a due appreciation of our use and value in society We let ourselves be used as pawns

If we wake up some morning and find a package on our doorstep labeled "State Medicine—Nonreturnable," it will be due to the indifference, apathy, and let-George-do-it attitude of the privates in our profession If our people know what is going to happen to them as patients under compulsory insurance there would be such a popular revolt against the measure as has never been seen in this country Who is to inform them? Their physicians, the men they turn to as the natural guardians of their health The doctor has the confidence of his patient The patient will believe him when he says that government's hampering regulations and red tape would retard treatment and interfere with freedom to prescribe what is needed promptly The patient will believe him when he says that the hordes of people forming an assembly line in his office might easily cut the time spent with each patient to two or three minutes, as it does now with many of the physicians under the same plan in England If all the patients in the country are not told this, and told it promptly by their own personal physicians, man-to-man and face-to-face, they may believe the promises of the men who are not charged with the responsibility of fulfilling them and so can promise anything, for, after all, the doctor is going to have to do the work, as he has been doing it all along, and if he says that, based on his knowledge and experience, he won't be able to deliver good medical care because his working conditions will make it impossible, most of his patients are going to believe him. So I call on you to enter on this campaign yourself in behalf of your patients Tell them in a few sentences what you think will happen to them, not only what will happen to you,

SPEAKER ANDRESEN Dr Simpson, have you anything to add to your report?

DR LEO F SIMPSON Yes, I have a few additional remarks to make, Mr Speaker

Mr Speaker and gentlemen, I am going to limit myself to a few topics that I thought it might be worth while to call to your attention.

First, our educational campaign that we are waging against hostile legislation in Washington It is not my intention to list the arguments against such legislation to this House of Delegates That would be carrying coals to Newcastle You are already converts What I plead for is for more and more of you converts to become missionaries in the cause—to labor in the Master's vineyard As missionaries fired with zeal and enthusiasm you will function in the office, in the home, and perhaps on the speaker's platform It was very stimulating for me, at the recent seminar for public speaking conducted in New York by our Public Relations Bureau, to see 175 able doctors, most of them volunteers, stay in the Hotel Commodore from 9.30 in the morning until 4 30 in the afternoon of a beautiful Palm Sunday, and be transformed from converts into missionaries

I must stress that the ultimate object behind all of this campaign is to influence your national congressmen and senators to vote against such legislation This must be done honorably and on the basis of the welfare of our patients and of our country To do this all of your arguments, your speeches, your influence will have to be translated into action—into the writing of letters by innumerable people, by resolutions passed by various civic organizations, by direct appeal to the congressmen, if you know them If your efforts are not translated into such action our campaign is weakened That is what I mean when I distinguish between converts and missionaries A missionary has knowledge, plus zeal, and he carries through to his goal.

The next topic I wish to speak on is our NEW YORK STATE JOURNAL It has constantly improved during my term of office I have attended several meetings of the JOURNAL Committee, and have been greatly impressed at the prodigious amount of work of those who make possible bringing the JOURNAL to your offices every two weeks The details and accuracy which are involved, not only in the advertising copy but in the editorials and scientific context, hold me spellbound You know of the fine editorials written by Dr Redway, full of common sense, actuated by high ideals The man, however, who amazed me most was Dr Kosmak I have reviewed many of the manuscripts which he edited before they were published They were filled with marks of his red pencil, making countless suggestions for their improvement, and he did that alone on 303 articles—one every day in the year, except Sundays If the president of your Society gets a medal, Dr Kosmak should be roundshouldered carrying around those he has already earned. Let us not be afraid I pass the torch to Dr John J Masterson He is an able and a courageous man He will need the help of all Give it to him with all your heart. (*Applause*)

SPEAKER ANDRESEN Thank you, Mr President! This addition to the President's Report is referred to the Reference Committee on Report of the President, of which Dr Thomas B Wood is chairman

Section 15 (*See 76*)

Remarks of President-Elect

SPEAKER ANDRESEN We now wish to ask Dr McGoldrick and Dr Elliott to escort the President-Elect, Dr John J Masterson, to the platform

The delegates arose and applauded as Drs Thomas A McGoldrick and Frederic E Elliott, of Kings, escorted Dr John J Masterson to the rostrum.

SPEAKER ANDRESEN Dr Masterson, will you make a few remarks?

DR. JOHN J MASTERSON I regret to say they will have to be more than a few I did not intend to make very many remarks this morning, but, in view of the greatest crisis in history that faces not only medicine but our American way of life, I cannot be silent. It must be up to you, because you are the leaders of the medical profession in this State and are in a position to carry back to your various county societies our strategy to combat this vicious legislation, to carry on the fight, so I felt that I should go into a little detail as to how we plan to wage it

No one could approach the beginning of a term of office, such as the one with which you have honored me, without being deeply impressed by the unusual responsibilities that lie ahead This would be true even under ordinary circumstances, but it is particularly true now To follow in the footsteps of a man of the distinction of Dr Leo F Simpson and to have the example of his able leadership and wise counsel is reason enough for his successor to feel a sense of humility It is in that spirit that I am preparing to pick up his mantle

You know of the President's recent message to Congress followed in a few days with another bill, more ambitious in its attempt to control the destinies of the people than any yet proposed It calls for government control of medicine, with gentle control

at first Once the first step is taken, ultimate full control would be inevitable. I cannot fathom by what method of reasoning Washington thinks the people are not fit to control the money they earn or unable to make important decisions for themselves Neither do I think they want any more "compulsory hands" in their pay envelope I quote the following from an interview by Senator Taft as reported in the papers of April 15

> I am against the welfare State and I am against socialized or nationalized medicine. The idea, for instance, that people can get their medical care from the government without paying a greater price than they pay today is preposterous. No people as a whole can get something for nothing Nothing can so quickly kill the incentive and the production of the people as encouragement to look to the Government as their benefactor and supporter

Mr Truman in his recent message to Congress said the cost of medical care would be less under their plan. After reading the various Hoover reports and the "efficient" methods of conducting many departments of our government, especially the Veterans Bureau and hospital construction program, it is difficult to account for such a statement

We believe compulsory sickness insurance will lead to financial, moral, and political sickness It arouses in the minds of our profession the suspicion that the object of its proponents is not solely the welfare of the public Our only weapons to combat these foreign sociologic concepts are facts and the truth, which we propose to carry to our patients and the public in general. They must know that socialization first controls, and then dictates, and when the citizen loses his sense of social responsibility the State takes over

In the discussions of this latest bill it must very definitely be understood that its effect on the public welfare is our primary consideration In our humble opinion its passage would be catastrophic as far as the health of the people is concerned They would be greatly disillusioned because they are being promised something which cannot be delivered, due to the lack of nurses and hospital beds and the increased demands made on the physicians Its cost would have a tremendous impact on our national economy It has been discredited in the European countries which are now subjects of American bounty We are not in favor of the status quo, and the implementation of the twelve-point program of the American Medical Association will correct any deficiencies in our present distribution of medical care by evolution and not revolution The state of the health of our people is the envy of the world and is being constantly improved by the various agencies, both public and private, that are interested in this work. Only a short time ago the Metropolitan Life Insurance Company stated that a child born today has a life expectancy of seventy years With the glorious record of the achievements of American medicine the medical profession feels that compulsory health insurance would be a backward step, retard research and would result in lowering the quality of medical care which our people are now receiving It would result not only in the regimentation of the doctor, but the patient as well It would destroy incentive, initiative, and freedom of action and create another enormous government bureaucracy to push the people around and impose a tax burden of an unpredictable amount I don't think any legislation ever proposed in Congress is so vulnerable to attack on account of the grave consequence it would have on the health of our people, our economy, and the ultimate socialization of the state Show me any country with a socialized government where the standard of living is as high as in the United States, which equals our industrial production, where the standard of health of the people, the medical schools, and hospitals compare with ours, and where the individual has the opportunity he has in this country It just does not exist It is our duty to bring this information to the American people

Dr Simpson has referred to our education program, but the real danger is that the people will not be informed in time The program outlined by the American Medical Association and the state and county societies will not win the battle for us unless each individual doctor carries our message to his patients and influential groups in his community We have the advantage in that in each physician's office we have a sounding board to reach our people not possessed by even the Federal Social Security group Generals plan the campaign, outline the strategy, but it is the private in the ranks upon whom the victory depends And we have an active army of 150,000 privates reaching into every hamlet of the country

The danger is that we will fail to make the most of our advantage It would be tragic if at some future date we should be compelled to repeat the words recently uttered by Lord Horder, chairman of the British "Fellowship for Freedom in Medicine," words that surely are echoed by the majority of British physicians. Referring to the catastrophe which struck British medicine last year he said

> In January we marched unitedly and effectively, in May, more like rabble, we surrendered! From the very start we have lacked dignity and a due appreciation of our use and value in society We let ourselves be used as pawns

If we wake up some morning and find a package on our doorstep labeled "State Medicine—Nonreturnable" it will be due to the indifference, apathy, and let-George-do-it attitude of the privates in our profession If our people know what is going to happen to them as patients under compulsory insurance there would be such a popular revolt against the measure as has never been seen in this country Who is to inform them? Their physicians, the men they turn to as the natural guardians of their health The doctor has the confidence of his patient The patient will believe him when he says that government's hampering regulations and red tape would retard treatment and interfere with freedom to prescribe what is needed promptly The patient will believe him when he says that the hordes of people forming an assembly line in his office might easily cut the time spent with each patient to two or three minutes, as it does now with many of the physicians under the same plan in England If all the patients in the country are not told this, and told it promptly by their own personal physicians, man-to-man and face-to-face, they may believe the promises of the men who are not charged with the responsibility of fulfilling them and so can promise anything, for, after all, the doctor is going to have to do the work, as he has been doing it all along, and if he says that, based on his knowledge and experience, he won't be able to deliver good medical care because his working conditions will make it impossible, most of his patients are going to believe him. So I call on you to enter on this campaign yourself in behalf of your patients. Tell them in a few sentences what you think will happen to them, not only what will happen to you,

and ask each patient individually and personally to write his senator and representative, and give your patients the name and address of each.

Under the leadership of the American Medical Association, campaign headquarters have been established in Chicago From this source will come the ammunition to be used in the war upon which we are engaged Posters, pamphlets, and circulars in vast quantities will soon be available The over-all strategy calls for the distribution of this ammunition through state and county medical societies, and directly by them to the physicians We now have in more than half the counties of the State organized campaign public relations committees Most of these have functioning speakers' bureaus The other counties should form these committees and get to work before it is too late The Woman's Auxiliary is going into action splendidly to cooperate in the execution of our plans The *News Letter* of the Public Relations Bureau will give a complete and detailed account of the plans from time to time. This *News Letter* will go to officers and public relations committees of county societies

Under the able leadership of Dr Floyd S Winslow and his State Society Public Relations Committee, and with the assistance of Mr Dwight Anderson and his staff, we cannot fail to win our part of this battle, unless we are lulled into a false sense of security by the reports which emanate from Washington that this bill may not pass at this session

We need every member of the Society to go into the front lines, and if all can be recruited and all will follow the plans that have been prepared by Dr Winslow's committee, we can win without any question and stamp out this vicious idea for all time

I urge you to examine the circular matter issued by our Public Relations Bureau which you will find available at the registration desk Order all the supplies you need for your own use Also, visit our campaign headquarters in the press room on the mezzanine floor of this hotel for more detailed plans There the battle orders are ready to be given out to the captains and the lieutenants so they can go back home from here and open up their recruiting offices until our army has in it every member of the Society

I have had an opportunity during the past few years to learn of the highly important services which are rendered by Dr W P Anderton, our secretary, and by Dr George W Kosmak, the able editor of our JOURNAL, as well as by Mr Dwight Anderson, who acts as business manager of our twice-a-month publication This experience has given me adequate reasons for having confidence in the abilities of these men, who will be such a powerful aid to me in the coming year The members of the Society are unaware of the myriad duties performed by our Publication and Office Management Committees who meet monthly and lay down the policies to be executed by the men whom I have named. With the help of these men, and of Dr Winslow and his Public Relations Committee in the campaign upon which we are engaged, my shoulders will be strengthened to carry the serious responsibilities which you have asked me to assume

About two per cent of the membership of American medicine is on the front line as officers of the American Medical Association, the state societies and the county societies We will be living in a fool's paradise if we think that these men alone can win this fight We have formidable opponents, with all of the resources of the government and the administration behind them, and we have got to carry the message to the people that this compulsory health insurance bill is a Trojan horse which will not only lower the services of medical care in this country but, if we can learn anything from history, will mean the socialization of these United States (*Applause*)

SPEAKER ANDRESEN We thank you, Mr President-Elect.

Dr Masterson's remarks will also be referred to the Reference Committee on Report of the President, of which Dr Thomas B Wood is the chairman

Section 16

Introduction of Representatives from Other State Societies

SPEAKER ANDRESEN It is always a pleasure to welcome to our meeting the delegates of other state medical societies As in the past, these states have sent us some of their best men, and I shall ask the representatives from each state, if present, to step to the rostrum and say a few words As far as I know the only one present is Dr Russell B Roth, who represents Pennsylvania, and I am going to ask Dr Leo Schiff to escort him to the rostrum

There was applause from the delegates as Dr Leo F Schiff, of Clinton, escorted Dr Russell B Roth to the rostrum.

DR. LEO F SCHIFF, *Clinton* It is a pleasure to introduce Dr Russell B Roth, representing the State of Pennsylvania

SPEAKER ANDRESEN Thank you, Dr Schiff! Won't you say a few words, Dr Roth?

DR. RUSSELL B ROTH Mr Speaker, Delegates, and members of the Medical Society of the State of New York, it has long been a pleasant tradition of mutual interest and cooperation to have interchanging delegates between your great State Medical Society and that of the State of Pennsylvania

Your Speaker has already explained our interest in what you do here in these ensuing days The medical picture has been changed sufficiently from past years so that all of us find it incumbent upon us to pay more attention to the flood of literature that crosses our desks in reference to the political issues of medicine than we do to the scientific publications What you do here in these next few days will be watched very closely not only by the State of Pennsylvania but by all of the states in the union, by all of the backers who are interested in the promotion of what I think we should perhaps not call organized medicine so much as ethical medicine

I convey to you the regrets of our president, Dr Gilson Colby Engel, that he could not be here personally on this occasion You are probably aware of his specific interests in providing counter measures to compulsory health insurance Those of you who have read the text of the bill recently submitted in the Senate by Senator Lister Hill know that that is a political implementation of Dr Engel's Ten Point Program which he presented to our State Society last year I do not know what the future holds as to the fate of *S 5*, and how fast it is going to come before the Senate of the United States, but we cannot afford to sit back and wait. I, as a representative of the State of Pennsylvania, shall in the next few days watch with avid interest for the purpose of carrying back to my State Society a report on what your attacks and your approaches to the situation will be. (*Applause*)

SPEAKER ANDRESEN Are there any other delegates from our neighboring states present?

There was no response

SPEAKER ANDRESEN From Connecticut, we are expecting Dr James R. Miller, from New Jersey, Dr James F Norton, and from Vermont, Dr Rol- and C McSweeney If they come in later, we will introduce them.

Section 17 (See 5)

Introduction of Members with Oldest Attendance Record in House

SPEAKER ANDRESEN While the discussion was going on, I noticed that one of the gentlemen whom I asked to come to the platform before came in, one of our two oldest members of the House, James F Rooney In view of the fact that we have so little time left I will ask the subsequent speakers to confine themselves to a few remarks, but we would like to hear from our old friend, Dr Rooney, I am sure (*Applause*)

DR. JAMES F ROONEY, *Trustee* Mr Speaker and gentlemen of the House, you don't need to hear anything from me this morning This is something that comes to you as you get older, and unfortunately I think it is a mistake because I am no older now than I was ten years ago You will hear a lot from me within the next few days probably, so I thank you, Mr Speaker, for calling on me

SPEAKER ANDRESEN I am sure we will, Dr Rooney (*Applause*)

Section 18

World Medical Association

SPEAKER ANDRESEN Dr Louis H Bauer, our former President, has asked for a few minutes to discuss the World Medical Association, of which he is the Secretary-General (*Applause*)

DR LOUIS H BAUER Mr Speaker and members of the House, last Thursday at 9 30 P M I was in Madrid, Spain, at 1 15 Friday afternoon I was in New York City I say that to show you how the world is constantly shrinking We are no longer three thousand or five thousand miles away from any country, but just a few hours We, therefore, have got to learn to live together, or we assuredly will not live at all

Following the recent war, an attempt was made to make up an organization of doctors of the world through their national medical associations That organization was finally perfected in Paris in September, 1947 There are now forty national medical associations belonging to this organization We hope eventually to have sixty, including the membership of at least 500,000 doctors

It has been surprising to see how these doctors can work together, and how they think pretty much alike In Geneva last September they adopted twelve principles on social security which you people here might very well have written yourselves They investigated German war crimes, and adopted what we might call a modification of the Hippocratic oath, with the recommendation that it be adopted by all national associations and licensing boards as a prerequisite to membership or licensure

We have been studying medical education throughout the world We have just finished a report, a preliminary one, on medical education in 26 countries of the world—something that has never been done before

We have been studying health practice throughout the world, and I am sorry to say that in the investigation of health practice the United States is one of the very few countries that quacks practice in, in fact, one country wrote in and said that they had no quacks practicing medicine because they all came to the United States

We are also investigating medical advertising and we are preparing a code an international code on medical ethics, and here is an instance of the spirit of cooperation that is prevalent In the meeting in Paris in 1917 there was a feeling, I think, of suspicion and distrust They did not know just how to take us They thought that perhaps the United States and Great Britain wanted to take over this organization and run it Well, we are running it, that is true, nevertheless we are doing it with the wholehearted support and cooperation of all participants That feeling of suspicion and distrust has been entirely dissipated, and in the case of this international code of ethics there were two paragraphs to which the American members objected They were deleted, and in doing so the Frenchman, who speaks practically no English, turned to Dr Henderson, the chairman of the Board of Trustees of the American Medical Association, and said, "That was for you," which shows how they are looking now to the United States for help and support

I want to distinguish between the World Medical Association and the World Health Organization The World Health Organization is a branch of the United Nations, and it receives its support from governmental funds It is concerned more particularly with the public health aspects of medicine, whereas the World Medical Association is a private organization composed entirely of national medical associations, and run by the medical profession, and its aims are to raise the standards not only of health but of medical care and of medical education throughout the world, and to better the international relations among various countries The support of the World Health Organization, as I say, comes from government funds, the support of the World Medical Association has to be obtained from private sources In many of these countries their associations don't have any money, never have had, and even if they have it they cannot get it out of the country at the present time Therefore, when we went over for the organization of this World Medical Organization two years ago those of us from the United States felt that if this organization was ever to be anything more than a nice little correspondence club it would have to have money, consequently we organized a United States Committee of the World Medical Association, which was incorporated as a nonprofit organization under the laws of the State of New York, and we have asked associations and individuals to become members of that Committee to render support to the World Medical Association to make sure that it could do a job All of these things that I have mentioned—and there are others I won't take your time to go over—have been accomplished purely because we have been able to raise the funds in this country Organizations like the American Medical Association, which is a member of the World Medical Association itself and also a member of the United States Committee, the Mayo Clinic, the International College of Surgeons, the College of Radiology, the Medical Society of the State of New York, the Nassau County Medical Society (I am proud to say because that is my own county society) and numerous other medical organizations, organizations like the National Tuberculosis Association, American Cancer Society, etc, and many of the pharmaceutical houses have contributed We want to have at least five thousand individual members of the Committee The members will receive all of the publications and reports of the Committee as well as the *Bulletin of the World Medical Association*, which will be issued quarterly They will receive a certificate of membership in the Committee, but what I hope will be of more interest to you is the feeling that by joining this Committee you yourselves, can feel that you are helping to raise the standards of medical education and medical care throughout the world

These people are looking to us for help When I was in Madrid, Dr Sensenich, the president of the American Medical Association, and Dr Henderson, the chairman of the Board of Trustees of the American Medical Association, were cabled to return to the States immediately on account of the Truman announcement last week, so they returned before me The president of the Association is a Frenchman, and he said, "I am sorry they are going, but on the other hand I am glad because if you succeed over there perhaps we may succeed in preventing any further socialization here, but if you succumb we will succumb" So they are looking to us for help, and we cannot let them down

We have outside here a young lady who will be glad to enter your subscription as individual members She also will be up in the exhibit hall during the rest of the week. I would like to see every member of the House of Delegates become a member of this Committee Every officer of the American Medical Association is a member of this Committee and eighty per cent of the House of Delegates of the American Medical Association are members of this Committee Many of you here are already, and those of you who are not I hope will be

Thank you! (*Applause*)

SPEAKER ANDRESEN Thank you, Dr Bauer

Section 19

Tribute to Vice-Speaker Strohm

SPEAKER ANDRESEN I regret to inform you about the illness of one of our friends and one of our hardest workers for the Medical Society Fortunately, he is now convalescing, and we hope he will soon be restored to full health He has shown courage and rare devotion to duty in coming here today I refer to our Vice-Speaker, Dr Nelson W Strohm

Dr Strohm, will you take a bow (*Prolonged applause*)

SPEAKER ANDRESEN We are now ready for resolutions It is important to have all resolutions introduced this morning so that our reference committees may consider them this afternoon It means much extra trouble for these hard working committees if delayed resolutions require additional meetings, and for us it means we will be spending more time tomorrow in session if we don't get almost all of our resolutions introduced today

Section 20 (*See 164*)

Hospitals in the Practice of Medicine

DR. J STANLEY KENNEY, *Planning Committee for Medical Policies, a Special Committee of the House of Delegates*

Mr Speaker and members of the House, the Planning Committee for Medical Policies is the sponsor of this resolution It had intended to present a supplementary report in a little more detail if that were possible, but the Committee met yesterday to consider a supplementary report from one of its subcommittees, and on the basis of that I am going to present this resolution to the House from the Planning Committee for Medical Policies

"WHEREAS, the Medical Society of the State of New York is heartily in accord with all movements that will afford the adequate training of students of medicine, the prevention and treatment of disease, and the establishment of medical care on economic planes which will not result in the deterioration of the individual practice of medicine or the lowering of the standards of medical care of the sick, and

"WHEREAS, there has been a tendency for certain hospitals and teaching institutions to open clinics for the practice of medicine for profit, and

"WHEREAS, we do not believe this is necessary for teaching purposes, and

"WHEREAS, we believe in the end it will lead to an inferior type of medical care for the public at large, therefore be it

"*Resolved*, that this committee recommend to the House of Delegates that the resolution previously passed by the House of Delegates (NEW YORK STATE JOURNAL OF MEDICINE, Part II September 1, 1948, page 18, paragraph 3) be called to the attention of hospitals and teaching institutions, and be it further

"*Resolved*, that a conference of deans of medical colleges and representatives of hospitals and teaching institutions be held to discuss and formulate a policy which is in the public's interest, and be it further

"*Resolved*, that all hospitals and teaching institutions be requested to take no further action until such time as the above policy has been formulated"

Mr Speaker, I would like one minute more to clarify this in the minds of the House, for there are quite some who seem confused This Planning Committee for Medical Policies is a special committee of the House of Delegates, and it is not a Council Committee. The three recommendations that appeared in the printed report we feel are of such import that I sincerely hope that those of you who have those recommendations will take the time to go before the Reference Committee, because what we have attempted to do we do not consider as final action, but we have given you what we, after considered thought, believe are sound opinions on the three subjects involved They were presented as recommendations in the report, and perhaps it is superfluous, Mr Speaker, but I have here in the usual form three resolutions which implement the recommendations of the Planning Committee which are published in the report I had some prepared in the interests of taking the labors off the Reference Committee.

SPEAKER ANDRESEN The report of the Planning Committee and this resolution are referred to the Reference Committee on the Report of the Planning Committee, of which Dr Thomas M D'Angelo, of Queens, is chairman

The three resolutions referred to by Dr J Stanley Kenney are as follows

Section 21 (*See 164*)

Medical Services in Hospital and Blue Cross Contracts

The following resolution is introduced to implement the recommendation contained in the 1949 Report of the Planning Committee for Medical Policies

"WHEREAS, the Medical Society of the State of New York has repeatedly passed resolutions defining radiology, pathology, anesthesiology, and physical therapy as the practice of medicine, and

"WHEREAS, this principle has been generally recognized by all concerned with relationships to these fields of medical practice, and

"WHEREAS, a large proportion of the practitioners in these fields have continued to make contracts with hospitals for full-time employment, and it has not been held to be unethical to do so, and

"WHEREAS, surgeons, internists, and other specialists are engaging in the same practices and are now signing full-time contracts with hospitals, and

"WHEREAS, it has been held that when a hospital employs such a licensed practitioner the work done by this practitioner is the practice of medicine by this practitioner and not by the hospital, and

"WHEREAS, the decision of the Attorney General does not change the definition of medical practice but points out that the hospitals are merely contracting for services of practitioners in their employ, and

"WHEREAS, the Medical Society of the State of New York must be sympathetic to any organized effort on the part of the practitioners in the various specialties to refuse to enter into salary contracts with hospitals and to demand the privilege of rendering bills for services separate from hospital bills, but no such organized effort has been made, therefore be it

"*Resolved*, that unless and until the specialists involved are willing to refuse to renew existing salary contracts with hospitals, and to refuse to enter into any further similar arrangements, it is the judgment of this body that it will be very difficult to correct this situation except through negotiations between the hospitals and the practitioners in the various specialties concerned"

Section 22 (*See 163*)

Reorganization of the District Branches

The following resolution is introduced to implement the recommendations contained in the 1949 Report of the Planning Committee for Medical Policies

"1 That Richmond County be separated from the present First District and added to the present Second District Branch. This is convenient both geographically and from the standpoint of good transportation

"2 That Westchester, Bronx, and New York Counties constitute a new district This could retain the present number one designation or be given a new number at the discretion of the House

"3 That Ulster and Sullivan Counties, along with Orange, Dutchess, Putnam, and Rockland Counties, be made a new district, the numerical designation to be at the discretion of the House

"4. That the several district branches arrange to employ an executive secretary, full- or part-time, to coordinate the various activities, public relations, legislation, workmen's compensation, and others of the component county societies, and we further recommend that the expenses of such executive officer be entirely provided for by the various county societies making up the district"

Section 23 (*See 165*)

Group and Contract Practice

The following resolution is introduced to implement the recommendations contained in the 1949 Report of the Planning Committee for Medical Policies

"WHEREAS, group practice is now established in New York State, and many new problems confront the profession in relationship to this type of practice, therefore be it

"*Resolved*, that the House of Delegates authorize a continuing study and critical survey of this problem of group and contract practice and instruct the Council to implement this action through the proper agency or committee to the end that we shall always be kept apprised of changing conditions in these areas of practice and be prepared to deal effectively with them"

Section 24 (*See 89*)

Medical Specialty Boards—Admission to Examination

DR. SAMUEL Z FREEDMAN, *New York* The following resolution was approved at the January 24, 1949, meeting of the Medical Society of the County of New York

"WHEREAS, the specialty boards in the various fields of medicine serve the purpose of setting criteria of scholarship, training, and ethics, and

"WHEREAS, certification by a specialty board confers upon a physician recognition of proficiency which is highly regarded by his colleagues and the layman, and

"WHEREAS, to deny to a physician who meets the basic training, postgraduate, and ethical requirements entrance to the examination necessary for certification in a specialty withholds from the candidate the recognition in such specialty of his colleagues and the patients he serves, thereby by inference branding him as inferior to those who are certified, and

"WHEREAS, since specialty board certification is an extremely important factor in obtaining admittance to the staffs of most recognized hospitals, the denial of certification to a physician who meets the basic training, postgraduate and ethical requirements of the Specialty Board accordingly unduly restrains him in the full practice of his profession, now, therefore, be it

"*Resolved*, that the Medical Society of the County of New York recommend that all physicians who are duly licensed to practice medicine in the State of New York and who meet the basic training, postgraduate, and ethical requirements of a specialty board be admitted to the examination given by the specialty board without regard to race, religion, color, sex, or national origin, and be it further

"*Resolved*, that the Secretary of the Medical Society of the County of New York be directed to send copies of this resolution to the presidents of each Specialty Board and to the chairman of the Advisory Board of the Medical Specialties, and be it further

"*Resolved*, that the delegates to the Medical Society of the State of New York are hereby instructed to introduce and work for the passage of this resolution in that body and in the House of Delegates"

SPEAKER ANDRESEN Referred to the Reference Committee on Miscellaneous Business (B), of which Dr Norman S Moore is chairman

Section 25 (*See 164*)

Resolution to Restrain Hospitals from Engaging in the Practice of Medicine

DR. BENJAMIN M BERNSTEIN, *Kings*

"WHEREAS, the rendering of medical services and the application of the principles of the art and science of medical practice must remain in the hands of qualified physicians practicing individually or in groups, and

"WHEREAS, no governmental or other agency

These people are looking to us for help When I was in Madrid, Dr Sensenich, the president of the American Medical Association, and Dr Henderson, the chairman of the Board of Trustees of the American Medical Association, were cabled to return to the States immediately on account of the Truman announcement last week, so they returned before me The president of the Association is a Frenchman, and he said, "I am sorry they are going, but on the other hand I am glad because if you succeed over there perhaps we may succeed in preventing any further socialization here, but if you succumb we will succumb" So they are looking to us for help, and we cannot let them down

We have outside here a young lady who will be glad to enter your subscription as individual members She also will be up in the exhibit hall during the rest of the week. I would like to see every member of the House of Delegates become a member of this Committee Every officer of the American Medical Association is a member of this Committee and eighty per cent of the House of Delegates of the American Medical Association are members of this Committee Many of you here are already, and those of you who are *not* I hope will be

Thank you! (*Applause*)

SPEAKER ANDRESEN Thank you, Dr Bauer

Section 19

Tribute to Vice-Speaker Strohm

SPEAKER ANDRESEN I regret to inform you about the illness of one of our friends and one of our hardest workers for the Medical Society Fortunately, he is now convalescing, and we hope he will soon be restored to full health He has shown courage and rare devotion to duty in coming here today I refer to our Vice-Speaker, Dr Nelson W Strohm.

Dr Strohm, will you take a bow (*Prolonged applause*)

SPEAKER ANDRESEN We are now ready for resolutions It is important to have all resolutions introduced this morning so that our reference committees may consider them this afternoon. It means much extra trouble for these hard working committees if delayed resolutions require additional meetings, and for us it means we will be spending more time tomorrow in session if we don't get almost all of our resolutions introduced today

Section 20 (*See 164*)

Hospitals in the Practice of Medicine

DR. J STANLEY KENNEY, *Planning Committee for Medical Policies, a Special Committee of the House of Delegates*

Mr Speaker and members of the House, the Planning Committee for Medical Policies is the sponsor of this resolution It had intended to present a supplementary report in a little more detail if that were possible, but the Committee met yesterday to consider a supplementary report from one of its subcommittees, and on the basis of that I am going to present this resolution to the House from the Planning Committee for Medical Policies

"WHEREAS, the Medical Society of the State of New York is heartily in accord with all movements that will afford the adequate training of students of medicine, the prevention and treatment of disease, and the establishment of medical care on economic planes which will not result in the deterioration of the individual practice of medicine or the lowering of the standards of medical care of the sick, and

"WHEREAS, there has been a tendency for certain hospitals and teaching institutions to open clinics for the practice of medicine for profit, and

"WHEREAS, we do not believe this is necessary for teaching purposes, and

"WHEREAS, we believe in the end it will lead to an inferior type of medical care for the public at large, therefore be it

"*Resolved*, that this committee recommend to the House of Delegates that the resolution previously passed by the House of Delegates (NEW YORK STATE JOURNAL OF MEDICINE, Part II, September 1, 1948, page 18, paragraph 3) be called to the attention of hospitals and teaching institutions, and be it further

"*Resolved*, that a conference of deans of medical colleges and representatives of hospitals and teaching institutions be held to discuss and formulate a policy which is in the public's interest, and be it further

"*Resolved*, that all hospitals and teaching institutions be requested to take no further action until such time as the above policy has been formulated"

Mr Speaker, I would like one minute more to clarify this in the minds of the House, for there are quite some who seem confused. This Planning Committee for Medical Policies is a special committee of the House of Delegates, and it is not a Council Committee The three recommendations that appeared in the printed report we feel are of such import that I sincerely hope that those of you who have those recommendations will take the time to go before the Reference Committee, because what we have attempted to do we do not consider as final action, but we have given you what we, after considered thought, believe are sound opinions on the three subjects involved They were presented as recommendations in the report, and perhaps it is superfluous, Mr Speaker, but I have here in the usual form three resolutions which implement the recommendations of the Planning Committee which are published in the report I had some prepared in the interests of taking the labors off the Reference Committee

SPEAKER ANDRESEN The report of the Planning Committee and this resolution are referred to the Reference Committee on the Report of the Planning Committee, of which Dr Thomas M D'Angelo, of Queens, is chairman

The three resolutions referred to by Dr J Stanley Kenney are as follows

Section 21 (*See 164*)

Medical Services in Hospital and Blue Cross Contracts

The following resolution is introduced to implement the recommendation contained in the 1949 Report of the Planning Committee for Medical Policies

"WHEREAS, the Medical Society of the State of New York has repeatedly passed resolutions defining radiology, pathology, anesthesiology, and physical therapy as the practice of medicine, and

"WHEREAS, this principle has been generally recognized by all concerned with relationships to these fields of medical practice, and

"WHEREAS, a large proportion of the practitioners in these fields have continued to make contracts with hospitals for full-time employment, and it has not been held to be unethical to do so, and

lution is introduced by the Bronx County Medical Society It concerns itself with diabetes detection drives, of which one was run last year, and which will be run again annually

"WHEREAS, it is within the province of the American Medical Association on a national, state, and county level to direct public health education and disease detection drives for the public benefit, and

"WHEREAS, lay-directed organizations have taken the leadership in these campaigns, and public fund raising has become a prominent feature of these projects, and

"WHEREAS, the Federal government through the United States Public Health Service has already taken steps in regard to the problem of detection and education in diabetes, and

"WHEREAS, diabetes being neither contagious nor epidemic is not truly a government problem, and

"WHEREAS, the American Diabetes Association, a branch of the profession of medicine, has begun a nation-wide detection drive to be conducted annually and directed solely by members of the medical profession without fund-raising appeals, and

"WHEREAS, the American Diabetes Association has carried and will carry its detection drive to the people only through the American Medical Association, the state and county societies, therefore be it

"*Resolved*, that the New York State Medical Society record its approval of the Diabetes Association's detection drive, and be it further

"*Resolved*, that the Public Health Committee and the Industrial Medicine Committee of the New York State Medical Society, together with a specially appointed committee for Diabetes Detection, be instructed to cooperate with the American Diabetes Association and its local associations in conducting diabetes detection drives in this State, and be it further

"*Resolved*, that the delegates to the American Medical Association be instructed to introduce these resolutions at the June, 1949, session of the American Medical Association, or support similar resolutions that may be introduced"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part VI, of which Dr Thomas O Gamble, of Albany, is chairman.

Section 30 (*See 136*)

Concerning Listing of Union Health Center in the State Medical Directory as an Industrial Clinic

DR. PETER M. MURRAY, *New York* On behalf of the Medical Society of the County of New York, I wish to introduce the following resolution

"WHEREAS, in the 1949 *Directory of the Medical Society of the State of New York* there is listed the Union Health Center under the section of Hospitals and Clinics, and

"WHEREAS, at a special meeting on September 29, 1948, of the Committee on Medical Economics, of the Medical Society of the County of New York, this listing was anticipated and unanimously disapproved, and

"WHEREAS, the Comitia Minora meeting on October 11, 1948, agreed with the action of the Committee on Medical Economics, and

"WHEREAS, at a general meeting of the Society the recommendation of the Comitia Minora in this matter was accepted, and

"WHEREAS, on November 19, 1948, the Medical Society of the State of New York was informed of the action of the Comitia Minora and its recommendation 'That it request the Medical Society of the State of New York to withhold approval of the listing of the Union Health Center in the State Medical *Directory* as an Industrial Clinic, pending further investigation by a subcommittee of the Medical Economics Committee', and

"WHEREAS, the Union Health Center does not meet the requirements for listing in the *Directory*, therefore be it

"*Resolved*, that the delegates from the Medical Society of the County of New York be instructed to introduce and attempt to carry through a resolution at the coming meeting of the House of Delegates of the Medical Society of the State of New York condemning this action, and be it further

"*Resolved*, to recommend to the Publication Committee of the Medical Society of the State of New York to eliminate the Union Health Center listing in the next issue of the Medical *Directory*"

This resolution was introduced at the Stated Meeting of the Medical Society of the County of New York on April 25 and passed, and the delegates were instructed to introduce it in this House

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part XI, of which Dr Eugene H Coon, of Nassau, is chairman

Section 31 (*See 142*)

Voluntary Service in Medical Corps of the Armed Forces

DR. ALFRED P INGEGNO, *Kings* The first resolution, gentlemen, is one presented by Dr Andresen

"*Resolved*, that the component county medical societies of the Medical Society of the State of New York be, and hereby are, urged by this, their House of Delegates, to exert every effort in their community to insure that a sufficient number of available physicians, particularly young interns and residents, be encouraged to volunteer to serve their nation in the medical corps of the armed forces"

SPEAKER ANDRESEN I would like to say I had nothing to do with introducing this This came from the headquarters of the Area Service Unit asking us to present this resolution

This is referred to the Reference Committee on the Report of the Council, Part I, of which Dr Scott Lord Smith, of Dutchess, is chairman

Section 32 (*See 93*)

Tenure of Hospital Staff Appointments

DR. ALFRED P INGEGNO, *Kings* Resolution of the Medical Society of the County of Kings, concerning tenure of hospital staff appointments, which was passed unanimously at a stated meeting on April 19, 1949, with instruction that it be submitted to this House of Delegates

"WHEREAS, proper and equitable hospital administration should include provisions in hospital bylaws which adequately protect the staff appointments of physicians from capricious or summary termination, particularly after a reasonable probationary period of service or after attainment of appropriate staff rank, be it therefore

"*Resolved*, that the Medical Society of the County of Kings, through its delegates, recommend to the Medical Society of the State of New York that an appropriate committee, working in

should be permitted either to control or to render medical care or services, and

"WHEREAS, the practice of medicine embraces services performed by radiologists, pathologists, and anesthesiologists, both in private practice and in hospitals, and

"WHEREAS, hospitals are now engaging in the provision of the services of such specialists without regard to their standing as specialists in the practice of medicine, and

"WHEREAS, in addition to the services of these specialists, hospitals are increasingly active in employing full-time specialists in other categories, and the providing of the services of these specialists to the public and charging and collecting fees for such services rendered, and

"WHEREAS, the division of fees by individuals and groups is forbidden by the accepted codes of medical ethics and by the provisions of the Education Law of the State of New York, now, therefore be it

"*Resolved*, that such activities on the part of hospitals are herewith construed as being in violation of regulations governing the practice of medicine and are, therefore, condemned, and be it further

"*Resolved*, that the Council be instructed to take immediate action under existing legal and ethical codes to stop these activities by hospitals, and be it further

"*Resolved*, that the Council be instructed to sponsor and support the reintroduction of the Friedman bill (*Senate Introductory 2402*), which was passed by the State Senate at the last session of the Legislature and which would legally forbid hospitals from carrying on the practices described in this resolution"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Planning Committee for Medical Policies, of which Dr Thomas M D'Angelo is the chairman, and which has had referred to it a similar resolution introduced by Dr Kenney for the Planning Committee

Section 26 (*See 150*)

Lien Law

DR. ABRAHAM KOPLOWITZ, *Kings* This is an old proposition, Mr Speaker and delegates, that we have been fighting for for a great many years, and still have not succeeded in getting

"WHEREAS, a bill to amend the lien law and civil practice act in relation to liens of physicians for treatment and care of certain injured persons was introduced in the 1949 Legislature of the State of New York, which bill was not passed, therefore be it

"*Resolved*, that the Medical Society of the State of New York request the reintroduction of the *Senate Introductory 2045* of 1949 to the 1950 Legislature of the State of New York, and be it further

"*Resolved*, that the Medical Society of the State of New York actively work for the passage of this bill."

SPEAKER ANDRESEN This is referred to the Reference Committee on Miscellaneous Business (A), of which Dr Andrew A. Eggston is the chairman

Section 27 (*See 135*)

Medical Directory

DR. NORMAN S MOORE, *Tompkins* At a meeting of the Tompkins County Medical Society held March 21, 1949, the following resolutions were adopted, and their delegate instructed to introduce them to this House of Delegates

"WHEREAS, the biyearly publication of th *Medical Directory of New York, New Jersey an Connecticut* and its distribution to all members c the New York State Medical Society withou charge entails a great drain on the finances of th Medical Society of the State of New York amounting to $85,000 this year, and

"WHEREAS, an expense of this magnitude ap pears to be unnecessary and unwarranted, there fore be it

"*Resolved*, that the House of Delegates direct that one of two alternative courses be taken, to wit

"1 That the *Directory* be published every two years and sold at cost to those members who desire a copy, or

"2 That the *Directory* be published every five years and distributed without charge to all members, with the understanding that supplements be published at intervals and distributed by subscription during the period between issues of the *Directory* in order to keep the function of the *Directory* up to date"

SPEAKER ANDRESEN Referred to Reference Committee on Report of the Council, Part XI, of which Dr Eugene H Coon, of Nassau, is chairman

Section 28 (*See 156*)

American Medical Association Assessment—Suggestion for Use of Funds

DR. NORMAN S MOORE, *Tompkins* Resolution Number 2

"WHEREAS, the House of Delegates of the American Medical Association has voted to assess each member of the Association twenty-five dollars ($25) to be 'used for a nation-wide plan of education on the progress of American medicine, the importance of the conservation of health, and the advantages of the American system in securing a wide distribution of a high quality of medical care', and

"WHEREAS, this statement does not recognize the necessity of taking positive action to remedy current defects in the distribution of medical care that are cause for complaint and to develop further a comprehensive nation-wide program for adequate medical care for all, as an alternative to the government proposals, and

"WHEREAS, the development of a nation-wide system of voluntary prepayment sickness insurance appears to be an integral part of such a program, therefore be it

"*Resolved*, that the funds collected from this assessment be used for (1) a program to discover weaknesses in the current distribution of medical care and develop means for remedying them, and (2) plans for adequate nation-wide voluntary sickness insurance, rather than chiefly for education and propaganda concerning our present system of medical care and its progress, and further be it

"*Resolved*, that the delegates to the American Medical Association from the Medical Society of the State of New York be instructed to introduce this resolution at the next regular meeting of the American Medical Association"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part VI, of which Dr Thomas O Gamble, of Albany, is chairman

Section 29 (*See 92*)

Diabetes Detection Drives

DR. FREDERICK W WILLIAMS, *Bronx* This reso-

mands the binding together of the entire medical profession to the point that the American Medical Association's failure to pass this resolution last year should be reconsidered. Let the State delegates inform the American Medical Association of the unanimous passage of this resolution last year and let them strongly urge favorable action by the American Medical Association at the annual session in Atlantic City in June, 1949"

SPEAKER ANDRESEN This resolution is referred to the Reference Committee on Miscellaneous Business (A), of which Dr Andrew A Eggston, of Westchester, is the chairman

Section 36 (*See 127*)

Amendment of Section 31 of Principles of Professional Conduct

DR. SAMUEL B BURK, *New York* Mr Speaker, officers, ladies and gentlemen, I have before me a suggestion relating to the Principles of Professional Conduct which I have been instructed to present before this august body by the Medical Society of the County of New York. I want to preface my remarks by the following As a member of the Board of Censors for many years I know there are problems that have been presented to us which call for certain action, and in view of the present situation there are certain changes which we should like to recommend

It also takes into consideration the fact that television is now becoming one of the modes of passing on the word to the public relating to the activities of our Medical Society for the care and welfare of our patients With your kind permission I shall proceed.

Dr Burk then read the following, which Secretary Anderton caused to be distributed to each delegate in advance of the reading for their convenience in following the proposal.

Suggestion to the Medical Society of the State of New York to amend Section 31 of Principles of Professional Conduct

"31 (*a*) Physicians, as individuals or as members of any group, institution, or organization, howsoever named, shall not resort to lay solicitation of patients in any form or manner whatsoever, directly or indirectly, or knowingly aid or permit others to make use of them in any form or manner of advertising or publicity through lay channels which would be tantamount to the solicitation of patients on their behalf, or employ any means or methods whatsoever to gain the attention of the lay public for the purpose of obtaining patients

"(*b*) Physicians shall not promise radical cures or refer to their singular achievements or unique or outstanding practices or the like, nor shall they boast of cases, operations, cures, or remedies, or inspire or knowingly aid or permit the publication of reports of any thereof, publicly through lay channels

"(*c*) Physicians shall not give, for use in connection with their name or photograph in any manner or form of advertising or publicity through lay channels, any endorsement, approval, certificate, report, or statement regarding any therapeutic agent, apparatus, or appliance, or any commercial article, or regarding any property, test or application thereof, or regarding the manufacturer or seller thereof Distribution of medical reprints should be limited strictly to the medical profession

"(*d*) It is suggested that before releasing any book, magazine, periodical, or newspaper article, or other writing or any statement or interview for lay publication and before taking part in any moving picture, radio or television broadcast, or making any statement before any public meeting or assemblage, and before approving any advertisement, announcement, or other publicity with respect to any of the foregoing, members of the Society, wherever time shall permit, should submit all pertinent data thereon to, and avail themselves of the advice and counsel of, any committee, bureau, or other facility of this Society, or of his own county medical society, which may be maintained or provided for the purpose of giving such advice and counsel, and should thereafter govern themselves accordingly Each member should be careful to insist, wherever time permits, in dealing with lay organizations, that no interview or statement, and no advertisement, announcement, or other publicity with respect to any of the above-described activities shall be published or made use of unless and until approved in writing by the member When consulted, the committee, bureau, or facility so consulted should render its decision in writing to the physician as promptly as reasonably possible In giving any such advice and counsel or in rendering any such decision, the committee, bureau, or facility involved shall be guided by the provisions of this Section 31, as interpreted in the light of the underlying motive, habit, and intention of the member and his standing and reputation in the profession and in the community and of the essentially educational or instructive, as distinguished from self-seeking or personal, character of the communication itself

"(*e*) Physicians shall not attempt to secure patients through solicitors, runners, contact men, or agents of any kind, or pay, or offer to pay, any fee, gratuity, commission, or bonus in return for the obtaining, referring, recommending, or procuring of any patient

"(*f*) Physicians should not become or remain associated or identified with any corporation, organization, group, or individual, medical or lay, resorting to or making use of direct advertising to the public for business of a medical or a therapeutic nature, or having to do with the diagnosis, care or treatment of the sick or injured, the maintenance of health or the prevention of disease"

DR. BURK I might add, gentlemen, this is the brain child of some of the members of the Medical Society of the County of New York, particularly the chairman of the Board of Censors, and the Academy of Medicine of the City of New York. At those conferences there were also members of the Medical Society of the State of New York who sat in on them, and here you have this suggestion presented to you

Thank you!

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part XII, of which Dr Joseph A Geis, of Essex, is chairman

Section 37 (*See 110*)

Representative of the Five Counties to Be Included in the Committee on Legislation

DR. MARGARET JANEWAY, *New York* This is presented at the instruction of the Medical Society of the County of New York

"*Resolved*, that the Medical Society of the County of New York instruct its delegates to the House of Delegates of the Medical Society of the State of New York to introduce a resolution that

conjunction with other interested groups such as the New York Hospital Association, initiate studies to define just and widely applicable standards for dealing with problems relative to tenure of hospital staff appointments"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part VI, of which Dr Thomas O Gamble, of Albany, is chairman We will give Dr Gamble something more to do

Section 33 (*See 119*)

Voluntary Health Insurance (National Enrolment Agency)

DR G W MCAULIFFE, *New York* The following resolution was approved at the Stated Meeting of the Medical Society of the County of New York, held on Monday, April 25, 1949

"WHEREAS, the problem of making voluntary health insurance available to everyone is of paramount interest to every physician, and

"WHEREAS, we believe that some form of a national plan is necessary in order to accomplish this end, now, therefore, be it

"*Resolved*, that a national enrolment agency be established under the direction of the Blue Shield and medical profession and to include an insurance company legally qualified to write voluntary health insurance in those areas where this is not available and to also act as an enrolment agency for local plans, and be it further

"*Resolved*, that this organization develop a contractual agreement at the top level with the corresponding organization now being formed by the Blue Cross Commission for hospital insurance in order that both sickness and hospital insurance may be presented to the public, and be it further

"*Resolved*, that the delegates from the Medical Society of the County of New York be instructed to introduce a similar resolution at the meeting of the House of Delegates of the Medical Society of the State of New York to the end that the delegates from the Medical Society of the State of New York be instructed to introduce a similar resolution at the meeting of the House of Delegates of the American Medical Association at Atlantic City in June, 1949"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of Council, Part VII, of which Dr Guy S Philbrick, of Niagara, is chairman

Section 34 (See *120*)

Voluntary Health Insurance (National Plan)

DR. FELIX OTTAVIANO, *Madison* Mr Speaker, I realize that several resolutions have been presented this morning that more or less combine the gist of this one. However, it was felt by my constituents in Madison County that we have no over-all plan as physicians The American Medical Association has no plan, in spite of its 12-point program, which is really something to offer in place of the government plan Therefore, I would like to present this, and it is up to the Committee itself then which it will present to the delegates for action

"WHEREAS, it is known and recognized that many of the existing voluntary health and medical insurance plans do not fully and adequately cover all illnesses, especially those of a catastrophic nature, and

"WHEREAS, the present and accepted voluntary health and insurance plans do not cover all classes, and

"WHEREAS, the medical profession is vitally interested in the health and welfare of all people and is desirous of meeting and improving any deficiencies that may exist in medical care, and

"WHEREAS, the 12-point plan, as recently proposed by the American Medical Association, makes no provision for a general and over-all voluntary national health insurance plan, therefore be it

"*Resolved*, that the Medical Society of the State of New York, now in convention, instruct and direct its delegates to the next annual session of the American Medical Association to present a resolution before that body recommending a general and over-all voluntary national health insurance plan be developed, which will include all classes, be available to all individuals as well as groups of individuals, and therein provide for full and complete coverage of all illnesses"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of Council, Part VII, of which Dr Guy S Philbrick, of Niagara, is chairman.

Section 35 (*See 154*)

Amendment of Article 5 of Constitution and Bylaws of the American Medical Association

DR. J HOMER CUDMORE, *New York* The following resolution was introduced by the Medical Society of the County of New York on April 25, 1949, and approved

"WHEREAS, some county medical societies in various parts of the United States exclude from their membership physicians of certain races, regardless of their professional ability or ethical standing, and

"WHEREAS, physicians so excluded from county societies are thereby excluded from membership or fellowship in the American Medical Association, and

"WHEREAS, physicians excluded from membership in the American Medical Association are for that reason denied the right to apply for membership in other national professional societies where membership in the American Medical Association is a prerequisite, and

"WHEREAS, these physicians are thereby restrained in the legitimate pursuit and furtherance of their professional activities, and

"WHEREAS, this exclusion of physicians on the basis of race constitutes an affront to our colleagues, a degradation of the honored traditions of our profession, and a violation of our American democratic ideal, therefore be it

"*Resolved*, that Article 5 of the Constitution and Bylaws of the American Medical Association shall be amended to state 'No constituent association shall exclude from membership any physician for other than professional or ethical reasons', and also be it

"*Resolved*, that the delegates of the Medical Society of the County of New York are hereby instructed to introduce this proposed amendment at the annual meeting of the House of Delegates of the Medical Society of the State of New York, to be held in 1949, to the end that this proposed amendment shall be introduced at the annual meeting of the House of Delegates of the American Medical Association to be held in 1949, and further be it

"*Resolved*, that the delegates of our County Society firmly impress upon the House of Delegates of the Medical Society of the State of New York that the course of world events today de-

"*Resolved*, by the Medical Society of the County of Herkimer

"1 That the Medical Society of the County of Herkimer urge some of the older members of the House of Delegates to the American Medical Association from the Medical Society of the State of New York to refrain from seeking re-election

"2 That the House of Delegates of the Medical Society of the State of New York at this meeting include a more representative and younger group of delegates to the American Medical Association House of Delegates in its annual selection of such delegates"

SPEAKER ANDRESEN Referred to the Reference Committee on Miscellaneous Business (A), of which Dr Andrew A Eggston, of Westchester, is chairman

Section 41 (*See 117*)

Medical Indemnity Payments

DR. ANTHONY C GALLUCCIO, *Bronx* This is a short resolution presented by the delegation of the Bronx County Medical Society

"WHEREAS, the medical profession has consistently supported the right of a patient to free choice of physician, and

"WHEREAS, contract restrictions under certain voluntary insurance plans tend to deny or restrict the right of free choice of physician, therefore, be it

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York endorse in principle legislation that will preserve this right of free choice, especially as it pertains to indemnity payments to patients insured in voluntary insurance plans"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part VII, of which Dr Guy S Philbrick, of Niagara, is chairman

Section 42 (*See 152*)

Endorsement of the American Medical Association 12-Point Program

DR. J P HENRY, *Monroe* This resolution was adopted by the Medical Society of the County of Monroe at a meeting on the 15th day of March, 1949, and I was instructed to introduce it

"WHEREAS, the future of medicine in the United States depends upon the maintenance of that democratic system which has already led to a standard of medical care and public health superior to that in any other country, and

"WHEREAS, medical care is expanding as fast as possible in the United States during its postwar stage, especially considering that one third of the American physicians served in the armed forces, many of whom have been but recently returned to civilian life, and

"WHEREAS, there are in the 81st Congress bills whose purpose is to provide a national health insurance and public health program, and

"WHEREAS, these measures would institute a system of compulsory health insurance and compel the imposition of an additional payroll tax to finance them, thus causing a hardship to the average wage earner, and

"WHEREAS, compulsory health insurance would lower the quality of medical care, impair the relationship between doctor and patient, and lead to the control of American medicine by an enormous bureaucracy, and

"WHEREAS, there is now available a wide variety of voluntary prepaid medical care insurance plans which provide the public with the opportunity to budget for expenses of medical care without dictation by the government, now, therefore, be it

"*Resolved* by the Medical Society of the County of Monroe, meeting in regular session this fifteenth day of March, 1949

"1 That the members of the Medical Society of the County of Monroe affirm their unanimous opposition to any present or future bills embodying the compulsory health insurance principle.

"2 That the members of the Medical Society of the County of Monroe approve and endorse wholeheartedly the 'Twelve-Point Program' adopted by the American Medical Association

"3 That we endorse the local implementation of the A M A program as contained in the Monroe Plan

"4 That for the purpose of encouraging the very healthy upsurge of physician interest in medical-economic problems, the following are recommended

"(*a*) Major problems to be considered by the House of Delegates should be sufficiently publicized prior to action to allow county and State Society members to advise their delegates of local opinion on the problems in question

This implies that as far as practical, the agenda of the House of Delegates meetings be submitted to each county society

The intent of this recommendation is to stimulate free discussion of major policy by all physicians

"(*b*) Liberalization of the editorial policy of the *Journal of the American Medical Association* is suggested so that minority opinion can comfortably be given expression. The establishment of a democratic discussion forum in the A.M A. *Journal* will do much to clarify intraprofessional differences The opportunity for ventilating repressed convictions can operate to produce insight, interest, and necessary compromise in problems facing all physicians

"(*c*) Establishment of a Bureau of Information which will regularly channel detailed current information to the county society level We feel that there is an unforgivable ignorance by physicians, in general, on problems of medical economics This ignorance stems from a lack of facilities for obtaining factual information, as well as from indifference on the part of physicians Action now, in the face of awakened interest and awakened sense of responsibility, may go far to correct this indifference

"(*d*) The A M A in consultation with state and Federal representatives and leaders in labor, industry, and business should formulate plans whereby the medically indigent can be subsidized for health insurance"

SPEAKER ANDRESEN Referred to the Reference Committee on Miscellaneous Business (A), of which Dr Andrew A. Eggston, of Westchester, is chairman.

a representative of the five county medical societies of Greater New York be appointed to the Committee on Legislation of the Medical Society of the State of New York."

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part IX, of which Dr William B Rawls, of New York, is the chairman

Are there any further resolutions?

Section 38 (*See 113*)

Free Choice of Physicians for Federal Employes

DR. GUY S PHILBRICK, *Niagara* I am submitting the following resolution to the House of Delegates at the request and direction of the Advisory Subcommittee on Workmen's Compensation

"WHEREAS, it is the custom of the U S Employes Compensation Commission to appoint designated surgeons in all localities where a U S Marine Hospital or Veterans Facility is not available for the care and treatment of injured employes, and

"WHEREAS, all injured employes are directed to one of these designated surgeons if injured in line of duty, and

"WHEREAS certain other branches of the Federal government, namely, the Veterans Facility, have recognized the free choice of physician plan in home treatment of veterans, and

"WHEREAS, all injured employes in New York State enjoy this privilege under the New York State Compensation Law, now, therefore, be it

"*Resolved*, that this House direct its delegates to the annual meeting of the American Medical Association to present a resolution requesting that provision be made in the Federal law on workman's compensation that all Federal employes be granted free choice of physician for injuries sustained in line of duty"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part X, Workmen's Compensation, of which Dr A. Wilbur Duryee of New York, is the chairman

Section 39 (*See 157*)

Opposition to Senate Resolution 5 on National Health Insurance and Request for Such Action by the American Medical Association

DR. JAMES GREENOUGH, *Otsego* This resolution is introduced at the request of the Otsego County Medical Society

"WHEREAS, there has been introduced into the Congress of the United States a bill known as *S 5*, whose purpose is to provide a national health insurance and public program, and

"WHEREAS, it is the belief of the members of this Society that the passage of this bill would be to the disadvantage of those needing medical care for the following reasons

"1 The control of medical care by public officials who have had no medical training or experience would inevitably lead to political interference in professional matters and would result in the development of an ineffective and enormously costly Federal bureaucracy

"2 The removal of private practitioners to the category of servants of a bureaucracy has been shown in other countries to result in indiscriminate abuse of the privilege of medical care, with overloading of available facilities so that the patient who needs care may be and

"WHEREAS, it is the belief of this Soc payroll deduction financing will obscure cost of a national health program and the annual budgeting and appropriative of the President and the Congress, and

"WHEREAS, the members of the Society turbed by the inevitable consequences considered health legislation, and

"WHEREAS, the 12-point program adva the American Medical Association, Febru 1949, while commendable, is not a specifi native plan to the proposed bill *S 5*, and

"WHEREAS, it is the right of the public tients to participate in the development of care plans, now, therefore, be it

"*Resolved*, by the members of this Ho Delegates

"1 That they affirm their unanimous sition to *S 5*

"2 That the Delegates of the Medic ciety of the State of New York to the Am Medical Association be instructed to intr a motion at the annual meeting in 1949 c for a conference under the auspices of the A can Medical Association of representativ labor, industry, the farm groups, medical dental practice, education and research, pital, public health, and other interested lay medical groups for the purpose of establis a joint planning commission Such a plan commission should immediately organize direct comprehensive studies for the formulat of a comprehensive detailed plan for preventi and curative medicine for the nation"

SPEAKER ANDRESEN Referred to the Referen Committee on Miscellaneous Business (A), of wh Dr Andrew A Eggston, of Westchester, is chairma

Section 40 (*See 155*)

Suggestion for a More Representative Group of Delegates to the American Medical Association

DR. GEORGE A. BURGIN, *Herkimer* This resolution is very respectfully presented by the County of Herkimer, with deep appreciation of the character and dignity that our delegates to the House of Delegates of the American Medical Association have always had

"WHEREAS, the American Medical Association, of which each county medical society is a primary and integral part, has entered upon a campaign of public education, and

"WHEREAS, a tax has been levied against each individual physician who is a member of his county society for the promotion of this educational program, and

"WHEREAS, the Medical Society of the State o New York is the first echelon in the chain of communication with the American Medical Association and its policy committee, and

"WHEREAS, the Medical Society of the State of New York has been represented by a distinguished group of delegates to the American Medical Association, but the great majority of that group being 'elder statesmen' whose economic situation is probably more or less secure and whose practical and personal relationship to the proposed compulsory health insurance legislation does not have the impact that faces the younger practitioner, now, therefore, be it

tion from the unusual expense of medical emergencies can be provided without compulsion and the paternal interference of government agencies, now, therefore, be it

"*Resolved*, by the House of Delegates of the Medical Society of the State of New York assembled in convention in the city of Buffalo, New York, on this 2nd day of May

"1 That it hereby goes on record against any form of compulsory health insurance or any system of political medicine that is now or hereafter may be introduced before the Congress of the United States,

"2 That a copy of this resolution be forwarded to the President of the United States, to each Senator and Representative from the State of New York, and that said Senators and Representatives be, and are hereby, respectfully requested to use every effort at their command to prevent the enactment of such legislation"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part VII, of which Dr Guy S Philbrick is the chairman

Section 47 (See 163, 166)

Redistricting of the District Branches of the Medical Society of the State of New York

DR. CHARLES W MUELLER, *Kings* This resolution is submitted by the Medical Society of the County of Kings and also the Coordinating Council of the five metropolitan county societies of New York

"WHEREAS, the five county medical societies of New York City function through the Coordinating Council for more efficient planning and execution of the duties and responsibilities of said county medical societies, and

"WHEREAS, Greater New York is the only division of New York State in which more than one county is under the local municipal government, and

"WHEREAS, the five county medical societies of New York City have common professional and economic interests different in many respects from those of county societies elsewhere in New York State as evidenced by the following

"1 The Health Department of New York City is directly responsible for the health of the people of the five counties and is not a part of a State Health District

"2 The Department of Welfare of New York City functions in a similar manner and, as of recent date, provides home medical care and many other medical services specifically intended for the residents of New York City only

"3 This City is the only unit in the State wherein public hospitals of more than one county are under the jurisdiction of a single authority, the Commissioner of Hospitals, responsible to the Mayor of New York City

"4. The relationships between the five county medical societies and the aforementioned public hospitals are governed by contacts with the Commissioner of Health, the Commissioner of Hospitals, and the Commissioner of Welfare through the Coordinating Council.

"5 Coordinated professional and economic policies are considered in the function of such city-wide organizations as the Hospital Council of Greater New York and the Hospital Conference of Greater New York, the latter comprising the superintendents of the City's many private hospitals and representatives from their medical boards

"6 Workmen's compensation regulations in four of the five county societies are different from those in effect elsewhere in the State, and

"WHEREAS, professional, economic, and social interests are served most efficiently by an administrative unit created out of consideration of problems common to a community and cognizant of the availability of facilities for readily bringing together all interested parties, now, therefore, be it

"*Resolved*, that the five county medical societies of New York City, for themselves and through the Coordinating Council, request the House of Delegates of the Medical Society of the State of New York, in convention assembled, that in the redistricting of the District Branches of the State Medical Society the five county medical societies of New York City be designated as a District Branch of the Medical Society of the State of New York"

SPEAKER ANDRESEN Referred to the Reference Committee on the Report of the Planning Committee for Medical Policies, of which Dr Thomas M D'Angelo, of Queens, is the chairman

Section 48 (See 153, 160)

Approval of Principles of the Association of American Physicians and Surgeons

DR. THOMAS O GAMBLE, *Albany* Mr Speaker and members of the House of Delegates, I wish to introduce the following resolution

"WHEREAS, bills have been introduced in the Congress of the United States providing for compulsory health insurance, and

"WHEREAS, the great majority of the members of the medical profession feel that such legislation would result in the lowering of medical standards, and

"WHEREAS, the lowering of standards would mean that our patients, whom we are serving to the best of our ability, would suffer, and

"WHEREAS, the House of Delegates of the Medical Society of the State of New York endorses the efforts of our officers, the American Medical Association, and our confreres to inform the public of the dangers of a compulsory health insurance program, and

"WHEREAS, it may be impossible to convince our representatives in Congress that the proposed legislation is dangerous to the public welfare, and

"WHEREAS, the medical profession, while willing to cooperate with all plans which would lead to better care for our patients, refuses to sign any contract which involves compulsion, therefore be it

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York endorses the objectives of the Association of American Physicians and Surgeons, which are as follows

"(*a*) To make available to the people the application of the insurance principle to the costs of major medical emergencies under proper voluntary plans

"(*b*) To educate the people to the use and benefits of voluntary plans of prepayment sickness insurance

"(*c*) To operate an endless public relations program which, first, will correct any errors within the profession, and, then, use every available publicity channel to tell the public what is accomplished in its interest

"(*d*) To conduct a continuing publicity campaign to inform all levels of the public of the

Section 43 (*See 88, 131*)

Remission of Dues for Physicians Leaving to Take Residencies

DR. G S BAKER, *Wyoming* I have been instructed by my county society, Wyoming, to introduce this resolution dealing with the remission of dues for physicians leaving to take residencies

"WHEREAS, several members of the New York State Medical Society have given up their practices to return to teaching institutions for residencies, and

"WHEREAS, these members now have a very limited income and in some instances no income at all, and

"WHEREAS, it is desirable that these doctors continue as members of their county medical societies and the New York State Medical Society, and

"WHEREAS, the continued payment of annual dues constitutes a serious financial burden to these members, be it therefore

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York remit the annual State assessment of members in this category as an encouragement to the undertaking of postgraduate studies, and to relieve these deserving members of the burden of paying dues, this to apply only to those members taking courses of one or more fiscal year's duration"

SPEAKER ANDRESEN Referred to the Reference Committee on Miscellaneous Business (B), of which Dr Norman S Moore, of Tompkins, is chairman.

Section 44 (*See 183*)

Employment of Executive Secretaries of District Branches

DR. STEPHEN R. MONTEITH, *Rockland* This is a personal resolution

"In order more effectively to consolidate the organization of the Medical Society of the State of New York, and particularly to implement the educational campaign in which the Medical Society of the State of New York, together with all other segments of the American Medical Association, is now engaged,

"*Be It Hereby Resolved*, that the Council of the Medical Society of the State of New York be instructed by the House of Delegates to employ an executive secretary for each district branch of the Medical Society of the State of New York, which executive officer shall be an employe of the State Society, directly responsible to the Council"

SPEAKER ANDRESEN Referred to the Reference Committee on Miscellaneous Business (B), of which Dr Norman S Moore, of Tompkins, is chairman

Section 45 (*See 188*)

Blood Banks

DR. JOHN M GALBRAITH, *Nassau* At the meeting of the Nassau County Medical Society, held on April 26, 1949, the following resolution was adopted, with the request that it be presented to the State Society Meeting

"WHEREAS, the routine clinical needs for blood and blood products have been steadily increasing as a result of medical research, and

"WHEREAS, it is occasionally necessary to mobilize large amounts of blood within short periods of time to meet civilian emergencies, and it may be repeatedly necessary to do so in the case of any military emergency, and

"WHEREAS, in many areas of the State facilities are not now adequate to meet these demands, it is hereby

"*Resolved*, that

"1 Each county medical society appoint a committee on blood banks to survey the needs for blood bank service in the county and to be responsible for the medical aspects of all community programs designed to operate existing or expanded services,

"2 In so far as possible, expansion of blood banks be through the strengthening of services provided by approved laboratories in general hospitals and by public health laboratories,

"3 The development of new and the discontinuation of existing facilities be carried out only after a careful evaluation of the needs for such action by all interested agencies including the county medical society and the hospitals in the county,

"4. In any given area the method of blood procurement be determined by agreement among the local agencies concerned, including the county medical society, the local hospitals, the public health laboratory where one exists, the interested voluntary agencies, and, where municipal funds are concerned, the city council or the county board of supervisors, and if the method of voluntary mass donations be agreed upon by such agencies, voluntary agencies such as the American Red Cross be encouraged to assume the responsibility for such procurement programs,

"5 An effort be made jointly by the Medical Society of the State of New York and the State Department of Health to coordinate the activities of blood banks along regional lines so that the procurement of rare blood groups for peacetime needs may be facilitated, and so that large amounts of blood may be readily obtained and adequately transported in case of civilian or military emergency"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of Council, Part IV, of which Dr A. H Aaron, of Buffalo, is chairman.

Section 46 (*See 116*)

Opposition to Imposing Compulsory Health Insurance on American People

DR FLOYD S WINSLOW, *Councilor* This resolution places this House of Delegates formally in opposition to compulsory health insurance

"WHEREAS, there have been introduced in the Congress of the United States bills which would impose compulsory health insurance on the American people for the professed purpose of providing for an extension of medical care and health facilities, and

"WHEREAS, the element of compulsion is contrary to the traditional reliance upon individual initiative and freedom of action that are the bedrock of our system of democracy, and would constitute a sharp departure from our most cherished ideals, and

"WHEREAS, compulsory health insurance would lead to the demoralization of medical service and undoubtedly contribute to a lowering of health standards, the impairment of medical education, and the stifling of research, to which would be added a huge bureaucracy supported by an unprecedented tax burden, and

"WHEREAS, medical care insurance on a voluntary basis already has demonstrated that protec

"WHEREAS, the only means of interpreting the facts concerning the hazards involved in government medicine and the cost thereof to the public is through education, now therefore be it

"*Resolved*, that the Medical Society of the State of New York record at this session its official approval not only of the $25 special assessment of the A.M.A., but also of additional levies if needed in order to carry a dynamic nation-wide program of public education to an effective and successful conclusion"

SPEAKER ANDRESEN Referred to the Reference Committee on Miscellaneous Business (A), of which Dr Andrew A. Eggston, of Westchester, is chairman.

Section 52 (*See 107, 161*)

Amendment of Education Law in Relation to the Practice of Psychiatry

DR. IRVING J SANDS, *Kings* Mr Speaker and members, I have the following resolutions from the Kings County Medical Society

"WHEREAS, psychiatry is a medical specialty and any one lacking a bona fide medical degree who attempts to make a mental diagnosis or gives mental advice in return for a fee actually is practicing medicine, and

"WHEREAS, no matter how well qualified individuals may be in clinical psychology or in psychiatric social work, such individuals, even though they may be licensed or certified in such specific fields, unless they also be psychiatrists, can and do perpetrate immeasurable harm upon unknowing and trusting patients, and

"WHEREAS, the Attorney General of the State of New York in or before 1945 did render an opinion to the effect that 'suggestive therapeutics (hypnosis) is within the meaning of the term "practice of medicine" and its practice is therefore forbidden except by a duly licensed physician or surgeon', and

"WHEREAS, the public too often considers listings in classified telephone directories of psychologists, whether licensed or unlicensed, institutes purporting to teach and/or practice what is described as metaphysics, psychologic guidance, psychotherapy, psychoanalysis, and hypnosis as bona fide evidence of some measure of approval, thereby leaving the door wide open for all manner of quasiqualified charlatanism, and

"WHEREAS, the Medical Practice Act does not specifically include mental and nervous diseases as diseases within the meaning of the law, and

"WHEREAS, as long as psychologists and psychiatric social workers claim only to be giving advice, counsel or guidance, they may, as matters now stand, avoid prosecution for practicing medicine, and

"WHEREAS, Paragraph 4, Section 6501 of the Education Law states 'The practice of medicine is defined as follows A person practices medicine within the meaning of this article, except as hereinafter stated, who holds himself out as being able to diagnose, treat, operate, or prescribe for any human disease, pain, injury, deformity, or physical condition, and who shall either offer or undertake, by any means or method, to diagnose, treat, operate or prescribe for any human disease, pain, injury, deformity, or physical condition', and

"WHEREAS, the State Department of Education through one of its authorized representatives expressed the belief 'that a psychologist should not hold himself out as being able to diagnose or treat any physical condition, which includes mental conditions, according to (that official's) interpretation of the opinion of the Attorney General of New York', now, therefore, be it

"*Resolved*, that the Legislature be requested to protect the public interest further by strengthening the Education Law, accomplishing this by specifically including mental and nervous diseases within the meaning of the law and specifically forbidding psychologists and/or psychiatric workers from practicing medicine, and be it further

"*Resolved*, that the Medical Society of the State of New York actively work for the passage of this legislation"

SPEAKER ANDRESEN Referred to Reference Committee on Report of Council, Part IX, of which Dr William B Rawls, of New York, is chairman Dr Lochner was here of the State Board of Medical Examiners I would suggest that, if possible, Dr Rawls get him to attend his committee meeting It would be well to discuss that matter with him.

Section 53 (*See 98*)

General Practitioners and the Visiting Staffs of General Hospitals

DR. IRVING J SANDS, *Kings* The second resolution reads

"WHEREAS, the general practitioners of medicine have played a dominant role in treating the sick of our country and in maintaining the high level of health of our nation, and

"WHEREAS, the general medical practitioners must constantly keep in touch with the various newer contributions made to the treatment of the sick, and

"WHEREAS, the general medical practitioner needs a hospital to which to send his patients and to acquire skill and experience in the institution of the newer methods of diagnosis and treatment, and

"WHEREAS, certain general hospitals have accepted the plan of limiting membership of their visiting staffs only to specialists in various branches of medicine, be it hereby

"*Resolved*, that it is the consensus of opinion of the House of Delegates of the Medical Society of the State of New York that at least thirty per cent of the members of the visiting staffs to the general hospitals should be comprised of general practitioners of medicine"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part VI, of which Dr Thomas O Gamble, of Albany, is chairman

Section 54 (*See 141, 184*)

Medical Officers for the Armed Forces of the United States

DR. IRVING J SANDS, *Kings* This is the third and last resolution I have to introduce

"WHEREAS, there is a critical shortage of medical officers in the armed forces, and

"WHEREAS, the Secretary of Defense has appealed to medical schools, state and county medical societies, and to the various hospitals, to encourage interns and younger practitioners of medicine to enlist in the armed forces, and

"WHEREAS, the response on the part of the younger medical men has been practically negligible, be it, therefore

value of private practice of medicine and the evils of compulsory health insurance and state or socialized medicine

"(*e*) To earn again the respect for and the understanding of the medical profession by the nation's lawmakers through proper, effective representation in Washington

"(*f*) To effect increasing support of the American Medical Association so that this scientific body may continue to improve upon its contributions to public health and the science of medicine

"(*g*) To organize physicians to agree to participate only in such methods of rendering medical services which are in the public interest Any action of the Association of American Physicians and Surgeons on this is not a proposed strike against the sick public AAPS members will always continue to serve their patients, just as they do now, and have always done in the past, but they avail themselves of their constitutional American right to refuse to do so as serfs of a political medicine bureaucracy

And be it further

"*Resolved*, that the principle of nonparticipation will not be invoked until every available method of blocking the passage of compulsory health legislation has been exhausted, and be it further

Resolved, that nonparticipation will not be invoked until a poll taken of the membership of this Society shows that clear majority favors this principle, and be it further

"*Resolved*, that the secretary of this Society be instructed to notify the presidents and secretaries of our county societies, the president and secretary of the American Medical Association, and the president and secretary of the Association of American Physicians and Surgeons of the adoption of this resolution"

SPEAKER ANDRESEN Referred to the Reference Committee on Miscellaneous Business (A), of which Dr Andrew A. Eggston, of Westchester, is the chairman

Section 49 (*See 94, 144*)

Complaint Against the Welfare Department of Nassau County

DR. E K. HORTON, *Nassau* This is a "quickie" from Nassau County

"WHEREAS, Nassau County Welfare Department is governed by a policy of the New York State Department of Social Welfare which states that all fees for medical care, rendered patients under their jurisdiction, are included in their regular monthly allowances, and

"WHEREAS, on numerous occasions the part of the allowance for medical care has been withheld from the physicians who supplied the services, and

"WHEREAS, the situation is becoming worse, and many physicians are not being paid for services rendered at fees lower than their regular fee, therefore be it

"*Resolved*, that the delegates of the Nassau County Medical Society request the Medical Society of the State of New York to take action in this matter on a State level, to bring about the necessary changes in policy so that physicians supplying medical care to patients under the jurisdiction of the Nassau County Welfare Department shall be paid directly or the checks drawn so that it will be necessary for patient and physician both to endorse them for cashing purposes, and that the white slip included with the check shall state the month in which the services were rendered."

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part VI, of which Dr Thomas O Gamble, of Albany, is chairman

Section 50 (*See 118*)

Voluntary Sickness and Hospital Insurance

DR. C J C PARSONS, *Westchester*

"WHEREAS, in discussing compulsory versus voluntary sickness and hospital insurance with lay audiences the most frequent criticism of the voluntary plans is their lack of comprehensiveness, and

"WHEREAS, the rapid growth of voluntary prepaid medical care insurance is one of the strongest arguments against compulsory insurance, and

"WHEREAS, we believe the voluntary plans must be broadened to include preventive medical and diagnostic services if we are to meet the needs of the people, now therefore be it

"*Resolved*, that the Medical Society of the State of New York urge the Blue Cross and Blue Shield to devise plans, as rapidly as possible, in keeping with good medical practice and actuarial soundness, whereby comprehensive medical and hospital coverage including preventive medicine and diagnostic procedures might be offered to the public and particularly to the low income segment thereof"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part VII, of which Dr Guy S Philbrick, of Niagara, is chairman

Section 51 (*See 149*)

The American Medical Association Assessment

DR. REID R HEFFNER, *Westchester* Mr Speaker and delegates, this is a resolution from the Westchester County Medical Society

"WHEREAS, the President of the United States representatives of the Federal Security Agency and certain senators and representatives are using all possible means to achieve the enactment of some form of legislation which will include a program of compulsory health insurance, and

"WHEREAS, we believe the promoters of this legislation are men not qualified to evaluate health needs nor methods of providing health services but are influenced by political pressure from organized groups that are interested in 'free medical care' and socialistic trends in government, and

"WHEREAS, it is universally conceded that we have the best medical care in the world and the best medical schools, research centers, hospitals and public health systems, and

"WHEREAS, compulsory health insurance leads inevitably to a deterioration in the quality of medical care, to greatly increased over-all costs in providing medical care, and eventually to a complete socialistic economy, and

"WHEREAS, the practicing physicians of the United States who are best qualified to evaluate health needs and methods of providing medical care are overwhelmingly opposed to any system of compulsory health insurance, e g, in Westchester County, on the basis of replies to a questionnaire sent to the 1,100 physicians in the county 95 per cent indicated unalterable opposition, and

nosis, x-ray therapy or radium therapy, as defined in subdivision seven of Section sixty-five hundred and one of this chapter by any person other than a person licensed under the provisions of this article, or article one hundred thirty-three or article one hundred forty-one of this chapter, subject to the conditions and limitations of his license, or a person, firm, association, or corporation who or which has been engaged in such practice for a period of five or more years continuously prior to July first, nineteen hundred fifty, and no such person, firm, association, or corporation shall change its name or sell its franchise or transfer its corporate rights directly or indirectly by transfer, capital stock control, or otherwise to any other person, firm, association, or corporation without permission from the Board of Regents. Any such person, firm, association, or corporation so changing its name or so transferring its franchise or corporate right without such permission shall be deemed to have forfeited its rights to exist and may be dissolved by an action brought by the Attorney General, and any such corporation shall be convicted of a violation of this section and shall forfeit its privileges and rights under this subdivision

"This act shall take effect July 1, 1951"

I move this resolution

SPEAKER ANDRESEN No, that will be referred to a reference committee for study and report back to this House later It will be referred to the Reference Committee on Miscellaneous Business (A), of which Dr Andrew A Eggston, of Westchester, is chairman.

Section 59 (*See 157*)

Suggested Educational Device

DR. HENRY E MCGARVEY, *Westchester* This resolution is presented by the Medical Society of the County of Westchester, and it reads

"WHEREAS, the poster reproduction of Sir Luke Filde's painting called 'The Doctor,' with appropriate information beneath the picture, seems to be an effective means of bringing pertinent information to the public, and

"WHEREAS, the effectiveness of this device will depend largely upon the extent of distribution obtained, now therefore be it

"*Resolved*, that the Medical Society of the State of New York recommend to the American Medical Association and the National Education Campaign Headquarters that a stamp-type reproduction of this picture be made in color with a simple subtitle such as, 'To Keep Politics Out of This Picture, Oppose Compulsory Health Insurance!', this stamp to be printed in such volume that quantities can be sent to every physician in the United States to be affixed to all bills and other mail from his office, large quantities also to be sent to state and county societies with administrative offices to be affixed to all mail sent to the general public, and be it further

"*Resolved*, that at least two copies of this poster be sent to every pharmacy in the United States for display together with quantities of appropriate literature, and be it further

"*Resolved*, that suitable cuts or mats be prepared in various sizes to facilitate the reproduction of this poster on the cover of medical journals and other publications, such as industrial house organs, women's club magazines, and the like, and be it further

"*Resolved*, that arrangements be made, if possible, to have it run at frequent intervals as a free or paid slide on the various television networks and in motion picture theaters"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council Part XI, of which Dr Eugene H Coon, of Nassau, is chairman

Section 60 (*See 155*)

Compulsory Health Insurance

DR. THEODORE R PROPER, *Orange* Mr Speaker and members of the House of Delegates, I have two resolutions which were passed by the Orange County Medical Society at its stated meeting on April 19, 1949

"WHEREAS, there have been introduced into the Congress of the United States bills known as *S 5*, *S 1679*, *H R 783* and *H R 345*, whose purpose is to provide a national health insurance and public health program, and

"WHEREAS, these measures would institute a system of compulsory health insurance and compel the imposition of an additional payroll tax to finance them, thus causing a hardship to the average wage earner, and

"WHEREAS, the compulsory health insurance would impair the relationship between doctor and patient, and lead to the control of American medicine by an enormous bureaucracy, and

"WHEREAS, our country is in an enviable position, recognized as the mecca of medical education, producing and developing the best doctors on earth, and

"WHEREAS, it is probable that any change in our system of dispensing medical care will lead to a deterioration in our medical standards and medical proficiency, and

"WHEREAS the 12-point program advanced by the A.M.A., February 12, 1949, offers an excellent alternative plan to the proposed bill *S 5* and similar measures advocating compulsory health insurance, and

"WHEREAS, the present voluntary health insurance plans throughout the nation have met with amazing success in a very short period of time, now, therefore, be it

"*Resolved* by the Orange County Medical Society

"1 That the members of the Orange County Medical Society affirm their unanimous opposition to *S 5* and similar measures advocating compulsory health insurance

"2 That the President of the United States be urged to consult with the A.M.A. as the representative of the medical profession of the United States to formulate a comprehensive plan for preventive and curative medicine for the nation

"3 That copies of this resolution be transmitted to the President of the United States, the Senators of New York, the Representative in Congress from the Twenty-Ninth Congressional District of New York, the American Medical Association, the Medical Society of the State of New York and the county medical societies of the State of New York.

"4. That this resolution be introduced by the delegates of the Orange County Medical Society in the House of Delegates of the Medical Society of the State of New York at the next annual meeting, May 2, 1949"

SPEAKER ANDRESEN That is referred to the Ref-

"*Resolved*, that it is the consensus of opinion of the House of Delegates of the Medical Society of the State of New York that residencies in the various specialties and assistantships to the visiting staffs of the various hospitals be given only to those young physicians who have given at least two years of active service in the armed forces of the country, and be it further

"*Resolved*, that a copy of these resolutions be sent to the medical superintendent of every hospital in the State of New York and to the president of the board of directors or trustees of such institutions"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part I, of which Dr Scott Lord Smith, of Dutchess, is chairman

Section 55 (*See 112*)

Radiology Workmen's Compensation Fees

DR. CHARLES MUZZICATO, *New York* This resolution has for its purpose the raising of the workmen's compensation fees for radiologists

"WHEREAS, increases were granted under the recent minimum fee schedule of Workmen's Compensation for all other specialties, and

"WHEREAS, the radiology schedule has remained the same since 1938, and

"WHEREAS, the cost of operation of an x-ray specialist's office has increased over 75 per cent, therefore be it

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York take all the necessary steps to recommend at least a 30 per cent increase in every item in the fee schedule pertaining to x-ray, and be it further

"*Resolved*, that a letter regarding the raising of fees paid to radiologists be sent to the chairman of the Workmen's Compensation Board of the State of New York"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of Council, Part X, Dr A Wilbur Duryee, of New York, chairman

Section 56 (*See 164*)

Practice of Medicine by Medical Colleges and Universities

DR. ALFRED ANGRIST, *Queens* I have just two short resolutions They are being introduced by Dr D'Angelo and myself

"WHEREAS, the Medical Society of the State of New York has gone on record on several occasions as being opposed to the practice of medicine for profit by medical schools and hospitals, and

"WHEREAS, the faculties of several medical schools are of the opinion that the medical education of the student is not complete unless he has had some experience in giving patients comprehensive medical care, and

"WHEREAS, these medical schools have formed or are considering forming medical groups to provide comprehensive medical care to prepaid voluntary medical expense insurance groups and other persons in the middle income brackets, be it therefore

"*Resolved*, that the Medical Society of the State of New York through its Council or proper committee invite representatives of the medical schools of this State to discuss this problem and arrive at a solution satisfactory to both parties."

Section 57 (*See 164*)

Practice of Medicine by Hospitals

DR. ALFRED ANGRIST, *Queens*

"WHEREAS, the Medical Society of the State of New York has gone on record on several occasions as being opposed to the practice of medicine for profit by medical schools and hospitals, and

"WHEREAS, medical schools and hospitals have formed or are considering forming medical groups to provide comprehensive medical care on a fee for service basis and to prepaid voluntary medical expense insurance groups and other persons in the middle income brackets, be it therefore

"*Resolved*, that the Medical Society of the State of New York through its Council or proper committee invite representatives of the official hospital associations of this State to discuss this problem and arrive at a solution satisfactory to both parties"

SPEAKER ANDRESEN I am going to refer that to the Reference Committee on Report of the Council Part I, of which Dr Scott Lord Smith, of Dutchess is chairman—the both of them.

DR. THOMAS M D'ANGELO, *Queens* May I say that those matters are in Dr Kenney's report, and I think it would be wise to refer them to the committee that is considering that report.

SPEAKER ANDRESEN Thank you! We will refer them to the Reference Committee on Report of the Planning Committee for Medical Policies, of which Dr Thomas M D'Angelo, of Queens, is the chairman

Section 58 (*See 151*)

X-Ray Treatment and Radium Treatment

DR. MORRIS WEINTROB, *Kings*

"WHEREAS, an x-ray bill failed of passage at the recent session of the State Legislature, the Medical Society of the County of Kings recommends to the House of Delegates the reintroduction of such a measure and proposes its form to be as follows

An ACT To amend the Education Law, in relation to the practice of x-ray diagnosis, x ray treatment and radium treatment

The People of the State of New York, represented in Senate and Assembly, do enact as follows

Section 1 Section sixty-five hundred one of the Education Law is hereby amended by adding thereto a new subdivision, to be subdivision seven to read as follows

7 X-ray diagnosis means that method of medical practice in which demonstration and examination of the normal and abnormal structures, parts or functions of the human body are made by use of x-rays, and any person who holds himself out to diagnose or able to make or makes any interpretation or explanation by word of mouth, writing, or otherwise of the meaning of a fluoroscopic or registered shadow or shadows of any part of the human body made by the use of x-rays, and also the use of x-rays or radium for the treatment of any human ailment shall be deemed to be engaged in the practice of medicine within the meaning of this article

Section sixty-five hundred twelve of such law is hereby amended by adding a new subdivision, to be subdivision five, to read as follows

5 The provisions of this article shall be deemed to prohibit the practice of x-ray diag-

nosis, x-ray therapy or radium therapy, as defined in subdivision seven of Section sixty-five hundred and one of this chapter by any person other than a person licensed under the provisions of this article, or article one hundred thirty-three or article one hundred forty-one of this chapter, subject to the conditions and limitations of his license, or a person, firm, association, or corporation who or which has been engaged in such practice for a period of five or more years continuously prior to July first, nineteen hundred fifty, and no such person, firm, association, or corporation shall change its name or sell its franchise or transfer its corporate rights directly or indirectly by transfer, capital stock control, or otherwise to any other person, firm, association, or corporation without permission from the Board of Regents. Any such person, firm, association, or corporation so changing its name or so transferring its franchise or corporate right without such permission shall be deemed to have forfeited its rights to exist and may be dissolved by an action brought by the Attorney General, and any such corporation shall be convicted of a violation of this section and shall forfeit its privileges and rights under this subdivision

"This act shall take effect July 1, 1951"

I move this resolution

SPEAKER ANDRESEN No, that will be referred to reference committee for study and report back to this House later It will be referred to the Reference Committee on Miscellaneous Business (A), of which Dr Andrew A Eggston, of Westchester, is chairman.

SPEAKER ANDRESEN That is referred to the Ref-

erence Committee on Miscellaneous Business (A), of which Dr Andrew A. Eggston, of Westchester, is chairman.

Section 61 (*See 87*)

Location Bureau for Proper Distribution of Medical Personnel

DR. THEODORE R. PROPER, *Orange*

"WHEREAS, organized medicine has been accused of being reactionary in its attitude toward changes in medicoeconomics, and

"WHEREAS, the medical practitioners who are most receptive to the socializers are those who have been unsuccessful in practice, or recent graduates who cannot find a suitable location for practice, and

"WHEREAS, many of the recent graduates who have had excellent postgraduate training in the general practice of medicine and in the specialties cannot find suitable locations for private practice, and

"WHEREAS, many of the recent graduates who seek advice from the established older physicians receive the usual unfriendly replies, 'Look elsewhere, overcrowded here'—'Go West, young man,' etc , and

"WHEREAS, it is high time that organized medicine realize that it can do a great service to communities that have an insufficient number of doctors, and a similar service to young doctors who go begging for advice regarding such understaffed communities, therefore be it

"*Resolved*

"1 That our State Society add to its various departments and functions a bureau for location.

"2 That proper use be made, toward this purpose, of our State JOURNAL to permit free notices from doctors seeking locations, doctors seeking assistants, and communities anywhere in the United States and its possessions offering satisfactory prospects for medical practice

"3 That our delegates to the State convention in May, 1949, be instructed to present this resolution and urge its adoption in principle at least, leaving the details to the governing Council's better judgment"

SPEAKER ANDRESEN Referred to the Reference Committee on Miscellaneous Business (B), of which Dr Norman S Moore, of Tompkins, is the chairman.

Section 62 (*See 81*)

Displaced Physicians

DR. SAMUEL Z FREEDMAN, *New York* This resolution is being presented on behalf of Dr Harold B Davidson, who could not be here today

"WHEREAS, there is at present a large group of physicians who, with their countrymen, have been rendered homeless and are now living as displaced persons in care of the international refugee organization in Western Germany and elsewhere, therefore be it

"*Resolved*, that the delegates from the Medical Society of the State of New York to the House of Delegates of the American Medical Association be instructed to introduce the following resolution

"*Resolved*, that a committee be appointed to study the problem of displaced physicians in cooperation with the Displaced Persons Commission, the various State authorities and with the international refugee organization."

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part V, of which Dr Harry V Spaulding is chairman

Section 63 (*See 85*)

Bed Facilities in Municipal and Voluntary Hospitals

DR. THOMAS F MCCARTHY, *Bronx* This resolution is introduced by myself personally

"WHEREAS, any increase in hospital bed capacity, either through the construction of new hospitals or extension of existing facilities, will be largely through the allocation of governmental funds, Federal or state, and

"WHEREAS, rapid expansion of voluntary hospitals and medical insurance plans may be anticipated in the immediate future, and

"WHEREAS, such expansion will multiply the number of patients that will require semiprivate and private hospital beds, and

"WHEREAS, such accommodations are proportionately small in voluntary hospitals and totally lacking in governmental hospitals, therefore be it

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York request the Council through its appropriate committee to present these pertinent facts to the proper authorities concerned with hospital planning, and be it further

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York request the Council to take whatever action it may consider feasible in the correction of present restrictive regulations in voluntary and municipal hospitals"

SPEAKER ANDRESEN Referred to the Reference Committee on Miscellaneous Business (B), of which Dr Norman S Moore, of Tompkins, is chairman.

Section 64

National Physicians Committee

DR FREDERICK A. WURZBACH, JR., *Bronx* Mr Speaker, it had been the intention of the Bronx County delegation to present on behalf of Bronx County a resolution requesting the American Medical Association to repudiate the action of the National Physicians Committee in respect to the Dan Gilbert letter It wishes to have recorded in the minutes of this body that such a resolution was unanimously passed at one of the regular meetings of the Bronx County Society before the repudiation by the American Medical Association and the disbanding of the National Physicians Committee

SPEAKER ANDRESEN This is presented simply for information and will not be referred to a reference committee

Section 65 (*See 109*)

Legislation—Larger Committee, News Releases

DR. AARON KOTTLER, *Kings* I have been requested by the Kings County Medical Society to present the following resolution

"WHEREAS, practically every bill introduced at the State Legislature during the past few years seeking to better the professional and economic status of medicine has failed to become a law, while bills introduced by nonmedical ancillary groups have been more successful, thereby further encroaching on the practice of medicine and further limiting its frontiers, and

"WHEREAS, most of the bills that concerned

practice of medicine introduced at the State Legislature during the past few years have been of greater vital significance to practitioners of medicine in the five counties of Greater New York, and

"WHEREAS, the Legislative Committee of the Coordinating Council of the five county medical societies of Greater New York is disturbed by medicine's failure to receive more favorable and deserved support from our State legislators in medicine's efforts to provide the citizens of our State with better medical protection, therefore be it

"*Resolved*, that the Council of the Medical Society of the State of New York be instructed to increase the number on the Legislative Committee which should be geographically distributed throughout the State, and be it further

"*Resolved*, that adequate provision for more effective efforts in the highly necessary practical field of close contact with our legislators be provided for, and be it further

"*Resolved*, that they make available to our State legislators 'to-the-point' brief monthly news releases of dynamic, pictorial, and verbal descriptive value which will serve to keep our legislators constantly and effectively informed of the cogent reasons underlying medicine's requests for the various bills in which it is concerned from the viewpoint of the public interest and that of the practitioners of medicine who serve them."

SPEAKER ANDRESEN Referred to the Reference Committee on Miscellaneous Business (B), of which Dr Norman S Moore, of Tompkins, is the chairman.

Section 66 (*See 164*)

Regulate the Practice of Medicine by Private Nonprofit Hospitals

DR AARON KOTTLER, *Kings* This is a resolution which is similar to one introduced the earlier part of the session in relation to the practice of medicine by private nonprofit hospitals It is a little different, and there are a couple of changes introduced in it as now presented The resolution has the approval of the Kings County Medical Society and has also been considered and approved by the Legislative Committee of the Coordinating Council of the five metropolitan New York county societies

"WHEREAS, the rendering of medical services and the application of the principles of the art and science of medical practice must remain in the hands of qualified physicians practicing individually or in groups, and

"WHEREAS, no government or other agency should be permitted either to control or to render private medical care or services, and

"WHEREAS, the practice of medicine embraces services performed by general practitioners, radiologists, pathologists, anesthesiologists, and other specialists as internists, surgeons, and the like, and

"WHEREAS, hospitals are now engaging in the provision of the services of such specialists without regard to their standing as specialists in the practice of medicine, and

"WHEREAS, in addition to the services of these specialists, hospitals are increasingly active in employing full time specialists in other categories, and the providing of services of these specialists to the public and charging and collecting fees for such services rendered, and

"WHEREAS, the division of fees by individuals and groups with hospitals is forbidden by the accepted codes of medical ethics and by the provisions of the Education Law of the State of New York, now, therefore be it

"*Resolved*, that such activities on the part of hospitals are herewith construed as being in violation of regulations governing the practice of medicine and are therefore condemned, be it further

"*Resolved*, that the Council be instructed to take immediate action under existing legal and ethical codes, to stop these activities by hospitals, and be it further

"*Resolved*, that the Council be instructed to sponsor and support the reintroduction of the Friedman Bill (*Senate Introductory 2402*), which was passed by the State Senate at the last session of the Legislature and which would legally forbid hospitals from carrying on the practices described in this resolution"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Planning Committee for Medical Policies, of which Dr Thomas M D'Angelo, of Queens, is the chairman.

Section 67 (*See 111*)

Physical Medicine—Increase of Fees for Workmen's Compensation Cases

DR. MADGE C L. MCGUINNESS, *New York*

"WHEREAS, increases were granted under the recent fee schedule of Workmen's Compensation for all other specialties, and

"WHEREAS, the fees paid for physical medicine have remained the same, and

"WHEREAS, the costs of office equipment and maintenance have increased greatly in the specialty of physical medicine, therefore be it

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York take all the necessary steps to recommend a substantial increase in every item in the compensation fee schedule pertaining to physical medicine, and be it further

"*Resolved*, that a letter regarding the raising of fees for physical medicine be sent to the chairman of the Workmen's Compensation Board of the State of New York"

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part X, of which Dr A. Wilbur Duryee, of New York, is chairman

Section 68

Notice of Intention to Amend Article V of the Constitution and Chapters III and VII of the Bylaws

DR. JAMES R. REULING, *Treasurer* This is a notice by me, as an individual, of an intention to propose a change in the Constitution and Bylaws

Article V of the Constitution has to do with Officers. After the first sentence, add to the end of the first sentence of Article V, "and the Editor of NEW YORK STATE JOURNAL OF MEDICINE"

I propose changes in the Bylaws as follows

(1) Add to Chapter III, Section 1, which has to do with the election of officers, at the end of the first sentence " annual meeting of the House of Delegates except that the Editor of NEW YORK STATE JOURNAL OF MEDICINE shall be elected by the Council at its first meeting after the close of the annual meeting of the House of Delegates"

(2) Add a new section to Chapter VII of the Bylaws to become a new Section 11, defining the duties of the Editor

Mr Speaker, these have to lie on the table and have to be published thirty days in advance of the next annual meeting

SPEAKER ANDRESEN This is accepted as a motion that these amendments to the Constitution and Bylaws will be presented at the next annual meeting There is no action we have to take on them today

Are there any further resolutions?

Section 69 (*See 86*)

Amend Education Law in Relation to the Practice of Anesthesia

DR. NATHAN BRODY, *Kings* Mr Speaker and members of the House, this is a resolution from the Kings County Medical Society

"WHEREAS, anesthesiology is the study and practice of the art and science of anesthesia in all its forms and all that pertains thereto, and

"WHEREAS, anesthesiology is an integral part of the practice of medicine according to the American Medical Association, the American Hospital Association, and the American College of Surgeons and other scientific and lay organizations, and

"WHEREAS, an anesthesiologist is a physician fully qualified to practice anesthesiology, and

"WHEREAS, an anesthetist is any person who administers an anesthetic, and such person may be a layman, podiatrist, nurse, dentist, veterinarian, or physician performing a technical procedure, and

"WHEREAS, inhalation therapies, nerve blocks, and fluid therapies are special branches of anesthesiology, and

"WHEREAS, the standards of anesthesiology as set forth by the American Board and American College of Anesthesiology include the following requirements for eligibility to take the examinations leading to certification

(*a*) Graduation from a medical school approved by the American Medical Association

(*b*) License to practice medicine in the state of practice

(*c*) Good standing in the local county medical society

(*d*) Five years limited to anesthesiology of which two years must be in an approved residency in the specialty,

and

"WHEREAS, anesthesiology has progressed to the point where a thorough knowledge of the basic sciences and clinical training in all the branches of medicine has become essential for the background to the study of anesthesiology, and

"WHEREAS, existing confusion in the legal status of anesthesiology in the minds of the medical, hospital, and lay public in the recent opinion from the office of the Attorney General as to whether anesthesiology is medical practice or hospital practice, and

"WHEREAS, this results in misunderstandings and hardships in many instances where hospitals and medical insurance plans are involved in which the physician may be unable to obtain proper remuneration, now therefore be it

"*Resolved*, that anesthesiology be recognized as the practice of medicine, with the following exceptions

(*a*) Dentists be permitted to administer

(*b*) Podiatrists be limited to the use of oc local anesthetics in podiatry

(*c*) Nurse anesthetists who have been a ministering anesthesia prior to the enactment this law be permitted to so continue.

(*d*) To permit the present schools teachi anesthesia to nurses to complete their course instruction to their present enrolment,

and be it further

"*Resolved*, that we request legislation be int duced in the 1950 session of the New York St Legislature establishing anesthesiology as t practice of medicine, and be it further

"*Resolved*, that the Medical Society of the St of New York actively work for the passage of s a law"

SPEAKER ANDRESEN Referred to the Referen Committee on Miscellaneous Business (B), of wh Dr Norman S Moore, of Tompkins, is chairman

Section 70 (*See 79*)

Expression of Approval of Services of Dr George Kosmak, Editor of the NEW YORK STATE JOURN OF MEDICINE

DR. FLOYD S WINSLOW, *Councilor* This reso tion has to do with the Editor of the JOURNAL, an respectfully request the complete attention of ev person in the room during the reading of this reso tion

"WHEREAS, Dr George W Kosmak having many years toiled unceasingly to advance the b interests of the Medical Society of the State New York, as Treasurer in 1937, as Trustee fr 1944 through 1946, as chairman of the Commit on Office Management and Policies in 1942, Trustee member of the Publication Committee 1945 and 1946, and as Managing Editor of NEW YORK STATE JOURNAL OF MEDICINE si October, 1945, at which time he also beca chairman of the Publication Committee,

"WHEREAS, under his able and farsigh leadership the publications of the Society, JOURNAL and the *Directory*, have notably proved in appearance, content, typography, advertising, an effective associate editorial bo has been added to the JOURNAL and the num and quality of the yearly published scient papers has been increased due to his careful edit and vast correspondence with authors, now th fore be it

"*Resolved*, that the Medical Society of State of New York hereby expresses to Dr Geo W Kosmak its hearty appreciation of his untir constructive, and productive thought and ef in the conduct of its publications"

(*Applause*)

The delegates arose and applauded

SPEAKER ANDRESEN That subject was also ferred to in the President's Supplementary Rep given this morning, and I have already referred t to the Reference Committee on Report of the Pr dent, so I believe I will refer this to the same erence committee

DR. W GUERNSEY FREY, *Queens* Is it necessa to refer this to any reference committee? Could not be acted upon here and now? I move its mediate adoption.

SPEAKER ANDRESEN We have to consider president's report on this subject as well, and I thi it would be well to have them come together though we all feel as you do, I think it would be w to have it come up separately

Section 71 (*See 108*)

Injunctive Relief Procedure

DR. MAURICE J DATTELBAUM, *Kings* A committee was appointed last year to do something about the cults, and the decision was made that the injunction bill should be introduced to curb them, but it failed to pass

"WHEREAS, a bill to amend Section 6513 of the Education Law of the State of New York in relation to authorizing the Attorney General to apply for relief by injunction to restrain the commission of any act which is illegal under Article One Hundred Thirty-One of such law, was introduced in the 1949 legislature of the State of New York, and was not passed, therefore be it

"*Resolved*, that the Medical Society of the State of New York request the reintroduction of *Senate Int 94* of 1949 to the 1950 Legislature of the State of New York, and be it further

"*Resolved*, that the Medical Society of the State of New York actively work for the passage of this *bill*."

SPEAKER ANDRESEN Referred to the Reference Committee on Report of the Council, Part IX, of which Dr William B Rawls, of New York, is chairman.

Section 72 (*See 106, 181, 193*)

Basic Science Law

DR. CHARLES GULLO, *Livingston* This resolution follows the line of thought of Dr Dattelbaum in regard to the failure we encountered in Albany at the last session of the Legislature to pass the injunctive relief measure, only our approach is different

"WHEREAS the injunctive procedure for the control of illegal practice failed of being enacted at the last session of the Legislature, and

"WHEREAS, illegal practice in New York State constitues a serious menace to public health, be it

"*Resolved*, that the House of Delegates of the New York State Medical Society approve that through its appropriate committee it have introduced a bill at the next session of the New York Legislature which will incorporate the principle of the basic science law, namely, that anyone who holds himself qualified to treat the sick must show that he is adequately informed in those sciences which are basic in all schools of practice of the healing art This applies whether the law provides for licensure or not, unless he is expressly exempted."

SPEAKER ANDRESEN That is referred to the same committee, the Reference Committee on Report of the Council, Part IX, Legislation, of which Dr William B Rawls, of New York, is chairman

Are there any further resolutions?

There was no response

SPEAKER ANDRESEN If there are no more, we have had fifty resolutions this morning I wish to stress once more the importance of having complete and frank discussions this afternoon at the meetings of the reference committees

Tomorrow morning we are going to call upon the reference committees immediately

There will now be a meeting immediately following of the chairmen of the reference committees over on this side of the room. I won't keep you any longer than about five or ten minutes for a brief briefing session

Are there any other resolutions or motions? If not, we are adjourned until tomorrow morning at 9 A M. sharp

The session adjourned at 12 53 P M.

MORNING SESSION

Tuesday, May 3, 1949

The session convened at 9 A M.

Section 73

Announcements

SPEAKER ANDRESEN I have a couple of announcements to make I am going to call your attention again to the banquet at 7 o'clock tomorrow night. They would like you to get your tickets early

I would also like to announce again regarding the headquarters of the National Education Campaign in the press room. You are all welcome to come to our press room on the mezzanine floor to find out something about the campaign, and perhaps to implement yourself with the tools for your speech-making

It was inspiring yesterday afternoon to go into the foyer here and see the twenty tables at which our reference committees were busy working in the interests of the medical profession and also in the interests of the public. Owing to a careful selection of members of the committees, as I mentioned yesterday, I believe problems were attacked more thoroughly than ever before All tables showed serious activity Some had strenuous arguments with a good deal of table-thumping All subjects had ample discussion, longer than could possibly be given on the floor of the House No committees finished before 4 30 Some worked until 6 A few returned in the evening

The facilities provided for the reference committees were the best we have ever had—much better than those provided for the House of Delegates of the American Medical Association The editor, the many stenographers and typists, and the presence of legal counsel and other experts to advise were of the greatest help to the reference committees, and although more resolutions were considered than ever before I am informed that due to the improvement and shortening of resolutions as a result of the help, money will actually be saved in the reduction of editorial work and in the saving of space in printing the transactions In many instances where resolutions overlapped a single resolution embodying the principles of all was substituted, the wording and content of others were improved, and in some instances resolutions were practically rewritten

All this should save time this morning, and we are going to save time also by having to spend less time in the discussions today We don't want to work into the night as the large number of resolutions might lead us to expect. I am serving notice now that all discussers will be limited strictly to five minutes as required by the Bylaws, and will be al-

lowed to speak only once on any one subject, unless the House votes to extend the time or allow another or second discussion Upon reaching the five-minute point, I shall pound my gavel, and, if the speaker requests it, shall without a formal motion ask for a vote on the question of extension This will apply to any and all discussers

I ask any chairman who believes that his subject requires an executive session to let me know promptly I hope there will not be the necessity for having one

I also ask all of you to report back to your own component societies formally and informally what we have done here Too many doctors are uninformed or misinformed of what goes on at this meeting

As the chairmen are ready with their reports, please come up to the table and give your name to one of the secretaries I shall call you in order of your so reporting

The first committee which has done so is the Reference Committee on Report of the President, Dr Wood

Section 74

Report of the Reference Committee on Report of the President

DR THOMAS B WOOD, *Kings* Your Committee on the Report of the President has given much thought and careful consideration to each idea or suggestion made by our President, Dr Leo Simpson, in his report to the Medical Society of the State of New York as printed in the April 1 issue of the NEW YORK STATE JOURNAL OF MEDICINE, and has made the following comments for the approval of the House of Delegates

First, it has been noted by each member of the Committee, consisting of Drs Wood, Wurzbach, Jr, Morrison, Baker, and Wetherell, that Dr Simpson's report, while brief and concise, covers the course of his administration adequately

In his first paragraph he deplores the actions of certain individuals in our Federal government in Washington, in planning to make the government stronger and the individual ever weaker by means of compulsory health insurance, compulsion, bureaucratic administration, and diminished quality of medical service to those patients who need it most Your Committee feels that every member of this Society should act positively upon his suggestions for combating this impending catastrophe by first supporting the educational program of the A M A, second, by paying the $25 assessment without further delay, and third, by increasing membership in the Society-approved nonprofit voluntary medical care plans

We have increased our membership in these plans by more than one half million in the past year due largely to the efforts of Drs Wertz and Aaron and Mr Farrell Your Committee appreciates and commends the great work and splendid progress made by these men and their committees and recommends that it be carried on to greater heights

Your Committee recommends the adoption of this part of the report, and I so move

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR WOOD The suggestion, made by our Past-President, Dr Louis Bauer, and carried out by Dr Leo Simpson, that the president-elect share one half the responsibility with the president in addressing the district branches throughout the State, is such a [illegible] Committee feels that it should be made a permanent part of the duties of the president-elect and offers the following resolution

"WHEREAS, the burden, in addition to his many other duties, of visiting and addressing all the district branches in one year is too much to put on on the shoulders of our president, and

"WHEREAS, the president-elect, to lighten his administrative duties for the coming year and assist in his training for assuming such responsibilities, should be given authority in the Bylaws, be it therefore

"*Resolved*, that the idea expressed in the resolution be referred to that appropriate committee of the Council to draft such an amendment to our Constitution to amend properly that article and section which applies to the duties of the president and president-elect, *and be it further*

"*Resolved*, that the committee be not limited to this one idea but may present other changes relative to the proper division of duties of these two most important administrative posts of this Society"

I move the adoption of this part of the report with the resolution

DR CLARENCE G BANDLER, *New York* I second it

There being no discussion, the motion was put to a vote, and was unanimously carried.

SPEAKER ANDRESEN The recommendation is adopted The matter will be referred to the Council for consideration next year

DR WOOD Your Committee notes with pleasure the praise given Dr Floyd S Winslow with [illegible] Dwight Anderson and his staff for their remarkable work in stepping up the activities of the Public Relations Bureau. This Bureau, an information bond to the county societies, an active collaborator with the educational campaign of the A M A., and with its multiple services to the profession, is one of great assets of this Society

Due to the prodigious efforts of Dr Kosmak, assisted by Dr Laurance Redway, the State JOURNAL has improved in quantity and quality of its scientific content and the high excellence of its editorials

I move the adoption of this part of the report

DR SAMUEL B BURK, *New York* I second it

SPEAKER ANDRESEN This is in effect a eulogy Dr Kosmak. I will call for a rising vote

The motion was adopted by the members of the House arising and applauding

DR WOOD We take care of that in another part of this

SPEAKER ANDRESEN I am informed there is going to be another reference to this later, so we are premature

DR GEORGE W KOSMAK, *Managing Editor* I don't like this "eulogy" idea (*Laughter*)

DR WOOD In view of the recommendation of our President to this House of Delegates that we evaluate our policy on blood banks as it was formulated last year, your Committee wishes to present the following resolution without any where for your consideration

"*Resolved*, that the Speaker of the House be required to refer this subject matter in the President's report relative to re-evaluating blood banks (unless it has already been done) to the proper policy-making body, for serious study and recommendation for explicit action"

I move the adoption of this part of the report including the resolution.

DR EDWIN A. GRIFFIN, *Kings* I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

DR. WOOD Your Committee notes the good word spoken by your President of the valiant work done by Dr J Stanley Kenney and his Compensation Committee with the help of Dr Kalish and the cooperation of Miss Donlon, the New York State Commissioner of Labor

Your Committee also notes that it is the duty of every member of this Society to help relieve the burden of ever-increasing malpractice suits, now carried by Mr Martin, our legal adviser It is self-evident that each one of us must be constantly alert in the care of our patients and also that we guard ourselves against criticizing our fellow practitioner except to proper authorities

Your Committee also concurs that it was a tremendous blow to the Society to lose the services of two of its staunchest supporters during the past year—Dr Albert A Gartner and Dr Oliver W H Mitchell

I move the adoption of this part of the report

DR. LEO F SCHIFF, *Clinton* I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

DR. WOOD Acting upon the suggestion of your President in his report that the business quarters of the Medical Society of the State of New York at 292 Madison Avenue are rapidly becoming inadequate for its needs, your Committee presents the following, in the form of a resolution, for your action

"*Resolved*, that the chair appoint a committee of three members of the House of Delegates to explore the situation and make recommendations to the Council covering any suggested change"

I move the adoption of this part of the report, including the resolution.

DR EDWIN A. GRIFFEN, *Kings* I second it

There being no discussion, the motion was put to a vote, and was unanimously carried

DR. WOOD It is a great pleasure to note the expression of deep appreciation our President made to those members of the Society's staff who have been of such great assistance to him during the year He also extended his thanks to all those committee members who served the Society so faithfully and well and to the House of Delegates for the honor conferred upon him by electing him President

I move the adoption of this part of the report

The motion was seconded by several, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 75 (*See 14*)

Report of Reference Committee on the Supplementary Report of the President

DR. THOMAS B WOOD, *Kings* In the supplementary report made yesterday morning by our President, Dr Leo Simpson, and referred to your Reference Committee, your Committee wishes to say that it is in entire agreement with the three points so ably stressed

First, that the Public Speaking Bureau of about 175 physicians has been organized by your State Society to carry its educational campaign to the public and the profession against the detrimental legislation now being discussed in Washington, and to exhort our Congressmen and Representatives to vote against such legislation

Second, that the NEW YORK STATE JOURNAL OF MEDICINE has shown constant improvement in its editorials, advertisements, and scientific content, due largely to the ardent work and application of Dr Kosmak and Dr Redway

Third, that the Malpractice Insurance program has instituted a change in the carrier company for the welfare of all members through its new master policy An urgent appeal is again made to come to the aid of our Counsel to better help him in the proper defense of our members It is the obvious duty of every member of the House of Delegates to support actively the group plan of malpractice insurance

Your Committee feels that a unanimous vote of thanks is due Dr Leo Simpson for the prodigious work he has carried on in spite of the many handicaps that have beset his path

I move the adoption of this part of the report

DR EDWARD P FLOOD, *Bronx* I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried.

Section 76 (*See 15*)

Report of Reference Committee on the Report of President-Elect

DR. THOMAS B WOOD, *Kings* The address of Dr John J Masterson, president-elect, just referred to your Committee, rings true to form as to the character and ability of the man now about to assume the full responsibilities of the office of president

His chief concern deals with the step-by-step control of medicine by the Administration and quotes Senator Taft to the effect that the idea of socialized or nationalized medicine, without paying a greater price, is preposterous He mentions the Hoover reports and finds it difficult to account for statements in President Truman's recent message to Congress We believe compulsory sickness insurance will lead to financial, moral, and political sickness Its cost would have tremendous impact on our national economy The implementation of the 12-point program of the A.M A will correct any deficiencies in our present distribution of medical care by evolution, not revolution The real danger is that the people may not be informed in time The physician's office must be a sounding board to reach our people Failure to combat "state medicine" will be due to indifference, apathy, and the let-George-do-it attitude of the privates in our own profession The Woman's Auxiliary is cooperating splendidly in the execution of our plans

Your Committee compliments Dr Masterson on his able address and exhorts all members to take his words to heart and translate them into action

I move the adoption of this part of the report

DR. MAURICE J DATTELBAUM, *Kings* I second the motion.

There being no discussion, the motion was put to a vote, and was unanimously carried

Section 77 (*See 70*)

Report of Reference Committee on Report of President Expression of Approval of Services of Dr George W Kosmak, Editor of the NEW YORK STATE JOURNAL OF MEDICINE

DR. THOMAS B WOOD, *Kings* The resolution introduced by Dr Floyd Winslow of Monroe County is as follows (*Resolution given in full—Section 70*)

Your Committee concurs in the sentiment expressed in this resolution memorializing Dr George W Kosmak, and recommends its adoption

I move the adoption of this part of the report.

DR. CLARENCE G BANDLER, *New York* I second it

SPEAKER ANDRESEN We have already had a standing vote which will let Dr Kosmak see what we think of him I will call the question to make this official

The motion was put to a vote, and was carried amid applause

SPEAKER ANDRESEN Dr Kosmak, will you take a bow?

DR. KOSMAK It is a little bit difficult for me to take this (*Applause*)

DR. WOOD Now I move the adoption of the report of your Reference Committee on the Report of the President as a whole

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER ANDRESEN Thank you, Dr Wood.

We will now hear from Dr Di Natale for his Committee on Constitution and Bylaws

In advance of the discussion on redistricting Secretary Anderton caused to be distributed to each delegate the map showing New York State, and the districts as then constituted (Fig 1)

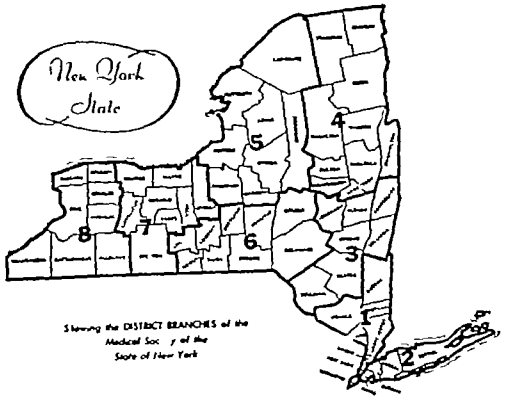

FIG 1

Section 78 (*See 163, 166*)

Report of Reference Committee on Constitution and Bylaws Redistricting

DR. PETER J DI NATALE, *Genesee* Mr Speaker and members of the House, this is the report of the Reference Committee on Proposed Amendments to the Constitution and Bylaws.

First, on the proposed amendment to Article XI of the Constitution, District Branches, which was introduced by Dr Stephen R. Monteith, Rockland County

"*Resolved*, that Article XI of the Constitution and Bylaws of the Medical Society of the State of New York be hereby amended to create a Ninth District Branch, and by such other redistribution as appears advantageous to develop the organizational activities of the district branches,"

your Committee, after hearing from a number of men interested in this matter, moves that Article XI, Section 1, Paragraph 1, be amended to read as follows

"The First District Branch shall comprise the members of the medical societies of the counties of New York, Bronx, Kings, Queens, and Richmond"

Your Committee feels this redistribution will better serve the interests of the five counties comprising Greater New York. Their problems are a little bit unique, and they should have their own district branch

I move you, sir, the adoption of this part of the Reference Committee's report

DR. SAMUEL B BURK, *New York* I second it

SPEAKER ANDRESEN Is there any discussion? All in favor say "Aye", contrary "No" The motion is carried, and the first recommendation of the committee is adopted.

DR. W GUERNSEY FREY, *Queens* May we not defer voting on this until we hear the rest of the redistricting, and what is going to happen in Rockland and Westchester Counties? I think it would be more intelligent to hear the rest of it before we vote on this portion

CHORUS *No* We have already voted

SPEAKER ANDRESEN It has been voted on and the amendment has been adopted. I asked for a discussion and nobody discussed it.

DR ARTHUR J BEDELL, *Past President* I move that we wait until we hear the whole thing It seems to me that would be a more logical method of procedure

DR. DI NATALE If it would facilitate matters, I voted in favor of it, so I will make a motion to reconsider the action just taken

SPEAKER ANDRESEN Will anybody second that motion for reconsideration?

DR. J STANLEY KENNEY, *Councilor* I will second it, yes

There being no discussion, the motion to reconsider was put to a vote, and was lost.

SPEAKER ANDRESEN The motion is lost.

DR. DI NATALE You mean we won.

SPEAKER ANDRESEN The motion to reconsider was lost, so the motion to adopt the Reference Committee's recommendation remains unchanged.

DR. DI NATALE Second, your Committee recommends that Article XI, Section 1, Paragraph 3, be made to read as follows

"The Second District Branch shall comprise the members of the medical societies of the counties of Westchester, Suffolk, Nassau, Rockland, Orange, Dutchess, and Putnam"

SPEAKER ANDRESEN And what do you want to do with that?

DR. DI NATALE I move the adoption of this second proposal.

The motion was seconded by several.

SPEAKER ANDRESEN Is there any discussion of that recommendation?

DR. FREDERICK S WETHERELL, *Onondaga* Where will they have their meetings?

DR. DI NATALE Why not let them decide that?

DR. LEO F SCHIFF, *Clinton* In view of the fact that this is still part of the redistricting, and it would be a far better plan to consider the whole thing together instead of only this part of it, I move that the vote on this be deferred until the entire plan has been completed, and it then can be taken up by sections

SPEAKER ANDRESEN Does anybody second that?

DR. BEDELL Yes, I will second that motion to defer action until the whole matter has been presented instead of this piecemeal procedure

DR. DI NATALE That is all there is, there is no more on that subject of redistricting

SPEAKER ANDRESEN I am informed there is no

further report from this Reference Committee on redistricting

DR. DI NATALE That is the end Those are the only two recommendations we are going to make on redistricting

DR. J STANLEY KENNEY, *Councilor* But the Reference Committee on the Report of the Planning Committee is going to bring in a recommendation on the same subject. I believe it is going to be in accord with this, but I could not be sure Therefore, I believe action on this could very well be deferred and this could very well come up at the time that that committee is ready to make its report on this subject of redistricting

SPEAKER ANDRESEN But the first recommendation in regard to the reconstituted First District has already been acted on

DR. KENNEY The first part has been adopted, I understand that, but this other could be deferred until the Reference Committee on the Report of the Planning Committee comes in with its recommendation on the same subject

SPEAKER ANDRESEN I think the other should have been deferred as well until then

CHORUS No It has been acted on

DR. KENNEY I think it might have been better for the House as a whole if it had been, yes

DR. SCHIFF I am willing to withdraw that motion

SPEAKER ANDRESEN Will you modify it and say that it should be deferred until the consideration of this question is brought up in the report of the Reference Committee on the Report of the Planning Committee? I understand they are going to take up something along that line also

DR. SCHIFF I will be very glad to reword my motion in that form.

DR. BEDELL I will accept that modification

The question was called, and the motion was put to a vote, and was carried

SPEAKER ANDRESEN The motion to defer action on that recommendation relative to redistricting of those counties is carried, and it will be considered when the other committee makes its report

DR. BEDELL Could we have a standing vote?

SPEAKER ANDRESEN Yes, I will ask for a standing vote All in favor of the deferment of this until the other committee reports will rise, now those opposed. The motion to defer is won

Continue, Dr Ni Natale, with your report

Section 79

Report of Reference Committee on Constitution and Bylaws Amendment to Chapter IV, Section 10, of Bylaws—Enlargement of Council Committee on Workmen's Compensation

DR. PETER J DI NATALE, *Genesee* On the proposed amendment to Chapter IV, Section 10, of the Bylaws, enlargement of Council Committee on Workmen's Compensation, introduced by Dr Joseph C O'Gorman, Erie County

"WHEREAS, the Constitution of the Medical Society of the State of New York limits the membership of the Council Committee on Workmen's Compensation to three, and

"WHEREAS, there exists a definite need for enlargement of this Committee so as to give it wider geographic representation, now therefore be it

"*Resolved*, that the Constitution of the Medical Society of the State of New York be amended by inserting in Chapter IV, Section 10, thereof, after the sentence beginning with 'The membership of the Committees' and ending with 'of the Bylaws,' the words 'and the Committee on Workmen's Compensation on (*k*) Chapter IV, Section 9 of the Bylaws'"

Your Committee, after much discussion, moves the adoption of this proposed amendment to the Bylaws—and this was after hearing all those who were interested and who appeared before the Committee, and we were all agreed on this recommendation—so that Section 10, Article IV, would read as follows

"Committees of the Council may include other members of the Society and shall be appointed by the President subject to the approval of the Council Each committee shall include at least one member of the Council who shall be chairman, except that he need not be chairman for the committee or committees in charge of activities (*a*), (*b*), and (*f*), Chapter IV, Section 9 of the Bylaws The membership of committees shall not exceed three including the chairman, except the committee or committees in charge of activities (*a*), (*b*), (*d*), and (*f*),"

and then add after (*f*) "the Committee on Workmen's Compensation"

I move the adoption of this portion of the report

The motion was seconded by several.

DR HOMER J KNICKERBOCKER, *Ontario* To clarify the situation may I ask that the resolution as introduced by Dr O'Gorman be read?

DR. DI NATALE I did read it

SPEAKER ANDRESEN Will you read it again?

The resolution was read

SPEAKER ANDRESEN Is there any discussion?

DR. J STANLEY KENNEY, *Councilor* I am a little confused on that May I ask is this an over-all resolution to enlarge all of the Council committees?

DR. DI NATALE No

DR KENNEY Just this one committee?

DR. DI NATALE Yes

DR. KENNEY And you would change the Bylaws to change the number on one Council committee?

DR. DI NATALE This would give the Council the right if they wished to enlarge the Committee on Workmen's Compensation It is not obligatory upon them, but only if they so desire

DR. KENNEY Why single out one committee?

DR. A W MARTIN MARINO, *Section Delegate* At the suggestion of the Legislative Reference Committee, I move that the amendment to the Constitution and Bylaws increasing the number of members on the Workmen's Compensation Committee be amended so as to also increase the number on the Committee on Legislation If there is any discussion necessary, we will discuss that phase of it

DR. HENRY W MILLER, *Putnam* I second that

SPEAKER ANDRESEN This is an amendment to the amendment proposed by the Reference Committee on Report of the Council, Part IX, on Legislation, and consists simply in allowing an increase also in the Committee on Legislation in addition to the Committee on Workmen's Compensation As an amendment to this amendment I consider it in order Is there anybody to dispute my ruling on this?

There was no dissent expressed.

SPEAKER ANDRESEN Is there any discussion on the amendment to the amendment?

DR. JOSEPH A. GEIS, *Essex* There was a resolution introduced yesterday to have this House vote such a change without referring it as an amendment to the Constitution and Bylaws I believe that was referred to Dr Moore's committee, and this amend-

ment will take care of that resolution in a legal way, otherwise we will have a report from a reference committee for the adoption of something that really should be an amendment to the Constitution and Bylaws This does take care of that resolution in a legal way

DR. JOHN J MASTERSON, *President-Elect* This, in my opinion, is really an amendment to the Constitution In going over the Constitution and Bylaws I note we have 17 committees, on 14 of which the chairman must be a member of the Council We have in the Society over 20,000 members, and I don't think that the President should have to confine the chairmen of fourteen important standing committees to the elected members of the Council, because it means that each Councilor would have to be chairman of at least five committees I think that the proper thing to do is for someone to make a motion that a committee be appointed for the revision of our Constitution and Bylaws In many cases we may have a member who has some very special abilities for a particular kind of work, but because he is not a member of the Council the President is unable to appoint that man as chairman of that committee

Also, I think that the numbers on the Council committees should not be limited to three as the Constitution and Bylaws state at the present time

This is clearly an amendment to the Constitution and Bylaws, and I don't think this body can act on it at this time, although it is for the Speaker to say that and not for me to make that ruling However, I hope before the meeting is over a motion will be made for the appointment of a Committee for the revision of the Constitution and Bylaws (*Applause*)

DR. WILLIAM B RAWLS, *New York* I would like to answer the gentleman back there (*indicating Dr Geis*) This resolution was before my reference committee Dr Marino is a member of our reference committee We realized that the resolution was unconstitutional, so we suggested that Dr Marino make this suggestion for the amendment to the amendment already before the House in order that this resolution might be put through and still be in order as it is at the present time If it is not done this way, the resolution will be out of order, but, if this amendment to the amendment passes, the resolution to increase the number will be in order

DR. KENNEY Mr Speaker and gentlemen of the House, I think there is considerable merit in what Dr Masterson just said. I am not in opposition to increasing the number on the Council committees if it is in the best interests of the Society, and certainly I will welcome broader support in workmen's compensation, but I just don't like this piecemeal attack on the Constitution and Bylaws, enlarging this committee and that committee and not touching the over-all picture I think the remarks of Dr Masterson are well taken We do have an Advisory Committee on Workmen's Compensation at the present time representing the eight districts of the State, and I believe now that that committee has had an opportunity to organize it can carry out the intent of the Erie County resolution until such time as the general revision of the Constitution and Bylaws is undertaken.

SPEAKER ANDRESEN Is there any further discussion?

DR. JOSEPH C O'GORMAN, *Erie* It is not the intent of Erie County to have an Advisory Committee, as has been reported. You all know what an advisory committee means Nothing!

If, after due consideration and after a year's time to study this, you postpone increasing this committee, you are pursuing delay tactics, and you are going to delay action for another year or maybe more The workmen's compensation problems affect 40 or more counties in this State, and we find out from years of experience that the medical profession, even the man in general practice, is not acquainted with its provisions There has been a lack of information given to them. We have tried to rectify that in the Eighth District We have succeeded in Western New York, and we hope to do that for the State as a whole You cannot possibly with your small committee of the Council do the job that needs to be done, and then, when you further provide that a Councilor must be the chairman of that committee, you are asking for almost the impossible, because there are men on the Council that are totally unacquainted with workmen's compensation problems, and when you have as the chairman of the Council Committee on Workmen's Compensation a very estimable gentleman, energetic and very worthy, by the time he learns something you have somebody else to educate We believe it is in the best interests of the profession as a whole to enlarge this committee

We determined in Western New York to have a general conference of the Eighth District for all purposes, an over-all Eighth District conference, so we put that into effect, and out of that has come the Workmen's Compensation Committee for the Eighth District We did not take any autonomy away from the county societies They still ran their own affairs, but we served as their administrators in Western New York We have it working now so that we don't have too many problems We have the cooperation of the carriers, we have the cooperation of labor, we have the cooperation of the self insurers The claims counsel come to the Western New York office in Buffalo, in which we have a paid executive for the Western New York district, and the problems are settled right on the spot, and we don't have so many things go by the board in the State as we used to

The medical profession is being abused by this Workmen's Compensation Law The "X" medical law, the "X" medical policy, wherein the carrier pays the damages and the company pays the doctor, that is one of the things that is one of the abuses

I don't think you should delay increasing this workmen's compensation committee any longer It is not going to interfere with any of the other revisions of the Constitution and Bylaws just because it is increased

Furthermore, I believe the Committee on Legislation should be increased also We know from experience that three men serving on this committee are completely inadequate

This is really from the Eighth District Workmen's Compensation Committee, and we put this resolution in to increase the number for the benefit of the State Medical Society as a whole

SPEAKER ANDRESEN You are not discussing the amendment to the motion You are now discussing the constitutional amendment in the original motion

DR. O'GORMAN If the amendment is going to kill the original motion, then kill the amendment.

SPEAKER ANDRESEN It is quite evident that what we are doing today is to create some stopgaps for defects in our present Constitution and Bylaws I am reliably informed that there is going to be later a resolution to appoint a committee to revise our Con-

stitution and Bylaws generally The Chair has ruled that this amendment to the amendment is proper If it were not proper, we would never be able to get an amendment to the Constitution adopted Somebody could come up each year with an amendment and kill a proposed amendment to the Constitution in that way It is perfectly proper for an amendment to the Constitution, when it is being brought up and discussed, to be amended, and I rule that this is an amendment to the amendment Now is there any further discussion?

DR RAWLS I only offered an explanation a moment ago in reply to a question put by the doctor back there (*indicating Dr Geis*)

DR DI NATALE May I state that I speak for four of the members of our Committee when I say that this was brought to their attention this morning, and they also are all in favor of this amendment to include the Committee on Legislation in that change

DR RAWLS It has been suggested that we change the entire Constitution and Bylaws That means this would be put over for another year The reference committee felt that the coming year would probably be one of the most important we have ever had in legislation of the State Medical Society, and that, even though this is a stopgap, and even though the Constitution and Bylaws generally do need to be amended, we should not be required to wait the entire year before we can increase the number on the Committee on Legislation, because there is too much work to be done Therefore, we would like to see this amendment go through today

SPEAKER ANDRESEN I hope you did not miss what I said I said that I thought these stopgaps were quite necessary in order to make us function this year rather than to wait until the revision of the Constitution and Bylaws generally next year

The question was called, and the amendment was put to a vote, and was carried

SPEAKER ANDRESEN The amendment is carried to allow an increase in the Committee on Legislation Now we come to the amendment concerning the Committee on Workmen's Compensation

The question was called, and the motion was put to a vote, and was carried

SPEAKER ANDRESEN The amendment as amended is carried, and now becomes a part of our Constitution and Bylaws

DR. DI NATALE I now move the adoption of the report as a whole

SPEAKER ANDRESEN You cannot do that You have one matter, action on which was deferred until another reference committee reports

DR. DI NATALE Right

Section 80

Report of Reference Committee on Report of Council, Part V, Public Health Activities (C) Nutrition, Geriatrics, Physical Medicine, and Rehabilitation

DR. HARRY V SPAULDING, *Section Delegate* The Reference Committee on Public Health Activities (C) to include Nutrition, Geriatrics, Physical Medicine, and Rehabilitation, consists of Harry V Spaulding, New York, chairman, Charles L Pope, Binghamton, E Carlton Foster, Penn Yan, Edwin L Harmon, Westchester, and Madge C L McGuinness, New York. This committee, for geographic reasons, has deferred its meeting until we could discuss our assignments at this convention It is our conviction that in these four specialties the Medical Society of the State of New York leads the state societies of the nation

Nutrition Your Committee feels that the Empire State should lead in nutritional studies Dr Norman S Moore, of the School of Nutrition, Cornell University, has contributed a most valuable series of articles on this vital subject His studies ramify every specialty from pediatrics to geriatrics—"the seven ages of man"

Your Committee urges further study of the nutritional problems of the internist, the surgeon, and the pediatrist Jolliffe, Moore, and others have stressed to the medical profession the scientific approach to nutritional studies

One Committee member is bringing these nutritional fundamentals before his local school system, and many communities are following the precepts of our own State's leadership

Your Committee again urges upon us all the value of nutritional studies in every specialty

Geriatrics In the geriatric field again New York is well to the fore Our previous Subcommittee in Geriatrics headed by Dr Stephen R Monteith, assisted by Drs C Ward Crampton and Scott Lord Smith, has distinguished itself in promulgating legislation regarding nursing homes, practical nursing, and furthering medical research in this new, old specialty In institutional work one Committee member has pointed out the correlation of physical medicine, geriatrics, and nutritional specialties, and is giving particular attention to them as a group institutional procedure

Physical Medicine and Rehabilitation In this specialty the nation eyes our progress and leadership Sardonically, it takes a war to advance the progress of medicine and surgery, and one of the most important advances made in medical care during and since World War II has been the increased recognition given to physical medicine and rehabilitation as an integral part of medical care

This field of medicine takes the patient from the bed to the job, the disabled and paralytic back to industry, and teaches and trains the maimed to utilize to the utmost what he has left Rehabilitation centers are being established throughout the State Doctors in various industrial centers are carrying out these principles of rehabilitation, beginning at the earliest possible moment following acute illness or injury

In World War I, Albee organized General Hospital No 3 at Colonia, New Jersey, where modern physical medicine principles were initiated, to be followed by the work of the American Rehabilitation Center—the first curative workshop to be nationally adopted by World War II Civilian centers are being established throughout the nation.

One of our Committee members, having devoted years to these physical medicine problems, concurs in the belief that the surgeon, the internist, the neuropsychiatrist, the psychiatrist, the specially trained nurse, the occupational therapist, the work therapist, and other related specialists must all complete the rehabilitation team.

Your Committee, therefore, urges the physicians and surgeons of the Medical Society of the State of New York to a more physical medicine-, nutrition- and geriatric-consciousness

I have a resolution that was referred to this Committee as well. Shall I report on that now?

SPEAKER ANDRESEN No, I think you had better divide it up You move the adoption of this portion of the report?

DR. SPAULDING Yes, I move it

SPEAKER ANDRESEN Is there a second?

DR. AARON KOTTLER, *Kings* I will second it

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN The report is adopted You have a resolution?

DR. SPAULDING Yes

Section 81 (*See 62*)

Report of Reference Committee on Report of Council, Part V Displaced Physicians

DR. HARRY V SPAULDING, *Section Delegate* Resolution of Dr Harold B Davidson, introduced by Dr Samuel Z Freedman

(*Resolution given in full—Section 62*)

The Reference Committee concurs in this resolution, and I move its adoption

DR. IRVING J SANDS, *Kings* I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried.

SPEAKER ANDRESEN I would like to announce now that we are anxious to get in new resolutions as early as possible After the next reference committee report I will call for any further new resolutions

Section 82 (*See 11A*)

Report of Reference Committee on Report of Council, Part VIII Liaison with Veterans Administration

DR JOSEPH P HENRY, *Monroe* The Report of the Reference Committee on Report of the Council, Part VIII is in two parts, both very short. The first concerns itself with Liaison with Veterans Administration

Your Reference Committee recognizes the complexity and difficulties of this problem and feels that the Liaison Committee has done an excellent job and should be highly commended

Your Reference Committee hopes that the Liaison Committee will continue its efforts in directing the care of the veteran toward "home town" care.

I move the adoption of this report

DR. STEPHEN H CURTIS, *Section Delegate* I second it

There being no discussion, the motion was put to a vote, and was unanimously carried

Section 83 (*See 11B*)

Report of Reference Committee on Report of Council, Part VIII War Memorial

DR. JOSEPH P HENRY, *Monroe* Your Reference Committee compliments and commends the War Memorial Committee on the vast amount of excellent work accomplished and the informative report submitted It recommends that the War Memorial Committee be continued I move the adoption of this report, with its recommendation

DR. BENJAMIN BERNSTEIN, *Kings* I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

DR. HENRY Now I move the adoption of the Report of the Council Reference Committee, Part VIII, signed by Benjamin M Bernstein, Stephen H Curtis, Joseph L Kiley, Halford Hallock, and Joseph P Henry, chairman, as a whole

DR. FREDERICK A. WURZBACH, JR., *Bronx* I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN We are now ready to consider any new resolutions Are there any new resolutions?

There was no response

Section 84

Announcements

SPEAKER ANDRESEN If there are no new resolutions, I have a couple of announcements to make First, all delegates are urged to visit the Scientific Exhibits on the mezzanine floor and the Technical Exhibits on the seventeenth floor of this hotel Please do not fail to register at the registration desk at the entrance to the exhibits on the seventeenth floor

I would also like to announce that Miss Mary Donlon has been invited to speak to us at twelve o'clock Whatever business we have will be suspended then for ten minutes while she tells us something about the new law—what is the name of it?

DR. J STANLEY KENNEY Disability Sickness Insurance Law

SPEAKER ANDRESEN About which many of us know very little, but which is going to affect all of us and the entire public

Section 85 (*See 63*)

Report of Reference Committee on Miscellaneous Business (B) Bed Facilities in Municipal and Voluntary Hospitals

DR. NORMAN S MOORE, *Tompkins* This is a resolution introduced by Dr McCarthy, of the Bronx as an individual

(*Resolution given in full—Section 63*)

I might say that the Reference Committee is quite cognizant of the fact that that resolution should be disposed of, if possible, by this House and not referred However, following a thorough review of the subject with the proponents and opponents of this resolution, your Reference Committee is of the opinion that the issues involved are too far-reaching in character to permit of discussion without further study

Therefore, the Reference Committee recommends that this resolution be referred to the Council. I move the adoption of the recommendation

DR. ABRAHAM KOPLOWITZ, *Kings* I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

Section 86 (*See 69*)

Report of Reference Committee on Miscellaneous Business (B) To Amend the Education Law in the Practice of Anesthesia

DR. NORMAN S MOORE, *Tompkins* Resolution introduced by Dr Nathan Brodie, of Kings

(*Resolution given in full—Section 69*)

At the hearing for this resolution an officer of the Anesthesia Society and the Section Delegate on Anesthesiology appeared before the Reference Committee Both presented arguments in opposition to this resolution Your Reference Committee unanimously supports their contention that anesthesiology is insufficiently defined in the resolution, and that more time is required to allow interested individuals, societies, and institutions to define properly this specialty In addition, the Committee is of the opinion that the content of the resolution is controversial and will raise unpredictable public relations problems with surgical specialty societies and various teaching institutions and hospitals

The Reference Committee recommends disapproval of this resolution

I move the adoption of the recommendation

DR. CLARENCE G BANDLER, *New York* I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN This motion is carried, and the original resolution is lost

Section 87 (*See 61*)

Report of Reference Committee on Miscellaneous Business (B) Location Bureau for Proper Distribution of Medical Personnel

DR. NORMAN S MOORE, *Tompkins* Resolution introduced from the Orange County Medical Society (*Resolution given in full—Section 61*)

The Reference Committee is aware of the fact that the Secretary of the State Society has acted for the past two years as a one-man placement bureau Also the Committee is informed that the NEW YORK STATE JOURNAL OF MEDICINE has a classified ad department, further activity of which will infringe on the classified ad department of the *Journal of the American Medical Association* The Committee feels there is insufficient need for the establishment of an additional bureau for employment in the State Society organization at this time Further, the Reference Committee is of the opinion that the resolution is so worded that it casts reflection on worthy members of our profession. The Reference Committee recommends disapproval of this resolution

I move the adoption of the Reference Committee's recommendation

The motion was seconded by several

SPEAKER ANDRESEN The recommendation of the Reference Committee, which carries with it disapproval of the resolution, is now open for discussion

DR. BENJAMIN M BERNSTEIN, *Kings* One of the important problems that everybody has been discussing in this country is the maldistribution of our doctors throughout the United States How is a young fellow going to get a job or find that one is available and waiting for him some place in the United States? From personal experience with a man in my office who is looking for a connection of that kind I know how difficult the situation is. What did he do? Did he put an ad in the A M A *Journal*? He said, "There are five million others in the A.M A. *Journal* under classified ads, so I am lost in the shuffle", and he is a wise guy Perhaps your contention will be that he should word his ad sufficiently different so as to attract attention Well, I don't know how much attention the ad would attract at best It is lost in the shuffle He cannot find a job he is looking for outside of New York City unless we help him and these other like-minded young men in finding suitable locations so there is a redistribution of the physicians in this country, which is one of the most important things we have been accused of not helping along We have plenty of doctors, we say, but they are not distributed properly

It seems to me that a bureau, not necessarily set up by our State Society, but set up by the American Medical Association as a placement bureau or a redistribution bureau, call it what you will, is necessary—not only one that will simply involve the business of putting classified ads in the A.M.A *Journal*, these because of their very number are lost in the shuffle

I would urge that the House of Delegates of the American Medical Association be asked to set up a placement bureau, to which these men can come or to which these men can write voluntarily, without spending their money or their energy in classifying themselves in a classified column and being lost thereby

DR. MOORE In support of the Reference Committee's recommendation, may I say that this question just discussed was brought in our Committee hearing and thoroughly considered There are men being placed every day by Dr Anderton in the State Society There are ads being placed We had as exhibits A, B, and C, three journals showing the classified advertisement section in the NEW YORK STATE JOURNAL OF MEDICINE This classified ad section will take ads from any state in the Union They do not encourage it, however, because it is in competition with the classified ad section of the *Journal of the A M A* Therefore, in rebuttal, in supporting the Committee, I feel that these points have been covered, Mr Speaker

SPEAKER ANDRESEN Is there any further discussion?

DR. THOMAS B WOOD, *Kings* I would just like to suggest that certain terms used in this resolution be changed somewhat He uses the word "organized" medicine throughout most of his "whereases" As we know, today we have no organized medicine, we have a medical profession Even President Roosevelt in having the Supreme Court declare us a trade did not say that we were organized medicine practicing in restraint of trade He said that we were the *medical profession practicing in* restraint of trade

I think the suggestion has been sent out by the American Medical Association that we disavow the term "organized medicine" so as not to confuse us with organized labor, and it is a good idea Therefore, I would suggest the deletion of the words "organized medicine" in the "whereases" and the insertion therefor of "medical profession"

SPEAKER ANDRESEN Your point is well taken, Dr Wood

Dr Bernstein, would you accept that correction in your "whereases," substituting the term "medical profession" every time "organized medicine" appears?

DR. BERNSTEIN It is not my resolution

The question was called, and the motion was put to a vote, and was carried

SPEAKER ANDRESEN The recommendation of the Committee, calling for the disapproval of the resolution, is adopted

Section 88 (*See 43, 131*)

Report of Reference Committee on Miscellaneous Business (B) Remission of Dues for Physicians Leaving to Take Up Postgraduate Work in Medical Education

DR. NORMAN S MOORE, *Tompkins* Resolution introduced by Dr G S Baker, of Wyoming County

"WHEREAS, several members of the New York State Medical Society have given up their practices to return to teaching institutions for residencies, and

"WHEREAS, these members now have a very limited income and in some instances no income at all, and

"WHEREAS, it is desirable that these doctors continue as members of their county medical societies and the New York State Medical Society, and

"WHEREAS, the continued payment of annual dues constitutes a serious financial burden to these members, be it therefore

"*Resolved*, that the House of Delegates of the

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN The report is adopted You have a resolution?

DR. SPAULDING Yes

Section 81 (*See 62*)

Report of Reference Committee on Report of Council, Part V Displaced Physicians

DR. HARRY V SPAULDING, *Section Delegate* Resolution of Dr Harold B Davidson, introduced by Dr Samuel Z Freedman

(*Resolution given in full—Section 62*)

The Reference Committee concurs in this resolution, and I move its adoption

DR. IRVING J SANDS, *Kings* I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN I would like to announce now that we are anxious to get in new resolutions as early as possible After the next reference committee report I will call for any further new resolutions

Section 82 (*See 11A*)

Report of Reference Committee on Report of Council, Part VIII Liaison with Veterans Administration

DR. JOSEPH P HENRY, *Monroe* The Report of the Reference Committee on Report of the Council, Part VIII is in two parts, both very short The first concerns itself with Liaison with Veterans Administration

Your Reference Committee recognizes the complexity and difficulties of this problem and feels that the Liaison Committee has done an excellent job and should be highly commended

Your Reference Committee hopes that the Liaison Committee will continue its efforts in directing the care of the veteran toward "home town" care.

I move the adoption of this report

DR. STEPHEN H CURTIS, *Section Delegate* I second it

There being no discussion, the motion was put to a vote, and was unanimously carried

Section 83 (*See 11B*)

Report of Reference Committee on Report of Council, Part VIII War Memorial

DR. JOSEPH P HENRY, *Monroe* Your Reference Committee compliments and commends the War Memorial Committee on the vast amount of excellent work accomplished and the informative report submitted It recommends that the War Memorial Committee be continued I move the adoption of this report, with its recommendation.

DR. BENJAMIN BERNSTEIN, *Kings* I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

DR HENRY Now I move the adoption of the Report of the Council Reference Committee, Part VIII, signed by Benjamin M Bernstein, Stephen H Curtis, Joseph L Kiley, Halford Hallock, and Joseph P Henry, chairman, as a whole

DR. FREDERICK A. WURZBACH, JR., *Bronx* I second the motion.

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN We are now ready to consider any new resolutions Are there any new resolutions?

There was no response

Section 84

Announcements

SPEAKER ANDRESEN If there are no new reso tions, I have a couple of announcements to ma First, all delegates are urged to visit the Scient Exhibits on the mezzanine floor and the Techni Exhibits on the seventeenth floor of this hot Please do not fail to register at the registration de at the entrance to the exhibits on the seventeen floor

I would also like to announce that Miss Ma Donlon has been invited to speak to us at twel o'clock Whatever business we have will be su pended then for ten minutes while she tells us som thing about the new law—what is the name of it?

DR. J STANLEY KENNEY Disability Sickne Insurance Law

SPEAKER ANDRESEN About which many of u know very little, but which is going to affect all o us and the entire public

Section 85 (*See 63*)

Report of Reference Committee on Miscellaneous Business (B) Bed Facilities in Municipal and Voluntary Hospitals

DR NORMAN S MOORE, *Tompkins* This is a resolution introduced by Dr McCarthy, of the Bronx as an individual

(*Resolution given in full—Section 63*)

I might say that the Reference Committee is quite cognizant of the fact that that resolution should be disposed of, if possible, by this House and not referred However, following a thorough review of the subject with the proponents and opponents of this resolution, your Reference Committee is of the opinion that the issues involved are too far-reaching in character to permit of discussion without further study

Therefore, the Reference Committee recommends that this resolution be referred to the Council. I move the adoption of the recommendation

DR. ABRAHAM KOPLOWITZ, *Kings* I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

Section 86 (*See 69*)

Report of Reference Committee on Miscellaneous Business (B) To Amend the Education Law in the Practice of Anesthesia

DR. NORMAN S MOORE, *Tompkins* Resolution introduced by Dr Nathan Brodie, of Kings

(*Resolution given in full—Section 69*)

At the hearing for this resolution an officer of the Anesthesia Society and the Section Delegate on Anesthesiology appeared before the Reference Committee Both presented arguments in opposition to this resolution Your Reference Committee unanimously supports their contention that anesthesiology is insufficiently defined in the resolution, and that more time is required to allow interested individuals, societies, and institutions to define properly this specialty In addition, the Committee is of the opinion that the content of the resolution is controversial and will raise unpredictable public relations problems with surgical specialty societies and various teaching institutions and hospitals

The Reference Committee recommends disapproval of this resolution

I move the adoption of the recommendation

son might be out six months in one year and six months in another year and claim two years' remission, and it is up to the county society to determine whether this man was out for one solid year

DR. WOLFF That is why I raised the point because that had occurred to me You can just substitute for the word "fiscal" the words "twelve continuous months"

DR. MOORE Yes, I will do that

SPEAKER ANDRESEN Do you want to make that change?

DR. MOORE Yes, I will accept that Does my committee have any objection to that?

None was expressed

SPEAKER ANDRESEN That change has been made then, changing the word "fiscal" to "twelve consecutive months"

DR. MOORE Right

DR. FENWICK BEEKMAN, *Assistant Treasurer* There are so many questions on this substitute motion that I feel it should be rereferred to the Committee so that it can be rewritten to cover all of these questions that have been brought up

DR. SAMUEL Z FREEDMAN, *New York* I second that motion to rerefer it to the Reference Committee

There being no further discussion, the motion was put to a vote, and was carried

SPEAKER ANDRESEN It is referred back to the Committee for clarification

Section 89 (See 24)

Report of Reference Committee on Miscellaneous Business (B) Medical Specialty Boards—Admission to Examination

DR. NORMAN S MOORE, *Tompkins* Resolution introduced by Dr Freedman of New York, on "Specialty Boards," which resolution was approved at the January 24, 1949, meeting of the Medical Society of the County of New York

(*Resolution given in full—Section 24*)

Delegates, your Reference Committee, after holding what it believes to be an adequate hearing on the subject, has obtained no evidence of discrimination by specialty boards Close study of the resolution reveals it to be too inclusive, and it appears to indict all specialty boards for discriminatory practices The Committee is of the opinion that the Medical Society of the State of New York has no jurisdiction over requirements of the various specialty boards The Reference Committee recommends disapproval of this resolution, and I so move

The motion was seconded by several, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER ANDRESEN The recommendation is adopted and the original resolution is lost

Are there any more committees ready to report? If so, we will be very glad to hear from them

There was no response

Section 90

Report of Group Plan Actuary

SPEAKER ANDRESEN In the meanwhile then, a couple of years ago this body asked for an audit of the malpractice insurance and defense board, and we are ready now to receive the audit from Dr Schiff

DR. LEO F SCHIFF, *Clinton* Mr Speaker and members of the House of Delegates, this report was to have been made to you by the auditor himself, Mr Linder, who spoke to the House last year Unfortunately, illness at the last moment prevented his coming, and he has sent his report to be read I am now reading this to you as a communication

"Acting upon the instructions of your Society, we have completed an audit and actuarial study of your Group Plan of Malpractice Insurance and Defense, the report thereon having been filed with your Secretary Our survey is a continuation of that made last year and utilizes the data compiled during the calendar year 1948 Since our report is necessarily of a technical nature, I shall try in these brief remarks to explain the significance of our findings and conclusions in a way that may be helpful to you

"Before presenting our findings, I would like to draw your special attention to the difficult nature of the actuarial problem involved Insurance rates are predicated on the loss experience which, in the case of malpractice insurance, is composed of the following three elements

"(*a*) The known loss costs as represented by the loss vouchers,

"(*b*) Estimated costs for reported but unsettled cases,

"(*c*) Estimated costs of suits and claims not yet reported, for acts committed some time in the past

"The inordinate delay in the reporting and final disposal of malpractice claims and suits is responsible for the fact that the estimates for the last two groups form an unusually large part of the loss experience. Furthermore, the estimates of the final costs in both of these groups cannot be determined with the same degree of accuracy as those under other forms of liability insurance These factors combine to make rating for malpractice insurance far more difficult than any other kind of liability insurance

"In the case of the incurred but not reported cases, both the number of losses to arise and the ultimate cost of them must be estimated Any method of analysis which is adopted must assume that the same incidence of claims exhibited in the past will be encountered in the future, and the cost of them will closely approximate those most recently closed Should there be a marked change either in the incidence of cases, or if ultimate settlement costs vary materially from the assumed costs, the calculated rates will, of necessity, vary accordingly For these reasons it should be stressed that the best we can achieve is reasonable results based upon a fair period of time, such as three or five years

"The method which we have followed in our analysis is similar to that employed last year, that is, we have utilized the last five expired policy years for rate-making purposes Here the problem is to strike a balance between recency of experience and dependability of data For example, were we to utilize a period of less than five years, our experience would be much more recent On the other hand, the proportion of estimated losses to total losses would be much larger than for the five-year period Even utilizing a five-year period, the closed cases amount to only 41 0 per cent of the total probable loss experience The similar figure for three years would be 27 7 per cent of the total It is, therefore, our considered judgment that we should utilize the five-year period rather than the three-year period, since, in that way, a fair balance is struck between recency of experience and dependability of data

"In our report of last year, we recommended the utilization of the last five expired policy years, and this suggestion has been adopted For the five expired policy years ending with 1947, our results indicate that over this period the rate for metropolitan

Medical Society of the State of New York remit the annual State assessment of members in this category as an encouragement to the undertaking of postgraduate studies, and to relieve these deserving members of the burden of paying dues this to apply only to those members taking courses of one or more fiscal year's duration"

At the hearing of the Reference Committee many officers of your Society were present and gave opinions in favor of the general idea of this resolution. Therefore, your Reference Committee offers a substitute resolution to read,

"*Be It Therefore Resolved* that the House of Delegates of the Medical Society of the State of New York shall remit, on the request of a county society, the annual State dues of members, not in active practice, who are undertaking postgraduate studies, and be it further

"*Resolved*, that immunity from dues shall apply only to those members whose studies continue for one fiscal year or more"

Your Reference Committee recommends the adoption of the substitute resolution, and I so move

The motion was seconded by several

DR. FREDERICK S WETHERELL, *Onondaga* I have a question A young man who is in this course of education comes right home to me, who is not already a member of a county society, but he wishes to be, and who is on his own and cannot afford to pay the dues the first year, what happens to him? Suppose my son applies now for membership in a county society, will he be taken in as of then and his dues remitted up to 1953, which will end nine years of training, during which time he learns nothing about professional medicine and its activities in county societies? That is not included in there, but I merely ask for clarification on that point

SPEAKER ANDRESEN May I inform the questioner that a good many county medical societies have an intern and resident membership, and I think such a man could be included in one of those. He cannot be considered as a member of the State Society unless he is elected to full membership in the county society, isn't that right?

SECRETARY ANDERTON Yes

SPEAKER ANDRESEN So that that question really has nothing to do with this motion

DR. WETHERELL The main question in my mind is should he today make application and then be accepted as a member of the county society? He would have to put up his first year's dues, would he not?

SPEAKER ANDRESEN Yes, in order to become a member

DR. WETHERELL Then would those dues by request be remitted to him?

SPEAKER ANDRESEN No

DR MOORE I move the substitute

SPEAKER ANDRESEN Do you want to make any kind of a recommendation, or amendment, or anything else?

DR. EZRA A. WOLFF *Queens* I would like to ask another question This contemplates that dues be remitted for men whose residencies occupy one or more fiscal years What would happen to a man who had a residency which is not for a year which coincides with a fiscal year? If his residency went from July to July, and our fiscal year runs from January to December, how would that be covered?

SPEAKER ANDRESEN Will you answer that?

DR. MOORE I think the intention of the Committee is that the word "fiscal" means not January to January but a year in which dues would be remitted, in other words, there would be one year which the dues would be remitted.

DR. MOSES H. KRAKOW, *Bronx* Then why n omit the word "fiscal", and make it a year?

SPEAKER ANDRESEN A man might have tw years' dues remitted if his residency occurred in tw different fiscal years, even if it was only of a year duration In other words, if he had four months i one fiscal year and eight months in the other fisc year, he should only have one year's dues remitte He has to be away a whole year during which due are to be remitted, as I understand it.

DR. KRAKOW Why not "continuous study for on full year"?

CHORUS "Twelve months"

SPEAKER ANDRESEN Does anybody want t make an amendment?

DR. JAMES R REULING, *Treasurer* In the substitute resolution offered by the Committee I failed to hear that their county societies were going to remit their dues as well It only says that the State Society dues shall be remitted I am wondering whether that is an oversight or whether it was done with intent by the Committee

DR. MOORE In the substitute resolution there appear two or three phrases that are not in the original, and I will read them

"*Be It Resolved* that the House of Delegates of the Medical Society of the State of New York" —this is new—

"shall remit, on the request of a county society" —and it was presumed that the county society would not ask the State Society to remit its dues unless it already had done so—

DR. REULING That is a presumption?

DR MOORE Right

DR. REULING Why not have it stated as a fact?

DR. MOORE It could be very easily inserted.

SPEAKER ANDRESEN Do you want to add that, that the county society also first remit its own dues?

DR. REULING I move it be rereferred for clarification

SPEAKER ANDRESEN That one point could be added without rereferring it, if you wanted to put in, "on the request of a county society which has already remitted its dues"

DR. MOORE That is right, "on the request of a county society which has remitted its dues"

SPEAKER ANDRESEN Add that to the resolution, and it will cover that one point

DR. MOORE Is there any objection from my committee? If so, please raise your hands

SPEAKER ANDRESEN Is there any objection on that addition?

There was none expressed

SPEAKER ANDRESEN Do you insist on having it referred, Dr Reuling?

DR. REULING No, I don't insist on having it referred, so long as that will be included

DR. WOLFF I should like to know what provision is going to be made for the point I raised

DR. JOHN J MASTERSON, *President-Elect* I think that will have to be decided by each individual county society as to what year he would be entitled to for the remission of his dues in detail

SPEAKER ANDRESEN I think the county societies could settle that We are leaving it to the county society to recommend

DR. WOLFF It is specifically stated that this is to occupy a fiscal year, and I feel that that should be clarified before you act on this resolution

DR. MOORE The Speaker has made it clear that the word "fiscal" should not appear because a per-

Section 93 (*See 29*)

Report of Reference Committee on Report of Council, Part VI Diabetes Detection Drive

DR. THOMAS O GAMBLE, *Albany* The following is a revision of the resolution introduced by Dr Frederick W Williams, of the Bronx County Medical Society, concerning "Diabetes Detection Drive"

"WHEREAS, it is within the province of the American Medical Association on a national, state, and county level to direct public health education and disease detection drives for the public benefit, and

"WHEREAS, lay-directed organizations have taken the leadership in these campaigns, and public fund raising has become a prominent feature of these projects, and

"WHEREAS, the Federal government through the United States Public Health Service has already taken steps in regard to the problem of detection and education in diabetes, and

"WHEREAS, diabetes being neither contagious nor epidemic is not truly a government problem, and

"WHEREAS, the American Diabetes Association, a branch of the profession of medicine, has begun a nation-wide detection drive to be conducted annually and directed solely by members of the medical profession without fund-raising appeals, and

"WHEREAS, the American Diabetes Association has and will carry its detection drive to the people only through the American Medical Association, the state and county societies, therefore be it

"*Resolved*, that the Medical Society of the State of New York record its approval of the Diabetes Association's detection drive, and be it further

"*Resolved*, that the Public Health Committee and the Industrial Medicine Committee of the Medical Society of the State of New York, together with a specially appointed committee for diabetes detection, be instructed to cooperate with the American Diabetes Association and its local associations in conducting diabetes drives in this State, and be it further

"*Resolved*, that the local county medical society, or group of county medical societies, shall determine, in conjunction with the American Diabetes Association, the nature of the local detection drive, and be it further

"*Resolved*, that the delegates to the American Medical Association be instructed to introduce these resolutions at the June, 1949, session of the American Medical Association, or support similar resolutions that may be introduced."

This is the revised resolution, concurred in by the introducer, Dr Williams, and the Committee recommends its adoption

The motion was seconded by several, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 93 (*See 32*)

Report of Reference Committee on Report of Council, Part VI Tenure of Hospital Staff Appointments

DR. THOMAS O GAMBLE, *Albany* Resolution introduced by Dr Alfred P Ingegno, of Kings County, "Tenure of Hospital Staff Appointments," which is also a revised resolution agreed to by the introducer

"WHEREAS, proper and equitable hospital administration should include provisions in hospital bylaws which adequately protect the staff appointments of physicians from capricious or summary termination, particularly after a reasonable probationary period of service or after attainment of appropriate staff rank, be it therefore

"*Resolved*, that the Medical Society of the County of Kings, through its delegates, recommend to the Medical Society of the State of New York that an appropriate committee, working in conjunction with other interested groups, such as the New York Hospital Association, initiate studies to define just and uniform standards for dealing with problems relative to tenure of hospital staff appointments, and other pertinent matters relating to staff appointments"

I move its adoption

The motion was seconded by several, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 94 (*See 49, 144*)

Report of Reference Committee on Report of Council, Part VI Complaint Against the Welfare Department of Nassau County

DR. THOMAS O GAMBLE, *Albany* This is a revision of the resolution introduced by Dr E K Horton, of Nassau County, subject "Complaint Against the Welfare Department of Nassau County"

"WHEREAS, the Nassau County Welfare Department is governed by a policy of the New York State Department of the Federal Social Security Agency, which states that all fees for medical care, rendered patients under their jurisdiction, are included in their regular monthly allowances, and

"WHEREAS, on numerous occasions the part of the allowance for medical care has been withheld from the physician who supplied the services, and

"WHEREAS, the situation is becoming worse, and many physicians are now being paid for services rendered at fees lower than their regular fees, therefore be it

"*Resolved*, that the delegates of the Nassau County Medical Society request the Medical Society of the State of New York to take action in this matter and to bring about the necessary changes in policy by urging the Federal Security Agency to alter its present method of payment so that it will be necessary for patient and physician both to endorse checks for cashing purposes, and be it further

"*Resolved*, that where payment for services rendered has been delinquent through present channels that the physician submit duplicate bills for such services directly to the New York State Department of Social Welfare, since the agency, having authorized such care, is the contracting party and is responsible for fulfillment of the contract"

This is an amended resolution, also concurred in by Dr Horton I move its adoption

DR. AARON KOTTLER, *Kings* I second it

SPEAKER ANDRESEN The motion is to adopt the revised resolution concurred in by the introducer Is there any discussion?

DR. BENJAMIN M BERNSTEIN, *Kings* Many of you will recall we had the same resolution about three or four years ago which we fought in this House to secure, but which was defeated in the fight It was carried on to the American Medical Association, and they also disapproved of the resolution.

Now we are opening the doors to state medicine, if you will. My interpretation of the phrase "so-

should have been $52 40 while for upstate the rate should have been $38 23 The foregoing analysis confirms the view expressed last year that throughout this period the members of the Society have secured their protection for substantially less than a fair rate

"Although our method of calculation differs considerably from that employed in calculating rates from the statistical data maintained by your indemnity representative, our results are substantially the same The chief points of difference lie in the fact that we have not applied an element of probable salvage to the outstanding losses and we have not included any factor for trend As a matter of general principle, we do not agree with the practice of applying any salvage factor to reserves for outstanding cases, because, if reserves are correctly estimated, the salvage factor should be negligible As to trend, we have omitted this factor because, in our opinion, the use of the last five expired policy years should provide its own trend factor

"While the foregoing deals with rates for standard limits, some reference should be made to the percentages utilized in calculating premiums for excess limits The only test which can be applied to this element of the business is whether or not the excess limit rates are reasonable While the loss ratio for excess limits business appears to be reasonable, it must be kept in mind that the excess limits portion of the premium is in the nature of a 'catastrophe' cover In other words, a few large losses may easily turn a moderate profit into a substantial loss

"This audit and actuarial study leads us to the following conclusions

"1 The known data, as represented by the closed vouchers, has been correctly accounted for and carried forward into the statistical data by the Society's indemnity representative

"2 Advantage was taken in the statistical data of salvage factors in arriving at the reserves for outstanding claims and suits before inclusion of these reserves in the loss experience for rate-making purposes

"3 In computing the reserves for the unreported cases, accepted actuarial methods were used in determining both the number of cases which are likely to arise, and the probable cost of disposing of them

"4. Our recommendation of last year, namely, that the last five expired policy years be used for determining current loss costs, has been adopted, and consequently a more realistic picture is presented by the Society's records

"As previously pointed out, the difficulty of rating malpractice insurance is greater than other forms of liability insurance because of the importance of the incurred but not reported cases, which cannot be determined with any mathematical accuracy Such reserves, at best, will always be informed guesses based upon the assumption that history will repeat itself, i.e , that what has happened in the past presents a pattern of what will happen in the future Since it is improbable that this will occur with any exactness, rates predicated on it are more than likely to be too high or too low Some additional adjustment factor appears to be needed to take up the slack or form a cushion for miscalculations in the cost of unreported cases, as well as the natural changes in loss costs which are bound to take place from year to year

"Because of this, there has been introduced into the premium rate a moderate contingent loss fund to provide the necessary cushion. The introduction of this contingent loss factor and its inclusion in the carrying agreement with the Employers Mutuals effective July 1, 1949, may prove to be the step requisite for putting the Society's malpractice insurance rating on a more efficient and sounder basis than at any time in the past"

This, gentlemen, is from Wolfe, Corcoran & Linder, the actuaries It has nothing to do with the Malpractice Insurance and Defense Board Report which will come to you later through the Reference Committee Since Mr Linder himself is not here, I don't believe that it can be profitably made the subject of discussion It is being reported to you, however

Mr Speaker, if there are any technical terms that have been used here, which some member desires to have explained, I may possibly have knowledge enough to explain them, but I am not in a position nor have I the right to attempt to interpret anything that Mr Linder has said

SPEAKER ANDRESEN Are there any such questions?

There was no response

SPEAKER ANDRESEN If not, we thank you, Dr Schiff, for this report.

We will have one more committee report, and then we will have a seventh-inning stretch.

Section 91

Report of Reference Committee on Report of Council, Part II Maternal and Child Welfare

DR. WILLIAM J ORR, *Section Delegate* As your Reference Committee has no resolution referred to it for consideration, our only function was to consider the reports of the Subcommittee on Maternal and Child Welfare as reported in the annual reports. Therefore, your Reference Committee reports as follows The Committee accepts and commends the reports of the Subcommittees on Maternal and Child Welfare as published in the annual reports of the Council of the Medical Society of the State of New York

The Committee further recommends (1) The Medical Society of the State of New York should urge strongly that all hospitals proceed with the fulfillment of the requirements as outlined in Regulation 35 of the Sanitary Code of the State of New York as rapidly as possible (2) The Committee also recommends that a report of the progress made by hospitals in the State in fulfilling these requirements be submitted to the House of Delegates at the next annual meeting

Your Reference Committee moves for the adoption of this report

The motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN We will now allow you a seventh-inning stretch

There was a five-minute recess

SPEAKER ANDRESEN Gentlemen, we have a lot more work to do If we don't get on the job now we will be here until all hours tonight

The next committee report is going to take considerable time Dr Gamble's committee has not only had referred to it the Report of the Council, Part VI, but has had five resolutions as well, so we are going to spend some time on this next report

DR. THOMAS O GAMBLE, *Albany* May I defer the last part of our report until later because that is the only part that will probably provoke a lot of discussion?

SPEAKER ANDRESEN Yes

"*Resolved*, that where payment for services rendered has been delinquent through present channels that the physician submit duplicate bills for such services directly to the New York State Department of Social Welfare, since the agency, having authorized such care, is the contracting party and is responsible for fulfillment of the contract"

SPEAKER ANDRESEN Is there any further discussion?

DR. EDWARD P FLOOD, *Bronx* Mr Speaker and members of the House, Dr Koplowitz suggested that discuss this matter with you from the point of view the Advisory Committee to the Department of Welfare and the Commissioner of Welfare of the ty of New York

You may not be aware of it, but a disgraceful situation has arisen in New York City Large areas populated by racial groups have not been served by physicians in those groups In these cases ere the Federal government contributes to the t of that service, it is impossible for the Department of Welfare to get the neighborhood doctors to e on these cases They are eager, of course, to e on the home relief medical and nursing cases cause the reimbursement is directly from the partment

Commissioner Hilliard came here from Chicago, d that problem was present there Practically ery welfare official in the country is confronted th it to a greater or lesser extent Every welfare ency in the country wants that Federal law ed, and we members of that Advisory Committee, cognizing that it was at the insistence of the medi- l profession that the patient-physician relationship ould not be disturbed by the intervention of a ird party or bureaucrat, and also recognizing the tegrity of the population as a whole, suggested at that method of payment be adopted Of urse, if we find that that method has resulted in rge segments of the population going without medi- l care to which they are entitled, at least we, the embers of the Advisory Committee to the Commissioner of Welfare, are urging the repeal of this gislation The Commissioner is also doing that

The New York State Welfare Agency's representatives who are on that Commission are anxious have the law amended, but it is recognized that, itil the Federal Security Law is revised, that is most impossible of achievement We know if ere is any revision of that law it may be to the etriment not only of the entire medical profession it of the entire population, so I think that at present we will have to recognize that 95 per cent of the eople are honest, and we will have to take our ance on the other 5 per cent. The suggestion is a seful one, the double endorsement, but it is impossible of accomplishment at the present time.

DR. ABRAHAM KOPLOWITZ, *Kings* Mr Speaker nd delegates, I am afraid we are a little confused bout state medicine or compulsory health insurance. Of course we are all opposed to it Some of s have been fighting it since 1919 That is thirty ears, but in all of the various plans that I have eard for compulsory health insurance or voluntary ealth insurance I still have not heard how the indigent are going to be taken care of That is still he government's part of the work. The government will have to pay for it, and that means that ou and I through taxes will have to pay for it if the overnment is going to take on the medical care of he indigent

It seems to me that covering a loophole such as his, where the government pays but the patient keeps the money and the doctor is done out of it, is sensible There is something wrong, and we are trying to correct it Just because we are afraid of socialized medicine in any form, does it mean then that doctors who do work are to be done out of their proper payment? I, for one, can't see that I cannot see why we must be so very much afraid of this bugbear Let us protect ourselves I am not personally interested, the same as most of you are not personally interested, but I remember now for quite a number of years this topic has come up for discussion The ophthalmologists, particularly about ten years ago, were complaining that the patients received checks from the government, and never turned them over to the doctor who rendered services Let us refuse to treat them altogether and be done with it, but if we are going to treat them let us protect ourselves in some fashion The New York City Department of Public Welfare for quite some time, while they pay a little less than the usual fee, do give the doctor the payment for his services directly from the Department

Here they are not asking for that, but they are asking for some form of protection for the doctor I am in favor of that resolution.

SPEAKER ANDRESEN Is there any further discussion?

DR. THOMAS M D'ANGELO, *Queens* I would like to ask, supposing more than one doctor treats a patient, how many endorsements would you need on the check?

SPEAKER ANDRESEN I should think there would be a separate check for each one

DR. GAMBLE I cannot answer the question, but I imagine that the family physician who originally saw the patient, and who has taken care of the patient primarily, would be the one that would sign the check

MEMBER That would be splitting fees then

DR. GAMBLE It is not an attempt to split fees. I don't think one can make that accusation It is not just This Committee felt, as the last speaker said, undoubtedly some patients are refusing to turn over the money to the doctor, money which the government pays them to pay such doctors' bills Even the signing of the check by the doctor does not insure that he is going to be paid, but the doctor at least is going to know that this money has been paid to the person he has taken care of under the welfare system. The only provision that is not contained in this resolution that will really give the doctor a recourse or redress is to appeal directly to the local welfare department As we have stated, this local welfare department has authorized the treatment It is, therefore, the contracting party, and it should pay the bill.

SPEAKER ANDRESEN Is there any further discussion?

DR. SAMUEL Z FREEDMAN, *New York* I would like to discuss this for a minute I think we have to bear in mind one thing in discussing this matter of medical care for the indigent, as to whether or not there shall be a difference in the way payment is made for medical services as compared, for instance, to the way these clients of the welfare department, the indigent, now pay for their rent, their food, their clothing, and for all of their other requirements for which they receive money from the welfare department

If we are to agree that the government, whether it be local, State, or Federal, is to pay the physician directly for services which he may render to the indigent, we must also bear in mind that we are thereby setting a precedent which can come home to

cialization of medicine" embraces payment by the government directly to the doctor for care given to a ward of the government That is what we are trying to do We are asking the government to pay us directly for the care of these people

Somebody said to me yesterday, "Well, doesn't the government pay for these people's shoes and for their groceries?"

Yes, but they do not pay it directly to the shoemaker, to the grocer, or to the butcher They pay it to the recipient, and he in turn pays the grocer, but if he does not he gets no more groceries

However, now we are opening the door too wide Pretty soon we will be placing ourselves in the position of the psychiatrist who was treating a man who said he had vast sums of money coming to him, with a large castle in Spain, and only needed three letters to prove that he deserved these things that were coming to him. "I treated this man for about a year, and I almost had him cured, but finally the letters arrived" I am afraid these letters may arrive as we open the door and try to cure the condition with which we are confronted I have always felt it advisable to shut the door quickly, and keep it closed If the government wants to pay for these people, let them do so by some insurance scheme which we will some day evolve whereby they will have to pay for the indigent and for those unable to pay and for the unemployed.

Of the schemes now provided, whether it be the Taft Bill, the Hill Bill, the Murray Bill, or even the United Medical Service or any other plan, we know none of them provides for those unable to pay for themselves, even when they are unemployed or when they are indigent Let us not open the door too wide. Somebody may walk in, and stay much longer than we want them to

DR. JOSEPH A GEIS, *Essex* On this question that is presented here, if we open the door at all we are going to be sorry We have opposed the idea of any governmental medicine, and one of the steps toward governmental medicine will be direct payment by the government to the doctor We can't eat our cake and have it too Let us be sincere and face this thing We either want state medicine or we don't want it If we want it, O.K , if we don't want it, we don't want it on welfare cases either

SPEAKER ANDRESEN I would like to call on Dr Wood, who is the chairman of our Public Medical Care Committee, to discuss this after which we will call for other discussers

DR. CHRISTOPHER WOOD, *Westchester* Mr Speaker and gentlemen of the House, I think perhaps there is a little misunderstanding about the intent of the resolution as modified by the Reference Committee As I understand it, this does not change our procedure of payment at all It simply recommends that in some way the doctor's name for whom the payment is intended be either included on the check or that in some way the check be directed to him, so there would be more force behind it to have the doctor paid.

As you all recall, this has come up many times previously, and we have always refused to affirm it. We have always voted it down We have always been in favor of the present regulations of the Social Security Board in which payments are made to the recipient of the service

The use of the terms "direct" and "indirect" is always confusing, but under the present regulations the payments are made to the patient, the idea behind that being that the Federal agency has confidence in the integrity of its clients, of the indigent, and they felt that those people were worthy of consideration that they should receive this money and pay their bills for medical services just like they pay any other bill.

We have always felt that we should have confidence in the integrity of the indigents, and our experience in this State has been satisfactory on the whole in that there have not been a marked number or a large number of cases in which payment has not been made There have been, shall we say, many instances but not in a large percentage.

Your Subcommittee has always been in favor of payment to the client, the client paying the doctor—shall we say—secondarily We still feel that way about it, and I think if we change our policy it is certainly a step toward, well, indirect approval of some form of governmental medicine

SPEAKER ANDRESEN Any further discussion?

DR. ALFRED ANGRIST, *Queens* I just want to clarify one point. First, as to the question of the advisability of the government purchasing insurance that was not included in the revised form of this resolution I know that Dr Gamble will bring that matter up as a separate part of his report. We were dealing here with the problem of doctors being paid for services rendered.

On the issue of paying a doctor, the resolution as we reframed it does not alter that procedure. We do not change the method of payment to the client, who in turn must pay the doctor Every member of the committee was in agreement that the doctor should not be paid directly, excluding the client or the indigent patient, but, to forestall existing abuses, which are numerous, it was the consensus of opinion—I think I am formulating this properly—that there would be no harm in including the doctor's name on the check which was going to go to the patient and requiring a double endorsement of both the patient and the doctor on that check, so that at least the doctor would know the patient had received the money, and the patient would then feel some obligation to pay the doctor That was one part of the resolution

MEMBER There is a change in the present procedure then if the doctor's name has to appear on the check as well.

DR. ANGRIST I am sorry, that part of the resolution does require a change in the present procedure, and that was included as a request in the resolution.

Then, secondly, the issue as to whether doctors who were never paid can retain the sum for the services rendered, that is covered in the resolution in that there exists in the present procedure the possibility that the doctor can bill the State agency directly, the Department of Public Welfare I think it is called, or some variant of that, and hold the agency responsible for such payment in that they represent the contracting agency That was part of the discussion, and I think all of those points are covered in the recommendation of the Committee

SPEAKER ANDRESEN I would like to ask Dr Gamble to read the clause that deals with that payment so as to clarify that situation

DR. GAMBLE It reads

"*Resolved*, that the delegates of the Nassau County Medical Society request the Medical Society of the State of New York to take action in this matter and to bring about the necessary changes in policy by urging the Federal Security Agency to alter its present method of payment so that it will be necessary for patient and physician both to endorse checks for cashing purposes, and be it further

in the guest chairs in the rear I am sorry I will not be able to ask him to speak for a few minutes, but I would like him to take a bow Dr Hilleboe, State Commissioner of Health

The delegates applauded as Commissioner Hilleboe rose

Section 96 (See 53)

Report of Reference Committee on Report of Council, Part VI General Practitioners and the Visiting Staffs of General Hospitals

DR. THOMAS O GAMBLE, *Albany* The following is a revision of the resolution introduced by Dr Irving J Sands, of Kings County

"WHEREAS, the general practitioners of medicine have played a dominant role in treating the sick of our country and in maintaining the high level of health of our nation, and

"WHEREAS, the general medical practitioners must constantly keep in touch with the various newer contributions made to the treatment of the sick, and

"WHEREAS, the general medical practitioner needs a hospital in which to send his patients and to acquire skill and experience in the institution of the newer methods of diagnosis and treatment, and

"WHEREAS, certain general hospitals have accepted the plan of limiting membership of their visiting staffs only to specialists in various branches of medicine, be it

"*Resolved*, that it is the consensus of opinion of the House of Delegates of the State of New York that all general hospitals include a reasonable number of general practitioners on their staffs."

I would like to draw your attention to the fact that the original resolution said 30 per cent, which we considered was merely a figure picked out of the air, and it was with the consent of the introducer of this resolution that we substituted "to include a reasonable number of general practitioners on their staffs"

I move the adoption of this resolution

DR. PETER J DI NATALE, *Genesee* I second it

There being no discussion, the motion was put to a vote, and was unanimously carried.

SPEAKER ANDRESEN The recommendation is adopted. Have you anything further?

DR. GAMBLE Yes

SPEAKER ANDRESEN Proceed

Section 97

Report of Reference Committee on Report of Council, Part VI Public Medical Care

DR. THOMAS O GAMBLE, *Albany* This is the part of the report of the Committee that may draw considerable discussion That is the reason I wanted a large number of the House of Delegates present before I presented it, and I purposely delayed it until the last.

Your Reference Committee has studied the report of the Council Committee on Economics, and has approved the statements contained therein. However, your Committee believes that the accomplishment of the State of New York in providing medical care of the highest order can be further improved by the adoption of the following recommendation

That the Federal or State government assist the indigent, including all those who are eligible for old-age assistance, to obtain medical care by purchasing adequate insurance from existing prepayment hospital and medical plans, provided that all voluntary health insurance programs will be entirely in the hands of the State agency acting in consultation with a State Hospital and Medical Care Council and regional hospital and medical care authorities set up in health regions within the State

May I say just a word about this? Your Committee felt that the State of New York, along with the other members of the medical profession in the United States, must not remain static We must present something that we believe is constructive This proposition is included in the ten point program proposed by Dr Engel, president of the Pennsylvania State Medical Society It is included in the Hill Bill Senator Hill, who is a personal friend of mine with whom I went to school and with whom I have corresponded about his bill, recognized when he introduced the Hill-Burton Bill, which was subsequently passed, the danger of the government saying how the hospitals which are to be constructed or where additions are to be made to existing hospitals are to be run. He recognized the danger of the government coming along and saying, "Now, boys, we are going to run these institutions," so he provided in his bill a prohibiting clause, which was acceptable to the American Medical Association and to this State Society, and that prohibiting clause is inserted in this recommendation I would like to read it once more

"provided that all voluntary health insurance programs will be entirely in the hands of the State agency acting in consultation with a State Hospital and Medical Care Council and regional hospital and medical care authorities set up in health regions within the State"

That is the exact wording of Senator Hill's recent bill.

I move the adoption of this recommendation

DR. PETER J DI NATALE, *Genesee* I second it.

There being no discussion, the motion was put to a vote, and was unanimously carried

DR. GAMBLE I move the adoption of the report of Part VI, with the exception of the one resolution which was referred back to the Committee

SPEAKER ANDRESEN I am afraid I will have to rule that you will have to wait until you get through with your Committee report before you make such a motion.

Section 98

Address of William A. Richardson

SPEAKER ANDRESEN I am afraid I will have to interrupt our proceedings for another visitor Of all of the so-called "throwaway" journals that come to our offices, there is one which we don't throw away, but which we read, and that is *Medical Economics* I think I speak for most of us when I say we read that We are honored today to have with us the editor of *Medical Economics* He has been upstairs at the Teaching Day talking about "Britain's Medical Experiment One Year Later," and he has offered to come down here and speak to us and give us a condensation of his talk in ten minutes I take pleasure in introducing Mr William A. Richardson

MR. WILLIAM A. RICHARDSON This is like trying to tell you about everything in five minutes I have been in England and the British Isles generally for the past month directing a study of the National Health Service, and with the help of our correspondents in London and some other people we got in for the occasion we made, I think, a pretty comprehensive study of what is going on in the British Isles, and what the quality of service is that they are giv-

plague us later on when we argue against a third party coming in and paying the bills, because our entire fight against compulsory health insurance is our fear that the government will pay us directly and we will become employes of the government If it is all right to do that in the case of the indigents, what argument can those of us who go out and debate the subject have against this manner of payment being extended to the entire population? If it is wrong in our estimation for the government to pay us directly for one group of patients, it is certainly just as wrong for them to pay us in the matter of the indigent

We have already in the matter of the indigents and the welfare clients had them receive money directly from which they utilize funds to buy their groceries, their clothes, and pay their rent, etc , so why can't that be extended to medical care? In that way we are also establishing a precedent perhaps for implementing arguments for the Taft Bill and other bills of that nature, in which the money will be given to the people but we, as physicians, will have direct contact with the patients and continue our personal relationship

DR. GEIS May I ask a question?

SPEAKER ANDRESEN You may

DR. GEIS Dr Flood said this will take care of about 5 per cent of the welfare patients. If we collect 95 per cent for our welfare patients, aren't we collecting a bigger percentage from them already than we are from our private patients?

DR. JACOB WERNE, *Queens* There is ample precedent for third party payment We have been doing that under workmen's compensation for many years, and none of us has been objecting We have a responsibility in this matter to our members Most of us in the House of Delegates here are not treating these patients We are standing here for this alleged principle of free enterprise, and we are consigning these great areas of patients to the loss of medical service because the general practitioners simply will not go out and take care of these patients when they know they will get gypped out of their fees The analogy drawn between medicine and clothing and groceries does not hold for the simple reason that when they go to the grocer you either pay for your groceries or you don't get them. The same way with rent If you don't pay your rent, the landlord evicts you The physician is called and after he has made his diagnosis or delivered the baby, he cannot very well put it back. I don't think there is any question but that we should meet the facts of life and provide for this endorsement procedure, whereby the physician will at least know the government has paid his patient for the services rendered

DR. JOSEPH L KILEY, *Saratoga* I think we are stepping up the ladder too far when we approach government The higher we go, the worse it gets I happen to know that we have a provision in our county where if the client gets the check and spends the money in a barroom, or poolroom or betting on the horses, it only happens once The men have recourse they know right in the welfare department We do a little investigation, and the next time the doctor is paid direct or the check is held onto and they are sure it goes where it was intended Let us drop this back into our local administration, into our local county societies, because if you keep pitching at this thing you will get somewhere with it.

I heard the suggestion about putting these people in insurance groups The minute you start buying voluntary health insurance for the indigent, the demand for medical care for that class of people will multiply about three times, and you will sabotage your voluntary health plans thereby The man who is industrious, works for a living, pays for his family's expenses, and buys voluntary health protection, is going to have to pay much more if we let the government, as is mentioned in the Lister Hill plans Bill, buy voluntary protection in these non profit for the indigent

I suggest that we forget this thing as far as making it a State-wide resolution, and drop it back in your own local county medical society I know that by talking to your welfare directors it can be done in your own locality without going on record and trying to change this whole proposition as far as checks are concerned

I happen to be the consultant to the welfare department in our county, and I offer to bet any man in the county one hundred dollars that if he took one hundred of our patients and one hundred of his private patients, he would collect more money from the welfare patients for the same amount of treatment at the end of a year than he would from his private patients

Thank you!

SPEAKER ANDRESEN There being no further discussion, we will now put the recommendation to a vote and—

DR. GAMBLE May I say just a word?

SPEAKER ANDRESEN Yes.

DR. GAMBLE I would like to ask the members of my Committee and the House of Delegates if it would be agreeable to you to leave out the first "resolved," namely, that the checks be endorsed by both doctor and the patient, and simply include the final resolution

"*Resolved*, that where payment for services rendered has been delinquent through present channels that the physician submit duplicate bills for such services directly to the New York State Department of Social Welfare, since the agency, having authorized such care, is the contracting party and is responsible for fulfillment of the contract"

If we delete the first resolved of the resolution, and include this latter one, would it be acceptable to my Committee and to the House of Delegates?

DR. FLOOD You will have to amend that to say either the New York State Department of Welfare for upstate people or the Department of Welfare in the New York City area for people down the State, which is autonomous to take care of the New York City cases

SPEAKER ANDRESEN Are you ready for the question?

DR. SAMUEL B BURK, *New York* I move that this matter be referred back to the Committee for clarification

The motion was seconded by several, and as there was no discussion, it was put to a vote, and was carried

SPEAKER ANDRESEN The motion is carried, and it is referred back to the Reference Committee for clarification

Section 95

Presentation of State Health Commissioner Hilleboe

SPEAKER ANDRESEN I asked Dr Gamble to let me interrupt his report for a minute One of the country's great men of medicine, a friend of this Society, with whom we have enjoyed enthusiastic cooperation in our mutual effort to improve the public health, has just entered the room

come brackets, the doctors there, many of them, have lost their private practices, for the most part they have not had any panel patients to carry over into the new scheme, and they are really scratching hard. One man I talked with just about ten days ago told me that he was applying to go to Canada. Whereas great numbers are not yet emigrating, there are quite a few who are thinking of it

One point that ought to be made clear is that no doctor is technically compelled to join the system He can stay out of it technically, but how is he going to live, if there is not enough private practice to support him—and that is the case—how is he going to get by? Well, obviously he cannot, so he is compelled by what one doctor referred to as financial blackmail of the state to come into the system The whole effect, of course, is not to build the men up to a higher level uniformly but to push them down to a common level of mediocrity, and I think that is the greatest drawback of the whole scheme Doctors complain, of course, on a day-to-day basis about the fact that they are not paid enough—that is chief—that they are overworked, and that they are losing their esteem in the eyes of the public, and there seems to be good evidence to support those points The public does not look upon the doctor in quite the same way it did He is now a civil servant He is not always asked to do things, in many cases he is told what to do I think that rubs the average doctor harder, rubs him the wrong way more than perhaps anything else Then, of course, there are many abuses that come up I don't mean to exaggerate these, because in quite a few cases the patients are considerate, but you still hear a lot of complaining about a doctor called to see a patient in a hurry—he got to the house, and he found that the man had a bunion and wanted to know whether it should be removed surgically He could very well have come to the office, and in the old days he would have, but not now

There is no evidence at the moment that doctors are being regimented, at least, I did not find any, but they are very fearful of it. They work under the direction of their local executive councils, and, as I say, while so far they have not been under the thumb particularly, they feel that as time goes on they are going to be

Specialists are doing much better than G P 's, at least financially A new scale of remuneration is coming into effect on the 5th of July this year, and a man starting in a specialty as a full-time worker in a hospital will get at the age of thirty-one a starting salary of $6,800, ranging up above, depending upon his age, to $11,000 There will also be awards for professional distinction. These will range from $2,000 to $10,000, and will be in addition to the basic salary so, by and large, the specialists, while they are not so well off as they were under private practice, are doing much better financially than the G.P 's are, and if something is not done to correct the inequity, the general practitioners are going to become specialists, and there won't be enough G.P 's to go around

Specialists are also paid for what they call domiciliary visits, house calls For such a consultation the specialist gets about $17 If he does any operative procedure, he gets another $8 00, unless it is an O B operation, in which case he gets another $17

Mileage fees are paid in addition to this However, they don't cover any more than the cost of operating the car, as a rule, and there is quite a bit of complaint on the score that the doctor is not paid for the time that he loses in going back and forth from a case that may be some distance from his office, as a matter of fact, if the case is too far off he is going to be disinclined to have any part in it

Perhaps the one conclusion I have come up with after looking at this plan close hand—and this is based largely on costs to G P 's who have seen this thing from both sides, both in the panels and out of them—is that, if we have a plan in this country, perhaps the greatest mistake we could make would be to make it all-inclusive and cover everybody Half the doctors I talked with, if not more, said, "For heaven's sake if you are going to have a scheme like this in the United States, be sure that it is limited to those who cannot afford medical care, and don't cover the others "

Off-the-record talks that I had with people in the Ministry of Health convinced me that the Socialists now in power hope ultimately—this is important I think—to force all British doctors into full-time salaried service in health centers They don't admit it openly, but if you talk to them behind the scenes that is what they will lead you to believe, and I think it is true This would mean putting the medical profession on a civil service status, and of course the crux of the whole argument between the profession and the government is it cannot do what it wants because there are not enough doctors, and there are not enough buildings in which to house them The building program in England is badly bogged down You cannot get a building permit for love nor money, so as a result only one of the health centers that the Government contemplates has been started so far, but that is the thing they are heading for, and if it goes along on that basis I am very much afraid that the example we will have to look at over there will not be an encouraging one to us in this country (*Applause*)

SPEAKER ANDRESEN On behalf of the House of Delegates, I thank you, Mr Richardson, for that illuminating report.

Section 99

Address of Chairman of the Workmen's Compensation Board, Miss Mary Donlon

SPEAKER ANDRESEN I now will ask Dr Kenney to take the rostrum for a moment to introduce another distinguished guest

DR. J STANLEY KENNEY, *Councilor* Mr Speaker and members of the House of Delegates, it is a very distinctive privilege that the Speaker has accorded me to have this opportunity of presenting to you the distinguished lady who is going to speak to you in a few moments As you all know, the Legislature passed the Mailler-Condon Bill. It has been signed by the Governor and is now law, and has become a part of the Workmen's Compensation Law, and is now Article IX of that law The chairman of the Workmen's Compensation Board whose duty it is to administer the provisions of that law has kindly consented to be here today at the invitation of Dr Simpson and talk to you briefly on the important points in this Disability Benefits Law, also to make an important announcement regarding workmen's compensation She has very kindly condescended after her speech to answer any questions that any of you may care to present.

It gives me a great deal of pleasure to present to you the Honorable Mary Donlon, the chairman of the Workmen's Compensation Board of the State of New York.

The delegates arose and applauded.

MISS MARY DONLON Dr Kenney, Dr Simpson, Dr Andresen, ladies and gentlemen, and members of the House of Delegates, I seem to be following Mr Richardson around this morning I said to him as

ing to the public under the new scheme, and equally what effect it is having on the practitioner I cannot do more than give the highest of the high spots, but here goes

The scheme in England, as you probably know, will have its first anniversary on July 5 of this year How is it doing? To us in the United States, facing perhaps a similar scheme, the answer is pretty significant, yet that answer depends, and must depend, rather largely on the observer's personal attitude toward socialization If you go to the British Isles as a socialist, you can find a good many arguments in support of the scheme If you go there, not as a socialist, you can marshal as many arguments against it But you may say, "What do the facts indicate? Surely, they must indicate whether the plan is good or not"

Unfortunately, no There are not enough facts The plan is still so new that the facts, such as they are, are not conclusive, and it probably will not be possible for a number of years really to arrive at a true evaluation of the scheme Meanwhile, the best we can do is to look over what there is and to use our common sense in arriving at least at a tentative evaluation

In order to do this job, and in order to avoid injecting any undue bias into it, we did not do as many investigators have done, go over there and talk to friends of friends We purposely took the Medical Register, picked out every tenth name, and talked to the men whose names appeared on the list after doing that We talked not only to doctors whose names we picked out in this way, but also to the general public, and I think that cross-section was pretty fair too Altogether about three hundred personal interviews were conducted among doctors, the public, the Ministry, and other bodies that might have any information about this

The interviewing took place all over England, Wales, and Scotland. I, personally, made a 2,000 mile tour by car in the principal cities of the British Isles and to many of the small towns and villages

The chief impressions of the scheme we have are these It is giving the people more medical care, but the care is of a relatively low grade. The job being done is thus quantitative not qualitative. The plan is overworking and underpaying the doctor It is a serious threat to his eventual freedom. It should not have been set up, in my opinion, to subsidize the care for the entire population, but simply for the needy There was no evidence we could find that most Britishers, or most Americans for that matter, cannot pay their own medical bills, at least in part. The scheme, as a result of covering everyone, is costing a tremendous sum of money and is going to cost a lot more when it reaches maturity

The big advantage which we have to admit is that the service it has been giving is given to the patient now without any worry about what it is going to cost The doctor can prescribe practically anything he wants, and the patient gets all sorts of benefits that the country at large was not entitled to before. How good those benefits are is, of course, another matter

The principle behind the service then is pretty generally accepted. The real issue is not one of principle but of method What do the British people think of this? Our survey showed most of the Britishers liked the scheme Quite a few are enthusiastic about it. Only one out of every six that we talked with rated it as less than good

The second thing we found out was that the scheme has a lot of drawbacks, and that the people know about those drawbacks Much of their optimism stems from the feeling that these drawbacks are temporary, and that in time patients won't have to wait in queues to see their doctors, and that the quality of the service they get is going to be a lot better

What do the doctors think about it? About three-fifths of the doctors we talked with don't like the scheme They admit advantages to it. They like it from the point of view of what the patient gets. They like being able to prescribe freely and that sort of thing, but by and large they would rather not have it About a fifth we saw liked the scheme, "I don't find much fault with it", the other fifth are on the fence

The Ministry of Health, instead of being fazed by the tremendous costs of the service and the volume of medicine and appliances and services being requested by the Plan, points to this as evidence of the great need that existed before the Plan came into effect A member of the House of Commons just recently said, "What does it matter what it costs, if the needs of our people for medical treatment require such an outlay?" To which another member replied, "What does it matter, indeed? The Americans are paying for it" (*Laughter*)

Without Marshall aid it certainly is unlikely that British could afford the wholesale benefits of the new program. This year the service will cost one and one half billion, or more than ten per cent of Great Britain's entire national budget, and when it matures, we are informed the scheme will probably cost, according to reliable estimates, about two and one half billion dollars or close to fifty dollars a head.

For each national health service patient the government pays the doctor a capitation fee of $3 00 a year, approximately To the shepherds for each breeding ewe it pays $3 30 The doctor who gives superior service under this scheme gets the same capitation fee as the doctor whose work is mediocre The temptation is obvious to do as little as possible There are still plenty of conscientious doctors, and it is fortunate for the country there are How conscientious they will be as time goes on is anybody's guess

The average general practitioner, as far as we could determine has about 2,300 health service patients, but many have the maximum allowed of 4,000 One man I talked with had 4,700 Now, if the average patient under the scheme is attended six times a year—and that is an official figure—the doctor with 4,000 patients may thus undertake 24,000 calls yearly, or 80 calls each working day The average patient who visits a doctor's office gets only about five minutes of his time Many get only a fraction of a minute You say, "How is that possible?" Bad as the picture is, it is not quite as bad as these figures indicate, because a great many of the people who come want a signature on a certificate, or they want a refill of a prescription, so they can be disposed of in a very few seconds That means that there is a little more time at least for those who require other attention

The doctors in the large cities where population is concentrated, and who had large panels under the old panel system, are doing better financially now than they were, and to that extent at least they like the new deal. Men in other areas—and there are a good many of them—where the population is not so concentrated, and who did not handle so many national patients before under the panel plan, are doing relatively worse, and they don't like it, in fact, if you go to some of the places, some of the resort towns, for example, where there used to be quite an accumulation of people in the upper in-

come brackets, the doctors there, many of them, have lost their private practices, for the most part they have not had any panel patients to carry over into the new scheme, and they are really scratching hard. One man I talked with just about ten days ago told me that he was applying to go to Canada. Whereas great numbers are not yet emigrating, there are quite a few who are thinking of it

One point that ought to be made clear is that no doctor is technically compelled to join the system He can stay out of it technically, but how is he going to live, if there is not enough private practice to support him—and that is the case—how is he going to get by? Well, obviously he cannot, so he is compelled by what one doctor referred to as financial blackmail of the state to come into the system The whole effect, of course, is not to build the men up to a higher level uniformly but to push them down to a common level of mediocrity, and I think that is the greatest drawback of the whole scheme Doctors complain, of course, on a day-to-day basis about the fact that they are not paid enough—that is chief—that they are overworked, and that they are losing their esteem in the eyes of the public, and there seems to be good evidence to support those points The public does not look upon the doctor in quite the same way it did. He is now a civil servant He is not always asked to do things, in many cases he is told what to do I think that rubs the average doctor harder, rubs him the wrong way more than perhaps anything else Then, of course, there are many abuses that come up I don't mean to exaggerate these, because in quite a few cases the patients are considerate, but you still hear a lot of complaining about a doctor called to see a patient in a hurry—he got to the house, and he found that the man had a bunion and wanted to know whether it should be removed surgically He could very well have come to the office, and in the old days he would have, but not now

There is no evidence at the moment that doctors are being regimented, at least, I did not find any, but they are very fearful of it. They work under the direction of their local executive councils, and, as I say, while so far they have not been under the thumb particularly, they feel that as time goes on they are going to be

Specialists are doing much better than G P 's, at least financially A new scale of remuneration is coming into effect on the 5th of July this year, and a man starting in a specialty as a full-time worker in a hospital will get at the age of thirty-one a starting salary of $6,800, ranging up above, depending upon his age, to $11,000 There will also be awards for professional distinction. These will range from $2,000 to $10,000, and will be in addition to the basic salary so, by and large, the specialists, while they are not so well off as they were under private practice, are doing much better financially than the G P 's are, and if something is not done to correct the inequity, the general practitioners are going to become specialists, and there won't be enough G.P 's to go around.

Specialists are also paid for what they call domiciliary visits, house calls For such a consultation the specialist gets about $17 If he does any operative procedure, he gets another $8 00, unless it is an O B operation, in which case he gets another $17

Mileage fees are paid in addition to this However, they don't cover any more than the cost of operating the car, as a rule, and there is quite a bit of complaint on the score that the doctor is not paid for the time that he loses in going back and forth from a case that may be some distance from his office, as a matter of fact, if the case is too far off he is going to be disinclined to have any part in it

Perhaps the one conclusion I have come up with after looking at this plan close hand—and this is based largely on costs to G P 's who have seen this thing from both sides, both in the panels and out of them—is that, if we have a plan in this country, perhaps the greatest mistake we could make would be to make it all inclusive and cover everybody Half the doctors I talked with, if not more, said, "For heaven's sake if you are going to have a scheme like this in the United States, be sure that it is limited to those who cannot afford medical care, and don't cover the others"

Off-the-record talks that I had with people in the Ministry of Health convinced me that the Socialists now in power hope ultimately—this is important I think—to force all British doctors into full-time salaried service in health centers They don't admit it openly, but if you talk to them behind the scenes that is what they will lead you to believe, and I think it is true This would mean putting the medical profession on a civil service status, and of course the crux of the whole argument between the profession and the government is it cannot do what it wants because there are not enough doctors, and there are not enough buildings in which to house them The building program in England is badly bogged down You cannot get a building permit for love nor money, so as a result only one of the health centers that the Government contemplates has been started so far, but that is the thing they are heading for, and if it goes along on that basis I am very much afraid that the example we will have to look at over there will not be an encouraging one to us in this country (*Applause*)

SPEAKER ANDRESEN On behalf of the House of Delegates, I thank you, Mr Richardson, for that illuminating report

Section 99

Address of Chairman of the Workmen's Compensation Board, Miss Mary Donlon

SPEAKER ANDRESEN I now will ask Dr Kenney to take the rostrum for a moment to introduce another distinguished guest

DR. J STANLEY KENNEY, *Councilor* Mr Speaker and members of the House of Delegates, it is a very distinctive privilege that the Speaker has accorded me to have this opportunity of presenting to you the distinguished lady who is going to speak to you in a few moments As you all know, the Legislature passed the Mailler-Condon Bill. It has been signed by the Governor and is now law, and has become a part of the Workmen's Compensation Law, and is now Article IX of that law The chairman of the Workmen's Compensation Board whose duty it is to administer the provisions of that law has kindly consented to be here today at the invitation of Dr Simpson and talk to you briefly on the important points in this Disability Benefits Law, also to make an important announcement regarding workmen's compensation She has very kindly condescended after her speech to answer any questions that any of you may care to present

It gives me a great deal of pleasure to present to you the Honorable Mary Donlon, the chairman of the Workmen's Compensation Board of the State of New York.

The delegates arose and applauded.

MISS MARY DONLON Dr Kenney, Dr Simpson, Dr Andresen, ladies and gentlemen, and members of the House of Delegates, I seem to be following Mr Richardson around this morning I said to him as

he was coming along that it was awkward to be pursuing a man as openly as I have been pursuing him today, because I followed him on the program upstairs, and then I came down here to find that I am following him on your program I think, perhaps, that is a good arrangement, because it gives you the opportunity to weigh two entirely different approaches to an important social problem I am convinced that after you have weighed those two approaches you will decide that we here in New York State have made far better progress along sound conservative lines than has been made in England to meet what is essentially in some respects the same problem of need

Dr Kenney said that I would make one announcement to you with regard to workmen's compensation That announcement is that happily after many conferences we were able last week to come to a final agreement with regard to the revised items for the medical fee schedules, which, therefore, were duly filed on April 29 in the office of the Secretary of State, which makes it become effective Our printer has not yet given us the full supply of copies, and they will be mailed gratis to all members of the panel within the next two or three weeks, as soon as received from the printer However, we were able to rush a kind of rough printing of 1,000 copies, and those copies are available for distribution here in the Hotel Statler on the mezzanine floor at the exhibit of the Workmen's Compensation Board We would like very much to have you go up and see our exhibit We would like you to take home with you a copy of the revisions to the schedule, and you can there if you wish leave your name and address and we shall be glad to send you a digest of the new New York State Disability Benefits Law, an official digest which has been prepared, and also to send you as soon as it comes from the printer a copy of this new law, with a rather comprehensive topical index of it

To get to the matter that I am here to discuss with you, this new legislation in New York State about which you have been reading in the papers and hearing on the radio, let me say first of all what I am sure you know that we here in New York State have not enacted a medical care program That is not what this law is This law is essentially what you are accustomed to regard as accident and health insurance provision, namely, a program to extend to workers throughout the State generally the opportunity to receive continued cash income partially to replace wages lost during periods of temporary nonoccupational illness or disability resulting from accidental injury So the first point I wish to make to you is that this does not set up a program of providing medical care It does provide cash income partially to replace wages during periods of temporary disability Briefly, what the law provides is a benefit rate of 50 per cent of lost wages with a maximum of $26 a week during the disability period of 13 weeks during any 52 consecutive calendar week period The program is financed jointly by employers and employes

New York is the fifth of the states to enact a temporary nonoccupational disability benefits program Preceding New York were—and in this order—Rhode Island, which in 1941 passed a law, then followed by California, New Jersey, and the State of Washington, which put her law on the statute books about two weeks before the New York Legislature acted, only to find after the Governor had signed the law up there in the State of Washington that one of the peculiar referendum provisions of the west coast had been brought into play, so now they don't have the law until the voters in November decide whether they want it or not Therefore, you cannot get me to argue with you if you decide that New York is the fifth or New York is the fourth state, because it depends on whether Washington is in or out at the moment

All of the other states followed quite a different pattern in setting up their disability programs from the disability benefits program pattern followed here in New York State Rhode Island, the first of them, has an all-out level tax regardless of cost, one per cent of the first $1,000 of payroll to be collected by the state from employes and the benefits to be paid out by the state California followed that pattern with the last moment amendment thrown into it in the Legislature which has a contracting-out provision so that, subject to certain penalties which the employer has to assume for the privilege of taking out insurance, instead of paying the tax to the state, private insurance is permitted New Jersey also has the contract of provisions New York, on the other hand, approaches this subject quite differently New York believes in the free enterprise system We think America has done pretty well under a concept of private enterprise, with private insurance functioning in the area where insurable hazards can be actuarily computed—and obviously they can be computed in the group accident and health field because something over 50 per cent of the employed persons in New York State are already entitled to some kind of disability benefits under voluntary plans that have been set up either by their employers or sometimes by unions alone, and very often by employers and employes So that New York turns its back in this new legislation on the idea that the best way or the only way to provide these benefits is by a level tax rate That is essentially the basis in the other states That is the philosophy of the bill now pending in Washington so far as disability benefits are concerned, and it is unrealistic It has no relation to actual cost

We feel that the Federal bill now pending extends the errors of the Rhode Island law, where the one per cent of payroll so badly met the obligations of the fund that it has been necessary since that law has been in operation to appropriate an additional $37,000,000, in the State of Rhode Island, a relatively small state, in order to make that fund solvent. The California law and the New Jersey law are still too new in terms of the period of their operation to know whether one per cent of the first $3,000 of payroll is or is not a correct measure of the cost of the disability benefits provided in those states However, one of two things happens with a level tax rate either it is like Rhode Island you don't have enough money and the taxpayers have to make up the difference, or as under our unemployment insurance program you build up more money than you need and, therefore, you have future tax reserves drawn away from a normal consumer market—a very tantalizing temptation to the tax spenders, who feel if there is some money around that some plan should be devised to use it—so that in New York we protect the situation through private insurance utilizing facilities already well established from long experience in providing this very type of benefit We say that the cost charged to the employe shall have a ceiling placed over it so the employe will always know what is the most that he must pay He will pay one half of one per cent of his weekly wages but not in excess of 30 cents a week, and whatever is the additional cost the employer will bear In times of normal employment, in years reasonably free from epidemics and other

serious group illnesses, it is likely that the employer's cost will match the cost of the employe In a more favorable year the employe's share, of course, may be less In a year of severe unemployment, in a year of epidemics, it is unquestionable that the employer's share of the cost will be more than the employe's, but you have the flexibility which will always adapt cost under our New York plan to whatever the actual risks of the situation are So much for our New York law!

There is one other point I would like to make by way of contrast between this and the pending Federal bill, because I think there is a sleeper in that bill that the people generally do not recognize I said earlier that New York's is an accident health insurance program It does not provide medical care In the Federal bill now pending there is a provision that the Director of Federal Security may direct the recipient of benefits to get medical care as a condition of continued right to the benefits How much that would be used, no one knows, but medical care may under that bill be provided to recipients of contemporary disability benefits if the bill is enacted, and the right of the recipient will be cut off if he does not avail himself of the kind of medical care and from the doctor to whose care he is directed by the Federal Security Administrator

Doctors have an important part in any disability benefits program You have that part now under these insured plans so common in industry, the voluntary plans Without the patient's doctor and the doctor for the insurance company, it would be absolutely impossible to know what benefits should be paid, and for how long You people make those decisions because you are qualified to make the determinations which underlie the decision as to what benefits are payable You do that also in workmen's compensation, which is our occupational disability program in New York State Now we must depend on you likewise under this new program

What this program in New York State does that I think the medical profession has not yet fully understood is not merely to put cash income into the hands of those deprived of wages because of temporary total disability that is not an occupational one, but to make it necessary for them to be under the care of a physician if that illness extends beyond seven days, and if they want to collect benefits Under the laws of the other states it is enough that a physician signs the certificate That is not enough under the New York law, therefore, we think that some of the so-called rackets which have developed in Rhode Island and other states will be obviated under this law, and with a sound social result If a man is sick more than seven days, so ill that he cannot go to work, it seems to us it is good for him, for society, and for his family, that he should be placed under the care of a doctor, but it is his doctor who takes care of him, and the only penalty he will suffer is that unless he is under that care he may not collect benefits So that the first provision with respect to doctors is that in order to collect the benefits it is not alone enough that a doctor has signed the certificate, but it is essential that the man shall be under the care of that physician

We are working now, and we shall be working for the next many months I suppose, with groups representing your Society, representing the insurance companies, representing the labor organizations, and representing the employers' groups, in order that the regulations may be as reasonable as possible to comprehend the situations as they appear, and that the forms required to be filed shall be as simple as possible yet give the necessary information.

This is now a new field The practice with the insurance companies will be a guide We will know the information that is necessary in order that the claims can be promptly paid This bill, unlike workmen's compensation—and off the record I think very fortunately unlike workmen's compensation—leaves a very wide area of discretion to the parties concerned to accommodate their differences The claimant is ill, he is under the care of his own physician, his physician files with the insurance company this certificate with respect to the illness, the insurance company physician looks it over, the claims office in the insurance agent checks to be sure the man is an employe of their insured, that this is rate of pay and so on under existing plans 99 50 per cent of all claims are paid in full Less than one half of one per cent of claims under the existing plans which now cover more than 50 per cent of New York State employes are disputed, or rejected, or compromised We hope that ratio maintains We are not looking for a lot of extra work, and to the extent that the doctor who attends the patient and the doctor who represents the insurance company or the self-insured employer can agree on the disabilities, the board is relieved of the obligation under the disability benefits law of passing on the cases

What is set up is a standard for compliance, when the parties cannot work out some different standard for themselves, and the State agency available to adjudicate the claim when there is a dispute We hope there won't be many disputes

There is just one other point—and I see Dr Andresen would like me to sign off—that I would like to make to you about this law, and that is the benefits are paid both to the sick employed and to the sick unemployed, and that the obligation to provide the benefits is directly on the employer, therefore on his insurance carrier during employment and for four weeks therafter, but there is set up a special fund for disability benefits administered by the chairman of the Workmen's Compensation Board which takes care of the payment of benefits thereafter

Thank you very much! I wish there were time to get over to you just this one point New York has done a significant job under the leadership of Governor Dewey this year, I believe, in turning our back on that concept of the state-dominated disability benefits program, back toward the free enterprise system. We can make it work if the medical profession will help us

Thank you! (*Applause*)

The two booklets referred to in Miss Donlon's address, "Digest of New York State Disability Benefits Law, April 1949," and "Workmen's Compensation Board, State of New York, Supplement to Medical Fee Schedule, May 1, 1949," are included in the original copy of these minutes

SPEAKER ANDRESEN We thank you, Miss Donlon, for your beautiful exposition of this new law We are now going to take advantage of your offer to answer questions Are there any questions from the floor?

DR. JOSEPH C O'GORMAN, *Erie* Is it necessary for a doctor to be on the workmen's compensation panel to treat these employes or unemployed? There are many doctors who are on the workmen's compensation panel and are licensed in New York State but don't wish to be on the workmen's compensation panel As I read it in the law a doctor must be on the workmen's compensation panel to treat these patients

MISS DONLON Yes, you are quite right Let me explain that there are much fewer doctors than

you think who are not on the panel We have on the panel 25,000 doctors in round numbers There are in general three groups of doctors—and when I generalize I don't mean to be understood that there are no exceptions, there are of course—there are in New York what we call the Park Avenue practitioner, and a good many of those doctors have never availed themselves of the opportunity of coming on the workmen's compensation panel. There are doctors engaged in research, who have not come on the panel Then in the last six years there have been a very small number of doctors, something like 400, who have been cordially invited to leave the workmen's compensation panel, and who have been rather effectively removed from it So that we have those doctors in general who have not certified for the workmen's compensation panel

The situation in Rhode Island, where there are no controls of any kind with respect to those who treat and certify as to disability benefits, has been something of a scandal, as I think you people know It seemed to us that with some thousand more doctors in New York State available for this than there are in all of England and Scotland under their program we probably would do pretty well, and judging by the number of applicants for authority I judge the doctors have been reading the newspapers, and at July 1, 1950, there won't be very many that won't be there

Dr. O'Gorman We have two questions You know the controversies that exist in workmen's compensation Are we going to have alleged untruthful and incomplete reports in this disability type of thing? The law provides for an investigation—and it sounds as though it is just a mere investigation—by the chairman We think there should be a hearing There is no provision for an appeal by the doctor If somebody says he didn't do this, or he didn't do that, there is no appeal for a hearing Let us assume a doctor is accused of something Under the Workmen's Compensation Law, it provides for an appeal.

Also doctors will have to appear, and the question is whether they be on the ordinary subpoena fee such as exists down in the courts before the referees? Now a doctor can be subpoenaed and paid 50 cents, so the question is will the doctors be reimbursed for appearances before hearing officers on subpoena, that is, will they be paid a fee in excess of the usual subpoena fees as is done before the Workmen's Compensation Board?

Two, a doctor may be suspended from the workmen's compensation panel for submitting untruthful and incomplete reports in a disability claim. The question is why not give him a chance at a hearing as we do in these other places and as we do at present under the Workmen's Compensation Law? That finishes my questions, the two questions that I had

Miss Donlon You are not arguing but asking a question I think I can answer both of them very briefly The Disability Benefits Law is Article IX of the Workmen's Compensation Law, and all of the provisions with respect to the authorizations and disciplinary provisions in regard to doctors in the Workmen's Compensation Law are, therefore, applicable with regard to fees for attendance by doctors. As I am sure you know, the fees with respect to that attendance at hearings are in large part mileage fees, etc, governed by the Civil Practice Act and not by the Workmen's Compensation Law

As to special fees for attendance that is, as you know, a matter of regulation under the Workmen's Compensation Law, not of statute, and I see no reason to apprehend that regulations are not possible under Article IX as under the other articles

Dr. John J Masterson, *President Elect* I think, Mr Speaker, the delegates would like to know from Miss Donlon—if they don't know at the present time—when this law will go into effect and the reasons for putting off its effective date as far as they have

Miss Donlon Dr Masterson has asked what is the date on which this law goes into effect, and what are the reasons for putting that effective date off as far as it is There are four dates really to watch, and I will try to give you those briefly The law became effective on April 13, 1949, and that was important because voluntary plans made by employers and covered in compliance with this law are those which were in existence on that day and are still in existence on July 1, 1950 That is a provision to prevent the chiseling employer from setting up a new submarginal plan, yet at the same time to continue plans that were in existence.

The second date to watch is coming up very soon now, July 1, 1949 That is the date when we begin to determine who are covered employers under the law

The third date to watch is January 1, 1950, when we begin the temporary six months' tax to set up initially the fund for payment of disability benefits to the sick unemployed

The fourth date to watch is the date to which Dr Masterson refers, July 1, 1950, when the law becomes fully effective The permanent financing contributions are to be collected, benefits for disabilities occurring on and after that date will be payable July 1, 1950, and that is when the benefit period begins.

Now why is it as long as that? I think you have seen from the way I have stepped along these dates that there are things which have to be done in order to make a progression of status toward the fully effective date Moreover, it is estimated that there will be at least 170,000 employers in the State of New York who will be within the scope of this act and something more than six million employes who are entitled to benefits under it, so the physical arrangements for getting the administration set up and for having insurance sold to them are quite considerable

Speaker Andresen Are there any further questions?

Dr David M Riskind, *Queens* One of the most controversial of disabilities that occurs in workmen's compensation is the occupational disease case. Is there any provision under this sickness disability law to protect the employe from submitting himself for this type of accident protection in order to avoid the necessity of waiting for a long period of time until his case becomes compensable under the occupational disease?

Miss Donlon I am very glad you asked that question Section 206 of the law, subdivision (2) is expressly designed to take care of the situation which I believe is contemplated in your question, where the question is solely whether or not the disability is occupational or nonoccupational Then this provision of the law provides that during the period when determination of occupational causation is being made the claimant is entitled to his benefits under this law with the right of reimbursement of the different carriers

Thank you very much for bringing out the point, because I had overlooked it

Dr. Nathan Brodie, *Kings* Will you tell us whether any provisions are considered for those who are self-employed, and secondarily, will you expand

briefly on the arrangements of coverage through various carriers?

Miss DONLON Answering first your question with regard to the self-employed, no, this law does not contemplate covering for the self employed This law contemplates covering where the groups of employes are four or more That is the well-known administrative device for having administration reasonable, not that anybody seriously thinks that the person who works in a group of three is less entitled to benefits You just draw the line somewhere, and traditionally four or more is the place where you draw the line

With regard to arrangements for insurance, I am glad you asked that question One of the arguments that has been made against a compulsory provision of this type of benefit in a statute is that we are doing very well, you admit there are more than 50 per cent of the employes covered, why not let it work out? Until you have a broad insurable group it has not been feasible to write this type of group insurance accident health for employed groups of less than 25, and we have in the State of New York something like 80,000 employers who have between four and 25 employes each, and their employes have been deprived of the opportunity of having this type of voluntary insurance Therefore, as a part of this new plan, groups down to four or more will be entitled to get it They can get their insurance or they can make provision to approve self-insurance in much the same way as under the Workmen's Compensation Law except that this insurance can be bought not only from the State Insurance Fund but from any insurance company authorized by the Superintendent of Insurance to write group accident and health insurance in the State of New York, which includes the life insurance companies generally, as well as the casualty companies

SPEAKER ANDRESEN Are there any further questions?

There was no response

SPEAKER ANDRESEN If not, we thank you very much, Miss Donlon

The delegates arose and applauded

SPEAKER ANDRESEN Gentlemen, we have had a hard morning, but we are going to have an even harder afternoon I don't know whether we should continue for another half hour before we go off for lunch Our program calls for a meeting again at two o'clock, so the more time we spend now the less we will have to spend after six o'clock tonight

CHORUS Move we continue for another half hour

SPEAKER ANDRESEN If there is no objection, we will continue Dr Gamble has not finished with his report as yet We have interrupted him twice, so I think we ought to extend him the privilege of finishing it. At the end of that time I am going to again call for resolutions from the floor which will have to be referred to reference committees to consider them during the luncheon hour

Where is Dr Gamble? While Dr Gamble is coming up, I will entertain a resolution from Dr Freedman, of New York

Section 100 (*See 130*)

Medical Specialty Boards—Admission to Examination

DR. SAMUEL Z FREEDMAN, *New York* This resolution has been rewritten at the request of the Reference Committee to which the original one was referred. It concerns "Medical Specialty Boards

"WHEREAS, the specialty boards in the various fields of medicine serve the purpose of setting criteria of scholarship, training and ethics, and

"WHEREAS, certification by a specialty board confers upon a physician recognition of proficiency which is highly regarded by his colleagues and the layman, and

"WHEREAS, to deny to a physician, who meets the basic training, postgraduate, and ethical requirements, entrance to the examination necessary for certification in a specialty withholds from the candidate the recognition in such specialty of his colleagues and the patients he serves, thereby by inference branding him as inferior to those who are certified, and

"WHEREAS, since specialty board certification is an extremely important factor in obtaining admittance to the staffs of most recognized hospitals, the denial of certification to a physician, who meets the basic training, postgraduate, and ethical requirements of the specialty board, accordingly unduly restrains him in the full practice of his profession, now, therefore, be it

Resolved, that the Medical Society of the County of New York recommend that all physicians who are duly licensed to practice medicine in the State of New York, and who meet the basic training, postgraduate, and ethical requirements of a specialty board be admitted to the examination given by the specialty board, and be it further

"*Resolved*, that the secretary of the Medical Society of the County of New York be directed to send copies of this resolution to the president of each specialty board and to the chairman of the Advisory Board of the Medical Specialties, and be it further

"*Resolved*, that the delegates to the Medical Society of the State of New York are hereby instructed to introduce and work for the passage of this resolution in that body and in the House of Delegates"

SPEAKER ANDRESEN That will be referred to the same reference committee as before, Miscellaneous (B), of which Dr Norman S Moore is chairman

Section 101

Revision of the Constitution and Bylaws (General)

DR. LOUIS H BAUER, *Past President* Mr Speaker, I have a resolution which I believe will not require referral to a reference committee but can be acted on by the House

"WHEREAS, it has been twelve years since the Constitution and Bylaws of the Society have been thoroughly revised, and

"WHEREAS, there have been many amendments adopted during that period of time, and

"WHEREAS, the present situation requires further consideration of a general revision, in order to make the Constitution and Bylaws more fully effective in carrying out the work of the Society, therefore be it

"*Resolved*, by the House of Delegates that the Speaker appoint a committee of three to prepare a complete revision of the Constitution and Bylaws, and that this committee be directed to prepare such a revision so that it may be printed in the JOURNAL at least sixty days prior to the next annual meeting, and may be considered by the House at the meeting in 1950"

Mr Speaker I move the adoption of the resolution.

The motion was seconded by several

SPEAKER ANDRESEN Do you feel that that does not need to be referred to a committee?

DR. BAUER I don't see why it has to be I think the House can act on it directly

SPEAKER ANDRESEN All right, the Chair will so rule. Is there any discussion?

The question was called, and the motion was put to a vote, and was unanimously carried.

SPEAKER ANDRESEN In the usual manner of any amendment to the Constitution and Bylaws, it will have to lie over for a year, and be published at least sixty days before the next meeting so that it can be studied by the individual members of the House and the county societies, and discussion can be had here before the Committee on Constitution and Bylaws at the time of the reference committee meetings

DR. THOMAS O GAMBLE, *Albany* May I ask the members of my committee to meet me immediately in the foyer

Section 102

Revision of the Constitution and Bylaws (District Branch Delegates)

DR. CHARLES F MCCARTY, *Kings* After Dr Bauer's resolution which was just passed, whether these are necessary or not, I don't know, but I have them ready

As chairman of the Committee on Credentials I have noticed something that happens regarding delegates, on which I am offering a resolution to amend the Constitution. Number one is—

SPEAKER ANDRESEN In view of the fact that the whole Constitution is going to be amended I think it will be more proper for you to suggest those to the committee that is going to do the amending rather than bring it up at this time

Section 103

Introduction of Delegate from Medical Society of the State of New Jersey

SPEAKER ANDRESEN Yesterday morning I called upon delegates from our neighboring states, and asked if any were here to come to the platform I am informed that Dr Norton, who is the representative from New Jersey, and who I believe is president of the Medical Society of the State of New Jersey, is here. I am going to ask Dr Kenney to escort Dr Norton to the rostrum to say a few words to us.

Dr J Stanley Kenney, of New York, escorted Dr James F Norton to the rostrum amid applause.

DR. JAMES F NORTON Mr Speaker and members of the House of Delegates of the Medical Society of the State of New York, as president of the Medical Society of the State of New Jersey I bring you greetings in this, your annual meeting I am sure that this meeting, like our own held recently, is geared to the very serious thought of the threat that confronts American medicine. You have heard a ot about it, and you will hear more I am sure during your deliberations, as to how best this threat can be turned back I am confident that we have by far the better side of the position, and I am very hopeful that if we properly and adequately get across to the people of this country the inefficiencies and the inequities and the imperfections in any type of a monopoly of the practice of medicine as threatens us now under compulsory health insurance in sharp contrast to the voluntary plans that your Society as well as ours are very earnestly sponsoring, the intelligence of the average run of the American people will cause them to decide in our favor

I bid you Godspeed in your deliberations, and I hope that out of this session will come what we expect something worth while in the interests of organized medicine It was a pleasure to be with you (*Applause*)

SPEAKER ANDRESEN We thank you, Dr Norton.

Section 104 (*See 159*)

Bond Issue for the Building of Hospitals in New York City

DR. WILLIAM B RAWLS, *New York* Before presenting the report of my Reference Committee, I have a resolution to offer

"WHEREAS, the City of New York has proposed a program for the building of new and the renovation of old municipal hospitals, and

"WHEREAS, this program is very necessary for the welfare of the indigent sick in New York City, and

"WHEREAS, it will be necessary to raise this money by a bond issue, and

"WHEREAS, under the present economic situation it will be necessary to obtain an amendment to the Constitution of the State, therefore be it

"*Resolved*, that the House of Delegates approve of the proposed amendment of the Constitution of the State

"*Resolved*, that section seven of article eight of the Constitution be amended by adding thereto a new paragraph, to be paragraph D, to read as follows

'the aggregate of indebtedness initially contracted from time to time after January first, nineteen hundred fifty, for the construction, reconstruction and equipment of city hospitals, not exceeding the sum of one hundred fifty million dollars Any indebtedness thereafter contracted in excess of such sum for such purposes, other than indebtedness contracted to refund indebtedness excluded pursuant to this paragraph, shall not be so excluded'

"*Resolved* (if the Senate concur), that the foregoing amendment be submitted to the people for approval at the general election to be held in the year nineteen hundred forty-nine in accordance with the provisions of the election law"

SPEAKER ANDRESEN Referred to Reference Committee on Miscellaneous Business (A), of which Dr Eggston is the chairman Dr Eggston has a lot to do but we will give him more

Section 105 (*See 12*)

Report of Reference Committee on Report of Council, Part IX Legislation

DR. WILLIAM B RAWLS, *New York* The Reference Committee has reviewed the work accomplished by the Committee on Legislation, and wish to commend them for their work. Your Reference Committee, however, would not be honest if they did not tell you that they view with misgivings our failure in the legislative field during the past year They are particularly concerned about our inability to secure the passage of bills that are advantageous to the health of the people of this State, and our inability to secure the defeat of those that are detrimental to the health of the people of this State They believe that as a whole we have fared rather badly during the past year

The Committee is deeply concerned over the apparent apathy of the legislative committees of the various counties. On some of the most controversial issues, only 26 out of 61 counties replied when asked for information by the legislative committee of this Society The Committee urges that every

delegate here return to his own society with the determination that an alert and active legislative committee be established

It is the opinion of this Committee that the accomplishments of our Society in the field of legislative matters are far from what we believe can be accomplished We further believe that with our present setup we will be unable to secure the results that we are convinced this Society is capable of attaining

The Committee recommends that the Council devise ways and means to secure a closer relationship with the various county legislative committees so that the actions of these committees be more closely correlated in order that recommendations made in reference to proposed legislation shall be supported by all the legislative committees throughout the State.

The Committee believes that in order to obtain these objectives it is necessary to augment our staff in Albany to the end that a closer and more effective relationship with the legislators may be achieved.

I move the approval of the report this far

The motion was seconded by several, and as there was no discussion, the motion was put to a vote, and was unanimously carried.

DR. RAWLS Your Reference Committee wishes to offer the following resolution

"*Resolved*, that the staff in Albany be augmented, preferably by someone well-versed in legislative matters and in public relations, in order that a closer and more effective contact with the legislators may be maintained"

I move its approval

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 106 (See 72, 181, 193)

Report of Reference Committee on Report of Council, Part IX Basic Science Law

DR. WILLIAM B RAWLS, *New York* Resolutions introduced by Dr Charles Gullo in reference to the basic science law

"WHEREAS, the injunctive procedure for the control of illegal practice failed of being enacted at the last session of the Legislature, and

"WHEREAS, illegal practice in New York State constitutes a serious menace to public health, therefore be it

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York recommend that through proper channels to have introduced a bill at the next session of the New York State Legislature which will incorporate the principle of the basic science law, namely, that anyone, without any exemptions whatsoever, who holds himself qualified to treat the sick must take an examination in those sciences which are basic in all schools of practice of the healing art This applies whether the law provides for licensure or not, unless he is expressly exempted, and be it further

"*Resolved*, that any basic science law granting any exemptions to anyone under any circumstances be actively opposed by this Society"

This is a revised resolution agreed to by the introducer of the resolution, and I move its approval.

The motion was seconded.

SPEAKER ANDRESEN The revised resolution has been moved. Is there any discussion?

DR. EZRA A. WOLFF, *Queens* Are we to understand if we go on record as approving this resolution we will have approved the adoption of a basic science law?

DR. RAWLS Correct

DR. WOLFF If that is so, I would like to discuss the matter

SPEAKER ANDRESEN Come right up to the microphone and then we will hear you

DR. WOLFF Mr Chairman and members of the House, annually the problem of the basic science law has been the subject of prolonged debate on the floor of this House Annually the proposition has been rejected as unsound In one of the most recent of the Council committee reports that same attitude was held, but the prophets of doom have recurrently forecast that the chiropractic bill is certain of passage next year We are told that the legislators are tired of the problem, and that they will license chiropractors in order to rid themselves of the problem One suggested remedy is the passage of a basic science law which, according to its proponents, will drive chiropractors from the State by making it difficult for them to be licensed

Furthermore, it is claimed that standards will be raised so there will be no incentive for the training of chiropractors, and potential candidates will study medicine instead, that ultimately then the chiropractor and other healing cults will be exterminated

Cursory thought might make this seem feasible, but on closer scrutiny there are numerous faults in the proposed remedy In the first place, while you can easily pass a basic science law, will it do what it is supposed to do? Standards will be lowered rather than raised, I am sure, since the present standards under our present law are higher than those which are incorporated in any operative basic science law

Then a second point is What makes anybody think that a basic science law could be enforced any better than our present law is, since the main difficulty apparently with the enforcement of our present law is that we have no machinery for its enforcement? That is what we are told—that there are not enough personnel to go around and pick up these irregular practitioners If we can get them for a new law, why can't we get them for what we have at present?

Has the licensing of chiropractors under any means or any type of law in 44 states thus far raised the level of their education or of their standards? I don't know that there is any evidence that proves to me at least that this has occurred.

How about the grandfather clause? Do even the most rabid of the advocates of a basic science law feel that there is any practical chance for the passage of a basic science law that would exclude the present irregular practitioners? I doubt it very sincerely, and I think that it is sort of a tongue-in-the-cheek attitude to assume that we can go on record as favoring a basic science law which would be practical as far as the politicians are concerned and which could be passed On the other hand, if you passed a basic science law which licensed the existing chiropractors, you would be defeating your own objective In spite of the fact that it is felt that ultimately it would weed them out, ultimately is a long time off when it comes to waiting for three thousand or more chiropractors to disappear

Another group of proponents of basic science are the self-styled practical group The burden of their argument is that since passage of the chiropractic bill is inevitable, we may as well make the best of the situation by controlling licensure through a basic

science law Is not this stand really a rationalization of an attempt to rid ourselves of a distasteful and burdensome yearly legislative struggle on the assumption that following the achievement of a basic science law we are going to be able to sit back smugly and let the law take its course and ultimately be entirely freed of this persistent nuisance of irregular practitioners? But it overlooks the most fundamental of all considerations—that its recognition by whatever name you want to call it is of a system which not one of us here believes has any slightest shred of merit or basic scientific truth Regardless of how expedient or how politic the measure may be, or how it may ultimately work for the good of the public, if we advocate its passage, we will have forfeited all right to the claim that we are motivated by consideration of the public welfare, and we will be placed in the light of opportunists who are seizing at a mechanism for destroying competition in order to advance our own interest and espousing hypocrisy toward a public we are pledged to protect (*Applause*)

Dr. Homer J Knickerbocker, *Ontario* The principal reason why the chiropractors want to be licensed is to eliminate the influx of migrant men from other states who are incompetent and cannot pass their own states' examinations It is a self-preservation proposition on their part Our present law is idealistic but ineffectual, and the chiropractors will certainly beat us if we don't do something to undermine their stand.

I recently talked with one of the senators, and our conference resulted in about this much He was asked how about the resistance a legislator might be expected to put up toward any bill, and he said that when a man went to Albany he was supposed to sit in a chair and get calluses in the seat of his pants, as a matter of fact, he sat in a chair and got callused all over, to the point where he had very little respect for any plea for anything that he could not consistently follow

If we get busy and do something to increase our effectiveness in our legislative program by an around-the-year importuning of even the candidates for Assembly and the Senate we will lay a foundation which will do something for us Whether basic science law will do the trick or not, I think no one can tell until it is tried, but at least we might better try it (*Applause*)

Dr. Benjamin M Bernstein, *Kings* Could I be heard?

Speaker Andresen Yes, after Dr Rawls

Dr. Rawls Before the start of the next speaker—we did not have in mind the chiropractors alone For example, the naturopaths are now clamoring for recognition, and there are others clamoring for recognition We had in mind all those who are classed by us as being beyond the pale of recognition, as quacks

Dr. Bernstein It has taken many years for the National Board of Medical Examiners to perfect a licensing examination which will be accepted by 45 states out of the 48 We are now in New York State going to try to arrange the same kind of a barrier that Florida has and some other few states that are trying to keep not the chiropractors out but to keep the doctors out These men who pass the National Board of Medical Examiners are competent, qualified, well-trained doctors, and they should be permitted to practice medicine in New York State

The belief that we can keep out chiropractors, or naturopaths, or others by adopting the basic science law to me sounds rather foolish because, after all, you know to try to stop a chiropractor practicing medicine is not feasible when he never did practice medicine He always has, and always will, try to substitute chiropractic for medicine. That is the argument, and if we stop talking about chiropractors practicing medicine, we will be a darned sight better off in trying to prevent them from substituting chiropractic for medicine. I can't see where any basic science law which permits them to take this examination is O K., that if you pass this examination you are all right. That would be a terrible, terrible blunder As I said to one of the men in our county who is interested in antichiropractic efforts, the matter could be cleared up considerably if he would say to any legislator he approached, "If you had your boy ill on the field of battle, would you want him treated by a doctor or by a chiropractor?" It always seems to me we can make this more realistic from that point of view, and if we will do that, we can accomplish a darned sight more

Dr. Samuel Schneierson, *Bronx* Mr Speaker and fellow delegates, I think there can be no question about the fact as to what our objective is here in relation to this problem As in relation to other problems, we are primarily concerned with the maintenance of, and more precisely with the improvement of, the medical care which the citizens of this State deserve So it follows as a corollary that in connection with this resolution and its consideration we have to decide only one thing Will we by our endorsement of this resolution secure a better quality of medical care for the citizens of this State, or will we advocate a measure which will ultimately lead to the deterioration of adequate medical care and health?

It strikes me that for many years the chiropractors have engaged in a steadfast and perhaps even in an effective campaign to secure some measure of recognition of their kind of work, even if that is a euphemism among the people of this State May it not be that this is merely an attempt to do on their part as recent dictators have done in the past to divide and conquer, to divide the problem, first, so that there will be from the outset recognition, and then with that gain in recent history proceed further onto the next step in what might not turn out to be an effective battle It would seem to me in the consideration of this problem that unless we can be convinced that this measure is in accordance with our best precepts, if there is any doubt even among those who may have some inclination to endorse this project—if there is any doubt at all on the part of the gentlemen here assembled—we have no alternative but to reject this resolution. In speaking here this afternoon, gentlemen, I am authorized to convey to you the unanimous opinion of our delegation that this resolution should at this time be rejected

Speaker Andresen Is there any further discussion.

Dr. Norman S Moore, *Tompkins* As one who first met the impact of the basic science law idea in this House of Delegates, I cannot refrain from a few remarks to let you know that for nearly ten years since this came up, and I was chairman of the reference committee that considered it, and we spent one whole day in this House of Delegates battling the pros and cons, and since that day there has been committee after committee appointed to study it, there have been reviews by Dr Hannon when he was secretary to the State Board of Medical Examiners, and he has given the results of his detailed studies before this House, so has Dr Lochner,

and the opinions of some of the members who have been on special committees to study the feasibility of a basic science law and who are interested in medical education have also been reported in this House, yet this proposition has always been turned down. If this House capitulates to this resolution, they will rue the day when their sons and daughters have to be judged by the people on the medical examining boards who are going to get medical student certificates, because this thing is a fact in other states and has never been reported correctly in this House of Delegates I feel this is a very serious crisis to put before us immediately before luncheon, therefore, Mr Speaker, I offer a motion to defer action on this until after luncheon

The motion was seconded by several, and as there was no discussion, the motion to defer was put to a vote and was unanimously carried

SPEAKER ANDRESEN We are adjourned until 2 o'clock

The session adjourned at 1 00 P M , to reconvene at 2 00 P M

TUESDAY AFTERNOON

May 3, 1949

The session reconvened at 2 00 P M

SPEAKER ANDRESEN I will ask Dr Rawls to continue.

DR. RAWLS Gentlemen, I would like to move that further consideration of the resolution being discussed before we adjourned on the basic science law be deferred until tomorrow morning until Dr Lochner, the secretary of the State Board of Medical Examiners, can be heard He cannot be here this afternoon.

SPEAKER ANDRESEN Do I hear a second?

DR. SAMUEL B BURK, *New York* I will second it.

SPEAKER ANDRESEN Is there any discussion?

DR. FREDERICK S WETHERELL, *Onondaga* We have all heard Dr Lochner many times, and I know that all of us know just about what Dr Lochner is going to say I see no reason why we should necessarily have men outside of this House discuss this subject with us any longer I object also for other reasons to this delay, namely, that Dr Lochner was here this morning, was he not, or am I mistaken in that?

DR. RAWLS Dr Lochner was here, but he had to lecture at 1 30 This report was supposed to be put on when Dr Lochner could be here to speak, but due to our guests this morning it could not be, and he had to leave before it was disposed of

DR. WETHERELL I entered a room last night, where Dr Lochner had been speaking to half a dozen men, and when I appeared all was silence I may be out of order, but I just do not like in any respect this business of registered lobbying

SPEAKER ANDRESEN Is there any further discussion of the motion to postpone action on this resolution?

DR. JACOB WERNE, *Queens* I take exception to the remarks of the last speaker I have heard Dr Lochner speak for the good of practicing doctors of medicine in this State, and if by the term "lobbyist" you connote somebody of ill repute, that certainly does not fit the bill with him There is no requirement, so far as I know, whereby any man who wants to lobby for anything here, or argue, or in any way be a proponent or an exponent or antagonist for any issue has to register with anybody This is not Washington, D C , this is Buffalo I am against the basic science law nevertheless—

SPEAKER ANDRESEN This is a motion to postpone action.

DR. WERNE I still say we should postpone it and hear the man who is in charge of licensure and examination in this State He certainly can give us something to think about

The question was called, and the motion was put to a vote, and was carried

SPEAKER ANDRESEN Very well, the motion is carried, and action will be postponed on this resolution until tomorrow morning

Section 107 (*See 52, 161*)

Report of Reference Committee on Report of Council, Part IX To Amend the Education Law in Relation to the Practice of Psychiatry

DR WILLIAM B RAWLS, *New York* The next is a resolution presented by Dr Irving J Sands, of Kings

(*Resolution given in full—Section 52*)

I move its approval

The motion was seconded, and as there was no discussion, it was put to a vote, and was carried.

Section 108 (*See 71*)

Report of Reference Committee on Report of Council, Part IX Injunctive Relief Procedure

DR. WILLIAM B RAWLS, *New York* Resolution introduced on behalf of Dr Solomon Schussheim, of Kings, which resolution has passed the House once before I believe

(*Resolution given in full—Section 71*)

Your Reference Committee approves of this resolution, and I so move

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 109 (*See 65*)

Report of Reference Committee on Report of Council, Part IX Legislation—Larger Committee, News Releases

DR. WILLIAM B RAWLS, *New York* Resolution introduced by Dr Aaron Kottler, of Kings

(*Resolution given in full—Section 65*)

I move its approval

The motion was seconded

SPEAKER ANDRESEN Part of this has already been carried out in regard to the Legislative Committee, but I see no harm in having the motion brought before the House Is there any discussion?

The question was called, and the motion was put to a vote, and was unanimously carried

Section 110 (*See 37*)

Report of Reference Committee of Report on Council, Part IX Representative of the Five Counties to Be Included in the Committee on Legislation

DR. WILLIAM B RAWLS, *New York* Resolution introduced by Dr Margaret Janeway, New York

(*Resolution given in full—Section 37*)

science law Is not this stand really a rationalization of an attempt to rid ourselves of a distasteful and burdensome yearly legislative struggle on the assumption that following the achievement of a basic science law we are going to be able to sit back smugly and let the law take its course and ultimately be entirely freed of this persistent nuisance of irregular practitioners? But it overlooks the most fundamental of all considerations—that its recognition by whatever name you want to call it is of a system which not one of us here believes has any slightest shred of merit or basic scientific truth Regardless of how expedient or how politic the measure may be, or how it may ultimately work for the good of the public, if we advocate its passage, we will have forfeited all right to the claim that we are motivated by consideration of the public welfare, and we will be placed in the light of opportunists who are seizing at a mechanism for destroying competition in order to advance our own interest and espousing hypocrisy toward a public we are pledged to protect (*Applause*)

Dr. Homer J Knickerbocker, *Ontario* The principal reason why the chiropractors want to be licensed is to eliminate the influx of migrant men from other states who are incompetent and cannot pass their own states' examinations It is a self-preservation proposition on their part Our present law is idealistic but ineffectual, and the chiropractors will certainly beat us if we don't do something to undermine their stand.

I recently talked with one of the senators, and our conference resulted in about this much He was asked how about the resistance a legislator might be expected to put up toward any bill, and he said that when a man went to Albany he was supposed to sit in a chair and get calluses in the seat of his pants, as a matter of fact, he sat in a chair and got callused all over, to the point where he had very little respect for any plea for anything that he could not consistently follow

Dr. Benjamin M Bernstein, *Kings* Could I be heard?

Speaker Andresen Yes, after Dr Rawls

Dr. Rawls Before the start of the next speaker—we did not have in mind the chiropractors alone For example, the naturopaths are now clamoring for recognition, and there are others clamoring for recognition We had in mind all those who are classed by us as being beyond the pale of recognition, as quacks

Dr. Bernstein It has taken many years for the National Board of Medical Examiners to perfect a licensing examination which will be accepted by 45 states out of the 48 We are now in New York State going to try to arrange the same kind of a barrier that Florida has and some other few states that are trying to keep not the chiropractors out but to keep the doctors out These men who pass the National Board of Medical Examiners are competent, qualified, well-trained doctors, and they should be permitted to practice medicine in New York State

The belief that we can keep out chiropractors, or naturopaths, or others by adopting the basic science law to me sounds rather foolish because, after all, you know to try to stop a chiropractor practicing medicine is not feasible when he never did practice medicine He always has, and always will, try to substitute chiropractic for medicine. That is the argument, and if we stop talking about chiropractors practicing medicine, we will be a darned sight better off in trying to prevent them from substituting chiropractic for medicine. I can't see where any basic science law which permits them to take this examination is O K., that if you pass this examination you are all right That would be a terrible, terrible blunder As I said to one of the men in our county who is interested in antichiropractic efforts, the matter could be cleared up considerably if he would say to any legislator he approached, "If you had your boy ill on the field of battle, would you want him treated by a doctor or by a chiropractor?" It always seems to me we can make this more realistic from that point of view, and if we will do that, we can accomplish a darned sight more

Dr. Samuel Schneierson, *Bronx* Mr Speaker and fellow delegates, I think there can be no question about the fact as to what our objective is here in relation to this problem As in relation to other problems, we are primarily concerned with the maintenance of, and more precisely with the improvement of, the medical care which the citizens of this State deserve So it follows as a corollary that in connection with this resolution and its consideration we have to decide only one thing Will we by our endorsement of this resolution secure a better quality of medical care for the citizens of this State, or will we advocate a measure which will ultimately lead to the deterioration of adequate medical care and health?

It strikes me that for many years the chiropractors have engaged in a steadfast and perhaps even in an effective campaign to secure some measure of recognition of their kind of work, even if that is a euphemism among the people of this State May it not be that this is merely an attempt to do on their part as recent dictators have done in the past to divide and conquer, to divide the problem, first, so that there will be from the outset recognition, and then with that gain in recent history proceed further onto the next step in what might not turn out to be an effective battle It would seem to me in the consideration of this problem that unless we can be convinced that this measure is in accordance with our best precepts, if there is any doubt even among those who may have some inclination to endorse this project—if there is any doubt at all on the part of the gentlemen here assembled—we have no alternative but to reject this resolution. In speaking here this afternoon, gentlemen, I am authorized to convey to you the unanimous opinion of our delegation that this resolution should at this time be rejected

Speaker Andresen Is there any further discussion

Dr. Norman S Moore, *Tompkins* As one who first met the impact of the basic science law idea in this House of Delegates, I cannot refrain from a few remarks to let you know that for nearly ten years since this came up, and I was chairman of the reference committee that considered it, and we spent one whole day in this House of Delegates battling the pros and cons, and since that day there has been committee after committee appointed to study it, there have been reviews by Dr Hannon when he was secretary to the State Board of Medical Examiners, and he has given the results of his detailed studies before this House, so has Dr Lochner

oard review the fee schedule at from one- to two-ear intervals so as to make it representative of the revailing rate of medical fees throughout the State move the adoption of this recommendation

The motion was seconded.

DR. J STANLEY KENNEY, *New York* I believe hat there will be a conference this fall on this ques-ion of the revision of the fee schedule for general ractitioners I have a qu ispromise to that effect hat it will be done

The question was called, and the motion was ut to a vote, and was unanimously carried

DR. DURYEE With the tendency for an increased demand for specialty ratings by physicians throughout the State, it is important that the qualifications of each applicant be carefully checked. While the qualifying boards may accept certification by an American specialty board as evidence of competence in a special field, the lack of certification should not disqualify a physician who is otherwise qualified in accordance with the standards for specialization set up by our Committee.

We also urge the Council to request the Legislative Committee to introduce legislation to bring about a fairer method of arbitration based upon the method in vogue throughout the rest of the State of disputed medical bills in the four counties having a population of over one million now under the jurisdiction of the Medical Practice Committee

Your Committee recommends to the Council that the Legislative Committee again introduce and obtain support for an amendment to Section 13(g)2 of the Workmen's Compensation Law to provide for arbitration of disputed medical bills in the county where the medical services were rendered

I move the adoption of this recommendation

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. DURYEE We recommend that the Council instruct the Legislative Committee to obtain support for and push a bill to abolish the Medical Practice Committee and transfer their functions to the county societies

I move the adoption of this recommendation

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. DURYEE Your Committee approves the report on thoracic surgery and recommends to the Council that they request the chairman of the Workmen's Compensation Board to approve and list this subspecialty under the symbol M-17

I move the adoption of this recommendation

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. DURYEE One more recommendation, and we are through.

We approve the section on group practice in the report and recommend that the provisions of the Workmen's Compensation Law be brought in line with the provisions of the Education Law concerning group practice.

I might clarify that Under the Workmen's Compensation Law a group cannot bill for services that any one member rendered but the bills must be rendered by individuals With the new Education Law the group can bill as a group for services rendered, so there is a conflict in the law that should be straightened out, and that is the reason for that recommendation

I move its adoption

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. DURYEE We approve the Committee report on Rule 19 in so far as it applies to fees collected by hospitals for services rendered by pathologists, physical therapy physicians, and anesthesiologists

Your Committee is pleased to endorse the felicitations of the Committee for the cooperation afforded by the Workmen's Compensation Board, Miss Mary Donlon, chairman, and of the district administrators and other officials of the Workmen's Compensation Board It also approves the sentiments concerning the Compensation Insurance Rating Board, Mr Henry Sayer, chairman, and concerning Mr Irving Salferman in charge of arbitrations for the insurance carriers

Your Committee wishes to commend the chairman of the Committee, Dr J Stanley Kenney, his associates and the director of the Bureau, Dr David J Kalisch, for their efficient and devoted attention to their duties during the past year We also wish to commend the office staff of the Bureau for their faithfulness and devotion to their duties

I move this report be accepted as a whole

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 115 (*See 10*)

Report of Reference Committee on Report of Council, Part VII Medical Care Insurance

DR. GUY S PHILBRICK, *Niagara* Your Reference Committee has studied the report of the Subcommittee on Medical Expense Insurance of the Council Committee on Economics We commend the Subcommittee for the careful and thorough analysis it made of the proposals formulated by the Blue Cross-Blue Shield Commissions for a Blue Cross-Blue Shield Association and a Blue Cross-Blue Shield Health Service, Inc , at its October 14, 1948, meeting, and for the action taken disapproving these proposals

Your Reference Committee recommends approval of the efforts of the Subcommittee in laying the groundwork for the establishment of a State-wide contract to be administered by the six New York State approved plans, and hopes this will be an accomplished fact in the very near future

Your Reference Committee recommends approval of the Subcommittee's recommendation through the Council Committee on Economics that approval be extended to the six New York State Plans for another year, as follows

United Medical Service, Inc.	New York City
Genesee Valley Medical Care, Inc	Rochester
Central New York Medical Plan, Inc	Syracuse
Medical and Surgical Care, Inc	Utica
Northeastern New York Medical Service	Albany
Western New York Medical Plan, Inc	Buffalo

Your Reference Committee studied with a great deal of interest the report of the activities of Mr George P Farrell, director of the Bureau of Medical Care Insurance, and commends him for his efforts and accomplishments

Your Reference Committee especially commends the following activities

(1) The quarterly reports on the progress of the plans are comprehensive and instructive and reveal the great strides made in increase of membership and financial stability of the plans during 1948

(2) During the year, he has continued, at an accelerated pace, the program of publicizing to the

Your Reference Committee disapproves of this resolution on the ground that this has been covered in a previous resolution, just passed

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously adopted.

SPEAKER ANDRESEN You will take up tomorrow morning that portion of your report that had to do with the basic science law

DR. RAWLS Yes

SPEAKER ANDRESEN Are there any further original resolutions, which we might have to refer to reference committees for consideration? Does anybody wish to make a resolution?

There was no response

Section 111 (*See 67*)

Report of Reference Committee on Report of Council, Part X Increase of Fees in Physical Medicine for Workmen's Compensation Cases

DR A WILBUR DURYEE, *New York* Mr Speaker and members of the House, your Reference Committee has three resolutions that were submitted to it Mary Donlon stole some of our thunder by bringing out a revised fee schedule, which was available for the first time this morning I have a copy of it before me at the moment, but I have not had a chance to discuss it with the sponsors of these resolutions However, if the Speaker orders we can act on these resolutions, and if there is any conflict with the new fee schedule it will automatically adjust itself

SPEAKER ANDRESEN Right

DR. DURYEE The first resolution introduced by Dr Madge C L McGuinness, of New York

(*Resolution given in full—Section 67*)

I move its adoption

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 112 (*See 55*)

Report of Reference Committee on Report of Council, Part X Radiology Workmen's Compensation Fees

DR. A. WILBUR DURYEE, *New York* Resolution submitted by Dr Charles Muzzicato, of New York.

(*Resolution given in full—Section 55*)

I move its adoption

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

Section 113 (*See 38*)

Report of Reference Committee on Report of Council, Part X Free Choice of Physicians for Federal Employes

DR. A WILBUR DURYEE, *New York* The third resolution was introduced by the Advisory Subcommittee of Workmen's Compensation by Dr Guy S Philbrick, of Niagara.

(*Resolution given in full—Section 38*)

I move its adoption, Mr Speaker

DR. CLARENCE G BANDLER, *New York* I second it

There being no discussion, the motion was put to a vote, and was unanimously carried

Section 114

Report of Reference Committee on Report of Council, Part X Workmen's Compensation

DR. A. WILBUR DURYEE, *New York* I now have the main report.

Your Reference Committee has reviewed in tail the report of the Council Committee on Wo men's Compensation We approve in general full report which covers the year's activities of Bureau of Workmen's Compensation and the Co cil Committee Certain sections of the report be discussed in detail with recommendations m where indicated.

Your Committee recommends the continuation the present structure of the Council Committee the Advisory Subcommittee representative of districts of the State This latter committee affo a good liaison between the county societies and Council committee until such time as a constitutio amendment decrees otherwise

This morning that constitutional amendment w passed, so I believe this particular recommendat will not be necessary Is that right, Mr Speak

SPEAKER ANDRESEN I believe so I think th can be left out

DR. DURYEE We approve the section on the si plification of report forms and recommend that t Council of the Medical Society of the State of N York request the formation of a committee consi ing of representatives of the Council Committee Workmen's Compensation or the director of Wor men's Compensation, of insurance carriers, e ployers, and the Workmen's Compensation Board study and recommend the simplification propos We again urge all physicians to make every effort report cases promptly and in detail

I move the adoption of this recommendation

The motion was seconded, and as there w no discussion, the motion was put to a vote, and w unanimously carried

DR. DURYEE Your Committee approves the se tion on the quality of medical care and on rehabi tation and urges that physicians throughout th State do everything in their power to improve th quality of medical care rendered injured workme including the use of consultants wherever indicate

Your Committee approves Section 4, which urg the prompt rendering of bills for medical and surgic services

The section concerning the functions of the Work men's Compensation Bureau has covered in deta the scope and duties of the Bureau It is importa to point out that the Bureau is at the service of ever doctor in the State who practices under the Work men's Compensation Law for both consultation an assistance, and physicians are urged to avail them selves of the service

We have studied the section of the fee schedul and strongly urge the chairman of the Workmen' Compensation Board to issue a statement on the dis puted points in the new fee schedule as soon as pos sible, so that physicians throughout the State ma have a guide in their charges for medical service rendered (This fee schedule was brought out b Miss Donlon this morning) Furthermore, w strongly recommend that the fees of the genera practitioner be increased to meet the present-da costs of conducting medical practice and in accord ance with prevailing rates in private practice

There are several recommendations that deal with the same subject, so I will continue, and I think they can be voted on as a whole

Therefore, a recommendation is in order for the increase of fees to the general practitioners I move this recommendation be adopted

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. DURYEE We approve and recommend that the chairman of the Workmen's Compensation

addition, I hated to disagree with a fellow director of mine in the United Medical Service

First of all, to correct some factual misconceptions, the American Medical Association did not refuse the principle of a national insurance company They turned down a specific company that was recommended, which would have been ultimately controlled by nonmedical personnel They rejected a specific insurance company but did recommend national enrolment

This whole question is shot through and through with political implications No one can fail to have noticed the rise in power of labor Labor is the motivating force in national contracts They wish to negotiate at the top level with Ford and General Motors for an over-all insurance

I do not visualize any particular dangers in this rather innocuous resolution It is an expression of opinion What I am more concerned about is that you and I will lack audacity and imagination, that we will fail to realize that in times of changed technics we need new answers to these vast complicated problems We cannot sit indolently here We must move forward, or a lot of other men will carry these banners

In essence what does this resolution propose? It proposes that great employers with vast organizations and with agencies in twenty or thirty states will have the means of being enrolled in an insurance company That insurance must in the nature of things be an indemnity insurance They can enroll out of Chicago or Detroit for any employes living in our area down in New York, and we would provide them with those benefits that are in our policies It means nothing more nor less than that If the employe went into the State of Nevada, there is no plan there, and they would have to pay on an indemnity basis for such services as that state presented. Of far more reaching importance, gentlemen, is that medical men control Blue Shield. This resolution proposes that through all the echelons of organization, and operation, and administration, it shall be in the control of medical men At the higher echelon the Blue Shield would purchase certain operational functions that are done by the Blue Cross They would be independent contractors for services

It is possible to extend the Blue Cross and the Blue Shield. We have about seventy prepayment medical plans in the United States and one hundred sixty different contracts We can write any contract that anybody wants, but it has to be sold at a premium that people will pay For example, there are noninsurable contracts A man seventy-eight or eighty, or even eighty-seven, may want to purchase a contract, an annuity of $1,000 a month, but his premium would be $999, so it has a noninsurable quality On the other hand, we have to be particularly zealous that when we have prepaid medical plans we mean that they are doctors' plans, and United Medical Service proposes to put into its fee schedule remuneration for the five specialties that are now being offered in some hospital contracts

I see no reason why this resolution should not prevail. It is a step forward. If we could anticipate all of the misgivings that life has for us, we should retire to some cave and not move lest the passing winds of controversy bother us, but if we want to move forward dynamically let us embrace the opportunity and measure our strength and estimate our greatness (*Applause*)

DR. WILLIAM B RAWLS, *New York* I would like to correct one misinterpretation here, and that is this does not propose turning over any of the voluntary plans that now exist to this national plan

I would also like to point out that one of the greatest criticisms we have today is that we have no national plan. Only last month I received a letter from a United States Senator who has appeared on the radio and television against compulsory health insurance, asking us, "When are you going to have a national plan ready, because we believe that is what you should have?" Also it will help very much in our fight against compulsory health insurance

I can see no reason why we cannot explore the possibility That is all this resolution asks for, that we go ahead and try to do something If we are always going to be too timid to take any step forward we might as well give up at the present time and say, "Gentlemen, give us compulsory health insurance because we are too timid to try to do anything on our own" I think that has been our greatest trouble in the past, and it is about time that we realized we have to take a step forward, because if nothing is ventured, nothing certainly is ever gained

I heartily approve of, and recommend the passing of, this resolution

The question was called, and the motion was put to a vote, and was carried

Section 120 (*See 34*)

Report of Reference Committee on Report of Council, Part VII Voluntary Health Insurance (National Plan)

DR. GUY S PHILBRICK, *Niagara* The fifth and last resolution was introduced by Dr Felix Ottaviano, of Madison

(*Resolution given in full—Section 34*)

Your Reference Committee recognizes and is in sympathy with the objectives desired in the resolution, but we also recognize that the American Medical Association cannot go into the insurance business For this reason, and this reason only, we recommend disapproval of this resolution

The motion was seconded, and as there was no discussion, it was put to a vote, and was carried

DR. PHILBRICK I now move adoption of the report of the Reference Committee on Report of the Council Part VII, as a whole

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

SPEAKER ANDRESEN Thank you, Dr Philbrick.

Section 121 (*See 9*)

Report of Reference Committee on Report and Supplementary Reports of Malpractice Insurance and Defense Board

DR. ABRAHAM KOPLOWITZ, *Kings* First of all, I would like to express my thanks to Dr McGarvey, Dr Guess, and Dr Shea, the key members of the Committee that met with me here and discussed our report, and for the help that they so generously gave The other member was not here for unavoidable reasons, and his substitute did not appear

Your Reference Committee on the Annual and Supplementary Reports of the Malpractice Insurance and Defense Board has studied these reports carefully, and is extremely gratified to observe the intimate knowledge which the Board evinces in this subject and the care they have given to this matter which is so vitally important to the membership in the practice of its profession

The figures presented seem to be in accordance

doctors and the public the various aspects of medical care insurance by many personal appearances before professional and lay groups

(3) He has attended many county, State and national meetings pertaining to medical care insurance and kept the Subcommittee on Medical Expense Insurance informed on the progress in this field.

Your Reference Committee recommends a vote of thanks to Dr A. H Aaron, chairman, and the members of the Subcommittee on Medical Expense Insurance, and to Mr George P Farrell, director of the Bureau of Medical Care Insurance, for a job well done

I move the adoption of this part of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 116 (*See 46*)

Report of Reference Committee on Report of Council, Part VII Opposition to Imposing Compulsory Health Insurance on American People

DR. GUY S PHILBRICK, *Niagara* There are five resolutions that were referred to this Reference Committee The first is that presented by Dr Floyd S Winslow, of the Medical Society of the County of Monroe

(*Resolution given in full—Section 46*)

Your Reference Committee approves this resolution, and I move its adoption

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 117 (*See 41*)

Report of Reference Committee on Report of Council, Part VII Medical Indemnity Payments

DR. GUY S PHILBRICK, *Niagara* The second resolution is that introduced by Dr Anthony Galluccio, delegate from the Bronx County Medical Society

(*Resolution given in full—Section 41*)

Your Reference Committee approves this resolution, and I move its adoption

The motion was seconded, and as there was no discussion, it was put to a vote, and was carried

Section 118 (*See 50*)

Report of Reference Committee on Report of Council, Part VII Voluntary Sickness and Hospital Insurance

DR. GUY S PHILBRICK, *Niagara* The third resolution was presented by Dr C J C Parsons, of the Westchester County Medical Society

(*Resolution given in full—Section 50*)

Your Reference Committee approves of this resolution, and I so move

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 119 (*See 38*)

Report of Reference Committee on Report of Council, Part VII Voluntary Health Insurance (National Enrolment Agency)

DR GUY S PHILBRICK, *Niagara* Resolution introduced by Dr G W McAuliffe, of New York County

(*Resolution given in full—Section 38*)

Your Reference Committee approves this resolution with the addition to the last sentence of words "for their approval of this plan."

At this time I request the Speaker to allow Gordon Heyd to speak for a few minutes in explanation of this

SPEAKER ANDRESEN Dr Heyd, will you come to discuss this for us?

DR. CHAS GORDON HEYD, *Past President* I have no comment The recommendation is quite clear Mr Chairman

DR. PHILBRICK I move its adoption

The motion was seconded by several.

SPEAKER ANDRESEN Is there any discussion?

DR. THOMAS M D'ANGELO, *Queens* I would like to know, first, what the committee's report is on the resolution

SPEAKER ANDRESEN They say they favor it.

DR. PHILBRICK I move the approval of this resolution

DR D'ANGELO Mr Speaker and members of the House, on the face of it this resolution seems a perfectly innocuous one, and one that could very easily be carried and approved Certainly a national enrolment agency is a necessary thing at the present time because there are a number of large corporations who have employes in various states of the union and these corporations would like to enroll their employes and insure them in one bunch. However because of the fact that they pay taxes in different states of the Union they have not asked the government to be allowed to pay the taxes all in one state and distribute them throughout the different states We feel that such an enrolment agency would be a good thing, nobody seems to have much objection to that, but now we come to the crux of the matter, and that is a national insurance company, because that is exactly what that implies. This, gentlemen, is a very difficult proposition I don't say it cannot be done, but I think its benefits would be far outweighed by its faults The United States is a very large country Conditions are quite different in Maine than they are in Mississippi, Florida, and the State of Washington It would be very difficult to sell the same benefits throughout the entire nation. Furthermore, as the top corporation was proposed last year, within five years the medical profession would have lost complete control of it.

There are many voluntary insurance plans throughout the United States today that are progressing favorably Such an insurance company, as advised in this resolution, I believe would practically wipe out our present local plans We don't even know yet what type of contract is necessary I don't know how many plans there are—there may be some eighty-odd plans throughout the United States—but I will bet there are over one hundred fifty contracts being sold. This is all in an experimental stage, and I strenuously oppose turning over our successful local plans to a national agency at present

Furthermore, the American Medical Association is studying this problem right now Last year it went on record as being opposed to a national insurance company The problem has had continuous study, and I am sure that Dr Heyd will be glad to give you some more information

I was going to move at this juncture that no action be taken at this time, but I am afraid such a motion would prohibit any further debate Therefore, I reserve the right to make it later on

DR. CHAS GORDON HEYD Mr Speaker and members of the House, I intended to remain silent because the resolution is its own expression of intent In

Your Committee approves these proposals of the Board, and I move their adoption

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. KOPLOWITZ Last year the House of Delegates adopted a resolution introduced by Dr Frederick S Wetherell, of Onondaga County, which asked for a study of the Alameda County (California) public relations and malpractice claim prevention plan The resolution read as follows

"*Resolved*, that the Council of the Medical Society of the State of New York be instructed to study the Alameda County Plan, and as soon as feasible to institute procedures which will end in the employment of measures of like nature in the constituent county societies or district branches of the Medical Society of the State of New York"

At the request of the Council, the Malpractice Insurance and Defense Board not only complied with this directive, but also investigated the Los Angeles County claim prevention plan and inquired into what is being done in the States of Connecticut and New Jersey in this matter

The Alameda County plan is the most ambitious of all because, in addition to claim prevention, it covers many other fields of medical service to the community which would be almost revolutionary in most of our counties Your Reference Committee feels, however, that if it were possible, this type of medical service would improve public relations far more than any propaganda campaign

The Los Angeles County Medical Association has an enrolment of about 3,500 doctors who serve a population which compares with our largest metropolitan counties This Association has a plan which is not so comprehensive, although it is said to have fathered the Alameda County setup Some of their claim prevention program, however, might lend itself to adoption by our county societies, with such variations as may be necessary to fit local conditions

Both plans aim to prevent malpractice claims at the source. We consider it wise to repeat

"Reduced to its simplest terms, the claim prevention program can be described as based upon the theory that an injured patient is entitled, without cost to him, to whatever corrective procedures are necessary to repair the damage, whether the doctor was right or wrong, and that he is entitled to reasonable reimbursement for loss of time and for pain and suffering if, in the considered judgment of the medical experts, the doctor was at fault If the doctor was not at fault, any payment beyond the cost of the corrective treatments is resisted solidly by the entire county organization This theory can easily be stated but to put it into practical application requires a great deal of organization, hard work, discipline, and close cooperation between the county organization, the members, their legal service, and their insurance company"

To illustrate their method of procedure, the Los Angeles County Medical Association cited a case in which a neurosurgeon was flown to Los Angeles from Washington, D C , to repair the nerves and tendons of a boy's hand, which had been severed in two places Complete function and use of the hand was restored. The cost of the repairs was probably high, but very small compared with the cost of damages which might have been assessed against the responsible doctor by a jury if the repair had not been made

In Connecticut and New Jersey the state and county societies have set up committees whose duty it is to review and comment on threatened malpractice suits While not in any way approaching the efforts of our west coast brethren, these states have recognized the obligation of the profession to prevent malpractice claims at the source, so far as possible It is well to remember in this connection that none of these organizations has a scientific insurance plan managed by members of the organization comparable with our Malpractice Insurance and Defense Board

The plans of Alameda and Los Angeles Counties strike one as far more than claim prevention, they actually serve a most altruistic purpose in correcting mistakes, both avoidable and unavoidable, thus preventing serious damage to individuals and in that way entirely fulfilling the obligation of the profession to its patients

The Board has obtained permission from the Council of the State Society to inaugurate claim prevention measures through pilot committees to be established in certain selected counties In discussing the plan with the Malpractice Insurance and Defense Board, we are impressed with their plan to inaugurate this in one county, until, by the process of trial and error, a plan that can work will evolve Your Reference Committee fervently hopes that from this beginning we shall be able to develop plans to safeguard the best interests of both our patients and ourselves Needless to say, such a program must necessarily take some time before it will show its effects on the insurance rates

I move the adoption of the report as a whole

DR. HARRY C GUESS, *Erie* I second it

SPEAKER ANDRESEN The adoption of the report as a whole has been moved. Is there any discussion?

DR. THOMAS F MCCARTHY, *Bronx* Mr Speaker, several years ago you recall Bronx County seemingly annoyed the House of Delegates by working on the malpractice insurance proposition in this State You may also have noticed in the last year or two that Bronx County has not been annoying the House of Delegates The reason for that is that I come here to commend the Malpractice Insurance and Defense Board for its very efficient work and because of the fact that they have now recognized that what we were trying to maintain for several years exists, that there was, and is, a very definite problem, and that they are working to correct it, so there is certainly nothing we can do but commend them for their work.

The question was called, and the motion was put to a vote, and was unanimously carried.

Section 122

Report of Reference Committee on Report of Legal Counsel

DR. ABRAHAM KOPLOWITZ, *Kings* Your Reference Committee has also studied the report of the counsel.

Mr William F Martin, your Society's counsel, and Mr Clearwater, the attorney for the Society, and their staff, have continued their work for the Society We note that during the year two new men have been added to their staff, one of whom has medical as well as legal training, which should add to the efficiency of the staff, and should be beneficial.

We wish to point out as a preliminary statement in connection with defense and malpractice litigation that, as your counsel has noted in his report, much of that litigation is obviously the result of

with conditions as they prevail today and not in great variance with those of last year

We are happy to learn that the Board has succeeded in concluding an agreement for our group insurance with so reliable a company as the Employers Mutual Liability Insurance Company of Wisconsin Also, we note with interest the introduction into the agreement with the company of a provision for a contingent loss reserve, and we join with the Board in hoping that this will be a solution of the difficult problem of equitably rating malpractice insurance We welcome the Employers Mutual into partnership with the Society On inspection of the master policy issued to the Society, we definitely can state that our policies will be nonassessable

We say this because some of our delegates were afraid that a mutual company in case of difficulty might require an assessment from its policyholders There is a definite provision which will prevent that

After last year's report of the Board, we are sure that a great many of us are not quite happy with the knowledge that the Yorkshire Indemnity Company, which has served us so well, would not continue and was carrying us on a temporary basis

Your Committee had reason to feel that the sudden and large increase in rates of last year was fully understood by the membership, as evidenced by the unanimous approval of last year's report by the House of Delegates However, we still hear occasionally from doctors who report that they can get their insurance cheaper and who want to know why they should not avail themselves of the opportunity Some of them do not yet realize that insurance is what it means, and that if protection is less than perfect, it is worthless

Your Reference Committee feels that too much emphasis cannot be placed on the fact that our rates are fixed by our Board together with the Company, after careful analysis of the actuarial facts In working out the new rates, which will be effective July 1, 1949, the Board did so with responsible heads of the Employers Mutual Liability Insurance Company and not some local agent, and the negotiations were predicated on the findings and report of our consulting actuaries, Messrs Wolfe, Corcoran, and Linder

The annual report begins by discussing the major problems of the Board, of which the first and most important, because it tinctures everything else, is our rising loss costs The Board's analysis is careful and factual as far as common sense can make it so The increase in rates from 1921 to today, during which the cost of $5,000 of insurance rose from $18 to $55, can easily be understood by us when we realize the tremendous rise in law suits against doctors The chairman of your Reference Committee can remember the time when few physicians thought of malpractice insurance, it was unheard of by the majority of doctors

The unprecedented rise in living standards of our population has brought about a condition where most of our voluntary hospitals today fill their beds, in great measure, with private cases who pay their doctors Patients expect more, and the courts hold medical men to a stricter accountability for their acts

In the beginning of our insurance era claims were few, but some of us saw a marked decrease as time went on and wondered how long it would be before the threat of malpractice suits would become a formidable factor in the practice of medicine

The growth in the field of insurance generally has made the public claim-conscious Knowledge on the part of the public that doctors carry malpractice insurance results in suits being instituted and pressed that might never have arisen against individual, uninsured doctors Courts and juries are likewise aware of the insurance factor and act accordingly in their decisions and awards The rising cost of living and the cheapness of money are also influences to be reckoned with.

The report stresses the preventable causes of many malpractice claims and lays them, quite properly it seems, at our own door The cases cited in last year's report amply illustrate how careful doctors have to pay for the untrained and careless ones The Board emphasizes that behind every malpractice claim is a dissatisfied patient Our attention is called to the fact that sympathetic handling, real careful care, that is, living up to the requirements of the "personal relationship between doctor and patient" which we stress so much, will prevent a good many suits, even though the results may not be entirely happy We cannot quarrel with that. Preventable claims must be stopped at the source, if at all possible

Last year the Board was granted authority to deny renewal of insurance to members found guilty of acts for which no excuse, in common decency, can be found The Council has additional authority to limit the amount of insurance a member may have or to deny it altogether to doctors whose medical procedures, conduct or attitude, in the opinion of competent medical opinion, is a burden to the group plan more hazardous than it should carry The Board now asks that the powers now divided between the Board and the Council in such manner be centralized by the addition of certain paragraphs to Section II of the Regulations Governing Malpractice Defense and Group Insurance, as follows

> "The authority to limit the amount of insurance protection granted to any member and the authority to withdraw the privilege of renewal of indemnity insurance under the group plan under conditions hereinabove stated is hereby delegated to the Malpractice Insurance and Defense Board and shall be one of the duties of the Board.
>
> "The Board may, in lieu of withdrawing the privilege of renewal of insurance from a member under the conditions stated, order that a deductible average clause in some given amount be applied to the renewal of such insurance
>
> "Any member whose insurance is affected by a decision of the Board shall have the right of appeal to the Council The decision of the Council shall be final"

The attention of the delegates is called to the proposed use of the deductible average clause when approved by the Insurance Department We are familiar with the working of deductible clauses in our automobile insurance, but this is a new concept in malpractice insurance

The introduction of this idea in malpractice insurance should act as a deterrent to those of us who may be inclined to carelessness in evaluating our ability or in the conduct of our practice The few doctors whose insurance will carry this clause will still be left with full protection beyond the deductions provided. In addition, your Reference Committee considers it desirable to point out that the application of these punitive measures will not be applied by an outside agency, but by a committee of our own choosing, brothers in the profession, the Malpractice Insurance and Defense Board of the State Society It is presumably unnecessary to add that the utmost care will be exercised to give each member of the Society full justice and the benefit of any doubt

to produce the volume with due economy Production costs have increased tremendously Publishing contracts are difficult to secure, and *Directory* advertising has poor sales value Our neighboring societies of New Jersey and Connecticut have refused to contribute to the cost of the *Directory* Few members of the Society as a whole appreciate these difficulties, and this Committee should like to commend the Publication Committee for a job well done Valuable as is the *Directory*, your Committee questions if this value warrants a deficit of over $80,000 It would appear that approximately one-seventh of the dues income of the Society is committed to this activity It is the largest single item of expenditure appearing in the budget This seems disproportionate at this time when the need for education of both physician and the public in the dangers of advancing socialism should be the prime activity of our organization

The Board of Trustees recommends that the *Directory* be published once in every four years instead of every two years with publication of a supplement once in the intervening two years

Your Reference Committee questions the value of such a supplement, and, while the cost of the arrangement would undoubtedly reduce the annual deficit, we do not think the value of such a supplementary publication sufficient to warrant the outlay

Deficits of this magnitude cannot be allowed to recur with maintenance of solvency of our financial position Therefore, it would appear that if publication of the *Directory* is to be continued during this present era of high costs, an increase in dues of the Society is an immediate necessity Your Reference Committee would suggest as a compromise that the House of Delegates approve publication of the *Directory* once every three years, omitting publication of any supplement, the listings in this new *Directory* being confined to physicians of New York State only, leaving out practitioners of New Jersey and Connecticut

Mr Speaker, I move the adoption of this recommendation

The motion was seconded by several

SPEAKER ANDRESEN Is there any discussion?

DR. ABRAHAM RABINER, *Kings* It seems to me that this is too important a matter to be passed off lightly This *Directory* is of great service to all physicians I am reminded of the fact that in one of the national scientific associations as part of our annual dues we were to receive each year a volume of the transactions When times became difficult, the volume continued, and was presented each year as heretofore, but instead of issuing that volume as part of the dues, every member very gladly paid $5 00 or $10 00 for each volume

I, therefore, suggest an amendment to the motion that the *Directory* be issued as heretofore every two years, but that every member or anybody wishing to buy the book pay for it.

DR. KOPLOWITZ I second that amendment

DR. JAMES F ROONEY, *Trustee* Mr Speaker and gentlemen of the House, as I understand it you are directing that the *Directory* be issued every two years That is the purport of the recommendation, am I not correct, Mr Speaker?

CHORUS No

SPEAKER ANDRESEN The amendment was every two years, and we are now discussing the amendment

DR. ROONEY The amendment was to change it to every two years and to charge each member who wants a copy?

DR. RABINER Correct

DR. ROONEY If you have looked over the expenditures of the Society for the last two *Directories*, you will realize the very great cost that has been incurred in publishing them, especially this last edition The cost was estimated to approximate $60,000 in toto It has come to approximately $144,000, which is over half of the total income in any one year for the Society One of the major desires on the part of the publications group of the Society is the securing of advertising to cut down the cost to the Society

There is a very large section of this State in which the *Directory* is not very widely used There is one section in which it is extremely important and is most necessary The Trustees have discussed this matter and have discussed it quite considerably, within the last year especially It has seemed to us, and we have taken no official action upon it because it is a matter of policy, and we are not charged and rightly have no function to perform with the continuing policy of the Society except in the preservation of our financial stability, that it would be much wiser instead of this House attempting to fix a matter that will come within the purview of the expenses of the Society two years from now or three years from now, to place the question as to the times and the intervals in which the *Directory* should be published in the hands of the Council as a continuing affair, with the Council reporting to the House each year as to whether or not they feel that the *Directory* should be published in an ensuing year or should continue in the hands of the next Council to be published at their recommendation to the House

There is one factor that must be considered, and that is this The long intervals between the publications of the *Directory* mean that an entirely new office force has to be collected approximately a year in advance for the collection of the material

I am not going to speak in approval or disapproval of the recommendations of your committee, except that I feel the wiser thing would be to follow the plan I have outlined to you I am not going to propose an amendment, but I hope that there will be some member of the House who will propose such an amendment so that this matter and the time of publication will be referred to the Council with power for this Council and the next Council to decide upon the times of publication.

There is one thing that we do know, gentlemen, and that is this—and I hope that some member of the Publication Committee will speak to it—we have altogether, as estimated, approximately in the neighborhood of 7,000 changes a year, minor or major throughout the State There has been some talk about putting out annual supplements It will cost at least approximately one third of the cost of the *Directory* to put out an annual supplement, and there will be no income from advertising

It seems to me in a matter as important as this that it would be better to refer this to the Council, giving them the power to recommend to the next House when the *Directory* should next be published.

SPEAKER ANDRESEN We are discussing the amendment made by Dr Rabiner, which was seconded by Dr Koplowitz

DR. KOPLOWITZ Mr Speaker and gentlemen, I have seconded this amendment because I have been thinking of it for a good long while Our *Directory* is not just a telephone directory, and it is not just a city directory It is a directory giving a man's qualifications I find it important almost at every office hour to refer to it Occasionally a patient will tell me so-and-so, and I like to look it up and see who

careless, hasty, and needless remarks by one physician concerning the work of another Such criticism should be avoided, and each member of the profession should always bear in mind how readily a patient can be stimulated to institute a malpractice claim.

In his work, your counsel has defended the malpractice actions brought against members insured under the group plan sponsored by the Society, and has also been called upon to defend a considerable number of members who were without insurance Your Reference Committee points out that these men must have realized the desirability of carrying malpractice insurance under the Society's group plan when they were confronted with the realities of malpractice litigation.

We note that during the year your counsel has disposed of 140 actual malpractice actions, together with a number of claims There have been instituted during the same period of time 203 new actions These actions are on the increase over the past few years We find that the number of new actions is considerably greater than during the war years, but that it is comparable with the amount of work handled prior to the war

We note particularly the important decision obtained by your counsel during the year, which was finally determined by the Appellate Courts to the effect that a surgeon may not automatically be held liable for the negligent acts of hospital personnel.

Your counsel and Mr Clearwater have, during the year, done a vast amount of work handling the legal aspects of the many problems which arise in connection with the administration of the affairs of the Society They attend the meetings of the Council and Board of Trustees and many committees of the Society and devote considerable time to advising various individual members who consult them concerning medicolegal problems of all sorts

In concluding, your Reference Committee recommends that the report of your legal counsel be approved and that he be commended for the efficient manner in which he and his staff have handled the legal affairs of the Society and the legal aspects of malpractice defense

We move the adoption of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER ANDRESEN Thank you, Dr Koplowitz!

Section 123

Report of Reference Committee on Report of Treasurer

DR. STEPHEN R MONTEITH, *Rockland* Your Reference Committee on Report of the Treasurer wishes to commend your treasurer for his report, and further thank him for comparative reports published showing the financial growth of our Society during the past twenty years

It is gratifying also to note that the accumulated assets of the War Memorial Fund have by the close of the fiscal year of 1948 reached beyond the halfway mark of the proposed accumulation

Examination of the published report of the Publication Committee with the estimate contained therein of a deficit of $84,000 for publication of the *Directory* and of the possible deficit arising from operation of the JOURNAL would seem to take care of the treasurer's question, "Why should we always be adding to our surplus?" Your committee will join the treasurer in not answering the query and agree thoroughly with him on the advisability of maintaining a surplus

The one recommendation made by the treasurer is the authorization by the House of Delegates of the furnishing of forms to the component county societies in reporting uniformly dues and assessments to the State Society Your Reference Committee heartily endorses this proposal and so recommends.

Your Reference Committee should also like to commend Dr Reuling for his efficient service, and to express the thanks of our Society to him and to the assistant treasurer for their excellent services to the Society

I move the adoption of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 124 (See 8, 133, 139)

Report of Reference Committee on Report and Supplementary Report of Board of Trustees

DR. STEPHEN R MONTEITH, *Rockland*

The Reference Committee on Report of the Board of Trustees should first like to open its remarks with an expression of sorrow at the passing of that genial servant of the Society, the late Dr Albert Gartner of Buffalo

Your Board of Trustees is heartily to be commended for their zeal in handling the affairs of the Society Your Reference Committee is heartily in agreement with their interpretation of the function of the Board of Trustees as expressed in the printed report, and we should like to quote from that report their definition

> "A trustee is responsible for the proper administration of funds or property entrusted to him for the benefit of others It is a duty to prevent waste, exercise due conservatism, to evaluate proposed expenditure, and to avoid use of the concept that cheapness is the sole measure of economy"

We feel that our Board of Trustees has competently and sincerely performed its function We believe that the funds of the Society are competently managed, and we approve of the way in which these funds are distributed and handled.

We approve of the action of the Board of Trustees in increasing the retainer paid to our legal counsel and the increase in his annual expense allowance

Your Reference Committee would like to call attention of the House to the two recommendations made by the Board of Trustees First, the admonition given to committees of the Council, and we might add the House of Delegates, to live within their budgets, and secondly, that the individual members observe the regulation calling for presentation of itemized bills for expenditures incurred within the prescribed thirty-day period.

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. MONTEITH This is on the supplementary report of the Board of Trustees

Your Reference Committee has considered the question of the frequency of publication of the *Directory* which is the subject of the supplementary report of the Board of Trustees Publication of the *Directory* is a valuable activity to which the Society is committed.

The Publication Committee has labored arduously

DR. FREEDMAN I will second that

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN That matter of the *Directory* then will be taken up later when the Publication Committee reports.

We will hear one more report before we declare a ten-minute recess.

Section 125 (See 7, 174, 177)

Report of Reference Committee on Report of the Secretary

DR. FREDERICK W WILLIAMS Concerning the Report of the Secretary, your Committee wishes to report that the statistics on membership as published were the statistics as of January 1, 1949 The published number of 834 delinquent members for 1948 would give the impression that this delinquency produced a loss in membership from 21,303 for January 1, 1948, to 21,171 as of January 1, 1949 This is explained, however, as being due to a variation in fiscal policy between some of county societies and the State Society By March 1949, the delinquency number was reduced to 284 which would bring the total membership to 21,721 and by May 1, 1949, our total membership was 22,520 This is definitely the largest membership in the history of our Society This is truly sound, progressive growth. Your Committee suggests, however, that the Secretary hereafter report the membership statistics more correctly—that is a typographical error, it should be currently—currently than of the calendar year—there has been some mistake in the typing here. I will ask a recess to get it straightened out It has been mistyped.

SPEAKER ANDRESEN Dr Williams wishes to be excused until he gets his report corrected

We will have a ten-minute recess

At this point there was a ten-minute recess.

SPEAKER ANDRESEN The House will be in order

Section 126 (See 13)

Report of Reference Committee on Report of Council, Part XII Miscellaneous

DR. JOSEPH A. GEIS, *Essex* First of all, I want to thank Dr Gullo, Dr Babbage, Dr Wolff, and Dr Loughran who worked so long and so hard with me yesterday afternoon in going over these matters

This is the report of the Reference Committee on Report of the Council, Part XII, Miscellaneous

(A) Convention—Your Reference Committee notes the report of the Council Committee on Convention, and feels that the last convention was one of the best ever held. It showed excellent forethought and planning This House owes its thanks to the subcommittee doing the work. Dr Mitchell will be missed at this and future conventions

I move the adoption of this part of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. GEIS Continuing

(B) Nursing Education—Your Reference Committee approves the action of your Council Committee on Nursing Education in supporting the effort to have the 1941 Nursing Law put into effect this year

We also note the question of change in the education and duties of nurses, both R.N and practical This matter requires serious consideration by each and every physician in the State.

The Committee feels that the time is here for the State Society to take a stand and investigate the nursing situation It is felt that there are many extraneous factors included in nursing education that are unnecessary, expensive, and of no value in the making of a good nurse. The time has come to reiterate the stand that the R.N go back to nursing and be less of an administrator

I move the adoption of this part of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. GEIS Continuing

(C) Woman's Auxiliary—The work of the Auxiliary has been increasing annually since it was organized. During the past year Mrs Neptune has averaged one meeting a week. We thoroughly approve the idea of the district meetings, and if we show one half the enthusiasm of the women the attendance at our district meetings will be doubled The average member of the State Society does not realize the work that the women are doing We recommend that a vote of thanks be extended to the Auxiliary and that the Secretary so notify them

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. GEIS Continuing

(D) Office Administration and Policies—Your Reference Committee notes the new businesslike distribution of costs and definitely approves of this It helps to determine the cost of each department The tightening of checks on vouchers is an excellent idea We approve the various methods of saving money through saving work adopted at the central offices We still feel that this is businesslike even if your reference committee chairman was one of those caught in the new regulations about mimeograph work.

This committee should be commended, and we recommend that it be continued

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. GEIS Continuing

(E) Questions on Ethics—At the last convention the question of advertisements and announcements of publications for the laity was referred back to the committee for better wording Your Council Committee reports the following

> "In the event that there is proposed any advertising in relation to any book or article or writing for the laity, such proposed advertising matter shall be submitted to the Committee on Public Relations prior to any public appearance of the advertisement This reviewing committee shall render its opinion without unnecessary delay It shall be guided mainly by this section of these Principles of Professional Conduct, but shall be empowered to make such concessions as may be practiced and necessary in considering the title and contents of the publication, the professional standing and reputation of the author, and such other material through which the publisher may wish to arouse interest"

We recommend that this be part of a general reconsideration which is suggested in our report on resolution of Dr Burk of New York County

Your Council Committee also considered the question of the use of such titles as F A C S , F.A.C P , Diplomate Am Bd. of Int Med., etc , on letter heads, professional cards and prescription blanks

they are There are young men who are every year receiving certification in boards or are joining the various colleges who are very keen on having it in the *Directory*, because other people look for it Only recently I was confronted with this situation—and I am free to say that it is not a usual thing—a patient whose doctor was away had to be operated on She was already in the hospital. He was not at hand to be consulted The husband was advised by a friend of his to look and see what initials the proposed surgeon who was to substitute had, and unless he was a diplomate of the Board, a F A C S, he was not to take him That is, of course, an extreme case, but, gentlemen, it is important not to let it go more than two years I would much rather pay for it every two years than to have to wait three years and get it for nothing, and the young men I know feel the same way about it

We are a little bit too sensitive about trying to save ourselves $5 00 here and $5 00 there We are carrying on a profession, and we need our implements, and our *Directory* is a part of them We should not be deprived of it for longer than two years, and if we have to pay for it we will pay for it

SPEAKER ANDRESEN I want to call your attention to what we are discussing Right now we are discussing the amendment to the resolution, which is that we shall have the *Directory* published every two years, and that we are to vote that everybody in the Society who wants a *Directory* shall pay for it

DR. JAMES R REULING, *Treasurer* Mr Speaker and gentlemen of the House, there is not available here and now enough information to give this House of Delegates an answer to all of the questions that might arise on this Dr Rooney, one of your Trustees, who knows a great deal about the running of the affairs of the Society, said there were 7,000 changes since the last *Directory* The changes come closer to 40,000 since the last *Directory*

A motion to publish every second year and sell to such members as want it is impractical. We have nothing to go by at this time as to how many members would want to buy it This needs careful study There are arguments certainly in favor of having this published as frequently as possible without terrific financial loss to the Society, but it does need close study by a small group, and I would move, Mr Speaker, that the matter be referred to the Council for study and action and report

The motion was seconded by several.

SPEAKER ANDRESEN Does anybody wish to discuss the motion to refer?

DR. SAMUEL Z FREEDMAN, *New York* Mr Speaker and members of the House, to us in the City of New York this is of such vital importance that time is of the essence You must realize that if you postpone this, as has been advocated by the previous motion, you are already yielding to a postponement of the publication of the *Directory* probably for a period of two or three years

I had the privilege of sitting in at a reference committee hearing of a different reference committee where a similar subject came up, and I was very much impressed by the facts and figures which we did obtain. If you will for a moment use your arithmetic abilities, you will realize that all that is involved in the way of a deficit in the publication of the *Directory* once every two years is a matter of $2 00 per member per year The deficit is approximately $84,000 If this is divided by two, it is $42,000 per year We have 22,000 members in the Society Divide that into the deficit, and you have $2 00 per year per member

I do not think the maker of the motion providing for the payment of the *Directory* by the members had in mind that the membership shall pay the entire cost of the *Directory*, which is now $15 per copy I can readily see, however, that if $2 00 were added to the dues of the membership there would be no deficit whatsoever, and the publication could come out every two years That would satisfy those of us in the City of New York, not only those who use it but those of us who are directly affected by it, where it hurts the most, in our pocketbooks As Dr Koplowitz has mentioned to you, to us it is essential that this publication come out no less than every two years, and I think from that point of view the City of New York, which does have a vast majority of the members although we don't have adequate representation in the House, should be considered We feel that this is of such vital importance to us that consideration should be given to us

May I ask a parliamentary ruling whether I could make an amendment at this time to add to the dues of the membership by $2 00 per year, and the *Directory* come out every two years

SPEAKER ANDRESEN The motion is a motion to refer That has nothing to do with the amount paid per year

DR. FREEDMAN Then I will have to limit my remarks and ask your indulgence and plead with you not to postpone action on this motion to publish the *Directory* every two years

DR. HOMER J KNICKERBOCKER, *Ontario* Point of information, do I understand that the motion to refer gives the Council the privilege of publishing the *Directory* whenever they see fit?

DR. JOSEPH A. GEIS, *Essex* No, report back at the next House

DR. KNICKERBOCKER Did you say they were to report back?

DR. REULING My motion was to refer to the Council with power to act and refer back to this House the printing of a *Directory* next year If the Council so directs, and after a study they find it feasible to do so, they can print it next year, or they print it two years from now

SPEAKER ANDRESEN That was my understanding, that there would be no delay in the printing of another *Directory*

DR. REULING No, there would be no delay

DR. FRANK LAGATTUTA, *Bronx* Mr Speaker and delegates, I think all this discussion is really not fair to the report of the Publication Committee, Part XI Why not hear what their report is before we make all these motions?

DR. BEEKMAN I am speaking to Dr Reuling's amendment, is that right?

SPEAKER ANDRESEN That is to refer back, yes

DR. BEEKMAN I do not think that the delegates of the House realize the changing costs with which we are confronted at the present time Every time we purchase paper the price has changed. It is not possible, because of this change in cost, for the House of Delegates to make a motion that will hold water and that we will be able to carry out perhaps six months from now If we accept Dr Reuling's motion we will refer it to a smaller body, and conditions may then be entirely different I think we will make a very great mistake if we make a motion that the Council will have to carry out because the Council is really the House between sessions and should be able to make such changes from time to time as conditions dictate

DR. GEIS I would like to make a motion to defer action on this until the report of the Publication Committee is considered on the same subject, when it can be considered at the same time as that report.

DR. FREEDMAN I will second that

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN That matter of the *Directory* then will be taken up later when the Publication Committee reports

We will hear one more report before we declare a ten-minute recess

Section 125 (*See 7, 174, 177*)

Report of Reference Committee on Report of the Secretary

DR. FREDERICK W WILLIAMS Concerning the Report of the Secretary, your Committee wishes to report that the statistics on membership as published were the statistics as of January 1, 1949 The published number of 834 delinquent members for 1948 would give the impression that this delinquency produced a loss in membership from 21,303 for January 1, 1948, to 21,171 as of January 1, 1949 This is explained, however, as being due to a variation in fiscal policy between some of county societies and the State Society By March, 1949, the delinquency number was reduced to 284 which would bring the total membership to 21,721 and by May 1, 1949, our total membership was 22,520 This is definitely the largest membership in the history of our Society This is truly sound, progressive growth. Your Committee suggests, however, that the Secretary hereafter report the membership statistics more correctly—that is a typographical error, it should be currently—currently than of the calendar year—there has been some mistake in the typing here I will ask a recess to get it straightened out It has been mistyped

SPEAKER ANDRESEN Dr Williams wishes to be excused until he gets his report corrected

We will have a ten-minute recess

At this point there was a ten-minute recess

SPEAKER ANDRESEN The House will be in order

Section 126 (*See 13*)

Report of Reference Committee on Report of Council, Part XII Miscellaneous

DR. JOSEPH A. GEIS, *Essex* First of all, I want to thank Dr Gullo, Dr Babbage, Dr Wolff, and Dr Loughran who worked so long and so hard with me yesterday afternoon in going over these matters

This is the report of the Reference Committee on Report of the Council, Part XII, Miscellaneous

(A) Convention—Your Reference Committee notes the report of the Council Committee on Convention, and feels that the last convention was one of the best ever held It showed excellent foresight and planning This House owes its thanks to the subcommittee doing the work. Dr Mitchell will be missed at this and future conventions

I move the adoption of this part of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. GEIS Continuing

(B) Nursing Education—Your Reference Committee approves the action of your Council Committee on Nursing Education in supporting the effort to have the 1941 Nursing Law put into effect this year

We also note the question of change in the education and duties of nurses, both R N and practical. This matter requires serious consideration by each and every physician in the State.

The Committee feels that the time is here for the State Society to take a stand and investigate the nursing situation It is felt that there are many extraneous factors included in nursing education that are unnecessary, expensive, and of no value in the making of a good nurse The time has come to reiterate the stand that the R N go back to nursing and be less of an administrator

I move the adoption of this part of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. GEIS Continuing

(C) Woman's Auxiliary—The work of the Auxiliary has been increasing annually since it was organized During the past year Mrs Neptune has averaged one meeting a week We thoroughly approve the idea of the district meetings, and if we show one half the enthusiasm of the women the attendance at our district meetings will be doubled The average member of the State Society does not realize the work that the women are doing We recommend that a vote of thanks be extended to the Auxiliary and that the Secretary so notify them

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR GEIS Continuing

(D) Office Administration and Policies—Your Reference Committee notes the new businesslike distribution of costs and definitely approves of this It helps to determine the cost of each department The tightening of checks on vouchers is an excellent idea We approve the various methods of saving money through saving work adopted at the central offices We still feel that this is businesslike even if your reference committee chairman was one of those caught in the new regulations about mimeograph work

This committee should be commended, and we recommend that it be continued

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. GEIS Continuing

(E) Questions on Ethics—At the last convention the question of advertisements and announcements of publications for the laity was referred back to the committee for better wording Your Council Committee reports the following

> "In the event that there is proposed any advertising in relation to any book or article or writing for the laity, such proposed advertising matter shall be submitted to the Committee on Public Relations prior to any public appearance of the advertisement This reviewing committee shall render its opinion without unnecessary delay It shall be guided mainly by this section of these Principles of Professional Conduct, but shall be empowered to make such concessions as may be practiced and necessary in considering the title and contents of the publication, the professional standing and reputation of the author, and such other material through which the publisher may wish to arouse interest"

We recommend that this be part of a general reconsideration which is suggested in our report on resolution of Dr Burk of New York County

Your Council Committee also considered the question of the use of such titles as F A C S, F A C P, Diplomate Am Bd. of Int Med., etc, on letter heads, professional cards and prescription blanks

The Committee decided that there was no objection to this provided the printing of these was in good taste The Committee left the interpretation of the phrase "in good taste" to the board of censors of each component county society This is also included in the referral to the Council committee

I move the adoption of this part of the report

The motion was seconded

DR. NATHAN BRODIE, *Kings* Do I understand, Mr Speaker, that this is just a report of the Economics Committee and not the resolution that was introduced yesterday?

DR. GEIS That is true

SPEAKER ANDRESEN The resolution is coming later?

DR. GEIS Yes

The question was called, and the motion was put to a vote, and was unanimously carried.

DR. GEIS Continuing

(F) Medical Licensure—Your Reference Committee notes the report of the Council Committee without understanding it However, we recommend that no graduates of any European continental school who matriculated after January 1, 1940, be admitted to examinations or be licensed without examination in this State

We also recommend that any physician of continental Europe who matriculated before January 1, 1940, should be required to have at least one year postgraduate work in an approved hospital before being considered eligible

We also recommend that a copy of this report be sent to Dr Dominick Maurillo to place before the Board of Regents

I might say in connection with this that the difficulty with the report from the Council Committee was due to the long sickness of Dr Strohm, who was the chairman of that committee It was finally drawn up in order to have it here for this meeting by Dr Peterson, who was working against time, and had a difficult job doing it alone It was one of the unfortunate things that happened because of Dr Strohm's illness

I move the adoption of this part of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. GEIS Continuing

(G) Belated Bills—We recommend that the bill of Dr Peter J Di Natale for $167 95 be approved for payment

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. GEIS We also recommend the payment of the bills of Dr Maxwell Lockie, $11 75, Dr C O E Lindbeck, $71 80, and Dr Ivan Hekiman, $25 35

SPEAKER ANDRESEN Will you explain just why that is necessary?

DR. GEIS Under the ByLaws of the Society all bills should be filed within thirty days from the time they were incurred If they are not filed within thirty days, the Council cannot approve them If they are filed after thirty days but before ninety days, the Council can refer them to the Trustees for approval, and if the Trustees see fit to approve them they may be paid.

All bills over ninety days old have to be brought before this House for approval

I move the adoption of this part of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 127 (See 36)

Report of Reference Committee on Report of Council, Part XII Amend Section 31 of Principles of Professional Conduct

DR. JOSEPH A GEIS, *Essex* Report on the resolution submitted by Dr Samuel B Burk, of New York County, which was distributed to each member of the House yesterday morning

(*Resolution given in full—Section 36*)

As a result of prolonged study of this resolution and a complete and thorough discussion, both pro and con, we recognize the need for a complete revision of the code of ethics with particular reference to the subject of advertising

We recommend that the Council Committee on Ethics study this matter and propose such changes as are needed at the next meeting of the House.

We also recommend that in the interim these problems be settled by each individual board of censors of the county societies

I move the adoption of this part of the report.

The motion was seconded

SPEAKER ANDRESEN Is there any discussion?

DR. NATHAN BRODIE, *Kings* Mr Speaker and members of the House, I have an amendment to this resolution, which refers particularly to Paragraph 31(a)

I wish to voice my disapproval of the resolution to amend Section 31 of the Principles of Professional Conduct It contains six sections

Paragraph (a) is objected to on the basis that it is incomplete and is consequently misleading It should be amended

The paragraph that I specifically object to, namely, 31(a), states

> "Physicians, as individuals or as members of any group, institution or organization, howsoever named, shall not resort to lay solicitation of patients in any form or manner whatsoever, directly or indirectly, or knowingly aid or permit others to make use of them in any form or manner of advertising or publicity through lay channels which should be tantamount to the solicitation of patients on their behalf, or employ any means or methods whatsoever to gain the attention of the lay public for the purpose of obtaining patients"

In the April 1, 1949 issue of the NEW YORK STATE JOURNAL OF MEDICINE under the annual reports of the Planning Committee, the following statement appears

> "The association or identification of a member of this society with a nonprofit voluntary medical insurance plan incorporated under Article IX-C of the Insurance Law of the State of New York or with a medical group associated or affiliated with such a medical insurance plan is not of itself improper or unethical and advertising or solicitation by any such medical insurance plan for subscribers to the plan is not of itself advertising to the public for business of a medical or therapeutic nature"

The Planning Committee for Medical Policies has investigated this matter with unusual thoroughness, and it is the result of the work of the committee composed of Drs Kenney, Anderton, Simpson, Masterson, Andresen, Cunniffe, Moore, Mott, Mitchell, Di Natale, and Aaron during the years 1946, 1947, and 1948

The approval of this resolution might be considered a form of restraint of trade, particularly since insurance programs in this State cannot exist

without the approval of the State Department of Insurance and the Department of Social Welfare

Two societies, namely, the San Diego Medical Society and the Oregon Medical Society, are now being sued by medical groups because of such restraining tactics

In these trying times where we are devoting every effort to develop various types of voluntary medical and hospital insurance, it is inadvisable to approve any resolution that would directly tend to restrain the development of any voluntary insurance plan, and conversely stimulate the development of the national compulsory health insurance program

I, therefore, recommend that this resolution be amended to include the recommendations of the Planning Committee published in the April 1, 1949, issue of the JOURNAL on page 816, as cited above

SPEAKER ANDRESEN Dr Brodie, the discussion is on the question of whether this whole matter shall be referred to the Council for revision of the Code of Ethics I don't know just where your amendment fits in How would you make that amendment?

DR. BRODIE 31(a)

SPEAKER ANDRESEN The question is whether we shall refer this entire matter to the Council

DR. BRODIE This amendment is in reference to including in there the report of the Medical Planning Committee in Section 31(a) I can read it directly from the Society bulletin if you would care to have me do so

SPEAKER ANDRESEN That would be a part of the job of the Council when it was reconsidering the whole Code of Ethics

DR. BRODIE However, they specifically omitted the recommendations of the Medical Planning Committee, and I believe they should be included because this now is in the form of a resolution

SPEAKER ANDRESEN The report of the Committee referred to, the Planning Committee for Medical Policies, has not been taken up yet, but that will also be considered by the Council

DR. BRODIE This is a resolution, and I am amending this resolution

SPEAKER ANDRESEN Amending it to have it include consideration of the Planning Committee's report in addition to the other?

DR. BRODIE That is right

SPEAKER ANDRESEN I guess there is no objection to that Is it seconded?

The motion was seconded by several

DR. SAMUEL B BURR, *New York* May I speak on that subject?

SPEAKER ANDRESEN Yes

DR. BURR Mr Speaker and members of the House of Delegates, inasmuch as I proposed these suggestions I sat through the committee's meeting, and I want to tell you that Dr Geis and his committee were very patient, and everybody who wanted to have an opportunity to discuss the pros and cons was given such time as he wanted. Even some members of the Planning Committee were present at the time Under the circumstances I think the whole matter is taken out of the hands of the House of Delegates and is transferred to our Council to report next time with such changes as to them, after study, may seem desirable, bearing in mind the report of the Planning Committee and bearing in mind all matters relating to publicity, but particularly with reference to this new modality for expressing our various cures or help that we may render the public, namely, television I believe that this whole amendment is entirely out of order

SPEAKER ANDRESEN We are now discussing an amendment which is simply to include the recommendation to the Council as well, that it consider the Planning Committee's report in revising the Code of Ethics It is not of any great importance, but it is not out of order

DR. THOMAS M D'ANGELO, *Queens* I should like to ask the question Does the present amendment just refer this matter to the Council or does it make it obligatory that it be accepted today?

SPEAKER ANDRESEN No, it just adds to the Reference Committee's recommendation the amendment that in considering this the Council also consider the Planning Committee's report

DR. BRODIE Right

DR. D ANGELO And does that include this whole question of ethics, not only Section 31 about which we have been arguing for the last three years but all other sections of the Code of Ethics be gone over by a committee of the Council and bring in a report of a whole new code of ethics?

SPEAKER ANDRESEN Yes

DR. GEIS Right

The question was called, and the amendment was put to a vote, and was unanimously carried, there being no discussion further, the motion as amended was put to a vote, and was unanimously carried

DR. GEIS Now I move the adoption of the report of the Reference Committee as a whole

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER ANDRESEN Thank you, Dr Geis

Section 128

Report of the Scientific Awards Committee

SPEAKER ANDRESEN Dr Charles D Post, of Onondaga, is here to make the report of the Scientific Awards Committee, which has to report direct to this House

DR. CHARLES D POST, *Onondaga* Our report is as follows

SCIENTIFIC AWARDS

First	Dr Nathan E Woodruff, Oak Ridge, Tennessee "Radio Isotopes"
Second	Dr Sidney A. Gladstone, New York Polyclinic Medical School, New York City "Sponge Biopsy A New Method in Cancer Diagnosis
Honorable Mention	Dr Louis E Etter, Western State Psychiatric Institute and Clinic, Pittsburgh, Pennsylvania "New Method for Roentgen and Anatomic Study of the Skull"

CLINICAL EXHIBITS

First	Dr David Lehr, New York Medical College, New York City "Low Toxicity of Sulfonamide Mixtures"
Second	Dr Charles A R Connor, American Heart Association, New York City

"Etiologic Diagnosis of Heart Disease"
Honorable Mention Dr Charles LeRoy Steinberg, Rochester, New York
"Gold Toxicology in Rheumatoid Arthritis"

CHARLES D POST, *Chairman*, Syracuse
CHARLES GIBBS, Rochester
JAMES MCASKILL, Watertown

I move its adoption

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER ANDRESEN Thank you, Dr Post

Section 129

Announcement

SPEAKER ANDRESEN I have an announcement to make Any members in the House of Delegates interested in volunteers for the armed forces—this in reply to the request for these volunteers received through the office of the Secretary of Defense—will meet with Dr Beverley C Smith in the rear of this room at the end of this meeting

Section 130 (*See 100*)

Report of Reference Committee on Miscellaneous Business (B) Medical Specialty Boards—Admission to Examination

DR. NORMAN S MOORE, *Tompkins* This is the Reference Committee's report on a resolution that was reintroduced this morning following this Committee's report, as an individual resolution of Dr Samuel Z Freedman, but I understand it had the endorsement of the New York County group It is the same resolution which was originally introduced without the words, "race, color, or creed." Do you wish it reread?

CHORUS Yes

DR. MOORE It reads

(*Resolution given in full—Section 100*)

The Reference Committee desires to amend the resolution in punctuation which places a comma following "basic training" in the first line of the third "whereas," and likewise places a comma following "basic training" in the third line of the resolution.

The Committee also desires to amend the first line of the fourth "whereas" to read "since a specialty board" rather than "since specialty board."

The Reference Committee recommends the approval of the amended resolution, and I so move

The motion was seconded.

DR. ABRAHAM KOPLOWITZ, *Kings* I don't think I quite understand the purpose of this whole thing When you mentioned about race, creed, or color, I could understand it. Perhaps there is an implication that they are differentiated against, but as it is now I would like to know the purpose of that Men are admitted to examination—

CHORUS Louder

SPEAKER ANDRESEN Dr Koplowitz wants to know the purpose of the resolution.

DR. KOPLOWITZ Men that meet the quality, ethically and by training, are admitted Now when the first resolution spoke of race, creed, and color that might imply that they were not With that taken out, what does it mean? I would like to know the purpose of it.

DR. WILLIAM B RAWLS, *New York* I would be glad to answer that This resolution was prompted by the fact that some men who have been licensed to practice medicine in the State of New York have not been allowed to take the specialty boards because they graduated from a foreign school, and in particular from the Scottish extramural school.

It was thought by the Medical Society of the County of New York that if these men had been licensed to practice medicine in New York, and, as a good many of these men had served in the armed services, if they had received the basic training required by the boards they should be admitted to the examinations by the boards and not discriminated against, just because they happened to have been graduated from a school that the boards do not wish to accept candidates from.

DR. KOPLOWITZ May I ask Dr Rawls whether he would include in that those graduates from the unapproved schools who have been licensed here?

CHORUS Louder

SPEAKER ANDRESEN He wants to know whether Dr Rawls would include the graduates of unapproved schools who have been licensed here

DR. RAWLS The unapproved schools cannot be licensed in the State of New York This only includes those people who have been licensed If you are not a graduate of an approved school, you cannot be licensed

DR. KOPLOWITZ Some have been licensed in the last few years

DR. RAWLS They must have the basic training, whatever school they come from.

DR. DONALD E MCKENNA, *Kings* As a member of the Board, I would like to state that under the circumstances certain schools in foreign countries are discriminated against, and rightly so They are discriminated against so as to give our own individuals an opportunity which they have as a birthright Any innuendo that a proper school in a foreign country is discriminated against is against all of the thoughts of the boards, and I speak feelingly on the subject. We are, I think, very fair As I see it, I am in accord with Dr Koplowitz unless the clause saying "race, color, or creed," is included, or discrimination because of religion or nationality, this motion has no effect and will have no effect upon the boards

DR. MAURICE J DATTELBAUM, *Kings* You are right

DR. JACOB WERNE, *Queens* I think we are treading on dangerous grounds We are intruding on the phrase of the Council of the American Medical Association, and before doing that we should have adequate grounds. The body of the resolution states that if these men have certain qualifications then they should be admitted. The boards have a perfect right, in conjunction with the Council of the American Medical Association, to set the qualifications, and apparently among their qualifications is one that these men shall graduate from schools either that are approved or have sufficient standing in the eyes of the members of the boards I think we should drop the term "discriminated against" unless there is some specific evidence to that effect that there has been actual discrimination. I hope that this resolution will be disapproved.

DR. SAMUEL Z FREEDMAN, *New York* I would like to discuss that.

SPEAKER ANDRESEN Go ahead

DR. FREEDMAN Apparently the idea of this resolution has been taken far afield Somebody has even said that there shall be two classes of citizens He speaks of those who, even though they may be

licensed in the State of New York, can and in his opinion should be discriminated against in order to give others the benefits of their birthright—whatever that may mean

The purpose of this resolution is quite simple There was purposely removed from this any word about discrimination on the basis of religion, color, national origin, etc, because in none of the "whereases" is there anything mentioned that discrimination takes place because of those reasons As Dr Rawls told you, it was brought up by a group of individuals in our county society who had a specific problem which was plaguing them In view of the fact that they had graduated from the so-called extramural schools of Scotland, they in some instances were not allowed to even take the examination by the board.

This was changed by us to read that anybody licensed to practice medicine in the State of New York shall be allowed to appear or make application for permission to take the examination Nobody is trying to tell the specialty boards what their requirements shall be as to training in their specialty The basic training referred to in that resolution has not anything to do with the basic training that we will discuss about individuals taking their examinations to practice medicine in this State This has to do with the basic training requirements set up by the different specialty boards, and the specialty boards are not deprived by this of any of their rights to set up their own criteria, but we do think it is unfair to cast aspersion upon the State of New York through its licensing representatives when they have, in their wisdom, seen fit to license an individual to practice in this State, that in spite of that the specialty boards say he still cannot practice medicine in their opinion

We do not have two types of practitioners in this State Anybody who is licensed to practice medicine in this State has every right that accrues to any other individual

As far as the argument of the Council of the American Medical Association doing certain things, let us not forget that we are representatives from our county societies, and we elect the delegates to the American Medical Association Don't let us fall into the error of thinking, as the public thinks, that the American Medical Association is some kind of a body which sits off by itself and is responsible to nobody The American Medical Association, whether it is the delegates, the Council, the trustees, or anybody else, is responsible to all of the members of the American Medical Association, and in the methods provided for by our Constitution this is the routine or the pathway along which these things that originate from individuals in the local county societies hope to get up there to the American Medical Association All we ask in that resolution is that anybody licensed to practice in this State of New York shall have the same right to take examinations as anybody else

DR. MOORE I beg your pardon May I read the resolution? It does not say that

DR. IRVING J SANDS, *Kings* What does it say?

DR. MOORE It says

"*Resolved*, that the Medical Society of the County of New York recommend that all physicians who are duly licensed to practice medicine in the State of New York, and who meet the basic training, postgraduate and ethical requirements of a specialty board be admitted to the examination given by the specialty board"

DR. FREEDMAN What is wrong with that?

SPEAKER ANDRESEN It does not mention anything about the Scotch school at all

DR. FREEDMAN While it does not mention the Scotch school, it does say that anybody who is a licensed practitioner and anybody who meets the basic requirements of the specialty board shall be admitted to the examination What is wrong with that?

DR. MOORE Nothing, the Reference Committee recommends its adoption with proper punctuation

DR FREEDMAN I thought you were differing with me

DR. KOPLOWITZ I would like to be heard

SPEAKER ANDRESEN You have discussed it once already

DR. KOPLOWITZ I asked a question

SPEAKER ANDRESEN All right

DR KOPLOWITZ I am also in sympathy with a lot of young men that have graduated from schools abroad that were somehow put on a lower basis by the American Medical Association Quite a time ago we were informed by the American Medical Association that graduates from foreign schools cannot occupy internships unless they have a state license Now it seems to me that this resolution has nothing to do with the boards As a principle I think the boards accept the rulings of the Council on Intern Training and whatever else you call it of the American Medical Association It is up to the American Medical Association to announce a rule that anyone that holds a license in the forty-eight states is legally a doctor of medicine allowed to go further if he can, but it is not up to the boards

The question was called, and the motion was put to a vote, and as there was doubt of the result, the motion was again put to a vote, and was declared carried

SPEAKER ANDRESEN The "ayes" have it, and the recommendation is adopted

Section 131 (*See 43, 88*)

Report of Reference Committee on Miscellaneous Business (B) Remission of Dues for Physicians Leaving to Take Residencies

DR. NORMAN B MOORE, *Tompkins* This resolution was introduced by Dr G S Baker, of Wyoming County

(*Resolution given in full—Section 43*)

As you recall, this resolution was returned to the Reference Committee by the House of Delegates, and I wish to report at this time that if and when I should become a patient I hope I will have the wisdom of the doctors that are on my Committee, because when they found out that the laboratory guide which they used yesterday was a wrong steer they revised their diagnosis in terms of more history and more laboratory aids today, therefore, the Committee reverses its stand with these comments

In consideration of this resolution yesterday, the Committee was unanimous in its desire to assist a worthy member of the State Society to receive postgraduate education Officers of the Society and other members of the House of Delegates who appeared before the Committee supported this feeling and did not inform the Committee of possible penalties to future administration of the State Society

Today on reconsideration the Reference Committee continues its feeling of sympathetic support for worthy fellow members desirous of postgraduate education However, additional opinions have given the Committee more insight regarding possible complications to which this resolution could lead in the future Further information was obtained re-

garding provisions already existing in the By laws for members in good standing who are in distress The Reference Committee feels the county society should assume the responsibility for special assistance to its members Therefore, with these additional facts available the Reference Committee has re-evaluated the resolution and recommends its disapproval

I move the adoption of the Reference Committee's recommendation

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER ANDRESEN The recommendation, carrying with it the disapproval of the original resolution, is adopted

DR. MOORE Now I wish to move the adoption of the Reference Committee's report as a whole

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER ANDRESEN Thank you, Dr Moore I understand you have a resolution to offer

Section 132 (*See 186*)

End Results of Industrial and Traumatic Surgery

DR NORMAN S MOORE, *Tompkins* I wish to offer this resolution as an individual

"WHEREAS, there are many thousands of medical records on file with the New York State Workmen's Compensation Board, such as those involving herniae, Colle's fractures, fractured femurs, and fractured scaphoids, and

"WHEREAS, the methods of examination used by the medical staff of the Board give the final results in terms of disability at end periods of time, varying from one to three years, and

"WHEREAS, these results have not yet been made available to the medical profession, therefore be it

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York requests the Chairman of the New York State Workmen's Compensation Board to attempt to obtain the necessary funds needed for study and tabulation of such medical records, so that these end results may be published and made available to the medical profession"

I move it be referred to the Council

DR. J STANLEY KENNEY, *New York* I second the motion.

SPEAKER ANDRESEN Is there any discussion? This is a motion to refer this resolution to the Council and not to a reference committee

DR. ARTHUR A FISCHL, *Queens* I just want to know whether these specific items are the only items as mentioned in that resolution or are there others?

DR. MOORE They were used as examples only

The question was called, and the motion was put to a vote, and was carried.

SPEAKER ANDRESEN The matter is referred to the Council

Section 133 (*See 124*)

Report of Reference Committee on Report of Council, Part XI Publication

DR. EUGENE H COON, *Nassau* The Reference Committee on Report of Council, Part XI, on Publication and Publicity has the honor to submit the following report

Your Committee has considered the report of the Council on Publications and observes that the Medical Society may be proud of the steady progress of the JOURNAL. The fact that its editorials h aroused comment by members and been referred in other journals and that its scientific articles h been widely abstracted and quoted in numer publications proves its increasing influence in country We, also, approve of the new plan of cluding practical articles on vital subjects such nutrition, physical medicine, and public hea Furthermore, we believe that the President's P is a helpful link between the head of the Society : its membership The inclusion of a special gr of men as contributors and advisers on the edito staff and the reference of scientific papers to a lis specialty consultants is in line with the forw look

We feel that the editorial staff as well as technical editorial staff, the advertising represer tives, and the others who have assisted are to highly commended for an excellent year's work.

It is noteworthy that this wider usefulness been attained without incurring any indebtedn We agree with the Council that an occasional de in publication of a paper is to be preferred to a (icit.

The Publication Committee is evidently alert the needs of the future and is already holding cussions regarding improvements in the general pearance of the JOURNAL. Progress makes s changes inevitable, but progress, also, dema careful thought, and we are pleased to note t such problems are being wisely approached.

Your Committee recommends to the Council t the *Directory* be published every two years, it ther recommends that the Publication Commit investigate thoroughly the cost of publishing Connecticut and New Jersey sections and the p sible loss due to advertising, and be gover thereby

Lastly, since by resolution of the House of D gates the Publication Committee is appoin annually, we recommend to the House of Delegs the continuance of this body as previously est lished

I move the adoption of this part of the report

DR. IRVING J SANDS, *Kings* I second, Speaker, that motion

SPEAKER ANDRESEN At this time we h agreed to consider the previous discussion on t subject again, and I think perhaps we should h that included at the present time as a part of discussion of the recommendation of Dr Coo committee You cannot consider two things once, so I think perhaps the best way would be have the other consideration taken up as a part the discussion of Dr Coon's committee's reco mendations

DR. STEPHEN R. MONTEITH, *Rockland* W can't we act on this report except that part wh concerns the *Directory*, and dispose of that p separately later in connection with the previ discussion?

SPEAKER ANDRESEN Would you like to do th

DR. COON It would be all right.

SPEAKER ANDRESEN Will you second that n tion of Dr Monteith's?

DR. COON Yes, that would be a good way handle it.

There being no discussion, the motion w put to a vote, and was unanimously carried

SPEAKER ANDRESEN This portion of the report approved except for the recommendation in rega to the publication of the *Directory*

We will now ask Dr Monteith, whose referen committee reported previously on this same qu

tion, to discuss the matter of the publication of the *Directory*

DR. MONTEITH Your Reference Committee on the Report of the Board of Trustees felt that we had investigated this question as far as we could in view of the fact that we did have conferences with members of the Board of Trustees, the Publication Committee, our JOURNAL editors, and our business manager

There is only one thing that I think I would say here, and that is, Dr Coon in his report has mentioned the fact that there should be an investigation by the Publication Committee of including the members from New Jersey and Connecticut in the *Directory* That has been done, and it is the considered opinion of the Publication Committee and business manager that the dropping of the listing of members from those states will not in any serious way affect the amount of advertising received for the *Directory*

We were also assured that the Publication Committee was seriously considering publishing the *Directory* without any advertising at all because the net profit from such advertising is very low, and the advertising itself is difficult to secure

In setting forth in our Reference Committee report the compromise issuance of the *Directory* on a three-year basis, we were simply compromising the recommendation of the Board of Trustees, who recommended a four-year issuance, with the issuance of a supplement The supplement we believe to be completely valueless

We felt that a four-year interval between publication was probably too long, but that with the two-year publication there was too much risk of running a big deficit

SPEAKER ANDRESEN Dr Kosmak, will you discuss this report? Let us hear right from headquarters

DR. GEORGE W KOSMAK, *Managing Editor* Mr Speaker and members of the House, I don't know quite how to begin, but I do want to say that in so far as the recommendation of the Publication Committee is concerned, as stated in its report we considered a three-year interval of publication appropriate. That was based on considerations that were brought up at a considerable number of our meetings.

The Publication Committee feels that the issuance of the *Directory* is not only one of its most difficult jobs but one which concerns the Society as a whole, and particularly its financial department, in a way that we did not feel that we should be the sole arbiters The Publication Committee is the servant of the Society, and we look upon it as such We do not wish to be put in the position where we should be the deciding factor, and whatever decision is reached at this particular gathering or any other gathering is the one that we shall feel ourselves compelled to follow

There are a great many difficulties associated with the publication of this *Directory* We include in it those 23,000 members of the State Society and some 8,000 names of those in the adjoining states The inclusion of the latter may be of advantage to a comparatively small number of people The metropolitan area, which embraces the nearby portions of the State of New Jersey and the State of Connecticut, may with good reason perhaps be included, but when we proposed this to the representatives of these two state societies they, after consultation with their officers, felt that they could not contribute anything to the costs

In so far as the proposition has been made that the *Directory* be sold to this particular group, we find that only 300 copies could be disposed of in those areas, but that the *Directory* includes 8,000 names from these two sections

In so far as publishing supplements is concerned, we feel that that would be a very undesirable feature When a man picks up the book, he looks up Dr Jones, and he assumes that the description of Dr Jones—his address, telephone number, and hospital associations—is correct There is not one man in a hundred who would go back to his supplement to find out whether that insertion is correct

Moreover, it would be a fairly costly venture, and the Publication Committee did not believe it would be a desirable thing to do

The proposition has also been made that the *Directory* be issued and sold to those who want it That would create an impossible situation When we compile that *Directory*, we have to make arrangements with a publishing concern and with the printer, and we have to give them a definite number of copies that are desirable If we were to rely on selling that simply to the men who wanted it we could obtain no satisfactory or definite estimate, because books are not published that way They are published in editions, and we must give an order for 25,000 or 27,000 copies, and then if we found that only 15, or 25, or possibly 30 per cent of the members wanted a copy, what would we do with the remainder?

Moreover, the difficulties of collecting these sums from the subscribers would be a task of considerable proportions So the Publication Committee does not feel that that is a desirable feature to follow up

Now, Mr Speaker, I have nothing more to say on that subject unless somebody wants to ask a question or questions However, I do want to take this opportunity to introduce a personal note It would be most ungracious of me if, as an individual, I did not give cognizance and recognize the very nice things that were said about me yesterday in those various resolutions I accept these compliments, but I do so in the belief that they should likewise be transferred to those men and women in the Society who have been so helpful to the editor in these recent years

I want to express my particular obligation to Dr Laurance Redway for the wonderful editorial work he has done I want to express my indebtedness to Mr Dwight Anderson, who has managed the business end of the JOURNAL and *Directory* I want to express my obligations to the office staff, and I want to express likewise my obligations to our secretary, Dr Anderton If I have omitted anybody, I am sorry, but this has not been, I want to assure you, the work of one individual What has been done is due to the devoted assistance that has been given by various people in the headquarters' office

I am glad, Mr Speaker and members of the House, to have had this opportunity to say these few words I assure you that I was greatly embarrassed yesterday to sit there and have to listen to all this, but the one thing that I did resent was the remark by the Speaker that this was a eulogy (*Laughter*) As an editor, naturally I have to take note of the definition of words in the dictionary I was always under the impression that eulogies were pronounced more or less over the dead, and while I may be dead from the left ankle down—in the last few days I have been suffering from an attack of gout—I want to assure you that does not extend above the ankle

I thank you, Mr Speaker, for having given me this opportunity to be heard

garding provisions already existing in the Bylaws for members in good standing who are in distress The Reference Committee feels the county society should assume the responsibility for special assistance to its members Therefore, with these additional facts available the Reference Committee has re-evaluated the resolution and recommends its disapproval

I move the adoption of the Reference Committee's recommendation

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

SPEAKER ANDRESEN The recommendation, carrying with it the disapproval of the original resolution, is adopted

DR. MOORE Now I wish to move the adoption of the Reference Committee's report as a whole

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER ANDRESEN Thank you, Dr Moore

I understand you have a resolution to offer

Section 132 (*See 185*)

End Results of Industrial and Traumatic Surgery

DR. NORMAN S MOORE, *Tompkins* I wish to offer this resolution as an individual

"WHEREAS, there are many thousands of medical records on file with the New York State Workmen's Compensation Board, such as those involving herniae, Colle's fractures, fractured femurs, and fractured scaphoids, and

"WHEREAS, the methods of examination used by the medical staff of the Board give the final results in terms of disability at end periods of time, varying from one to three years, and

"WHEREAS, these results have not yet been made available to the medical profession, therefore be it

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York requests the Chairman of the New York State Workmen's Compensation Board to attempt to obtain the necessary funds needed for study and tabulation of such medical records, so that these end results may be published and made available to the medical profession"

I move it be referred to the Council

DR. J STANLEY KENNEY, *New York* I second the motion.

SPEAKER ANDRESEN Is there any discussion? This is a motion to refer this resolution to the Council and not to a reference committee

DR. ARTHUR A FISCHL, *Queens* I just want to know whether these specific items are the only items as mentioned in that resolution or are there others?

DR. MOORE They were used as examples only

The question was called, and the motion was put to a vote, and was carried

SPEAKER ANDRESEN The matter is referred to the Council.

Section 133 (*See 124*)

Report of Reference Committee on Report of Council, Part XI Publication

DR. EUGENE H COON, *Nassau* The Reference Committee on Report of Council, Part XI, on Publication and Publicity has the honor to submit the following report

Your Committee has considered the report of the Council on Publications and observes that the Medical Society may be proud of the steady progress of the JOURNAL. The fact that its editorials have aroused comment by members and been referred to in other journals and that its scientific articles have been widely abstracted and quoted in numerous publications proves its increasing influence in the country We, also, approve of the new plan of including practical articles on vital subjects such as nutrition, physical medicine, and public health. Furthermore, we believe that the President's Page is a helpful link between the head of the Society and its membership The inclusion of a special group of men as contributors and advisers on the editorial staff and the reference of scientific papers to a list of specialty consultants is in line with the forward look.

We feel that the editorial staff as well as the technical editorial staff, the advertising representatives, and the others who have assisted are to be highly commended for an excellent year's work.

It is noteworthy that this wider usefulness has been attained without incurring any indebtedness We agree with the Council that an occasional delay in publication of a paper is to be preferred to a deficit

The Publication Committee is evidently alert to the needs of the future and is already holding discussions regarding improvements in the general appearance of the JOURNAL. Progress makes such changes inevitable, but progress, also, demands careful thought, and we are pleased to note that such problems are being wisely approached

Your Committee recommends to the Council that the *Directory* be published every two years, it further recommends that the Publication Committee investigate thoroughly the cost of publishing the Connecticut and New Jersey sections and the possible loss due to advertising, and be governed thereby

Lastly, since by resolution of the House of Delegates the Publication Committee is appointed annually, we recommend to the House of Delegates the continuance of this body as previously established.

I move the adoption of this part of the report

DR. IRVING J SANDS, *Kings* I second, Mr Speaker, that motion.

SPEAKER ANDRESEN At this time we have agreed to consider the previous discussion on this subject again, and I think perhaps we should have that included at the present time as a part of the discussion of the recommendation of Dr Coon's committee You cannot consider two things at once, so I think perhaps the best way would be to have the other consideration taken up as a part of the discussion of Dr Coon's committee's recommendations

DR. STEPHEN R. MONTEITH, *Rockland* Why can't we act on this report except that part which concerns the *Directory*, and dispose of that part separately later in connection with the previous discussion?

SPEAKER ANDRESEN Would you like to do that?

DR. COON It would be all right

SPEAKER ANDRESEN Will you second that motion of Dr Monteith's?

DR. COON Yes, that would be a good way to handle it

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN This portion of the report is approved except for the recommendation in regard to the publication of the *Directory*

We will now ask Dr Monteith, whose reference committee reported previously on this same ques-

tion, to discuss the matter of the publication of the *Directory*

DR. MONTEITH Your Reference Committee on the Report of the Board of Trustees felt that we had investigated this question as far as we could in view of the fact that we did have conferences with members of the Board of Trustees, the Publication Committee, our JOURNAL editors, and our business manager

There is only one thing that I think I would say here, and that is, Dr Coon in his report has mentioned the fact that there should be an investigation by the Publication Committee of including the members from New Jersey and Connecticut in the *Directory* That has been done, and it is the considered opinion of the Publication Committee and business manager that the dropping of the listing of members from those states will not in any serious way affect the amount of advertising received for the *Directory*

We were also assured that the Publication Committee was seriously considering publishing the *Directory* without any advertising at all because the net profit from such advertising is very low, and the advertising itself is difficult to secure

In setting forth in our Reference Committee report the compromise issuance of the *Directory* on a three-year basis, we were simply compromising the recommendation of the Board of Trustees, who recommended a four-year issuance, with the issuance of a supplement The supplement we believe to be completely valueless

We felt that a four-year interval between publication was probably too long, but that with the two-year publication there was too much risk of running a big deficit

SPEAKER ANDRESEN Dr Kosmak, will you discuss this report? Let us hear right from headquarters.

DR. GEORGE W KOSMAK, *Managing Editor* Mr Speaker and members of the House, I don't know quite how to begin, but I do want to say that in so far as the recommendation of the Publication Committee is concerned, as stated in its report we considered a three-year interval of publication appropriate That was based on considerations that were brought up at a considerable number of our meetings.

The Publication Committee feels that the issuance of the *Directory* is not only one of its most difficult jobs but one which concerns the Society as a whole, and particularly its financial department, in a way that we did not feel that we should be the sole arbiters The Publication Committee is the servant of the Society, and we look upon it as such. We do not wish to be put in the position where we should be the deciding factor, and whatever decision is reached at this particular gathering or any other gathering is the one that we shall feel ourselves compelled to follow

There are a great many difficulties associated with the publication of this *Directory* We include in it those 23,000 members of the State Society and some 5,000 names of those in the adjoining states The inclusion of the latter may be of advantage to a comparatively small number of people The metropolitan area, which embraces the nearby portions of the State of New Jersey and the State of Connecticut, may with good reason perhaps be included, but when we proposed this to the representatives of these two state societies they, after consultation with their officers, felt that they could not contribute anything to the costs

In so far as the proposition has been made that the *Directory* be sold to this particular group, we find that only 300 copies could be disposed of in those areas, but that the *Directory* includes 8,000 names from these two sections

In so far as publishing supplements is concerned, we feel that that would be a very undesirable feature When a man picks up the book, he looks up Dr Jones, and he assumes that the description of Dr Jones—his address, telephone number, and hospital associations—is correct There is not one man in a hundred who would go back to his supplement to find out whether that insertion is correct

Moreover, it would be a fairly costly venture, and the Publication Committee did not believe it would be a desirable thing to do

The proposition has also been made that the *Directory* be issued and sold to those who want it That would create an impossible situation When we compile that *Directory*, we have to make arrangements with a publishing concern and with the printer, and we have to give them a definite number of copies that are desirable If we were to rely on selling that simply to the men who wanted it we could obtain no satisfactory or definite estimate, because books are not published that way They are published in editions, and we must give an order for 25,000 or 27,000 copies, and then if we found that only 15, or 25, or possibly 30 per cent of the members wanted a copy, what would we do with the remainder?

Moreover, the difficulties of collecting these sums from the subscribers would be a task of considerable proportions So the Publication Committee does not feel that that is a desirable feature to follow up

Now, Mr Speaker, I have nothing more to say on that subject unless somebody wants to ask a question or questions However, I do want to take this opportunity to introduce a personal note It would be most ungracious of me if, as an individual, I did not give cognizance and recognize the very nice things that were said about me yesterday in those various resolutions I accept these compliments, but I do so in the belief that they should likewise be transferred to those men and women in the Society who have been so helpful to the editor in these recent years

I want to express my particular obligation to Dr Laurance Redway for the wonderful editorial work he has done I want to express my indebtedness to Mr Dwight Anderson, who has managed the business end of the JOURNAL and *Directory* I want to express my obligations to the office staff, and I want to express likewise my obligations to our secretary, Dr Anderton If I have omitted anybody, I am sorry, but this has not been, I want to assure you, the work of one individual What has been done is due to the devoted assistance that has been given by various people in the headquarters' office

I am glad, Mr Speaker and members of the House, to have had this opportunity to say these few words I assure you that I was greatly embarrassed yesterday to sit there and have to listen to all this, but the one thing that I did resent was the remark by the Speaker that this was a eulogy (*Laughter*) As an editor, naturally I have to take note of the definition of words in the dictionary I was always under the impression that eulogies were pronounced more or less over the dead, and while I may be dead from the left ankle down—in the last few days I have been suffering from an attack of gout—I want to assure you that does not extend above the ankle

I thank you, Mr Speaker, for having given me this opportunity to be heard

SPEAKER ANDRESEN I beg the pardon of our editor for making a mistake in English. He corrects things that I write every once in a while, and now he has corrected something I have announced We thank him very much for his very modest talk about his own efforts We all know we would not have the JOURNAL we have were it not for his efforts, although all the other people who are helping him are doing such a fine job as well

Our Committee has recommended that this whole matter of how often the *Directory* is to be published and at what expense is to be referred to the Council The previous Committee had recommended three-year publication. Do you want to put that in the form of an amendment so we can do something about it?

DR. MONTEITH Had not Dr Reuling amended our report, to refer it to the Council? I think he had

DR. JAMES R. REULING Mr Speaker and gentlemen of the House, I believe the question before us at this time is the report of the present Reference Committee We have laid a matter on the table until this Reference Committee has reported That should be taken care of There cannot be two main motions on the floor at the same time, and I shall move, Mr Speaker, that this portion of this Reference Committee's report be referred to the Council for action

The motion was seconded by several

SPEAKER ANDRESEN Dr Reuling, the thing we are acting on is a motion to refer the matter to the Council, which is what you are making a motion of now That is what we are voting on now, whether to refer it to the Council.

DR. REULING This was a two-year publication.

SPEAKER ANDRESEN No, they wanted to refer the whole matter, as I just said, of how often or by what method to the Council.

DR. REULING I beg your pardon I don't think that motion then should prevail There should be a motion to take the other from the table and dispose of it likewise

DR. JAMES F ROONEY, *Trustee* I rise to a question of information I think the House is confused, as I am As I recall the discussion on the report of the preceding reference committee concerning the question of time of publication, it was moved that we postpone further discussion on the amendments that were made to that reference committee's report. They deferred action upon those until after hearing the report of the reference committee on the Publication Committee's report, so that they could be taken up jointly I am asking the Chair if that is the understanding of the Speaker and if that is the understanding of the House

SPEAKER ANDRESEN The Speaker has ruled that two resolutions or two reports cannot be acted on at the same time. In the first place we cleared the boards so far as the reference committee's report is concerned to boil it down to merely a consideration as to whether the whole matter of publication of the *Directory* was to be referred to the Council or not, and then I asked whether the people who had introduced the original resolution and the committee which had considered it would like to discuss this question of the one motion before the House, and that is the recommendation of this Reference Committee.

DR. ROONEY Of this Reference Committee on Publication?

SPEAKER ANDRESEN Yes, that is the motion before the House

DR. ROONEY I think that is the important thing to have the House understand.

SPEAKER ANDRESEN I stated that first.

DR. ROONEY May I ask that the chairman of the Reference Committee reread the recommendation?

SPEAKER ANDRESEN Will you read that again, Dr Coon?

DR. COON It reads

> "Your Committee recommends to the Council that the *Directory* be published every two years, it further recommends that the Publication Committee investigate thoroughly the cost of publishing the Connecticut and New Jersey sections and the possible loss due to advertising, and be governed thereby"

The reason for the latter being that yesterday we were informed that there was some question still in the minds of the Publication Committee whether they would be losing more money from advertising by dropping out New Jersey and Connecticut than they would be saving the cost of publication.

SPEAKER ANDRESEN You said you wanted to refer it to the Council. You didn't mention that now

DR. COON Yes, it starts, "Your Committee recommends to the Council"

CHORUS Two-year publication

SPEAKER ANDRESEN Your recommendation then is to the Council?

DR. COON Right

SPEAKER ANDRESEN It is not a mandate, it is a recommendation

DR. ROONEY Right

DR. REULING I rise to a point of order then that my original motion was in order This is only a recommendation.

DR. ROONEY I will take a point of order also The point of order, Mr Speaker, is this There are embodied actually two motions in this report asking for the approval of the House One is to refer to the Council, and the other is directing the Council to publish the *Directory* every two years I would suggest that as a matter of parliamentary order the recommendations be divided and passed upon separately

CHORUS Right.

DR. ARTHUR A. FISCHL, *Queens* I so move.

The motion was seconded by several.

SPEAKER ANDRESEN We will do that We will then have the first recommendation. What is that, Dr Coon?

DR. COON "Your Committee recommends to the Council that the *Directory* be published every two years."

DR. ROONEY Now, Mr Speaker, I would like to say three words to the House I hope this motion will fail of approval.

SPEAKER ANDRESEN Is there any further discussion?

DR. EZRA A. WOLFF, *Queens* As I understand it, Mr Speaker, the motion is to publish the *Directory* every two years

SPEAKER ANDRESEN To recommend to the Council that it be published every two years

DR. WOLFF I should like to suggest an amendment I think we are all in accord that we should publish the *Directory* as often as is feasible We are all afraid it is going to cost too much money I think if we had a little insurance on our costs we could possibly get around the situation. I suggest that the recommendation of the Committee be amended so as to read that the *Directory* shall be published every two years and distributed in the manner heretofore employed, with the understanding that any deficit resulting from the production of

the next issue shall be defrayed by a per capita assessment, which shall not exceed $5 00 for each member

SPEAKER ANDRESEN Is that amendment seconded?

The amendment was seconded by several

DR. LEO F SCHIFF, *Clinton* Mr Speaker and gentlemen, we are going to get ourselves so terribly balled up and do things that we may be sorry for later We are losing sight of the simplest solution, and that is to refer this matter and all the other matters that are coming up in connection with it to the Council. They have some idea of what this House of Delegates wants They have the time for consideration of the Publication Committee's ideas and all of the other things involved The only sensible action that we could take would be to refer the matter to the Council with power to act as in their judgment they see fit and to report to this House of Delegates next year, and I so move

The motion was seconded by several

SPEAKER ANDRESEN Is there any discussion of this motion to refer?

DR. ABRAHAM RABINER, *Kings* This *Directory* is one of the services that the Society offers to its members It is a necessary service, and should be available to them. My original amendment was an effort to make it possible that this service be continued to those who want it It would not be a great sacrifice for them to pay a small amount of money to obtain it The argument that was given to me in the period when we had a recess was that there are a great many members who would not avail themselves of it, who would not care to have it if they had to pay for it and—

SPEAKER ANDRESEN I am very sorry, but I will have to rule now we are considering the motion to refer, not the other amendment

DR. RABINER But this is in reference to that motion.

SPEAKER ANDRESEN Not so far

DR. RABINER I will come to it in a moment

SPEAKER ANDRESEN Will you get right down to it?

DR. RABINER The point is this I think it would be unfair to tax every member of the Society for any deficit. On the other hand, if it were announced that this volume is available to every member who wishes it, but that a small assessment or rather a small fee would bring them the volume, I think it would take care of the deficit.

SPEAKER ANDRESEN The question is whether the whole matter is to be referred to the Council, the matter of publication of the *Directory*

CHORUS Question

CHORUS No

SPEAKER ANDRESEN All in favor of limiting the further debate and bringing up the question at once say, "Aye"—

DR. FREEDMAN Mr Speaker, I wish to be heard.

SPEAKER ANDRESEN Contrary, "Nay" The motion to limit debate is carried.

DR. FREEDMAN Are you sure you are within your rights in doing that?

SPEAKER ANDRESEN The House has decided there is to be no more debate on it.

DR. FREEDMAN Are you parliamentarily correct?

SPEAKER ANDRESEN The question had been called

DR. FREEDMAN I am asking if you are parliamentarily correct to thus limit debate

SPEAKER ANDRESEN The House has decided to limit debate and take up the question. All those in favor of the question will say, "Aye", contrary, "No" This matter is now referred to the Council.

DR. FREEDMAN May I ask when the Council has the time to do all the work that has been passed on to them by this body in addition to doing the work that it has been elected to do?

DR. REULING Might I at this time repeat the motion that I made before or rather my intention to take from the table the matter of the motions that were laid on it?

SPEAKER ANDRESEN We still have another resolution from this Reference Committee to discuss

DR. REULING I was declared out of order, and now you have taken action on the motion I am now making the motion to take from the table at this time the recommendation, with its amendments, of a previous reference committee

SPEAKER ANDRESEN Then that would put two motions before the House, which is out of order because we have the other half of this recommendation to discuss It was divided into two parts

DR REULING May I hear that read?

DR. COON "It further recommends that the Publication Committee investigate thoroughly the cost of publishing the Connecticut and New Jersey sections and the possible loss due to advertising, and be governed thereby"

DR. KOSMAK May I just interrupt a moment? I would like to inform the chairman of the Reference Committee that all of that has been done The Publication Committee has made a thorough study of those features that he is referring to there

SPEAKER ANDRESEN Is there any further discussion?

There was no response

SPEAKER ANDRESEN Dr Reuling, do you wish to discuss that?

DR. REULING No

SPEAKER ANDRESEN Would you like to refer that together with the previous one?

DR. REULING Yes, Mr Speaker That is simply to ask them to study?

SPEAKER ANDRESEN Yes

DR. REULING And that could very well be a part of the motion to refer to the Council the matter of publication?

SPEAKER ANDRESEN Yes Do you want us to vote on it the way it is?

DR. REULING I will yield

DR. MONTEITH I should like to amend the Reference Committee's report and request that this portion of their report be likewise referred to the Council.

DR. ARTHUR J BEDELL, *Past President* I second that motion, or that amendment rather

SPEAKER ANDRESEN Is there any discussion on the motion to refer this part of the report also to the Council?

The question was called, and the motion was put to a vote, and was unanimously carried.

DR. REULING Mr Speaker, this motion to table was to be a part of this discussion. I move that that question and the amendments thereto be now taken from the table

The motion was seconded by several

SPEAKER ANDRESEN You will do that automatically, because it was voted it should be done that way That was my intention to bring that up now in the taking of any vote, because the motion was originally that it was to be taken up after this—

DR. REULING It was not It was to be considered at the same time.

SPEAKER ANDRESEN At the same time?

DR. REULING Yes

SPEAKER ANDRESEN Then we will take it up now All in favor will say "Aye", contrary, "No" The motion is carried and that is being taken up.

DR. REULING Now I move that those matters be referred to the Council for action

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 134

Report of Reference Committee on Report of Council, Part XI Public Relations

DR. EUGENE H COON, *Nassau* The importance of the National Education Campaign needs no argument, and a spokesman for the American Medical Association makes very clear what part we must play in this campaign He writes, "Your state association and your office as well as your member societies will be in the front lines of the grass roots campaign to convince the American people that voluntary medical care is better for them by far than any compulsory system."

Our Committee joins the Council Committee on Public Relations in emphasizing the following steps to be taken immediately by each county organization

1 Organize a speakers' bureau composed of members with forensic ability

This first step, an organization of a speakers' bureau, is a vital one Aid to form this committee may be secured from Mr Thomas E Walsh, field representative of the Public Relations Bureau of the Society It is encouraging to note that eight counties have formed such a speakers' bureau, but it is imperative that the other 53 societies act at once

2 Have a public relations committee which will gather available material concerning compulsory health insurance from the State Medical Society and elsewhere

3 This committee should, also, see that its speakers attend a "briefing session" similar to the one to be held on May 14 in Rochester Members who are in a district which is eligible to attend this session should see that their society is represented adequately Arguments against compulsory health insurance will be presented and an expert adviser on public speaking will assist Advice on how to hold a "briefing session" for individual county societies may be obtained from Mr Walsh

4. Ask the county organization to alert for opportunities to speak, get the Woman's Auxiliary to help in this Their membership reaches many groups The State organizations of dentists and retail druggists have offered aid in this fight Enlist the aid of the local dentists and druggists in the search for chances to present our side of this question.

The continued assistance to the Woman's Auxiliary is heartily approved. Aid given to their planning committee and the information made available to them has helped to strengthen their organization A well-informed Woman's Auxiliary means a better informed community Our committee urges the utmost cooperation between the Council Committee on Public Relations and the Woman's Auxiliary

Your Committee is impressed by the list of releases, news letters, and publications

We wish to commend the Council Committee on Public Relations for an excellent report in a crucial time

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 135 (*See 27*)

Report of Reference Committee on Report of Council, Part XI Medical Directory

DR. EUGENE H COON, *Nassau* We now have three resolutions The first one is the resolution introduced by Dr Moore, of Tompkins County

(*Resolution given in full—Section 27*)

Your Committee disapproves of this resolution Definite recommendations were made in Report of Council, Part XI, Publications and Public Relations

That has already been taken care of, and requires no additional action

SPEAKER ANDRESEN As long as that has already been disposed of, I will rule we need not take it up now

Section 136 (*See 30*)

Report of Reference Committee on Report of Council, Part XI Concerning Listing of Union Health Center in the State Medical Directory as an Industrial Clinic

DR. EUGENE H COON, *Nassau* Resolution introduced by Dr Peter Murray, of New York County

(*Resolution given in full—Section 30*)

Your Committee suggests the substitution of the following resolution

"*Resolved*, that only those hospitals, clinics, and other institutions which comply with the intent and the spirit of the code of ethics of the Medical Society of the State of New York as it applies to the practice of medicine, be listed in the *Directory*"

Your Committee approves the adoption of this resolution.

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 137 (*See 59*)

Report of Reference Committee on Report of Council, Part XI Suggested Educational Device

DR. EUGENE H COON, *Nassau* Resolution introduced by Dr McGarvey, of Westchester

(*Resolution given in full—Section 59*)

Your Committee recommends the adoption of this resolution

The motion was seconded by several

SPEAKER ANDRESEN Any discussion? That is merely a recommendation to the American Medical Association, is that right?

DR. COON Yes

The question was called, and the motion was put to a vote, and was unanimously carried.

DR. COON I would like to thank the members of the Committee for their assistance and cooperation, Drs Frank LaGattuta, Irving J Sands, and William A. Peart

Also I wish to move adoption of the report of the Committee as a whole, as amended

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

SPEAKER ANDRESEN Thank you, Dr Coon

Section 138 (*See 173*)

Revised Workmen's Compensation Fee Schedule

SPEAKER ANDRESEN Yesterday morning your Speaker announced that we had two members of the House who had been serving continuously since

1913 We tried to get both of them to come up here and speak, and neither was here at that time, but Dr Rooney had plenty to say later, and we have already heard from him. Now we are going to hear from the other one Dr Bedell is going to prove that he is with us by getting up and giving us a few words of greeting and then giving us some information

DR. ARTHUR J BEDELL, *Past President* I arise neither for greeting nor for time-consuming discussion I arise in anger This morning we heard from Miss Donlon that the fee schedule had been revised. It has—downward. I rise, sir, and ask that Dr Duryee's committee, Part XI, on the Report of the Council, who made the recommendations that the fee schedules for the general practitioner, the radiologist, and the practitioner of physical medicine be revised and proper adjustments made, consider this matter The supplemental fee schedule has just been seen, and speaking for the ophthalmologists of the State of New York I object to the promulgated revision and request that Dr Duryee's committee bring in an additional report including the schedule for eye care I trust, Mr Speaker, these remarks and my presence will thank you for acknowledging me.

SPEAKER ANDRESEN Dr Bedell has made a motion to refer this to Dr Duryee's committee

DR. BRITTAIN F PAYNE, *New York* I second that motion

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN That is so referred

Section 139 (*See 8, 124, 133*)

Report of Reference Committee on Report and Supplementary Report of the Board of Trustees

DR. STEPHEN R MONTEITH, *Rockland* Might I have this opportunity to thank the members of my committee who listened long and patiently yesterday afternoon, Dr Charles W Mueller, Dr B Wallace Hamilton, Dr Thomas M Watkins, and Dr Harold F Brown

I also move the adoption of the report of the Reference Committee as a whole, as amended and referred.

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 140

Report of Reference Committee on Report of Council, Part I Postgraduate Education

DR. SCOTT LORD SMITH, *Dutchess* Mr Speaker and members of the House, the report of the Council, Part I, reviews the work of the Committee on Public Health and Education under the chairmanship of the late Dr O W H. Mitchell.

Your Reference Committee is greatly impressed by the vast amount of postgraduate education carried on, as shown by this report of what has been provided during the year The patient, persistent, and prodigious efforts of the chairman have been invaluable to the doctors and citizens of this State For many years, Dr O W H. Mitchell was a member of the Committee on Public Health and Education and, since 1940, had served as its chairman. Therefore, before reviewing in detail Dr Mitchell's work, your Reference Committee would request a silent standing tribute to Dr Mitchell.

SPEAKER ANDRESEN It is so ordered

The delegates arose and stood for one minute in silent tribute to Dr O W H Mitchell's memory

DR. SMITH Postgraduate medical education is furnished by this Council Committee in many ways

1 Speakers are provided for meetings of hospital staffs, county societies, and other medical groups This program is made available by the combined efforts of the New York State medical school faculties and research institutions, the New York State Department of Health, the New York State Dental Society, the New York State Department of Labor, and others For programs so arranged the Medical Society of the State of New York pays the speakers' traveling expenses, and the New York State Department of Health provides the honorarium

2 The *Course Outline Book* is published and distributed to a long list of medical organizations' officers, public health, education and welfare officials, research foundations, and others The 1948 edition, revised for 1948 and 1949, contains 67 announcements That it is up to date is attested to by two new items, (*a*) "Medical Aspects of Radioactive Materials," and (*b*) Medical Motion Picture Films, procurable on a loan basis The course book has been used in 33 counties whose county societies or hospital staffs have had at least one and usually four or more lectures

3 Regional meetings and teaching days were held during the year in five counties

Always alert, the Public Health and Education Committee has, as of February 1, 1949, already made extensive commitments along similar lines for the coming year

Also, Dr Mitchell addressed the Associated State Postgraduate Committee in Chicago on "The Postgraduate Medical Education Program of the Medical Society of the State of New York," and the fall meeting of the Brooklyn Tuberculosis Society on the State Medical Society's BCG Program.

In conclusion, your Reference Committee has only unbounded admiration for the work of Dr Mitchell and his committee, and is confident that his successor will carry on at the high level which Dr Mitchell attained during the nine years that he served as chairman of the Committee on Public Health and Education The Committee realizes the imperative need to continue this work.

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 141 (*See 54, 184*)

Report of Reference Committee on Report of Council, Part I Medical Officers for the Armed Forces of the United States

DR. SCOTT LORD SMITH, *Dutchess* Under Emergency Preparation, two resolutions were referred to the Reference Committee

One was the resolution introduced by Dr Irving J Sands, of Kings

(*Resolution given in full—Section 54*)

Your Committee considered this would exceed the authority of the House of Delegates and, therefore, recommends that it be not approved

I move the adoption of this section of the report

DR. STEPHEN R. MONTEITH, *Rockland* I second that motion

There being no discussion, the motion was put to a vote, and was unanimously carried

Section 142 (*See 31*)

Report of Reference Committee on Report of Council, Part I Voluntary Service in the Medical Corps of the Armed Forces

DR. SCOTT LORD SMITH, *Dutchess* The second resolution, introduced by Dr Alfred P Ingegno, of Kings, is entitled "Voluntary Service in the Medical Corps of the Armed Forces"

"*Resolved*, that the component county medical societies of the Medical Society of the State of New York be, and hereby are, urged by this, their House of Delegates, to exert every effort in their community to insure that a sufficient number of available physicians, particularly young interns and residents, be encouraged to volunteer to serve their nation in the Medical Corps of the Armed Forces"

Your Committee approves the purpose of this resolution, but considers it weak, and proposes a substitute resolution as follows

"WHEREAS, the Secretary of Defense has stated that there exists an extreme emergency shortage of medical personnel in the armed forces, and

"WHEREAS, approximately 8,000 doctors had their medical school expenses, partially or completely, paid by the government under the A S T P or V-12 programs, and

"WHEREAS, approximately an equal number of doctors were deferred from service in World War II for the purpose of completing their medical education, who themselves paid for their education, and

"WHEREAS, it would seem unjust to require those doctors in the armed forces who are at present finishing their tour of duty or about to finish, to remain on duty, or to request these doctors who have served and been discharged from the armed forces to return to active duty, and

"WHEREAS, a draft of doctors is undesirable, therefore be it

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York endorses the efforts of the Secretary of Defense to secure immediate volunteers from those doctors who have not yet served in the armed forces, and who (*a*) had their medical school expenses, partially or completely, defrayed by the government under the A S T P and V-12 programs, or (*b*) were deferred from service in World War II for the purpose of completing their medical education at their own expense."

I move the adoption of this report—this portion of the report rather

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. SMITH This report is signed by Dr Kenneth Bott, Dr Charles Lakeman, Dr Thomas P McCarthy, and Dr Scott Lord Smith, and I move the adoption of the report as a whole.

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

SPEAKER ANDRESEN Thank you, Dr Smith.

Section 143

Night Session

SPEAKER ANDRESEN It is now six o'clock. We still have six reference committees to hear from A couple of their reports will involve considerable discussion. The question comes up are we to adjourn now and meet again tonight in this room or are we going to stay now for another half or three-quarters of an hour and perhaps dispose of at least three or four of them and take up the rest tomorrow, or are we going to take all of them up tomorrow and perhaps run into the afternoon, which seems rather certain at present

DR. JOSEPH A. GEIS, *Essex* I make a motion that we adjourn now and reconvene at eight o'clock tonight

DR. JAMES F ROONEY, *Trustee* I second that.

SPEAKER ANDRESEN Is there any discussion of that motion?

DR. ARTHUR A FISCHL, *Queens* I would be opposed to that Some of us are going out, we will get back late I would suggest that this session go on for another three-quarters of an hour and keep the evening free

The question was called, and the motion was put to a vote, and was carried

SPEAKER ANDRESEN I am sorry to say the motion is carried. We will meet again at 8 o'clock

The session adjourned at 6 05 P M., to reconvene at 8 P M

TUESDAY EVENING SESSION

May 4, 1949

The session reconvened at 8 35 P M.

SPEAKER ANDRESEN Although we are not all here, we have a quorum, and I think we had better get started.

I must apologize for getting here late, but one of our elder statesmen asked several of us to dinner, including me I don't know whether he was not trying to put over something political, but I was so busy eating I did not care, as a matter of fact, I left without even eating my dessert

Our first report is from the Reference Committee on Report of Council, Part VI, Economics, of which Dr. Gamble is the chairman.

Section 144 (*See 49, 94*)

Report of Reference Committee on Report of the Council, Part VI Complaint against the Welfare Department of Nassau County

DR. THOMAS O GAMBLE, *Albany* Mr Speaker and members of the House, as you know, this morning a resolution which was introduced by the Nassau County Society in complaint against the Welfare Department of Nassau County was referred back to our Committee

The Committee has met and heard many delegates and, after due consideration, has come to the con-

clusion that the solution of the County Society's difficulties with the Welfare Department are local and, therefore, we recommend that the resolution be disapproved

I move the adoption of this report.

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. GAMBLE Now I move the adoption of the report of the Reference Committee, Part VI, as a whole.

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 145

Report of Reference Committee on Report of Council, Part III, Public Health Activities (A) Industrial Health

DR. HARRY GOLEMBE, *Sullivan* The Subcommittee on Industrial Health under the chairmanship of Dr Leonard Greenburg held a meeting on December 9, at which time representation from the Council Committee on Public Health and Education, officers of the Medical Society of the State of New York, representatives from the State Department of Health, and the Commissioner of Health of the City of New York were present Among the subjects discussed were

1 Postgraduate instruction in industrial health and occupational diseases

2 The Joint Occupational Disease Cancer Committee of the New York State Departments of Labor and Health and the U S Public Health Service Your Subcommittee recommends that a pamphlet prepared on this subject be distributed through the Medical Society of the State of New York, that publicity be given to it in the NEW YORK STATE JOURNAL OF MEDICINE, and that the Medical Society of the State of New York appoint a representative to this Committee Your Reference Committee endorses these requests

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

DR. GOLEMBE 3 Your Subcommittee further discussed the advantages of reporting occupational diseases in New York State which might require a change in the State Labor Law stating what occupational diseases must be reported Your Reference Committee endorses this recommendation, and is also in agreement that the chairman of your Subcommittee compile a list of occupational diseases for publication in county society bulletins, the NEW YORK STATE JOURNAL OF MEDICINE, and the *Health News* of the New York State Department of Health.

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. GOLEMBE The Committee discussed various other subjects, among them medical bureaus, the need of compiling a list of physicians working in industrial plants, and industrial rehabilitation, although no specific recommendations were made Your Reference Committee feels that this subject is of great importance, that the Committee should continue their work in this field so as to be able to bring in specific recommendations Your Reference Committee also commends the work being done on postgraduate instruction and industrial health and would like to see that this phase of postgraduate instruction is taken up by more of the county societies than has been the case in the past.

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 146

Report of Reference Committee on Report of the Council, Part III Rural Medical Service

DR. HARRY GOLEMBE, *Sullivan* Rural Medical Service There is no indication that the Council Committee on Rural Medical Service, under the chairmanship of Dr Dan Mellen, held any meetings during the past year Their report is a general one and indicates that there is a desire in New York State to attract physicians, dentists, and nurses into the rural areas, and that while this problem has not made too much progress, its development would seem to depend on the development of good hospital facilities A great amount of work has already been done in this direction during the past year through the Joint Hospital Survey and Planning Commission and, if this continues, adequate hospital facilities will be more and more available in the rural areas and should help in the practice of medicine in these areas Your Reference Committee is of the opinion that this work is of such great importance that the Committee could perhaps be more energetic in continuing its activities and that all interested bodies, such as the medical schools, State Medical Society, the Grange, 4-H Clubs, and the Joint Hospital Survey and Planning Commission be constantly contacted under the sponsorship of this committee to carry out the extension of medical services and facilities in the rural areas

It is also recommended that the Committee continue its cooperation with the American Medical Association which annually holds a meeting to discuss these problems One of the members of the Council Committee attended such a meeting, representing the State Medical Society, in Chicago, on February 3, 1949

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 147

Report of Reference Committee on Report of Council, Part III Problems of Alcoholism

DR. HARRY GOLEMBE, *Sullivan* Problems of Alcoholism Despite its short existence, your Special Committee on the Problems of Alcoholism, under the able chairmanship of Dr Milton G Potter, has already done a splendid job There is no question but that the interest in this problem is widespread among the general public and, as is well put in the committee report

> "It behooves the component county societies to be alert to their local situation and take the leadership in plans for the rehabilitation of the alcoholic. This is a medical and public health problem primarily and therefore a medical and a public responsibility The public looks to the medical society for leadership, and we should be ready and equipped to take that leadership"

It is shown in this report that progress is being made by several subcommittees in different sections of the State, and it is hoped that many more areas will continue in this field of work. The report further states that the State Society was represented

on the board of directors of the Rehabilitation Center which is administered by the School of Medicine of the University of Buffalo, but your Reference Committee advises that this was an unofficial representation. It is felt by your special committee that the results of this work may very well guide the future extension to other committees of this type of study, treatment, and rehabilitation. Your Reference Committee appreciates the importance of the Rehabilitation Center as administered by the University of Buffalo, and recommends that the State Society be officially represented on their board of directors

I move the adoption of this recommendation

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried.

DR. GOLEMBE The recommendations made by the committee are endorsed by your Reference Committee with the exception of Recommendation No 2 which asks that a definite appropriation should be allotted to this committee for expenses In the report of the committee it is noted that the State Medical Society budget for 1949 has already approved $750 toward the work of this committee, hence this recommendation is no longer necessary The other recommendations, as follows, are endorsed by your Reference Committee, and it is recommended that the House of Delegates go on record as favoring these recommendations

1 The members of this special committee need not be limited to the House of Delegates, but may include any member of the State Society

2 That encouragement of the formation of county committees be continued.

3 That the work on the reference booklet on alcoholism be continued

4. That members of county societies be encouraged to assume leadership of the many lay committees which are being organized for education on alcoholism

5 That the education of the profession in this problem be continued

6 That local county committees clear through the State Committee any projects on alcoholism under advisement

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. GOLEMBE At the request of the chairman of the Special Committee on the Problems of Alcoholism the following recommendations were discussed

1 "That the activities of the Committee on Problems of Alcoholism of the Medical Society of the State of New York be closely coordinated with those of the Subcommittee on Problems of Alcohol of the New York State Interdepartmental Health Council." It might be stated here that "the Interdepartmental Health Council consists of the New York State Commissioners of Health, Mental Hygiene, Social Welfare, Education, and Correction."

2 "That the Council Committee on Public Health and Education and the Special Committee on the Problems of Alcoholism, *with the State of* New York Department of Health, arrange a Symposium on the Problems of Alcoholism to be held on the 'Teaching Day' at the next annual meeting of the Medical Society of the State of New York"

Your Reference Committee is in agreement with these recommendations and recommends their approval by the House of Delegates. I so move.

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

DR. GOLEMBE I move the adoption of the report of the Reference Committee, Part III, as a whole

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN Thank you, Dr Golembe. I would like to announce that this will be the last opportunity for the introduction of any resolutions. Are there any such resolutions?

Section 148 (*See 196*)

General Practitioner—Section, Training

DR. J J ZIMRING, *Nassau* This resolution was adopted at a meeting of the Medical Society of Nassau County on April 26, 1949

"WHEREAS, we feel that the best interests of the general practitioner and of the patients he serves should be given consideration, therefore be it

"*Resolved*,

"1 That the general practitioner should be given special training in medical school to fit him for general practice,

"2 That hospital internship should be so arranged that the general practitioner be trained for general practice for at least two years,

"3 That a Section for General Practice should be established in all hospitals in the country, and especially in those which train interns and have the approval of the American Medical Association,

"4. That hospitals should arrange for general practitioners to be on their staffs,

"5 That this program be presented at the House of Delegates of the A.M.A. in June, 1949"

SPEAKER ANDRESEN I will refer that to the Reference Committee on Report of the Council, Part I, of which Dr Scott Lord Smith, of Dutchess, is the chairman.

The next committee that is ready has a report which will keep us busy for some time. Having had nine resolutions referred to it, some of them controversial, I expect we will be very much occupied for some little time I am now going to call on Dr Andrew A Eggston to report for the Reference Committee on Miscellaneous Business (A)

DR. EGGSTON Mr Speaker and members of the House of Delegates, I won't keep you long, I will just keep you forever, that is all (*Laughter*) I have not had nine resolutions referred to my committee, but eleven, which I will now proceed to throw at you, one by one

Section 149 (*See 51*)

Report of Reference Committee on Miscellaneous Business (A) The American Medical Association Assessment

DR. ANDREW A EGGSTON, *Westchester* The first resolution is one introduced by Dr Reid R. Heffner, of Westchester I don't know why I placed that first, but somehow or other it just happened

"WHEREAS, the President of the United States, *representatives of the Federal Security Agency*, and certain Senators and Representatives, are using all possible means to achieve the enactment of some form of legislation which will include a program of compulsory health insurance, and

"WHEREAS, we believe the promoters of this legislation are men not qualified to evaluate health needs nor methods of providing health services, but are influenced by political pressure from or-

ganized groups that are interested in 'free medical care' and socialistic trends in government, and

"WHEREAS, it is universally conceded that we have the best medical care in the world and the best medical schools, research centers, hospitals, and public health systems, and

"WHEREAS, compulsory health insurance leads inevitably to a deterioration in the quality of medical care, to greatly increased over-all costs in providing medical care, and eventually to a complete socialistic economy, and

"WHEREAS, the practicing physicians of the United States who are best qualified to evaluate health needs and methods of providing medical care are overwhelmingly opposed to any system of compulsory health insurance, e.g., in Westchester County, on the basis of replies to a questionnaire sent to the 1,100 physicians in the county 95 per cent indicated unalterable opposition, and

"WHEREAS, the only means of interpreting the facts concerning the hazards involved in government medicine and the cost thereof to the public is through education, now, therefore be it

"*Resolved*

"1 That the Medical Society of the State of New York, recognizing the welfare of the public, records its official approval,

and we have changed that word "recognizing" to "mindful of"

"not only of the $25 special assessment of the American Medical Association, but also of additional levies, if needed, in order to carry out an intensive nation-wide program of public education in the interest of good medical care for everybody

2 Furthermore, that the House of Delegates of the Medical Society of the State of New York recommends that

and we have changed that word "that" to "to"

"to the House of Delegates of the American Medical Association the establishment of annual dues for all of its members, beginning in 1950, such dues to be available for the advancement of the Association's national educational campaign"

Your Reference Committee approves of this resolution as amended, and I move that it be adopted

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 150 (*See 26*)

Report of Reference Committee on Miscellaneous Business (A) Lien Law

DR. ANDREW A EGGSTON, *Westchester* The next resolution was introduced by Dr Abraham Koplowitz of Kings.

(*Resolution given in full—Section 26*)

Your Reference Committee approves of this resolution, with the suggestion that the endorsement of the bill by the governing body of the New York Bar Association be solicited

We move the adoption of this resolution

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 151 (*See 53*)

Report of Reference Committee on Miscellaneous Business (A) X-ray Treatment and Radium Treatment

DR. ANDREW A. EGGSTON, *Westchester* Next is a resolution introduced by Dr Morris Weintrob, of Kings County

(*Resolution given in full—Section 53*)

Your Reference Committee approves of this resolution, and I move its adoption.

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

DR. JAMES R. REULING, *Queens* The purpose of this is not entirely clear to me, and I don't know whether it has to do with the Medical Practice Act and the amending of that or not.

DR. EGGSTON I think it is the introduction of the Clancy Bill for the practice of x-ray, that no one should practice x-ray or roentgenology without being licensed, but no such bill will ever be put through unless something is done to take care of the fellow who has been practicing a number of years doing radiology This clause takes care of the grandfather clause, provided they have been in business five years

DR. REULING Been in what business?

DR. EGGSTON Been in the x-ray business, been in the practice of roentgenology I should say

SPEAKER ANDRESEN Is that explanation satisfactory? If so, you may continue, Dr Eggston, with your report The recommendation of the Reference Committee, carrying with it the adoption of the resolution, has been already carried.

Section 152 (*See 42*)

Report of Reference Committee on Miscellaneous Business (A) Endorsement of the American Medical Association 12-Point Program

DR. ANDREW A EGGSTON, *Westchester* The next resolution is quite a lengthy one that was introduced by Dr J P Henry, of Monroe

(*Resolution given in full—Section 42*)

This resolution is very broad in scope and devoid of specificity, however, it contains many worthy ideas for comment

First, Monroe County strongly and thoughtfully approved and endorsed the 12-point program of the American Medical Association Article 4, which advocates a healthy interest in medical economics, is open to analysis

(*a*) Prior publicity to county and state associations by the American Medical Association for advanced instructions to the delegates to approve action on resolutions to be presented to the House is difficult of achievement and obviously impractical.

(*b*) The American Medical Association *Journal* is asked for comfortable arrangements for minority expressions and a democratic forum At present, any member of the medical profession may, unhampered and unfettered, express his opinions in writing to the editor with the request that these be published in the correspondence column. How many individuals read this is open to question Your Committee endorses the establishment of a forum for the discussion of timely topics It is certainly true that more interest should be stimulated at the present time

(*c*) Regarding the Bureau of Information, any lack of information of our profession about medical economics is either due to indifference, lethargy, or hypothyroidism, as all that is needed is the ability to read and listen However, there should be published in the local medical journals the letters of Secretary Lull, of the American Medical Association, and likewise the bulletins issued from the Washington office These are all instructive to the medical profession If the letters are too long they should be abstracted and read or printed for the benefit of the county members. A formula to awaken a sense of

on the board of directors of the Rehabilitation Center which is administered by the School of Medicine of the University of Buffalo, but your Reference Committee advises that this was an unofficial representation It is felt by your special committee that the results of this work may very well guide the future extension to other committees of this type of study, treatment, and rehabilitation Your Reference Committee appreciates the importance of the Rehabilitation Center as administered by the University of Buffalo, and recommends that the State Society be officially represented on their board of directors

I move the adoption of this recommendation

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried.

DR. GOLEMBE The recommendations made by the committee are endorsed by your Reference Committee with the exception of Recommendation No 2 which asks that a definite appropriation should be allotted to this committee for expenses In the report of the committee it is noted that the State Medical Society budget for 1949 has already approved $750 toward the work of this committee, hence this recommendation is no longer necessary The other recommendations, as follows, are endorsed by your Reference Committee, and it is recommended that the House of Delegates go on record as favoring these recommendations

1 The members of this special committee need not be limited to the House of Delegates, but may include any member of the State Society

2 That encouragement of the formation of county committees be continued.

3 That the work on the reference booklet on alcoholism be continued

4 That members of county societies be encouraged to assume leadership of the many lay committees which are being organized for education on alcoholism

5 That the education of the profession in this problem be continued

6 That local county committees clear through the State Committee any projects on alcoholism under advisement

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. GOLEMBE At the request of the chairman of the Special Committee on the Problems of Alcoholism the following recommendations were discussed

1 "That the activities of the Committee on Problems of Alcoholism of the Medical Society of the State of New York be closely coordinated with those of the Subcommittee on Problems of Alcohol of the New York State Interdepartmental Health Council." It might be stated here that "the Interdepartmental Health Council consists of the New York State Commissioners of Health, Mental Hygiene, Social Welfare, Education, and Correction"

2 "That the Council Committee on Public Health and Education and the Special Committee on the Problems of Alcoholism, with the State of New York Department of Health, arrange a Symposium on the Problems of Alcoholism to be held on the 'Teaching Day' at the next annual meeting of the Medical Society of the State of New York."

Your Reference Committee is in agreement with these recommendations and recommends their approval by the House of Delegates I so move

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

DR. GOLEMBE I move the adoption of the report of the Reference Committee, Part III, as a whole.

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN Thank you, Dr Golembe.

I would like to announce that this will be the last opportunity for the introduction of any resolutions.

Are there any such resolutions?

Section 148 (*See 196*)

General Practitioner—Section, Training

DR. J J ZIMRING, *Nassau* This resolution was adopted at a meeting of the Medical Society of Nassau County on April 26, 1949

"WHEREAS, we feel that the best interests of the general practitioner and of the patients he serves should be given consideration, therefore be it

"*Resolved*,

"1 That the general practitioner should be given special training in medical school to fit him for general practice,

"2 That hospital internship should be so arranged that the general practitioner be trained for general practice for at least two years,

"3 That a Section for General Practice should be established in all hospitals in the country, and especially in those which train interns and have the approval of the American Medical Association,

"4. That hospitals should arrange for general practitioners to be on their staffs,

"5 That this program be presented at the House of Delegates of the A.M.A. in June, 1949"

SPEAKER ANDRESEN I will refer that to the Reference Committee on Report of the Council, Part I, of which Dr Scott Lord Smith, of Dutchess, is the chairman

The next committee that is ready has a report which will keep us busy for some time Having had nine resolutions referred to it, some of them controversial, I expect we will be very much occupied for some little time I am now going to call on Dr Andrew A. Eggston to report for the Reference Committee on Miscellaneous Business (A)

DR. EGGSTON Mr Speaker and members of the House of Delegates, I won't keep you long, I will just keep you forever, that is all (*Laughter*) I have not had nine resolutions referred to my committee, but eleven, which I will now proceed to throw at you, one by one

Section 149 (*See 51*)

Report of Reference Committee on Miscellaneous Business (A) The American Medical Association Assessment

DR. ANDREW A EGGSTON, *Westchester* The first resolution is one introduced by Dr Reid R. Heffner, of Westchester I don't know why I placed that first, but somehow or other it just happened

"WHEREAS, the President of the United States, representatives of the Federal Security Agency, and certain Senators and Representatives, are using all possible means to achieve the enactment of some form of legislation which will include a program of compulsory health insurance, and

"WHEREAS, we believe the promoters of this legislation are men not qualified to evaluate health needs nor methods of providing health services, but are influenced by political pressure from or-

DR. FISCHL I think the Committee should go into a further discussion of this problem

SPEAKER ANDRESEN They point out that the American Medical Association is a national or Federal association composed of autonomous county and state societies

DR. EGGSTON Right, and that a change in its basic concepts, we agree, should occur with the changing order, but now is not the opportune nor strategic time

DR. JOHN J MASTERSON, *Kings* I think earlier today you had an example of the persistence of resolutions before this House I do not know what action the American Medical Association will take on this resolution Twice in the past, one time in San Francisco and again in Chicago, a resolution from this Society on this subject was presented to the House of Delegates, and both times we were told just what Dr Andresen told us tonight.

I do not see any harm in presenting this resolution to the House of Delegates of the American Medical Association Maybe they will turn it down again, but maybe the time has arrived when the other states may take a different attitude than they have in the past, so I would favor that this resolution be sent to the House of Delegates of the American Medical Association or rather that the delegates from this Society be directed to present this resolution to the House of Delegates of the American Medical Association

SPEAKER ANDRESEN You are against the resolution I take it then, Dr Masterson?

CHORUS No

DR. MASTERSON I think the resolution should be presented to the A.M.A. by our delegates

SPEAKER ANDRESEN Then you are against the recommendation of the Committee?

CHORUS No

DR. EGGSTON We are for the resolution in principle

SPEAKER ANDRESEN There are two points involved in the Committee's recommendation First, that they agree in principle with the resolution as presented, and second, that they feel now is not the time to present it.

DR. EGGSTON Now is not the opportune time, yes, but we approve of the resolution in principle. Now if some amendment is made that it be introduced at the present time that would take care of the matter in the way Dr Masterson has suggested.

DR. MASTERSON I would so move

The motion was seconded by several.

SPEAKER ANDRESEN In other words, that brings us back again to the original resolution?

DR. SAMUEL Z FREEDMAN, *New York* I move the adoption of the original resolution.

DR. SAMUEL B BURK, *New York* I second that.

SPEAKER ANDRESEN Is there any further discussion of this amendment?

DR. JACOB WERNE, *Queens* I take it there has been an amendment?

SPEAKER ANDRESEN The recommendation of the Reference Committee has been amended to the effect that it be presented to the A.M.A.

DR. WERNE The recommendation of the Reference Committee was that it be approved in principle, is that right?

SPEAKER ANDRESEN Yes, and the amendment is that it shall be brought up by our delegates at the A.M.A. meeting next month.

DR. JAMES R REULING, *Treasurer* Point of order, the Reference Committee's report is one action, a positive action and the amendment is an immediate negation of that action.

CHORUS No, sir

DR. REULING If they want to defeat the motion, it should be done in that way rather than by an amendment.

DR. WERNE I would like to support Dr Reuling's interpretation I think that this amendment should be declared out of order because the motion before this House is the recommendation of Dr Eggston's Committee to disapprove that resolution which asks that we instruct our delegates to the American Medical Association to introduce this resolution Therefore, this amendment is out of order, and consequently the matter before the House is the discussion of Dr Eggston's committee's report disapproving this resolution—

DR. EGGSTON We don't disapprove of the resolution We approve it in principle

DR. WERNE Disapproving of the introduction of that resolution

DR. EGGSTON At the present time.

SPEAKER ANDRESEN If we don't recognize this amendment, we have the original recommendation of the Committee before us If that recommendation is then not carried, the motion is lost entirely

DR. WERNE I would like to speak on the recommendation of *Dr Eggston's Committee*

SPEAKER ANDRESEN I still want to get enlightenment on this subject of the amendment. I feel also that a negative motion to a positive resolution is wrong May I ask Dr Rooney for advice?

DR. JAMES F ROONEY, *Trustee* This is most highly complimentary Is it a question as to this point of order that was raised by my friend, Reuling, that Dr Masterson's motion to amend the Committee's report is out of order? Is that the point?

SPEAKER ANDRESEN That is the point

DR. WERNE Yes, sir, I agree, and those of us who want to support the resolution referred to Dr Eggston's Reference Committee can do so by defeating his recommendation, and then can secure the instruction to introduce it into this year's House of Delegates of the American Medical Association

DR. ROONEY As a matter of parliamentary law I can only answer you through the Speaker, I am sorry In my opinion any amendment modifying the report of a reference committee that is germane to the matter under report is perfectly in order, Mr Speaker

SPEAKER ANDRESEN The amendment is under discussion

DR. THOMAS M D'ANGELO, *Queens* May I rise to a point of order Does this House of Delegates vote on the report of the Committee or does it vote on the original resolution?

SPEAKER ANDRESEN In every case we vote on the report of the reference committee's opinion regarding the original resolution

DR. CYRIL DRYSDALE, *Suffolk* In that case, will the Committee put its report in plain English and say that while they approve of the resolution in principle, they now disapprove of the resolution—

DR. EGGSTON The introduction of the resolution, at this time

DR. DRYSDALE Which is exactly what he is doing, and then we can vote on that

DR. EGGSTON There was no disapproval of the resolution, but we disapproved of introducing it in the House of Delegates of the American Medical Association at this time, because having been there at the last meeting which was held just last December it got no place I think when the thing has been more or less settled nationally, it can be taken up and clarified, but the Committee is in favor of the House of Delegates' amending this just as they see fit.

responsibility in the average physician appears almost as illusive as the etiology of cancer

(*d*) Section (*d*) is really controversial and lacks clarity, particularly in regard to the source and administration of any medical subsidy

Your Reference Committee disapproves of this resolution as a whole, and I so move

The motion was seconded.

SPEAKER ANDRESEN May I ask, Dr Chairman, does that include the summary of eight resolutions?

DR. EGGSTON No, that is all different sections of the same resolution

SPEAKER ANDRESEN Is there any discussion? You have a mouthful to think about

DR. LEO F SIMPSON Does not the Reference Committee approve of the first two resolutions and object to the last four?

DR. EGGSTON There are no separate resolutions It is all in one resolution. These are different paragraphs of the same resolution. In the first statement we said it was so broad in scope it was very difficult to present it in one resolution, anyway it would be objected to from that standpoint if for no other

SPEAKER ANDRESEN In view of the fact that we have acted on most of the provisions of that today, I think the chairman is rather wise to put them all together

The question was called, and the motion was put to a vote, and was carried

SPEAKER ANDRESEN The recommendation of the Reference Committee is adopted, and the original resolution is lost

Section 153 (*See 48, 160*)

Report of Reference Committee on Miscellaneous Business (A) Approval of Principles of the Association of American Physicians and Surgeons

DR. ANDREW A. EGGSTON, *Westchester* Resolution introduced by Dr Thomas O Gamble, of Albany

(*Resolution given in full—Section 48*)

While all analytic and unbiased medical minds welcome the aid of any organization which has at heart the medical care of the people, the American Medical Association for a century has been the mother and mentor of all American medicine This is true in spite of the ingratitude in many high places It, therefore, by tradition and experience, is well equipped, through a rejuvenated public relations mechanism and its national educational campaign, to carry its own torch, yet any group, educational, medical or otherwise, which has any constructive suggestions or programs, will be welcome to offer these in trust to the American Medical Association

Past experience teaches the advisability of using the one and best qualified agency, that is, the American Medical Association, to advocate all that is good for the doctor and the sick There must be unified intent and effort

Your Reference Committee could not agree to approve of this resolution, although its advocates won our admiration and respect for their sincerity Therefore, we recommend disapproval of this resolution, and I so move

The motion was seconded, and as there was no discussion, it was put to a vote, and was carried

Section 154 (*See 35*)

Report of Reference Committee on Miscellaneous Business (A) Amendment of Article V of Constitution and Bylaws of the American Medical Association

DR. ANDREW A. EGGSTON, *Westchester*. The next resolution is that introduced by Dr J Homer Cudmore, of New York.

(*Resolution given in full—Section 35*)

Your Reference Committee has this recommendation After a rather thorough discussion your Reference Committee is in full accord with the text and implied fraternal instincts in this resolution. It is our wish and we know it is your desire that a constant effort be exerted to take a definite position corrective of any undemocratic situation in medicine. A physician at all times is aware of the equality of blood, flesh, and life, nevertheless we are at present compelled to recognize that the American Medical Association is a national or Federal association composed of autonomous county and state societies. That a change in its basic concepts, we agree, should occur with the changing order, but now is not the opportune nor strategic time We trust that continued enlightenment in the right place and time will correct any inequality

Your Reference Committee approves of this resolution in principle

SPEAKER ANDRESEN Does that include the recommendation of presenting the resolution before the House of Delegates of the American Medical Association?

DR. EGGSTON That is up to the House what it wants to do itself on that. We approve of this resolution in principle

SPEAKER ANDRESEN Just what does "in principle" mean?

DR. EGGSTON We are in favor of this resolution. The recommendation of the Reference Committee is that your Reference Committee approves of this resolution in principle, but we state above that at the present time the American Medical Association is so constituted, and because of its defeat of the same resolution last year, we do not feel now is the opportune time to introduce this into the American Medical Association We are, however, heartily in accord with the principles expressed in the resolution.

DR. JOHN J MASTERSON, *Kings* You are in favor of the resolution, but don't think this is the opportune time to present to the A.M A ?

DR. EGGSTON Exactly

DR. ARTHUR A. FISCHL, *Queens* There is no doubt when this resolution comes before the American Medical Association the same thing is going to happen to it as happened on previous occasions I think we can try to take some measure whereby we will accomplish a more constructive and more efficient manner of giving these unfortunate physicians some representation, probably a more direct representation in the American Medical Association. I believe the Committee should consider that aspect of it rather than take the same aspect that was presented already to the American Medical Association, the results of which we know will happen year in and year out I would rather see some effort made to give those members who may not ever be members of their own county medical societies some direct representation in the American Medical Association itself

SPEAKER ANDRESEN You are speaking in support of the Committee's recommendation I take it?

DR. FISCHL But the Committee's recommendation means nothing

SPEAKER ANDRESEN The Committee's recommendation is that they approve in principle of the resolution, but they don't think at this time the resolution should be presented before the House of Delegates of the American Medical Association, is that right?

DR. EGGSTON That is right.

DR. WERNE Mr Speaker, I studied in the Southland, and I am quite familiar with the problem When Dr Eggston states that one of the reasons the American Medical Association feels that they should not enter into this controversy is because they don't want to oppose local autonomy, I think he does so with his tongue in his cheek. No one raises the question of local autonomy Should any county medical society in the country decide suddenly to permit dichotomy in which was involved the division of fees, they would stop you pretty quickly and throw you out of the American Medical Association There is no reason why the American Medical Association centrally cannot tell some of the Dixiecrat states to admit these colored men on the same basis they do the white man We should take a strong stand here, and if we are defeated again, let us bob our heads up and be defeated still again, but stand up for the principle that was enunciated.

DR. RAWLS Mr Speaker, you ruled me out of order when I tried to amend a substitute motion before I insist a substitute motion can be amended, and I think I would be borne out in that by the parliamentarians here that a substitute motion can be amended. However, I would like to speak on the substitute motion as offered by Dr Rooney, and I would like to offer an amendment to that

SPEAKER ANDRESEN The great trouble then is that we have a third amendment We have a second amendment in the form of a substitute motion before us, and you cannot have more than two amendments to any motion

DR. RAWLS It does not make any difference how many amendments you have If you have a substitute motion, that substitute motion can be amended, and I appeal from the ruling of the Chair that it cannot be

DR. SAMUEL Z FREEDMAN, *New York* I suggest we ask Dr Bauer on that question. Let us get his advice on it

DR. LOUIS H BAUER, *Past President* You can have as many substitute motions as people care to make You can only have one amendment to an amendment, but you can have as many as a dozen substitute motions, and then you can take them up in the reverse order, and dispose of them in that manner, one at a time

DR. RAWLS Can we amend a substitute motion?

DR. BAUER Strictly speaking, a substitute motion should not be amended, but another substitute motion made of it In place of it, you make another substitute motion

DR. RAWLS Then I offer this as a substitute motion. As the president of the county society that offered this resolution I would like to make a statement I am very much in favor of the resolution as offered. I realize the difficulties involved in passing this particular resolution to the House of Delegates of the American Medical Association. I also do not wish to see this defeated because I would like to see some success on what we have been trying to do

I offer this substitute motion that we approve of this resolution that has been presented, and that we memorialize the American Medical Association to appoint a special committee to solve this problem.

SPEAKER ANDRESEN Is there any discussion?

DR. FREEDMAN Has it been seconded?

DR. STEPHEN R MONTEITH, *Rockland* I will second that

SPEAKER ANDRESEN Hearing no discussion, I will put that to a vote All in favor of that substitute motion say—

DR. FLOYD S WINSLOW *Councilor* Mr Speaker—

SPEAKER ANDRESEN I asked for discussion, and nobody got up

DR. J STANLEY KENNEY, *Councilor* It has not been voted on yet, so it is not too late to discuss it

SPEAKER ANDRESEN The vote has been called, therefore, there can be no more discussion Am I right?

DR REULING Until the negative has been called for, the member has the privilege of the floor I believe, Mr Speaker The negative of the vote has not been taken, and I would like to discuss the motion by simply pointing out we are memorializing the American Medical Association to solve a problem. That in itself is a ridiculous motion We can memorialize them to study it I don't think that Dr Rawls meant what his motion said You can't ask them to solve it It can't be done

DR. RAWLS In view of this objection then, may I suggest a study leading toward a solution?

DR. KENNEY May I rise to a point of order, sir? I don't know whether I am out of order or not—

DR. REULING I would like to continue if I might

SPEAKER ANDRESEN Dr Reuling has the floor

DR. REULING I would simply like to make a statement and emphasize something that has already been said to aid in clarifying our thinking The American Medical Association is a federation of state associations In Texas they permit chiropractors to practice medicine. How would you feel if the Texas State Association memorialized the House of Delegates to insist that New York State admit chiropractors to the practice of medicine? It just is about as simple as that

I am in thorough and hearty agreement with the intent of the resolution Dr Rooney had a very good solution for it You can belabor this so much that you build up additional resistance I have had good intelligent men tell us that it is only a matter of a few years until this is solved. It is not going to be solved by calling them names and telling them that they are unfair continually A resolution such as the substitute motion that Dr Rooney made is the sort of sugar that will eventually accomplish what I am sure the practitioners in New York State want

DR. WINSLOW In view of the fact that you have allowed some of the more intelligent men to discuss this problem, may I now speak?

SPEAKER ANDRESEN Yes, sir

DR. WINSLOW In conformance with the wishes of the House of Delegates of the Medical Society of the State of New York at three sessions of the House of Delegates of the American Medical Association within the past ten years I have presented a resolution similar to the one before you now, and I now rise to speak against all substitute motions and all amendments and strive to uphold the original recommendation of the Reference Committee

May I respectfully point out to you that whatever your sympathies may be, there is probably a better solution of this situation. Each time this has been presented, the ruling of the American Medical Association has been that they had no constitutional rights to prescribe what regulations should govern the admission to the constituent county or state societies They just cannot do it

Now if it is the desire of a group of men in this House to demonstrate the fact that there is no racial bias here, and that we do proceed under democratic principles, then the thing for them to do is to present the name of a man belonging to any race that they think is not receiving proper democratic treatment and allow him to be nominated here for this position and by either winning or losing he thereby demonstrates the democracy of the organization.

That is the reason we reported it out that we approve of it in principle We are not against the resolution

DR. ROONEY I will offer a substitute motion. The substitute motion is this That this House approves of this resolution in principle, and that our delegates be instructed to convey that information to the House of Delegates of the American Medical Association

The motion was seconded by several.

SPEAKER ANDRESEN A substitute motion is now before the House

DR. WILLIAM B RAWLS, *New York* I would like to make an amendment to the substitute motion.

SPEAKER ANDRESEN You cannot do that We have already an amendment, then a substitute motion, which is the second amendment, so you cannot have another amendment

DR. RAWLS You can amend a substitute motion according to my interpretation of parliamentary rules

SPEAKER ANDRESEN A substitute motion is an amendment, and we have one amendment before that.

DR. WERNE May I raise a point of order? I think we have a very simple situation here Dr Eggston's Committee passed on this resolution in a manner that is obviously not acceptable to some of the members of this House of Delegates

CHORUS Use the microphone We can't hear

DR. WERNE Dr Eggston's Committee has passed on this resolution in a manner that is obviously not satisfactory to some of the members of this House of Delegates Let us dispose of this problem by acting on Dr Eggston's recommendation regardless of just how he wants us to believe it means Let us act on that directly, and those of us who are opposed to that restriction can defeat it, and by that defeat we can reactivate the strength of the original resolution referred to him.

SPEAKER ANDRESEN The discussion must be limited to discussing the substitute motion Is there any further discussion on the substitute motion?

DR. PETER M MURRAY, *New York* Mr Speaker and members of the House of Delegates, I have been a member of this House of Delegates for over twelve years, and time and again I have had my heart gladdened by the deep, forward understanding and support that this House of Delegates has always given any proposal to safeguard the real democracy which we profess to have in this country It is a great pleasure for me to sit here and hear men rise to the defense of the original resolution

May I say in deference to the chairman of the Reference Committee that he is sincerely and honestly in favor of the resolution as originally proposed, and it is only because of what has been termed political expediency, because it was turned down last year, that there is any hesitation.

My heart goes out to Dr Winslow, one of our senior elder statesmen, who presented this resolution last year at the American Medical Association He was turned down, and no man likes to be turned down, but may I say to you, Dr Winslow, from the comments I have heard around me New York is living up to the finest traditions of democracy when they insist that we ought to take a fair and square stand on the morality of this issue, whether the American Medical Association turns it down or not. I believe the Medical Society of the State of New York does itself proud and lives up to the finest traditions of the medical profession when it does such a thing

Within the last few weeks you have read in the newspapers reports coming from a celebrated Negro citizen, Mr Paul Robeson, in which he made the statement that Negroes would not fight in the defense of this country should we ever become attacked by or wish to fight against a totalitarian form of government Today I came in possession of a clipping, which I wish to share with you, because it expresses my sentiments and the sentiments of the vast majority of Negro citizens of this country This clipping is as follows

"We owe a debt of gratitude for the fair, intelligent and balanced replies to Mr Paul Robeson's statements in Paris, written by Max Yergan and Ivan Leslie Harry They show us how much we lose by our lack of respect for the Negro race, how much we gain by their contributions—as witness the work accomplished by Dr Ralph Bunche. As for Paul Robeson, friends who have known him for many years can only have sympathy for him, he is completely misled and his reactions can be explained by many justifiable accusations against us I wish these replies could be reprinted in every newspaper in the United States

"We haven't too much time left to change our attitude toward the Negro race and other minorities We should be glad we can still open our eyes and see, before the Communists gain further strength."

I listened yesterday to Dr Bauer in his eloquent appeal in favor of the World Medical Association, and I wonder how long it is going to be before he is going to be embarrassed by having some of these nations to whom we offer moral leadership point to us and say we do not come into court with clean hands. What are you going to do about Negro doctors in your own Southland?

Ladies and gentlemen, I submit it is not primarily for the interest of the Negro doctors who are excluded from membership in the American Medical Association in seventeen states and the District of Columbia, but it is rather for the integrity of yourselves that you cannot afford to do less than to stand fair and square and support this resolution. We don't have to win, but we have to be true to our better selves, and I have every confidence that this House of Delegates is going to do the square thing today as it has done over the twelve years since I have been a member of this House of Delegates

I thank you! (*Applause*)

SPEAKER ANDRESEN May I just say that I was also present last year and the year before when this type of motion was defeated in the House of Delegates of the American Medical Association I don't think it is good for any cause to be overwhelmingly defeated year after year, and while I am not supposed to express an opinion it seems to me that the substitute motion, which requires our delegation to state to the House of Delegates of the American Medical Association that we have adopted this in principle, would make a much better impression than to have a motion which would be ridiculed and defeated as it was last year

DR. WERNE On the motion, I have not had an opportunity to speak on the motion.

SPEAKER ANDRESEN You spoke on the substitute motion a minute ago

DR. WERNE I ask for permission to speak again.

SPEAKER ANDRESEN That will require a majority vote Am I right?

DR. WERNE I still ask for permission to speak again.

SPEAKER ANDRESEN All in favor of allowing Dr Werne to speak again say "Aye", contrary, "No" It is carried. You may speak.

medical societies will admit them so they may be protected in their relationship to the American Medical Association

As has been said here before, on two or three occasions a resolution of this sort has been introduced, and the reference committee has reported each time that it was contrary to the Constitution and Bylaws of the American Medical Association The previous resolutions, as I recall, suggested no amendment to the Constitution and Bylaws of the American Medical Association There has been such a suggestion now

The proposition of Dr Rawls is not so weasley-worded as it was accused of being, because I believe that a committee of physicians of the American Medical Association, including certain Southern physicians, might work out a solution which would be satisfactory to everybody and give these men the recognition to which they are entitled. It is a local proposition, only every one I know, all of the officials of the American Medical Association, want to see this thing solved, and they want to see it solved in the right manner They are anxious to see the Negro physician in the South receive the same recognition which he has here in New York, and I think that Dr Murray would second what I say when I say that there certainly has been no discrimination in the State of New York against Negroes or any other race, and we would like to see that condition exist throughout the United States

There is, as you know, a proposition in Congress on the states' rights which is causing a great deal of furor How that is going to turn out, nobody knows, but what we want is to have this problem solved, and we want to adopt the method that will get the quickest solution. If introducing an amendment to the Bylaws of the American Medical Association is the quickest solution, all right, but if appointing this committee, where a group can sit down over a table and work out a solution, is the quickest way to do it, that is what we want

I am not so sure but what Dr Rawls' suggestion may be the quickest way of getting a solution It is not dodging the issue It is trying to find a solution which will give the results in the quickest fashion In any event no action can be taken by the American Medical Association for another year because an amendment to the Constitution has to lie over for a year just as it does in this Society, and if a proposition is brought in to propose such necessary amendments as may be required and in the meantime a study committee is appointed who can work out a satisfactory solution, I am not sure but that will be the quickest way of really getting results—and results are what we want It is not a question of the form of the motion or anything else, it is what will get results

SPEAKER ANDRESEN Is there any further discussion?

DR. THOMAS O GAMBLE, *Albany* Mr Speaker and members of the House, I was born and raised in Alabama. What I am going to say may not sit well with this group, but I think it probably will.

I have felt ever since I moved to New York State that the Southern Negro doctor should be recognized as a member of the medical profession. When I went South two years ago I talked to three different county societies on this very proposition. I was told that they were willing to sit down and talk this thing over and work out a proper solution, but if the North tried to force them into any action that they would set back the wheels of progress fifty years.

I believe that a conference such as has been suggested is the proper solution of this thing, and I believe that it can be worked out There are enough good decent white people in the South that will recognize the Negro as a member of the medical profession

SPEAKER ANDRESEN Is there any further discussion?

You have now before you the substitute motion which substitutes itself for the original motion Dr Angrist's substitute motion includes the original resolution plus the recommendation to bring up a constitutional amendment for consideration by the American Medical Association Do you understand what the motion is now?

DR. ROONEY No

SPEAKER ANDRESEN Does everybody understand what the motion is about?

CHORUS No

SPEAKER ANDRESEN The original Angrist motion has been substituted for all of the other substitutes which we have pertaining to the original recommendation of the Committee, which disapproved the resolution—

DR. EGGSTON We approved it in principle

SPEAKER ANDRESEN And added to that has been the recommendation to propose an amendment to the Constitution and Bylaws of the American Medical Association covering this matter, is that right?

DR ANGRIST That is correct

There were calls for the question

DR. MASTERSON I think that will take too long to solve the problem, Mr Speaker, asking the American Medical Association to change their Bylaws I don't think it can solve the problem by changing their Bylaws It will only delay the solution of this problem, as the last speaker has said.

SPEAKER ANDRESEN Possibly this might be one way of accomplishing what we want because it would call for a conference in regard to the changing of the Constitution and Bylaws, in any event.

There were calls for the question

SPEAKER ANDRESEN The question has been called All in favor of this substitute motion say "Aye", contrary, "No" The substitute motion is lost.

CHORUS Standing vote

SPEAKER ANDRESEN I think we will have to call for a standing vote. I am sorry to delay proceedings, but over here it sounded louder to the people than it did to those on the other side

DR. FREEDMAN What are we voting on now? Dr Angrist's substitute motion?

SPEAKER ANDRESEN Yes, which is what I just described All in favor of that motion, rise—

DR. ROONEY I don't think the House understands exactly what we are voting on.

SPEAKER ANDRESEN They just said they did.

CHORUS No

DR. ROONEY There certainly seems to be some confusion as to exactly what we are voting on now

SPEAKER ANDRESEN I will say it again for the third time We are voting now on a substitute motion made by Dr Angrist, which embodied the original motion plus an amendment to propose the necessary amendment to the Constitution and Bylaws of the American Medical Association covering this matter

DR. WINSLOW Could we have that original Angrist substitute motion restated by him?

DR. ROONEY Yes, and then we will know what we are voting on. It could be read by the stenographer

SPEAKER ANDRESEN It is to the effect that the delegates of this Society should propose to the House of Delegates of the American Medical Association the immediate attempt to change the Bylaws

Dr Masterson said that he could not see any harm in this resolution going up to the American Medical Association and being turned down year after year May I point out to you through the field of experience that there is a definite objection, and that is this That in connection with the presentation of this resolution there is an element that wishes to embarrass the American Medical Association, so that the press takes advantage of the situation and we get very bad press notices following the action of the American Medical Association in upholding the constitution of their organization That is the evil that flows from this situation

I think that a better analysis of the question and a better way out would be for us to present on the floor of this House as a candidate or as a nominee for delegate to the American Medical Association the name of a man who belongs to any race who you think is not getting proper democratic recognition, thereby coming nearer to solving this problem

I wish to support the original resolution of the Reference Committee

Dr. Madge C L McGuinness, *New York* I second that

Speaker Andresen I will have to confine the discussion to the substitute motion made by Dr Rawls You can clear the deck and come back to the original motion if we can get rid of these substitute motions

Dr. Morris Weintrob, *Kings* I want to say—

Speaker Andresen Will you discuss the substitute motion which was made by Dr Rawls?

Dr Weintrob I will discuss the substitute motion with this thought in mind I fail to see how the substitute motion differs in any way from the recommendation of the Committee I would have to be convinced that there is enough merit or enough substance in the substitute motion to warrant all of this discussion

In view of that, and having been partially responsible for the wording of this recommendation of our Committee, I feel that in all due justice the previous speaker should be given a great hand. We sweated with that problem considerably, and we are happy to see that all of you here are sweating too It was because we felt that it was most untimely to permit those who oppose the policies of the American Medical Association to come out and smear the American Medical Association with the sort of campaign they would love to use that we worded this resolution just the way we did in its most careful and most particularly diplomatic manner We think that it will serve the American Medical Association best if we leave it in the words which our committee suggests to you gentlemen.

Speaker Andresen Is there any further discussion of the substitute motion of Dr Rawls?

Dr. Samuel Z Freedman, *New York* On the substitute motion, just in a few words, what you are doing if you pass the substitute motion is to encourage those who are finding fault with the American Medical Association that you in New York have not the courage to stand up for what you say you believe in If we are going to be concerned about a minority of the American Medical Association, we ought to bear in mind that the American Medical Association is considered by us—and we hope it is considered by others—a democratic organization, and in a democratic organization, unless things have changed lately, the majority are supposed to rule

The majority of the states in this Union are for that which we stand for, and if we are going to appease the seventeen states of the South and the District of Columbia, I think we would be deserving of a worse press than if we showed the courage of our convictions of our community that that is the way we feel

The mere fact that it has been turned down a few times, I am reminded that a certain group of people in this world have been turned down for two thousand years, but that did not stop them. Now I don't think there are two thousand years left to solve the problem of this world, not only of this State, as to the relationship between the races. Those who would stand up today and say, "Well, we might get a poor press if we pass what we want to pass," they are doing not only a great injury to their members whom they are representing but they are doing a great injury I believe, as Dr Murray much better put it, to the United States I am sure Dr Bauer, if he were to say something, would agree that the world is looking to the United States for leadership, and as a leader you must stand up and be counted You don't do that by using weasel words By passing this substitute motion you are only appeasing and using weasel words Let us pass the original resolution and go ahead from there

Speaker Andresen In order to get down to the original resolution, we will have to get two substitute motions and an amendment out of the way first.

Dr. Rooney A point of order, I have listened to this supposed discussion upon a second substitute motion There has been no discussion that has been germane in my opinion to the substitute motion. There has been no statement as to why the substitute motion should or should not be carried. We have gone all over the lot of the original resolution, and I raise that point of order

Dr. Alfred Angrist, *Queens* May I speak?

Speaker Andresen Will you speak on the substitute motion only?

Dr. Angrist May I be recognized, sir?

Speaker Andresen Yes This has to do with Dr Rawls' substitute motion, and has nothing to do with the original motion at all, is that right?

Dr. Angrist If I may speak, sir, forgive me for keeping Pelion upon Ossa, but I still have another substitute motion, and I think that is in order, sir?

Speaker Andresen Yes

Dr. Angrist I move the original motion plus the following amendment as the substitute motion And further be it resolved that provision for direct representation of such physicians as are not allowed admission to the local county medical societies in their local communities be provided for in such instances by the necessary changes in the Bylaws of the American Medical Association

This is in the form of a substitute motion to end all substitute motions

Speaker Andresen As I understand it, this motion substitutes for the original?

Dr. Weintrob This motion substitutes for anything that has gone on since then, including the recommendations of the Committee

Dr. Winslow We have with us an executive of the Board of Trustees of the American Medical Association, Dr Louis H Bauer I would ask that you please have him speak on this

Dr Bauer I may say that this whole proposition has caused considerable concern to the Board of Trustees of the American Medical Association, and they are very anxious to see something worked out that would solve it

For your information I may say that some of the Southern doctors who are most outstanding are also concerned about it, and they are endeavoring to work out some method by which the Southern states who now do not admit Negro physicians to the county

medical societies will admit them so they may be protected in their relationship to the American Medical Association

As has been said here before, on two or three occasions a resolution of this sort has been introduced, and the reference committee has reported each time that it was contrary to the Constitution and Bylaws of the American Medical Association The previous resolutions, as I recall, suggested no amendment to the Constitution and Bylaws of the American Medical Association There has been such a suggestion now

The proposition of Dr Rawls is not so weasley-worded as it was accused of being, because I believe that a committee of physicians of the American Medical Association, including certain Southern physicians, might work out a solution which would be satisfactory to everybody and give these men the recognition to which they are entitled It is a local proposition, only every one I know, all of the officials of the American Medical Association, want to see this thing solved, and they want to see it solved in the right manner They are anxious to see the Negro physician in the South receive the same recognition which he has here in New York, and I think that Dr Murray would second what I say when I say that there certainly has been no discrimination in the State of New York against Negroes or any other race, and we would like to see that condition exist throughout the United States

There is, as you know, a proposition in Congress on the states' rights which is causing a great deal of furor How that is going to turn out, nobody knows, but what we want is to have this problem solved, and we want to adopt the method that will get the quickest solution If introducing an amendment to the Bylaws of the American Medical Association is the quickest solution, all right, but if appointing this committee, where a group can sit down over a table and work out a solution, is the quickest way to do it, that is what we want

I am not so sure but what Dr Rawls' suggestion may be the quickest way of getting a solution. It is not dodging the issue It is trying to find a solution which will give the results in the quickest fashion. In any event no action can be taken by the American Medical Association for another year because an amendment to the Constitution has to lie over for a year just as it does in this Society, and if a proposition is brought in to propose such necessary amendments as may be required and in the meantime a study committee is appointed who can work out a satisfactory solution, I am not sure but that will be the quickest way of really getting results—and results are what we want It is not a question of the form of the motion or anything else, it is what will get results

SPEAKER ANDRESEN Is there any further discussion?

DR. THOMAS O GAMBLE, *Albany* Mr Speaker and members of the House, I was born and raised in Alabama. What I am going to say may not sit well with this group, but I think it probably will.

I have felt ever since I moved to New York State that the Southern Negro doctor should be recognized as a member of the medical profession. When I went South two years ago I talked to three different county societies on this very proposition I was told that they were willing to sit down and talk this thing over and work out a proper solution, but if the North tried to force them into any action that they would set back the wheels of progress fifty years.

I believe that a conference such as has been suggested is the solution of this thing, and I believe that it can be worked out. There are enough good decent white people in the South that will recognize the Negro as a member of the medical profession

SPEAKER ANDRESEN Is there any further discussion?

You have now before you the substitute motion which substitutes itself for the original motion. Dr Angrist's substitute motion includes the original resolution plus the recommendation to bring up a constitutional amendment for consideration by the American Medical Association Do you understand what the motion is now?

DR. ROONEY No

SPEAKER ANDRESEN Does everybody understand what the motion is about?

CHORUS No

SPEAKER ANDRESEN The original Angrist motion has been substituted for all of the other substitutes which we have pertaining to the original recommendation of the Committee, which disapproved the resolution—

DR. EGGSTON We approved it in principle

SPEAKER ANDRESEN And added to that has been the recommendation to propose an amendment to the Constitution and Bylaws of the American Medical Association covering this matter, is that right?

DR. ANGRIST That is correct

There were calls for the question

DR. MASTERSON I think that will take too long to solve the problem, Mr Speaker, asking the American Medical Association to change their Bylaws I don't think it can solve the problem by changing their Bylaws It will only delay the solution of this problem, as the last speaker has said.

SPEAKER ANDRESEN Possibly this might be one way of accomplishing what we want because it would call for a conference in regard to the changing of the Constitution and Bylaws, in any event

There were calls for the question

SPEAKER ANDRESEN The question has been called. All in favor of this substitute motion say "Aye", contrary, "No" The substitute motion is lost

CHORUS Standing vote

SPEAKER ANDRESEN I think we will have to call for a standing vote I am sorry to delay proceedings, but over here it sounded louder to the people than it did to those on the other side

DR. FREEDMAN What are we voting on now? Dr Angrist's substitute motion?

SPEAKER ANDRESEN Yes, which is what I just described All in favor of that motion, rise—

DR. ROONEY I don't think the House understands exactly what we are voting on

SPEAKER ANDRESEN They just said they did.

CHORUS No

DR. ROONEY There certainly seems to be some confusion as to exactly what we are voting on now

SPEAKER ANDRESEN I will say it again for the third time We are voting now on a substitute motion made by Dr Angrist, which embodied the original motion plus an amendment to propose the necessary amendment to the Constitution and Bylaws of the American Medical Association covering this matter

DR. WINSLOW Could we have that original Angrist substitute motion restated by him?

DR. ROONEY Yes, and then we will know what we are voting on It could be read by the stenographer

SPEAKER ANDRESEN It is to the effect that the delegates of this Society should propose to the House of Delegates of the American Medical Association the immediate attempt to change the Bylaws

and the Constitution of the American Medical Association in order that discrimination which exists in certain states should be immediately rectified Is that the purport of that substitute motion?

DR ANGRIST No, it is not

SPEAKER ANDRESEN Then will you read the resolution in regard to that?

DR ANGRIST This is the substitute motion It is the original motion plus this additional resolved—And further be it resolved that provision for direct representation of such physicians as are not allowed admission to the local county medical societies in their local communities be provided for in such instances by the necessary changes in the By-laws of the American Medical Association

I have not even discussed this matter, so if I may presume upon your time to this extent That would call for a conference and implement the solution of this problem to the satisfaction of all parties I think that would correspond to an immediate solution of this problem

DR EGGSTON Your substitute motion incorporates the recommendation of the Reference Committee, plus this additional "resolved?"

DR. ANGRIST Yes

SPEAKER ANDRESEN It is not the original Cudmore resolution?

DR. ANGRIST No

SPEAKER ANDRESEN The original Cudmore resolution was disapproved by the Reference Committee, and as that is part of the substitute motion that is being substituted for all of the other substitute motions that we have had, plus the provision about seeking a constitutional amendment—

DR EGGSTON We did not disapprove of that resolution, we heartily approved of it in principle

SPEAKER ANDRESEN Does everybody understand that now?

CHORUS No

DR EGGSTON We approved of the resolution in principle but did not think this was the opportune time to present it to the House of Delegates, and that additional resolved takes care of it

SPEAKER ANDRESEN Yes

DR D'ANGELO May I ask a question?

SPEAKER ANDRESEN Yes

DR. D'ANGELO I would like to know what resolution or substitute motion Dr Bauer was saying he would think would be the best way out

CHORUS Dr Rawls'

CHORUS Out of order

SPEAKER ANDRESEN Are you ready for the question? The question is on the substitute motion proposed by Dr Angrist, which he has stated and restated All in favor say "Aye", contrary, "No" The substitute motion is lost

Now we come to the next substitute motion, which is the one by Dr Rawls

DR. ROONEY I made the first substitute motion, and I will withdraw that substitute motion and join with Dr Rawls in his

SPEAKER ANDRESEN Dr Rawls' substitute motion is now before us

CHORUS What is it?

SPEAKER ANDRESEN Will you state it, Dr Rawls?

DR. RAWLS The substitute motion that I offered was that we approve of the original resolution in principle and memorialize the A.M A to appoint a special committee to study this problem and offer a solution

SPEAKER ANDRESEN Does everybody understand that? Are you ready for the question?

There were calls for the question

DR. RAWLS Dr Rooney suggested that since he had withdrawn his substitute motion in favor of mine that the committee should be one that we memorialize the A M A. to appoint, that we memorialize the A M A to appoint a study committee, to make an endeavor to arrive at an immediate solution of this problem Is that right?

DR ROONEY That is right

SPEAKER ANDRESEN Do you understand the question? Are you ready for the question?

There were calls for the question, and the motion was put to a vote, and was carried.

SPEAKER ANDRESEN That substitute of Dr Rawls' is carried, and is a substitute for all previous motions including the recommendation of the Reference Committee

DR. EGGSTON He said he approved of it in principle

DR. ROONEY The substitute motion is a substitute for yours as well

Section 155 (*See 40*)

Report of Reference Committee on Miscellaneous Business (A) Suggestion for a More Representative Group of Delegates to the American Medical Association

DR. ANDREW A EGGSTON, *Westchester* The next resolution was introduced by Dr George A. Burgin, of Herkimer, "Suggestion for a More Representative Group of Delegates to the American Medical Association," and it was adopted at a meeting of the Medical Society of the County of Herkimer on April 12, 1949

(*Resolution given in full—Section 40*)

The officers and delegates of the Medical Society of the State of New York are nominated and elected from the floor of the House of Delegates for a definite tenure of office No one is elected for life All American Medical Association delegates must stand for election every two years Thus it is evident that ours is truly a democratic organization In no way is a member interfered with if he wishes to nominate anyone from the floor of this assembly, in fact, the ardent and persistent effort of all in the interest of competent representation is not only welcomed but greatly to be desired.

Your Reference Committee disapproves of this resolution I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 156 (*See 28*)

Report of Reference Committee on Miscellaneous Business (A) American Medical Association Assessment—Suggestion for Use of Funds

DR. ANDREW A EGGSTON, *Westchester* There are three resolutions more to be reported on, so I will try to be brief

On the resolution introduced by Dr Norman S Moore, of Tompkins

(*Resolution given in full—Section 28*)

Your Reference Committee feels this resolution unnecessary because these subjects have already been considered by the trustees of the American Medical Association, the Coordinating Committee, as well as the Committee of 53, with the decision that these funds be used for a national educational campaign

Your Reference Committee disapproves of this resolution, and I so move

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 157 (*See 39*)

Report of Reference Committee on Miscellaneous Business (A) Opposition to Senate Resolution 5 (S 1679) on National Health Insurance and Request for Such Action by the American Medical Association

DR. ANDREW A EGGSTON, *Westchester* Resolution introduced by Dr James Greenough, of Otsego County

(*Resolution given in full—Section 39*)

Inasmuch as many of these conferences have been held under the auspices of the Council of Medical Service and other agencies of the American Medical Association and have been devotedly attended by our esteemed and astute American Medical Association delegate, Dr McGoldrick, there is no apparent necessity for this resolution at this time Your Reference Committee recommends disapproval of this resolution, and I so move

The motion was seconded, and as there was no discussion, it was put to a vote and was unanimously carried

Section 158 (*See 60*)

Report of Reference Committee on Miscellaneous Business (A) Compulsory Health Insurance

DR. ANDREW A EGGSTON, *Westchester* Resolution from Orange County

(*Resolution given in full—Section 60*)

Your Reference Committee, because of the many conferences which have been held and numerous and broader conferences scheduled, disapproves of this resolution.

I move the adoption of this recommendation of the Reference Committee

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

Section 159 (*See 104*)

Report of Reference Committee on Miscellaneous Business (A) Bond Issue for the Building of Hospitals in New York City

DR. ANDREW A EGGSTON, *Westchester* Finally, and this was the last straw, a resolution introduced by Dr William B Rawls, of New York.

(*Resolution given in full—Section 104*)

I understand this has passed the Legislature and has probably already been signed by the Governor

Your Reference Committee recognizes the need for adequate municipal hospital facilities in the City of New York for the care of medical indigents

Necessary legal steps should be taken where the need for such additional or improved municipal hospital facilities has been demonstrated. The planning of the proper type of hospitals should take into consideration the difference in costs between hospitals for acute cases and those providing care and treatment of chronic diseases

Your Reference Committee feels that it is not qualified to pass an opinion upon the legal ways and means of accomplishing the purposes of this resolution. However, it approves of the resolution in principle.

I hope you all understand the resolution as originally presented. I will not take the time to explain it to you.

I move the adoption of the recommendation.

The motion was seconded

SPEAKER ANDRESEN Is there any discussion?

DR. WILLIAM B RAWLS, *New York* May I say one word? I will make it short This resolution was handed to me yesterday morning about twelve o'clock or something like that, and it was presented by the executive secretary, I believe it is, of the State Charities Aid Association The whole idea of this is to be able to increase the debt limit of New York City in order that they might carry out their proposed building program for municipal hospitals Lord knows we need it in New York City, as everybody coming to New York City will tell you I don't know anything more about this legal terminology than Dr Eggston does This was handed to me as having been passed by the Legislature, as having been signed by the Governor, and that it was going to be voted on at a referendum this fall, and they would like the support of the medical profession in trying to put this referendum over so we can have some money to build some hospitals in New York City

DR. LEO F SCHIFF, *Clinton* Since the making of substitute motions has now become a fad, I am going to propose one We don't understand this thing It would take us quite a while to have it elucidated, so why even approve of such a thing in principle? I won't say I am against it, but I simply don't understand it, so the only sensible course for us to follow is to admit that we do not understand it Therefore, I move as a substitute motion that we take no action.

DR. EGGSTON The American Medical Association has gone out in all of its resolutions after every state society, "We need more hospitals We need more hospital facilities," so I don t think we can pass up this resolution and not approve of the fact that we should have more hospitals In discussing that particular amendment or substitute, I think we have to take that into consideration from a publicity standpoint

DR. SCHIFF O K., if I may be permitted to withdraw that substitute, let us expand it and say that while we approve of the building of hospitals where necessary and where feasible, various financial arrangements, such as extension of the debt limit, should be made where required and possible This is not in the position, this is parenthetical still. Because we cannot understand this particular motion on $150,000,000, and so on, we can take no action, so the thing in effect is this, that we are in sympathy with the motion, with actions to build more hospitals, but we cannot sensibly take any action on this particular motion which is in reference to a very specific expenditure of money

SPEAKER ANDRESEN The Chair feels that this is really not a substitute It actually puts the same recommendation that the Reference Committee has made perhaps in not quite as good a form.

DR. SCHIFF I beg your pardon I beg to differ The recommendation that I heard read from this platform was that we approve of it in principle

SPEAKER ANDRESEN That was the last clause

DR. SCHIFF Which meant we approved something costing about $150,000,000, which none of us understood

SPEAKER ANDRESEN That was explained in the resolution Will you read that again?

CHORUS No

DR. EDWARD P FLOOD, *Bronx* I am a member of the Reference Committee This is really a very simple proposal, and—

SPEAKER ANDRESEN Did somebody second that substitute motion by Dr Schiff?

The motion was seconded by several

DR. FLOOD This is a very simple matter The debt limit of New York City is limited by the Constitution Last year the Mayor asked for a ten cent fare so he could build more hospitals, but Mike Quill came along and got all of the profits out of the ten-cent fare We need the hospitals We need tuberculosis sanatoriums We need 700 beds in the Bronx alone The only way the money can be secured is by the floating of a bond issue that will be paid for by the subsequent generations that use the hospital The Constitution prevents New York City from issuing bonds above a certain ceiling

An amendment to the Constitution of the State of New York was proposed and passed by the Legislature, and will be signed by the Governor and will be submitted to the electorate of New York State next November The *State Charities Aid Association* asked the Medical Society of the State of New York to support the ratification of this amendment by the electorate We know the need of these things Now our Reference Committee elaborates upon and instills some of our ideas that we think some of the money should be spent for, facilities for the custodial care of the chronically invalid and for the rehabilitation of the crippled and otherwise disabled medical indigents of New York City Therefore, if you approve the report of the Reference Committee, it is a very simple thing They can then say that the Medical Society of the State of New York approves of the bond issue, and approves the purpose behind the question

DR. JAMES F ROONEY, *Trustee* Very briefly, it seems to me there is no emergency This matter will not be voted upon until the fall Nobody seems to know anything about it Dr Flood has very ably explained it I knew nothing about it before I did know that the question of raising the debt limit was a State affair It seems to me we will be acting judiciously, as we have in the past, if this motion be referred to the Council After study, the Council can take the necessary active steps In the interim between the meetings of the House of Delegates, the Council is the House of Delegates, and they can approve it after they have gone over all of the implications of this bill I, therefore, move that this be referred to the Council for its prompt action

The motion was seconded, and as there was no discussion, it was put to a vote, and was lost

SPEAKER ANDRESEN The motion to refer is lost

We now come to the original motion of the Reference Committee Is there any further discussion on that original motion?

The question was called, and the motion was put to a vote, and was carried

DR. EGGSTON Mr Speaker, I move that we adopt the Reference Committee's report as a whole, as amended

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN Thank you, Dr Eggston

DR. EGGSTON There is one other thing that I must do, and that is to thank the fellows on my committee who worked so hard, Dr Morris Weintrob, Dr Edward P Flood, and Dr Orin O Flint, as well as Dr J C Zillhard, who substituted for Dr Vogel

I also thank you, Mr Chairman, for your earnest consideration

Section 160 (*See 48, 153, 162*)

Reconsideration of Recommendation of Reference Committee on Miscellaneous Business (A) Approval of Principles of the Association of American Physicians and Surgeons

DR. ROONEY I will move immediately, Mr Speaker, that the Speaker in conjunction with the Secretary be given the permission of the House to make the necessary deletions in the record.

DR. FREDERICK S WETHERELL, *Onondaga*. Seconded.

SPEAKER ANDRESEN Very well. Are you ready for the motion on the deletion?

The question was called, and the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN The deletion is ordered.

We have another committee report, and I think we ought to get through with that tonight That is the report of the Reference Committee on the Report of the Planning Committee, of which Dr D'Angelo is the chairman

Section 161 (*See 52, 107*)

Reconsideration of Action Taken on Report of Reference Committee on Report of Council IX To Amend the Education Law in Relation to the Practice of Psychiatry

DR. JAMES R REULING, *Treasurer* Might I rise to a question of privilege before you hear this Reference Committee report?

SPEAKER ANDRESEN Yes

DR. REULING I would ask the privilege to speak on a resolution that has been passed by this House. I believe the House was not fully aware of the significance of the action It has to do with a resolution introduced by Dr Irving J Sands of Kings, to amend the Education Law in relation to the practice of psychiatry I want to move a reconsideration. Would you like me to read further before I make the motion?

SPEAKER ANDRESEN I suppose it will be worth while to know why you want to do it

DR. REULING It reads

"WHEREAS, the Medical Practice Act does not specifically include mental and nervous diseases as diseases within the meaning of the law, and

"WHEREAS, Paragraph 4, Section 6501, of the Education Law, states

'The practice of medicine is defined as follows A person practices medicine within the meaning of this Article, except as hereinafter stated, who holds himself out as being able to diagnose, treat, operate, or prescribe for any human disease, pain, injury, deformity, or physical condition, and who shall either offer or undertake, by any means or method, to diagnose, treat, operate, or prescribe for any human disease, pain, injury, deformity, or physical condition' "

that is the Medical Practice Act, and then it goes ahead

"*Therefore be it Resolved* that the Council of the Medical Society of the State of New York be instructed to take whatever measures are necessary to insure the amendment of the Education Law to prohibit specifically psychologists and/or psychiatric workers from practicing medicine, and be it further

"*Resolved*, that the Medical Practice Act be amended to include mental and nervous diseases, and be it further

"*Resolved*, that the Medical Society of the State of New York actively work for the passage of this legislation "

This House of Delegates has in years past repeat-

dly resisted all attempts to open up the Medical ractice Act to redefine the practice of medicine be- ause of fear of opening that door to some of the ults Therefore, Mr Chairman, in order to bring us before the House I am going to make a motion reconsider at a time convenient to the Chairman.

SPEAKER ANDRESEN You voted for the motion us morning?

DR. REULING I voted for the motion I move reconsider

DR. JAMES F ROONEY, *Trustee* I second the otion.

There being no discussion, the motion was put a vote, and was carried

SPEAKER ANDRESEN The motion to reconsider it s been carried. Now what is your pleasure? you want to make another motion now?

DR. ROONEY I will make this motion, that the ouse disapprove of this recommendation That is motion that we disapprove of the recommenda- n to open up the Medical Practice Act again as s proposes to direct the Council and the Legisla- e Committee to do If we do that, gentlemen, it is e opening Pandora's box because the moment we ke a movement to open the Medical Practice Act naturopath, the chiropractor, and every other ich will be in there with proposals to amend the inition of the practice of medicine, which is owledgably the most legally accurate that exists any state of the Union I hope you will vote to approve the original recommendation and wipe thing off the map

The motion was seconded by several

DR. SOLOMON SCHUSSHEIM, *Kings* Being a fit ject for psychiatric study and treatment, I feel t perhaps I may have company tonight This ning when this resolution was presented we all idered it very favorably Perhaps through the 's and evening's entertainment we have suddenly id that Pandora is opening a box If we are to /-dally, as has been said before, about what we ly believe and think, we will never get anywhere us not continue to think that way and be in fear someone else may step in. If we can control our movements when we step in, we can certainly others out

R. ROONEY I rise to a point of order Due to lateness of the hour and the lot of business we have before us, unless we are going to work all tomorrow and make a lot of mistakes as we do in e morning meetings on the day of election, I am g to make this motion that the House vote to debate upon any of these subjects to one ute for each speaker

The motion was seconded by several

R. SAMUEL Z FREEDMAN, *New York* Can we e that retroactive?

EAKER ANDRESEN The Chair will rule that cannot be made retroactive This motion re- s a two-thirds vote

The question was called, and the motion was o a vote, and was carried

EAKER ANDRESEN One minute for each dis- on for the rest of the evening

R. CHARLES GULLO, *Livingston* This is a good on by Dr Rooney We have heard from Dr ley on this subject many times as well as other voicing this expression of fear about reopening Medical Practice Act We are afraid of fear Medical Practice Act was tampered with in and again in 1946, and it was not started by House, when the osteopaths were licensed. igh we may not have started it, it was a change e Medical Practice Act when these people were given additional rights We may not start it, but other people do

DR. AARON KOTTLER, *Kings* Mr Speaker and delegates, this resolution was introduced upon the suggestion of Dr Samuel Harper, who is the director of psychiatry for the City of New York. He introduced this resolution at the Kings County Medical Society, after reading an editorial in the *Woman's Home Companion* written by Dr Morris Fishbein He disagrees with Dr Fishbein as to psychologists and psychiatric workers treating people who have mental or nervous disorders, and it was upon his suggestion that this was introduced. I believe he is an authority on the subject, and that we should follow the wisdom of the authorities on these subjects

SPEAKER ANDRESEN Your minute is up I cannot allow you any more time The House has ordered me not to allow more

DR. FREEDMAN On a motion to refer, I move this be referred to the Council.

SPEAKER ANDRESEN There is a motion to refer the motion which has been approved by the Reference Committee to the Council. Is there a second to that?

The motion was seconded by several

SPEAKER ANDRESEN Is there any discussion?

DR SCHUSSHEIM Do we wish to disavow our vote of this morning and refer it to the Council? What is the trouble around here?

SPEAKER ANDRESEN That is the motion

DR MORRIS WEINTROB, *Kings* Point of information, Mr Chairman, is it parliamentary by a motion of this sort to refer, to invalidate a two-thirds vote to reconsider immediately?

SPEAKER ANDRESEN The motion to reconsider was adopted by a two-thirds vote The motion is now before us to reconsider We want to do anything we want with it Am I right?

DR. ROONEY The motion to reconsider was passed by the House, then I made a motion that this thing be disapproved, that we consider the action that the House took in approving the recommendation of the Reference Committee, and that we disapprove of their recommendation which approved this resolution It is immaterial to me, I am perfectly satisfied to dispose of this matter by referring it to the Council, and I will withdraw my motion and I will second the motion to refer to the Council.

SPEAKER ANDRESEN Is there any further discussion?

DR. IRVING J SANDS, *Kings* There is nothing to refer at the present time The practice of nervous and mental diseases is not recognized by law The resolution recommends it be so recognized. There is absolutely nothing in the resolution that should make you have any doubt of its validity Please don't send it back again to the Council. You have passed it That was a step in the right direction. Let us take it back.

The motion was put to a vote, and was declared carried, after a viva voce vote was in doubt, by a standing vote 46 in favor and 22 against

Section 162 (*See 160*)

Report of Secretary on Deletions Ordered

SECRETARY ANDERTON The Secretary reports he has made the deletions as ordered by the House

Section 163 (*See 22, 44, 47, 78*)

Report of Reference Committee on Report of Planning Committee for Medical Policies

DR. THOMAS M D'ANGELO, *Queens* Mr Speaker

and members of the House, this report will necessarily be a lengthy one, with the number of resolutions that were given to our Committee, but I assure you that I have cut this down to the bone, and with all of the resolutions that were presented to us we have made just two out of them

Your Reference Committee has had a considerable amount of work referred to it at this session Besides the annual report of the Planning Committee a considerable number of resolutions having to do with the work of the Planning Committee have been referred to this Reference Committee

The members of the Medical Society of this State are very often dissatisfied that their problems are not quickly solved. Here is a Planning Committee that has been diligently working for three years, yet many of the problems that were studied at the beginning have not been solved, and their study is still continuing This year their report deals mainly with three phases

(1) Reorganization of District Branches,
(2) Medical services in hospital contracts, and
(3) Group Practice

Mr Speaker, I was absent from the House this morning when the matter of district branch reorganization was voted on May I know officially just what action was taken?

SPEAKER ANDRESEN The metropolitan county societies were made into District 1, the five counties That was adopted Joining Nassau, with Westchester, Suffolk, Rockland, Orange, Dutchess, and Putnam into the Second District Branch, was deferred.

DR. D'ANGELO It is going to be very difficult for me to rephrase this report to conform with the action of the House this morning I shall do my best I then shall take up only those district branches which have not been reorganized this morning

The action taken by the House this morning was at variance with the report of this Committee, and I had hoped that both reports would have been taken up at the same time However, since the action you took this morning is final in that respect, the only thing that your Reference Committee can do now is to rephrase this If any of my members on the Reference Committee are present here, and they do not approve of what I am about to say, I wish they would get up and object

Since the First District Branch now consists of the five counties of New York City, then the Committee will recommend—and this was a second choice by the way—that the Counties of Nassau and Suffolk be joined in another district branch with Westchester, Rockland, Putnam, Dutchess, and Orange

CHORUS What about Ulster?

DR. HARRY GOLEMBE, *Sullivan* Ulster is in the Third District

SPEAKER ANDRESEN Do you so move?

DR. D'ANGELO I am trying to make this to conform with the action that was taken this morning As I say, it is not the action of this Committee as I was about to report it, but since a particular action has already been taken by this Society I have to alter my report at present

SPEAKER ANDRESEN How about your Committee?

DR. D'ANGELO They approve it I asked any of them that disapproved it to speak up

SPEAKER ANDRESEN Did you ask your Committee if they approve it?

DR. D'ANGELO If any of my Committee members are here and disapprove, I hope they will speak up I left out Sullivan and Ulster in the district branch we had planned, but since Suffolk and Nassau are being added to that district branch I thought it best to leave the Third District Branch as is and let it be reorganized, if necessary, at another time. I move the adoption of that portion of the report.

The motion was seconded

SPEAKER ANDRESEN Is there any discussion?

There was no response

SPEAKER ANDRESEN Dr Monteith, do you want to discuss that?

DR. STEPHEN R MONTEITH, *Rockland.* No

DR. SCOTT LORD SMITH, *Dutchess* I would like to discuss it as the immediate past president of the First District Branch. I would be quite satisfied with the action taken between the two committees. I think it is quite possible that ultimately the three semimetropolitan counties may wish to go by themselves I would be heartily in favor of taking the action, which was an imperative action in view of the general differences between the metropolitan and rural counties

SPEAKER ANDRESEN This involves more than just a motion This is really a constitutional amendment It was presented as an amendment this morning to a constitutional amendment which was proposed a year ago, and which it was legally possible to consider today The action on that amendment was postponed until we heard from Dr D'Angelo's Committee, so this is more than just a motion. It is a constitutional amendment I might add parenthetically in view of the fact that we are going to have a revision of the Constitution and Bylaws anyway during the next year to be acted upon next year this will again be merely a stopgap until the whole question of reorganization may come up during the year

The question was called

SPEAKER ANDRESEN We will consider this then in lieu of the amendment that was made this morning

DR. D'ANGELO That implements the actions of this Society to conform with the Constitution and Bylaws, and I think Dr Di Natale will so report

SPEAKER ANDRESEN If this motion of Dr D'Angelo's Committee is approved, it will be referred to Dr Di Natale's Committee, which will report immediately thereafter

DR. D'ANGELO That is right

The motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN The motion is adopted and this recommendation is now referred to Dr Di Natale's Committee

DR. D'ANGELO Your Committee is of the opinion that unless some definite constructive work can be done by district branches they had better be entirely abolished. We also think that if they are organized on geographic, economic, and political lines they can accomplish good constructive work.

Furthermore, your Committee is of the opinion that several district branches may arrange to employ an executive secretary, full- or part-time, to coordinate the various activities, public relations, legislative, workmen's compensation, etc , and we further recommend that the expenses of such executive officers be entirely provided for by the various county societies making up the district

I move the adoption of this portion of the report

DR. JAMES F ROONEY, *Trustee* I second that motion

DR. STEPHEN R MONTEITH, *Rockland* May I discuss that a moment?

SPEAKER ANDRESEN Yes

DR. MONTEITH Yesterday morning I introduced

a resolution into this House carrying instructions from this House of Delegates to the Council to employ executive secretaries for each district branch I don't know what has happened to that resolution as I believed it was referred to Dr D'Angelo's committee

SPEAKER ANDRESEN Apparently, it is coming up

DR. MONTEITH It is in the same connection It seems to me that for the really effective work which we need immediately we cannot afford to wait for the time that it will take each one of these districts to formulate and to carry into effect the means whereby they can employ secretaries or anybody else The district branches now have no dues They are entirely dependent on the bounty of the State Society or the meager operation which they now have I, personally, cannot see any objection to the State Society setting up an executive officer in each district branch, that executive officer being a direct employe of the State Society, responsible to the Council for his actions in every way I do not believe it feasible within any speedy length of time for any district branch outside of some district branch which has a large county society with an already employed executive secretary to carry out this idea I hope that the recommendations of this Reference Committee will not be approved, and that my resolution will prevail

DR. ROONEY It has been estimated by the Board of Trustees, in relation to this resolution of Dr Monteith's, that it would cost the State Society approximately nearly $100,000 to establish and pay an executive officer, a competent executive officer, in each of the eight district branches Gentlemen, we are almost beyond our budget now If we have to publish another *Directory* at a cost of approximately averaging $44,000 a year we will be debiting ourselves over one hundred and some odd thousand dollars above our present dues income If you want to adopt this plan of Dr Monteith's you will without any question have to put in another resolution to raise your dues in the sum of something between $5 and $8 additional per year for your State dues You can consider what you want to do about it

DR. ROBERT C PEALE, *District Delegate* Mr Speaker and members, as president of the Eighth District Branch I would like to say that a few years ago we realized that something like this had to be done We also realized that we had no money with which to do it Every chiropractor in this State pays three to four or five times what we pay We have carried on this plan, and it has worked successfully It has been of the greatest help to all of the county societies The officers and everyone who attends the meetings pay their own expenses, and I don't see any reason to argue about a few dollars

SPEAKER ANDRESEN We have been getting over in the discussion to considering another motion than the one that was made by the Reference Committee Isn't that right? The next resolution will take care of it I believe

DR. D'ANGELO May I say that action on this resolution will automatically carry action on Dr Monteith's resolution because if we adopt this resolution we have each corresponding society of the district branches pay for it.

DR. FREDERICK W WILLIAMS, *Bronx* I would like to know if the Reference Committee's recommendation makes it mandatory for the district to have an executive officer

DR. D'ANGELO No

DR. WILLIAMS I would like to know if one of the districts does decide to hire an executive officer from the counties to be supported from the counties within the district, is he then responsible to the Council of the State Society?

DR. D'ANGELO No

DR. THOMAS P MCCARTHY, *Bronx* Will you read that again?

DR. D'ANGELO "That several district branches may arrange to employ an executive secretary, full- or part-time, to coordinate the various activities, public relations, legislative, workmen's compensation, etc , and that we further recommend that the expenses of such executive officers be entirely provided for by the various county societies making up the district" That is taken verbatim from the report of Dr Kenney's Planning Committee

DR. WILLIAMS I didn't hear that word "may"

DR. D'ANGELO I have added it

DR. HOMER J KNICKERBOCKER, *Ontario* Mr Anderson has already added five new men. Cannot we add them in the various regions until such time as the districts can develop a man and pay for him.

The question was called, and the motion was put to a vote, and was carried

DR. D'ANGELO Therefore no action on Dr Monteith's resolution is necessary

Section 164 (*See 20, 21, 25, 56, 57, 66*)

Report of Reference Committee on Report of Planning Committee for Medical Policies Medical Services in Hospitals and Blue Cross Contracts

DR THOMAS M D'ANGELO, *Queens* Medical Services in Hospitals and Blue Cross Contracts More and more the hospitals are entering the practice of medicine First the pathologists, radiologists, anesthesiologists, and the physiotherapists were involved. Now many hospitals are selling the service of surgeons and other specialists The trend is increasing The Planning Committee has studied this very carefully, and we would like to call to your attention the preliminary report of the A M A committee, of which Dr Hess is chairman We cannot look to the A.M A. for a nation-wide solution to this problem. It must be solved on a state level The Planning Committee has given most of its attention to the problem of the pathologist, radiologist, anesthesiologist, and the physiotherapist, and the solution that has been prepared deals mostly with these specialties We believe that all the doctors are now involved, and that we must tackle this problem in a different manner

Certain medical services have been offered to the public by our hospitals It would be difficult for the hospitals to remove these services at the present time, because the public has been educated to receive these services The Blue Cross has accepted these services in its contracts to the hospital and the public Blue Shield contracts are not paying for these services because they are, at present, being paid by the Blue Cross In some areas of this State, however, Blue Shield is ready to pay for such services, and we believe that the public would not, in any way, be deprived of any medical care if such medical services were transferred from Blue Cross to Blue Shield. The Reference Committee, therefore, recommends that the Medical Society of the State of New York hereby goes on record as again approving, in principle, that the rendering of medical services must remain in the hands of qualified physicians practicing individually or in groups It also recommends that where Blue Shield plans are in operation that Blue Cross plans discontinue offering medical services in pathology, radiology, anesthesiology, and

physiotherapy, and that Blue Shield plans pay for these services The Reference Committee also recommends that all Blue Cross and Blue Shield plans in this State be notified of this action

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. D'ANGELO We have received a number of resolutions concerning this phase of the Planning Committee report Since they all agree in principle, the Reference Committee has combined them in one resolution, and offers the following substitute for the various resolutions introduced

"WHEREAS, the Medical Society of the State of New York is heartily in accord with all movements that will afford the adequate training of students of medicine, the prevention and treatment of disease, and the establishment of medical care on economic planes which will not result in the deterioration of the individual program of medicine or the lowering of the standard of medical care of the sick, and

"WHEREAS, there has been a tendency for certain hospitals and medical teaching institutions to open clinics for the practice of medicine for profit, therefore be it

"*Resolved*, that

"1 This Committee recommend to the House of Delegates that the resolution previously passed by the House of Delegates (NEW YORK STATE JOURNAL OF MEDICINE, September 1, 1948, Part II, page 18, paragraph 3, column 2) be called to the attention of hospitals and teaching institutions

"2 That a conference of deans of medical colleges and representatives of hospitals and teaching institutions be held to discuss and formulate a policy which is in the public interest

"3 That all hospitals and teaching institutions be requested to take no further action in this matter until such time as the above policy has been formulated.

"4 That the Council be instructed to sponsor and support the reintroduction of the Friedman Bill (*Senate Introductory 2402*) which was passed by the State Senate at the last session of the Legislature"

I move the approval of that portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 165 (*See 23*)

Report of the Reference Committee on Report of the Planning Committee for Medical Policies Group Practice

DR. THOMAS M D'ANGELO, *Queens* The Committee recommends that continued study of group practice be carried on. It also recommends that the Planning Committee approve a set of principles for group practice as soon as possible In the meantime the members of our Society can be guided by the result of the Planning Committee study so far

I move the adoption of this portion of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. D'ANGELO We recommend that this Committee be continued, and I so move

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. D'ANGELO I wish to thank the members of that Committee for the hard work they put in all afternoon, and I move the adoption of the report as a whole

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

Section 166 (*See 78, 163*)

Report of Reference Committee on Constitution and Bylaws Amendment to Article XI, Section 1, Paragraph 3

SPEAKER ANDRESEN We now have to take up the report by Dr Di Natale on the Reference Committee on Constitution and Bylaws

DR. PETER J DI NATALE, *Genesee* This morning you deferred until tonight this part of the amendment to the Constitution and Bylaws

Paragraph 3, Section 1, Article XI at present reads as follows

"The Second District Branch shall comprise the members of the medical societies of the counties of Kings, Queens, Nassau, and Suffolk."

This morning you voted to make the five metropolitan New York counties the First District Your Reference Committee moves that paragraph 3 of Section 1, Article XI read as follows

"The Second District Branch shall comprise the members of the medical societies of the counties of Westchester, Suffolk, Nassau, Rockland, Orange, Dutchess, and Putnam."

I move the adoption of this portion of the Reference Committee's Report on the Constitution and Bylaws

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 167

Report of Reference Committee on Report of Council Part IV Public Health Activities (B)

DR. A. H AARON, *Erie* Your Reference Committee on Report of Council, Part IV, recommends the approval of the following public health activities, Part B, as per the reports that are in your hands

(1) Report submitted on Cancer,
(2) Report submitted on Hard of Hearing and the Deaf,
(3) Report on the Subcommittee on Rheumatic Fever,
(4) Report on Mental Hygiene

I move the adoption of this portion of the report.

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

Section 168 (*See 45*)

Report of Reference Committee on Report of Council Part IV Blood Banks

DR. A. H. AARON, *Erie* At the annual meeting of the House of Delegates of the Medical Society of the State of New York, in May, 1948, the following resolution was approved

"WHEREAS, the National Red Cross has undertaken the establishment of a nation-wide Blood Donor Service Program, the basic philosophy of which is to provide blood for all, and which pro-

vides in some areas not only for donor services but also for collecting, processing, and distributing blood from a centralized bank, and

"WHEREAS, free service for all economic levels of the population is not compatible with established patterns of American life, and

"WHEREAS, a centralized blood bank service under the Red Cross may tend to destroy existing blood banks in the hospitals, and

"WHEREAS, all professional and technical phases of a blood bank program should be under the control and supervision of the physicians of the community, and

"WHEREAS, a permissive program adapted to meet local needs has been approved in Westchester County in full cooperation with the Westchester Chapter of the American Red Cross, now therefore be it

"*Resolved*, that the New York State Medical Society urge county societies to consider the establishment of a Red Cross Blood Donor Service Program similar to that proposed for Westchester which provides

1 Red Cross Blood Donor Service

2 Free Red Cross blood for the medically indigent who are unable to provide replacement

3 The continuation of existing hospital blood banks and encouraging the establishment of banks in other hospitals.

4 Implementation and supplementation of the existing blood bank services

5 All professional and technical control and supervision of the donor service program vested in a committee of physicians appointed by the county medical society

6 And general coordination of the program through a committee representing the Red Cross, the county hospital association, and the county medical society."

Therefore, under that resolution a Subcommittee on Blood Banks was appointed by the president of the State Medical Society, consisting of Drs Lester J Unger, Eugene L Lozner, and Morris Maslon, who held frequent meetings in conjunction with the New York State Department of Health, representatives of the American Red Cross and other interested members of the Medical Society of the State of New York, who gave their report as published in the annual reports of the State Society for 1948 and 1949 Since the publication of this report it has been discovered that the Westchester Plan is not in operation and has not been in operation, due to the fact that the National American Red Cross would not endorse their plan

Since the resolution introduced by Nassau County dealing with the subject of blood banks is under consideration now, your Reference Committee has concentrated on the report as presented by Nassau County and we believe that a discussion of this report will obviate the necessity of acting on the report of the original Subcommittee on Blood Banks

The resolution that was referred to your Reference Committee, and that was adopted at a meeting of the Nassau County Medical Society, held on April 26, 1949 reads

(*Resolution given in full—Section 45*)

We approve the recommendation that the committee be continued or a new committee be appointed to work out the best plan for a sound blood bank program for the State of New York, developed jointly by the New York State Department of Health and the Medical Society of the State of New York and its constituent local bodies

We move the approval of the entire report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER ANDRESEN Thank you, Dr Aaron

DR. AARON We would like to thank the other members of the Reference Committee, also Dr Stillman, the president of the American Blood Bank Association, Dr Curphey, Dr Sobol, Dr Witherby, Dr Simpson, and Dr Masterson, who aided us in the formation of this report

SPEAKER ANDRESEN Dr Williams has now edited his report, and will continue reading it.

Section 169 (*See 7, 125, 172*)

Report of Reference Committee on Report of Secretary

DR. FREDERICK W WILLIAMS, *Bronx* On the advice of Counsel of the Society, I wish to say that I am here ready to report to the best of my knowledge, information, and belief (*Laughter*)

Part I, Report of the Secretary Your Committee wishes to report that the statistics on membership as published were the statistics as of January 1, 1949 The published number of 834 delinquent members for 1948 would give the impression that this delinquency produced a loss in membership from 21,303 for January 1, 1948, to 21,171 as of January 1, 1949 This is explained, however, as being due to a variation in fiscal policy between some of the county societies and the State Society By March, 1949, the delinquency number was reduced to 284, which would bring the total membership to 21,721 and by May 1, 1949, our total membership was 22,520 This is definitely the largest membership in the history of our Society This is truly sound, progressive growth Your Committee suggests, however, that the Secretary hereafter report the membership statistics more currently than as of the calendar year and that closer cooperation be established between the county and State offices so that the statistical report, as published, will more accurately reflect the status of our membership rolls

Your Committee wishes to call the attention of the delegates to the fact that eleven counties were reported as honor counties, having 100 per cent of their 1948 dues paid in 1948 This is commendable, and we suggest that more of the counties make an effort to attain this status

Your Committee wishes to call attention to the excellent work on the part of the Secretary in the reporting of the minutes of the Council as published through the year Also, we wish to make note of the fact that there was marked improvement in the timing of the publishing of the annual reports and the supplementary reports in preparation for this convention We again request all officers, committee chairmen, and district branch presidents to cooperate with the Secretary to make this even more efficient in the future Such cooperation will aid materially in the intelligent handling of the business of the convention

Your Committee is anxious to bring to the attention of every delegate and every member of this Society the conscientious, efficient, and humble manner in which your Secretary has carried out the multitudinous tasks of his office His published report touches but briefly some highlights of his efforts in our behalf this past year For this he should receive our sincere thanks and appreciation

I move the adoption of this portion of the Reference Committee's report on the Report of the Secretary by a rising vote.

The motion was seconded, and the delegates arose and applauded

Section 170

Report of Reference Committee on Report of the District Branches

DR. FREDERICK W WILLIAMS, *Bronx* Part II, Report of the District Branches A report of the attendance figures of all the district branches reveals that the real active value and worth of the district branches varies greatly in the different sections of the State Your Committee advises that effort be exerted to revitalize the less active district branches. This, your Committee feels, may well be attained in several ways

First In the downstate area of metropolitan New York City redistricting is an essential change which will be accomplished by adoption of resolutions to be reported by another committee Your Committee is of the opinion that districting should be done on a basis of common problems among the counties, not purely geographic location

Second In the district branches in general throughout the State, revitalizing may be attained by establishing a coordinating advisory committee as has been done in the Eighth District Your Committee recommends the present setup in the Eighth District to the attention of other districts for their consideration. We feel that district branch activity should be developed locally and adapted to local problems and interests We also wish to stress that district branch activity should not be developed to such an extent as to encroach upon county sovereignty District branches should not be permitted extended representation in the House of Delegates Your Committee recommends that district branches be given every encouragement to revitalize by a process of evolution, with room for local adaptation

I move the adoption of this part of the Reference Committee's report

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

Section 171

Report of Reference Committee on Censors

DR. FREDERICK W WILLIAMS, *Bronx* In regard to the Report of the Censors, we received no report, so I move the adoption of this report as a whole as properly edited

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR WILLIAMS I thank the members of my Reference Committee for their cooperation and assistance

Section 172 (*See 169*)

Acknowledgment of Rising Vote of Thanks by Secretary Anderton

SECRETARY WALTER P ANDERTON Your Secretary at the moment of your kind approbation was completely stricken dumb, but now the words—and probably too many—will be flowing forth. All I can say, from the bottom of my heart thank you, but what little I have been able to accomplish for the State Society has been entirely due to the work of others in the State Society, and I mean by that Miss Dougherty, Dr Frey, Mr Anderson, and the other many people that work in your office

Section 173 (*See 138*)

Supplementary Report of Reference Committee on Report of Council, Part X Revised Workmen's Compensation Fee Schedule

DR. A. WILBUR DURYEE, *New York* Mr Speaker, this is a supplementary report on the Report of the Council, Part X, Workmen's Compensation

Your Reference Committee has had referred to it the consideration of the motion of Dr Arthur Bedell regarding the fees of ophthalmologists as embodied in the supplementary report to the fee schedule of the Workmen's Compensation Board dated May 1, 1949

After consultation with Dr J Stanley Kenney, chairman of the Council Committee on Workmen's Compensation, and Dr David J Kaliski, director of the Workmen's Compensation Bureau, and your incoming president, Dr John J Masterson, and after reviewing the entire supplementary fee schedule, it is apparent that inequities in other specialties are also present.

Therefore, your Reference Committee recommends that the Council Committee on Workmen's Compensation of the Medical Society of the State of New York with such other well-informed members of the Medical Society of the State of New York whom the President may see fit to appoint, meet with the chairman of the Workmen's Compensation Board or with whomsoever she may desire to appoint, to urge the correction of these inequities as soon as possible and to advise and assist in the implementing of the recommendations made in the report of your Reference Committee and adopted by the House of Delegates in session on May 3, 1949

I move the adoption of this report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. DURYEE I would like to thank the members of my committee who worked on the original report and also on this supplementary report, Dr Reginald A. Higgons, Dr Charles E Goodell, Dr Walter S Bennett, and Dr John H Garlock, and also for their assistance Dr J Stanley Kenney and Dr David J Kaliski.

SPEAKER ANDRESEN Thank you, Dr Duryee

Are there any further resolutions to be presented? This is the last opportunity to present any resolutions None can be made tomorrow

Section 174 (*See 182*)

Voluntary Medical Care Insurance Participation

DR. CHARLES GULLO, *Livingston* This is a resolution which will probably result in a lot of work for some men when they get back home

"WHEREAS, enrolment in the Voluntary Medical Care Plans approved by the Medical Society of the State of New York indicates public acceptance of this principle to provide for medical care costs, and

"WHEREAS, a program to accelerate enrolment is essential to provide protection to a greater number of people, and

"WHEREAS, the cooperation and participation of all doctors in the plans is necessary to accomplish this purpose, now therefore be it

"*Resolved*, by the House of Delegates of the Medical Society of the State of New York, that

1 The Medical Society of the State of New York extend to county medical societies through

its facilities the necessary assistance to increase doctor participation in the plans

2. That meetings be arranged through district branches to formulate a program to increase enrolment in local areas through the cooperation of county medical societies and the plans"

SPEAKER ANDRESEN I will refer that to the Reference Committee on Report of the Council, Part VII, Medical Care Insurance, of which Dr Guy S Philbrick, of Niagara, is the chairman

Section 175 (*See 195*)

Increased Annual Assessment

DR STEPHEN R MONTEITH, *Rockland* I should like to introduce a resolution pertaining to the annual per capita assessment

"*Be It Hereby Resolved* by this House of Delegates that the annual per capita assessment on each component county society for the ensuing fiscal year shall be $25"

SPEAKER ANDRESEN I can't refer it to Dr Monteith's own reference committee very well

DR JAMES R REULING, *Treasurer* On the question of the wording there, you say "assessment on each component county society" You mean "on each member" don't you?

DR MONTEITH It conforms to the wording of the Constitution

SPEAKER ANDRESEN I will refer that to the Reference Committee on Report of the Planning Committee for Medical Policies, of which Dr Thomas M D'Angelo, of Queens, is the chairman

Section 176

Vote of Thanks to Help of Society

DR JOSEPH A GEIS, *Essex* I would like to make a motion that this House of Delegates extend a vote of thanks to the secretarial and other help of the Society who have stayed here so late tonight, and that we authorize the Board of Trustees to make thanks apparent in a more substantial form

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER ANDRESEN It is so recommended

There being no further motions and no further reports of committees, I now declare the meeting adjourned until tomorrow morning at 9 o'clock

The session adjourned at 11 25 P M

WEDNESDAY MORNING SESSION

May 4, 1949

The session reconvened at 9 A M

Section 177

Announcement of Death of Delegate John L O'Brien

SPEAKER ANDRESEN The Chair wishes to recognize Dr Van Etten. (*Applause*)

DR NATHAN B VAN ETTEN, *Past President* Mr Speaker and members of the House, it is with deep sadness at this moment that it is my duty to announce to the House the sudden death of one of your members, long a delegate to this House, constructive thinker, intelligent critic, hard worker and devoted physician, distinguished in his work in New York City, Dr John L O'Brien, of the Bronx, died suddenly last night

Mr Speaker, I ask that the House stand in silent tribute to Dr O'Brien, and that the Secretary communicate with Dr O'Brien's family expressing the great regret that this House has over its serious loss

The delegates arose and stood in silent tribute to the memory of Dr John L O'Brien

Section 178

Announcements

SPEAKER ANDRESEN I wish to announce again that the tickets for the banquet are still available

I wish also to ask you to go to the Technical Exhibits, to sign upstairs on the 17th floor The Technical Exhibits support this meeting, and they judge the success of the meeting by the number of people who have registered, so it is really our duty to go up and register on the 17th floor and to look at some of the exhibits

I also have to announce that the Council meets either directly after this session or, if the session lasts too long, at 2 P M in the rooms of the Erie County Medical Society on the 18th floor

The Trustees will meet immediately afterward.

I wish to say a few words of appreciation of the work of this House. You are certainly the best House ever to represent the medical profession of New York. You have been remarkably patient, attentive, and cooperative You have not been too critical of my mistakes The experienced parliamentarians among you have helped me through many tight places, and I wish to thank particularly Drs Rooney, Bauer, and Reuling for their help on several such occasions

Several of the new members of the House have remarked to me what a revelation it has been to see this House at work. They and the occasional guests who have observed our work from the back of the room have marveled at the endurance and alertness of this aggregation of decrepit old men From what they had heard and read they expected to find this House as well as the House of Delegates of the American Medical Association, as was mentioned yesterday, a sort of old men's home with groups of cackling superannuated armchair sitters exchanging wheezes and ancient anecdotes and in between passing lightly a few nonsensical inconsequential resolutions

It is further remarkable that, with few exceptions, this group of indefatigable workers for the good of the medical profession and for the interests of the public have come here at their own expense Our Publicity Bureau missed a wonderful opportunity when it failed to have pictures taken of the beehive of activity in the foyer here when our twenty reference committees were meeting there on Monday, and when our House was working last night until a late hour

You all look tired after your long sessions yesterday when we spent actually eleven hours in here at work, but you may be proud of what you accomplished. It was really too much, and we must consider the advisability of a full three-day session

Section 179

Elections

SPEAKER ANDRESEN We now come to the first

business of the morning, which will be the election of officers, and when the election is over will you please go back to your seats We still have business to attend to We have at least four more reference committees to hear from, and there are a number of resolutions that have to be taken up this morning Mr Secretary, is there a quorum present?

SECRETARY ANDERTON Yes, sir

SPEAKER ANDRESEN Will the Secretary please read the names of the tellers, and please answer to your name We must have thirty tellers to do an efficient job

The Secretary read the following names, from whom were selected the tellers

Harold F Morrison
Grant Thorburn
Moses H. Krakow
Clifton H. Berlinghof
Daisy H Van Dyke
Alfred P Ingegno
Aaron Kottler
Abraham Rabiner
E. Kenneth Horton
E. Percy Eglee
Peter M Murray
Felix Ottaviano
Homer J Cudmore
Norton S Brown
John F Kelley
David H. MacFarland
W Walter Street

Theodore R. Proper
Sol Axelrad
Arthur A. Fischl
Richard P Doody
David W Beard
Cyril Drysdale
Charles F Rourke
Edward F Stanton
Beverly C Smith

SPEAKER ANDRESEN I think approximately thirty answered As soon as you put your ballot in the box, will you go outside? Dr McCarty, the chief teller, will meet you outside and brief you in regard to the action we are going to take when the ballots come in I will just read you Chapter III, Section 5, of the By laws

"In the event of a single nominee only for any office, a majority vote without ballot shall elect."

In such case the Chair will entertain a motion for closing the nominations and declaring the candidate elected

Ballots will be distributed to fill out the spaces for which multiple candidates have been nominated only, not the ones where there have been single nominations, and they have been elected by viva voce vote

In connection with the delegates, we will elect this year eleven to the American Medical Association, so we will have to vote for twenty-two, because we have to have eleven alternates as well We must, therefore, have at least twenty-two nominations for delegates

NOMINATIONS AND ROLL CALL

Nominations were received

Assistant Secretary Frey read the following list of those who were entitled to vote

OFFICERS COUNCILORS, AND TRUSTEES

Leo F Simpson

ELECTION OF OFFICERS, TRUSTEES, AND COUNCILORS

The following officers were elected for one year
President-Elect, Carlton E Wertz, *Buffalo*
Second Vice-President, James E McAskill, *Watertown*
Secretary, W P Anderton, *New York*
Assistant Secretary, Andrew A. Eggston, *Mount Vernon*
Treasurer, James R. Reuling, *Bayside*
Assistant Treasurer, Fenwick Beekman, *New York*
Speaker, Albert F R. Andresen, *Brooklyn*
Vice-Speaker, Frederic W Holcomb, *Kingston*
Trustee for Five Years, William H Ross, *Brentwood*
Trustee for Four Years, Dan Mellen, *Rome*
Councilors for Three Years, Theodore J Curphey, *Garden City*, Harold F R Brown, *Buffalo*, Elton R. Dickson, *Binghamton*
Councilors for Two Years, George C Adie, *New Rochelle*, Leo E Gibson, *Syracuse*
Councilor for One Year, Renato J Azzari, *Bronx*

ELECTION OF A.M A. DELEGATES

The following were elected 1950–1951 delegates John J Masterson, *Kings*, Leo F Simpson, *Monroe*, Thomas A. McGoldrick, *Kings*, George W Kosmak, *New York*, J Stanley Kenney, *New York*, Peter J Di Natale, *Genesee*, Andrew A Eggston, *Westchester*, Stephen R. Monteith, *Rockland*, Renato J Azzari, *Bronx* Peter Murray, *New York*, Joseph P Henry, *Monroe*

The following were elected 1950–1951 alternate delegates Maurice J Dattelbaum, *Kings*, Scott Lord Smith, *Dutchess* Samuel B Burk, *New York*, Thomas M D'Angelo, *Queens*, Joseph A Geis, *Essex*, Ezra A. Wolff, *Queens*, Denver M Vickers, *Washington* John L. Edwards, *Columbia*, Gervais W McAuliffe, *New York*, Madge C L McGuinness, *New York*, Thomas M Watkins, *St. Lawrence*

Section 180

Election to Retired Membership

SPEAKER ANDRESEN We have another matter to take up and that is the election to retired membership The names of those have been published in the announcement, have they?

SECRETARY ANDERTON There are a few additions

Henry D Abbott *Buffalo*
Herman D Andrews *East Aurora*
Clement Dorra *New York City*
Edward S Godfrey Jr *Albany*
Charles H. Keene *Kenmore*
Charles A. Lawler *Salamanca*
Ira W Livermore *Gowanda*
Clayton H Snover *Randolph*
James A. Taggert, *Salamanca*

In order that one gentleman may become eligible for retired membership it gives me pleasure to move that there be the remission of the War Memorial assessment of Dr Clement Dorra, due to illness

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. B WALLACE HAMILTON Now I move that all these men, including those printed and the additions, be elected to retired membership

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried, the complete list being as follows

Henry D Abbott, *Buffalo*
David E Alexander *New York City*
Charles E. Allaume *Utica*
Morris Robert Altman *New York City*
Herman D Andrews *East Aurora*
Carmelo Atonna *New York City*
Benjamin A. Barney *Hornell*
Robert L Bartlett, *Rome*
Henry C Becker *Rockland, Maine*
Marcus I. Blank, *New York City*
Dominic G Bodkin *Brooklyn*
Julius B Boehm, *Brooklyn*
Frank W Bradner *Brooklyn*
William Paul Brown, *Albany*
Domenico Candela *Brooklyn*
Alfred E Cohn, *New York City*
Thomas E. Cooney *Lime Rock Connecticut*
Frederick Coonley *Staten Island*
James E Crossman *Canisteo*
Clarence D Daniels *Veridian*

business of the morning, which will be the election of officers, and when the election is over will you please go back to your seats We still have business to attend to We have at least four more reference committees to hear from, and there are a number of resolutions that have to be taken up this morning Mr Secretary, is there a quorum present?

SECRETARY ANDERTON Yes, sir

SPEAKER ANDRESEN Will the Secretary please read the names of the tellers, and please answer to your name We must have thirty tellers to do an efficient job

Dr McCarty, the chief teller, will meet you outside and brief you in regard to the action we are going to take when the ballots come in I will just read you Chapter III, Section 5, of the Bylaws

"In the event of a single nominee only for any office, a majority vote without ballot shall elect"

In such case the Chair will entertain a motion for closing the nominations and declaring the candidate elected.

Ballots will be distributed to fill out the spaces for which multiple candidates have been nominated only, not the ones where there have been single nominations, and they have been elected by viva voce vote.

In connection with the delegates, we will elect this year eleven to the American Medical Association, so we will have to vote for twenty-two, because we have to have eleven alternates as well. We must, therefore, have at least twenty-two nominations for delegates

NOMINATIONS AND ROLL CALL

Nominations were received

Assistant Secretary Frey read the following list of those who were entitled to vote

OFFICERS COUNCILORS, AND TRUSTEES

Leo F Simpson
John J Masterson
Louis H. Bauer
Theodore J Curphey

ELECTION OF OFFICERS, TRUSTEES, AND COUNCILORS

The following officers were elected for one year
President-Elect, Carlton E Wertz, *Buffalo*
Second Vice-President, James E McAskill, *Watertown*
Secretary, W P Anderton, *New York*
Assistant Secretary, Andrew A. Eggston, *Mount Vernon*
Treasurer, James R. Reuling, *Bayside*
Assistant Treasurer, Fenwick Beekman, *New York*
Speaker, Albert F R. Andresen, *Brooklyn*
Vice-Speaker, Frederic W Holcomb, *Kingston*
Trustee for Five Years, William H Ross, *Brentwood*
Trustee for Four Years, Dan Mellen, *Rome*
Councilors for Three Years, Theodore J Curphey, *Garden City*, Harold F R. Brown, *Buffalo*, Elton R. Dickson, *Binghamton*
Councilors for Two Years, George C Adie, *New Rochelle*, Leo E Gibson, *Syracuse*
Councilor for One Year, Renato J Azzari, *Bronx*

ELECTION OF A.M.A. DELEGATES

The following were elected 1950–1951 delegates John J Masterson, *Kings*, Leo F Simpson, *Monroe*, Thomas A. McGoldrick, *Kings*, George W Kosmak, *New York* J Stanley Kenney, *New York*, Peter J Di Natale, *Genesee*, Andrew A. Eggston, *Westchester*, Stephen R. Monteith, *Rockland*, Renato J Azzari, *Bronx*, Peter Murray, *New York*, Joseph P Henry, *Monroe*

The following were elected 1950–1951 alternate delegates Maurice J Dattelbaum, *Kings*, Scott Lord Smith, *Dutchess* Samuel B Burk, *New York*, Thomas M. D'Angelo, *Queens*, Joseph A. Geis, *Essex*, Ezra A. Wolff, *Queens*, Denver M Vickers, *Washington*, John L Edwards, *Columbia*, Gervais W McAuliffe, *New York*, Madge C L McGunness, *New York*, Thomas M Watkins, *St Lawrence*

Section 180

Election to Retired Membership

SPEAKER ANDRESEN We have another matter to take up and that is the election to retired membership The names of those have been published in the announcement, have they?

SECRETARY ANDERTON There are a few additions

Henry D Abbott, *Buffalo*
Herman D Andrews *East Aurora*
Clement Dorra *New York City*
Edward S Godfrey Jr *Albany*
Charles H. Keene, *Kenmore*
Charles A. Lawler *Salamanca*
Ira W Livermore *Gowanda*
Clayton H Snover *Randolph*
James A. Taggert *Salamanca*

In order that one gentleman may become eligible for retired membership it gives me pleasure to move that there be the remission of the War Memorial assessment of Dr Clement Dorra, due to illness

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR. B WALLACE HAMILTON Now I move that all these men, including those printed and the additions, be elected to retired membership

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried, the complete list being as follows

Henry D Abbott, *Buffalo*
David E. Alexander *New York City*
Charles E Alliaume *Utica*
Morris Robert Altman *New York City*
Herman D Andrews *East Aurora*
Carmelo Atonna *New York City*
Benjamin A Barney *Hornell*
Robert L Bartlett, *Rome*
Henry C Becker *Rockland, Maine*
Marcus I Blank, *New York City*
Dominic G Bodkin *Brooklyn*
Julius B Boehm, *Brooklyn*
Frank W Bradner *Brooklyn*
William Paul Brown *Albany*
Domenico Candela *Brooklyn*
Alfred E Cohn *New York City*
Thomas E Cooney *Lime Rock Connecticut*
Frederick Coonley *Staten Island*
James E. Crossman *Canisteo*
Clarence D Daniels *Meridian*

George W Davis *Oneida*
Clement Dorra *New York City*
Frederick W Filsinger *Buffalo*
George G Fisher *Newhall, California*
Carl C Franken *New York City*
David I Frey *Bronx*
Juha R Gibson *Flushing*
Edward E Gillick, *Youngstown*
Alexander Gilligan *Brooklyn*
Edward S Godfrey Jr *Albany*
Joseph E Golding *Setauket*
Malcolm Goodridge *New York City*
Charles T Graham Rogers *Ridgefield Connecticut*
John Gromann *Utica*
Abraham Grossman *Bronx*
Edward E Haley *Buffalo*
Robert Hurtin Halsey *New York City*
Addison T Halstead *Rushville*
Samuel W Hamilton *Cedar Grove New Jersey*
William P Healy *New York City*
Lewis W Heizer *Watertown*
Clifford W Hendrickson *New Rochelle*
Philip F Hoffman, *White Plains*
Charles H Holmes *Cambridge*
Edward F Horr *Barneveld*
Leo Jacobi *New York City*
Cyrus P Jennings *Macedon*
Willard B Jolls, *Orchard Park*
Henry M Kalvin *Brooklyn*
Charles H Keene *Kenmore*
Reynold Kutner *New York City*
Charles A. Lawler *Salamanca*
Max Lederer *Brooklyn*
Heinrich Lehndorff, *New Rochelle*
Adolphe Letellier, *Seneca Falls*
Richard Lewisohn *New York City*
Elis I Lindgren *New York City*
Ira W Livermore *Gowanda*
Jerome M Lynch, *Pasadena California*
William John Maby *Mechanicville*
James F Maltman *Canandaigua*
Charles E Manning *Brooklyn*
Andrew J McGowan, *New Brighton*
Russell J McGraw *Coral Gables Florida*
John P McQuilkin *Westhampton Beach*
Willis E Merriman *Utica*
Henry E B Meyer *Garden City*

Willets Wilson *Ithaca*
George D Winchell *Rose*
Abraham L Wincor, *Bronx*
Charles A Wisch *North Tonawanda*
Abraham Leo Wolbarst *New York City*
Francis Carter Wood *Englewood New Jersey*
Max A. Zipser *New York City*

SPEAKER ANDRESEN I will declare a recess for ten minutes until we get further reports

Recess

Section 181 (*See 72, 106, 193*)

Report of Reference Committee on Report of Council, Part IX Basic Science Law

SPEAKER ANDRESEN The first thing we have to consider this morning is the deferred discussion on the Report of the Council, Part IX, Dr Rawls

DR CHARLES GULLO, *Livingston* May I ask a question?

SPEAKER ANDRESEN Yes

DR. GULLO Is this the report on my resolution?

SPEAKER ANDRESEN Yes

DR. GULLO I ask that this House defer action on this report until such time as the tellers are back here so they can vote when it is time to vote and hear the arguments against it I have information of vital importance to this House that I want everyone to hear

DR. FREDERICK S WETHERELL, *Onondaga* I second that motion

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN It is deferred until the tellers announce their vote and return to the House All of you who are interested in this matter, will you kindly come to the fore and give your reasons to the Committeee? In that way we will save an awful lot of time on the floor I am referring now to the matter of the $25 assessment, which is now being considered by that reference committee

Are there any other reference committees ready to report?

Section 182 (*See 174*)

Report of Reference Committee on Report of Council, Part VII Voluntary Medical Care Insurance Participation

DR GUY S PHILBRICK, *Niagara* Mr Speaker this resolution was introduced late last night by Dr Charles Gullo, of Livingston

(*Resolution given in full—Section 174*)

Your Reference Committee wishes to approve this resolution, and I so move

The motion was seconded.

SPEAKER ANDRESEN The Reference Committee has moved the approval of the resolution Is there any discussion?

DR GULLO This resolution contemplates far more than appears on the surface It was introduced after consultation with Dr Wertz and Mr Farrell, and it is going to mean a lot of work for every one of you, those that will be asked—and of course you all belong to a plan and probably will all be asked. It contemplates an active campaign in the State of New York to give an example to the rest of the states and to the rest of the nation as to what can be done with effort in the next five months to bring prepaid insurance to our people.

Mr Farrell has done an excellent job, but the county societies have not They have merely done a fair job If you are going to prevent socialized medicine, you have got to wake up and do something about it You have to have a fait accompli so that Washington will know that our people are covered for the emergency, and that at least part of their medical care is paid for and practically all of their hospital bill is paid for This contemplates an active selling campaign with the participation and enrolment, which does not exist today, of every single doctor in the State of New York.

The question was called, and the motion was put to a vote, and was unanimously carried

SPEAKER ANDRESEN Are there any other reference committees ready to report?

There was no reply

SPEAKER ANDRESEN Dr Rawls, you have a motion to make?

Section 183

Vote of Thanks to Chairman of Scientific Exhibits and His Committee

DR. WILLIAM B RAWLS, *New York* I would like to move this House extend a vote of thanks to the chairman on Scientific Exhibits, Dr J G Fred Hiss, of Syracuse, as well as to his committee and all of the exhibitors for their valuable contributions to the scientific interests of the State Society meeting

DR CLARENCE G BANDLER, *New York* I second that motion.

There being no discussion, the motion was put to a vote, and was unanimously carried.

SPEAKER ANDRESEN That motion is carried, and that message will be taken to Dr Hiss

Section 184 (*See 54, 141*)

Request to Reconsider Action Already Taken re Voluntary Service in Medical Corps

DR. MORRIS WEINTROB, *Kings* Mr Speaker and members of the House of Delegates, I would like to move a reconsideration of the motion that was introduced by Dr I J Sands of Kings yesterday and was defeated. The motion is this, that it is the consensus of opinion of the House of Delegates that residencies in the various specialties of medicine and assistantships on the different visiting staffs of the hospitals be given only to those doctors who have given active service in the Medical Corps of the armed forces of our country

The motion was seconded, and as there was no discussion, it was put to a vote, and it was lost

SPEAKER ANDRESEN The "Nays" have it, and it cannot be reconsidered.

Section 185 (*See 132*)

Reconsideration of Resolution Referred to Council on Cancer and Results of Industrial and Traumatic Surgery

DR J STANLEY KENNEY, *Councilor* Mr Speaker and gentlemen, there was a resolution introduced by Dr Norman Moore yesterday, which I would like to ask the House for permission to reconsider It will only take a minute It is noncontroversial It will not take up the disbursement of any funds This resolution was referred to the Council, but it is felt that it is of sufficient general importance to the medical profession that this House approve it now so request, that this be reconsidered

CHORUS What is it?

DR. JAMES F ROONEY, *Trustee* Point of order, the motion is a motion to reconsider, and before the materiality of the matter that Dr Kenney has spoken about can even be taken up the motion to reconsider must be passed. The two things cannot be embodied in the one motion

SPEAKER ANDRESEN The motion to reconsider is before us Does anybody second it?

CHORUS Reconsider what?

DR. CLARENCE G BANDLER, *New York* It is hard to know whether we want to reconsider it when we don't understand what it is

DR. KENNEY Dr Rooney just stated I could not tell what it is

DR ROONEY I did not say that Dr Kenney was already starting to say what different action he requested when he was moving to reconsider a certain proposal that was passed by the House I am not trying to strangle debate Heaven knows I am trying to expedite this thing in a parliamentary way, and avoid doing the stuff that this House has done year after year the last day of the session when these things have been taken up in a hurry, and mistake after mistake has been made in the effort to get away The motion that you desire to reconsider can be stated, but not what other action you want taken on it, until after the House has voted to reconsider it The men are tired, and they will vote aye to almost anything to get out of here

DR. KENNEY May I state what this resolution is, Mr Speaker?

SPEAKER ANDRESEN We don't know what we will reconsider unless we know what the motion is

DR. ROONEY State what it is, not what alternative action you want taken on it

DR. KENNEY The resolution is that the House of Delegates of the Medical Society of the State of New York requests the chairman of the New York State Workmen's Compensation Board to attempt to obtain the necessary funds needed for study and tabulation of such medical records—and these medical records are valuable records that have been accumulated over the years—the end results of industrial accidents so that these end results may be published and made available to the medical profession

I should like to ask the privilege of the floor of the House for one minute for Dr Willis Weeden, medical director of the Workmen's Compensation Board, to tell us in sixty seconds why he would like us to approve this today

SPEAKER ANDRESEN Does anybody second the motion to reconsider?

DR. ROONEY Point of order this is a motion to reconsider this resolution If and when it is reconsidered then you can extend the floor of the House for discussion.

SPEAKER ANDRESEN I am asking for a second to the motion to reconsider

DR. WILLIAM B RAWLS, *New York* I will second it

The motion was put to a vote, and was carried.

SPEAKER ANDRESEN The motion can be reconsidered. It is now before the House for discussion

DR. KENNEY I would like to ask the privilege of the floor for about sixty seconds for Dr Willis Weeden to explain in a few words why we want this approved.

SPEAKER ANDRESEN I think we had better not qualify it as to seconds

DR. JOSEPH A. GEIS, *Essex* I move we extend the floor to Dr Weeden

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

DR. WILLIS WEEDEN The object of passing this resolution is merely to strengthen the hands of the

chairman of the Workmen's Compensation Board when she goes to the Budget Committee of the State or to private individuals, such as insurance companies, to try and get them to donate funds with which we can get out this vast accumulation of material which, when published, will, I am sure, be of great interest to all of the medical profession

DR. KENNEY The resolved in the resolution is

"*Therefore Be It Resolved* that the House of Delegates of the Medical Society of the State of New York requests the chairman of the New York State Workmen's Compensation Board to attempt to obtain the necessary funds needed for study and tabulation of such medical records so that these end results may be published and made available to the medical profession"

I so move

DR. ROONEY I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

Section 186

Vote of Thanks to Mr Dwight Anderson and his Staff, also Exhibitors

DR. LOUIS H BAUER, *Past President* I would like to move that we extend thanks and commendation to Mr Dwight Anderson and his staff and to the exhibitors who are here in this meeting, not only for the exhibits which have been prepared but for the great aid they have given in making this meeting a success I so move

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 187

Vote of Thanks to Chairman and Members of Scientific Program Committee

DR. FREDERIC W HOLCOMB, *Councilor* Mr Speaker and members of the House, I would like to move that the chairman of our Scientific Program Committee, Dr Alfred Ingegno, of Brooklyn, and members of his committee be thanked for the excellent scientific program they have arranged for this meeting

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 188

Vote of Thanks to the Chairman and Members of Arrangements Committee

DR. FLOYD S WINSLOW, *Councilor* I move a vote of thanks and appreciation on behalf of the House to Dr Harold F R Brown, chairman of the Arrangements Committee of this meeting and the other members of his committee. Considering the difficulty of carrying on this very comprehensive program, he should have a lot of credit and our appreciation for the work that he and his committee have done in entertaining the House of Delegates of the Medical Society of the State of New York and the other departments of the Society at our annual meeting I, therefore, move we extend such vote of thanks and appreciation.

The motion was seconded

SPEAKER ANDRESEN Dr Brown is in the back of the room. I will call for that vote by acclamation

The delegates arose and applauded

SPEAKER ANDRESEN Dr Brown, you very modestly kept in the background We thank you.

Section 189

Vote of Thanks to Management of the Hotel

DR. A W MARTIN MARINO, *Section Delegate* Mr Speaker and members of the House, as our Speaker said this morning this has been one of the most successful meetings that our Society has held Without the eager cooperation of the management of this Hotel I don't think that our Arrangements Committee would have been as successful as it has been I, therefore, move that the management of the Hotel Statler in Buffalo be commended for its eager cooperation in making the arrangements for this meeting and for the fine manner in which those arrangements were carried out

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 190

Report of Committee on Prize Essays

SPEAKER ANDRESEN Has the chairman of the Committee on Prize Essays anything to report?

SECRETARY ANDERTON Yes, I have his report, Mr Speaker, under date of April 20, 1949

"*To the House of Delegates, Gentlemen*

"Seven papers were submitted for the Merritt H. Cash Prize. After careful consideration the Committee decided that none was worthy of the prize award All showed evidence of thought and hard work and we were grateful to the authors for their interest and assiduity

"One paper, 'Perimetry in Retinitis Pigmentosa,' submitted for the Lucien Howe Prize, we recommend for honorable mention

"We send our thanks and appreciation to the disappointed authors and hope they may try again

"Respectfully submitted,
ARMITAGE WHITMAN, M D, *Chairman*
ROGER F LAPHAM, M D
A. H AARON, M D

For the essay, "Perimetry in Retinitis Pigmentosa A Review of 234 Cases," offered in competition for the Lucien Howe Prize, the authors use *this sentence* to designate themselves, "Somewhere beneath the stars is something that you alone can do, never rest until you find it" The authors are Dan M Gordon, M D, and Namlyn R. Kong, B A., of the New York Hospital-Cornell University Medical College. I move that the report of the Committee be accepted and approved with thanks

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 191

Remarks of New President-Elect

SPEAKER ANDRESEN I want you to meet our new President-Elect, Dr Wertz

The delegates arose and applauded

SPEAKER ANDRESEN Will Dr Winslow please escort Dr Wertz to the platform to say a few words to us?

Dr Floyd S Winslow escorted Dr Carlton E. Wertz to the platform amid applause

DR. CARLTON E WERTZ Mr Speaker and fellow members of the House of Delegates, you have had a long tedious session here How you got up this morning to attend this meeting I don't know You

have had lots of talks and lots of speeches so I am not going to bore you with another

We have many difficult things in front of us now, and we will have more for some time to come I just want to say that I want to thank you for the honor you have bestowed upon me. I feel very humble, and I pledge to do all in my power to help the progress of medicine in the State of New York.

Section 192

Remarks of New Vice-President

SPEAKER ANDRESEN Will Dr Dan Mellen escort Dr McAskill to the platform.

There was applause as Dr Dan Mellen escorted Dr James E. McAskill to the platform.

DR. JAMES E MCASKILL Mr Speaker and gentlemen of the House of Delegates, I wish to express my sincere appreciation for the honor you have conferred upon me I hope I may be worthy of your confidence.

This promises to be a very strenuous year for the top officials of our Society It shall be my daily prayer that nothing shall happen to incapacitate our president or president-elect

I hope the Society will have a very successful year I think we might well keep in mind a remark made by our Speaker Monday morning, that our actions will be watched with interest by the public

Thank you!

SPEAKER ANDRESEN Thank you, Dr McAskill!

Section 193 (*See 72, 106, 181*)

Continuation of Report of Reference Committee on Report of Council, Part IX Basic Science Law

SPEAKER ANDRESEN Earlier this morning action was deferred on Dr Gullo's resolution which is under consideration by the Reference Committee on Report of Council, Part IX. Dr Rawls, will you resume the discussion of this subject

DR. WILLIAM B RAWLS, *New York* This resolution was read yesterday I believe, and there was a short discussion of it, then adjournment was taken, and it was to go on again this morning

I have a short statement, with the permission of the Speaker, that I would like to read because since the meeting yesterday there has been a meeting of this Reference Committee I have discussed this at great length. I think the Committee now has spent six or eight hours on this particular resolution.

Yesterday your Committee recommended that this resolution—and perhaps I should read this resolution again, maybe you have forgotten it

DR. CHARLES GULLO, *Livingston* A point of order

SPEAKER ANDRESEN What is your point of order?

DR. GULLO I have been a member of this Society for a long time I have come here for eleven years, and I don't like to stop this This is a democracy, and a democracy demands debate, so everybody can be heard. I don't like to stop debate on anything, but also there is a parliamentary procedure that is to be followed in a democracy

Yesterday out of courtesy to Dr Rawls and to the opponents of our resolution, you did not hear me get up and say, "I will not have Dr Lochner speak." I welcomed his coming here, and we will see who has the correct information However, there is a parliamentary procedure to be followed. Debate was was started yesterday, and Dr Knickerbocker spoke in its favor Dr Bernstein spoke against it. Dr Moore asked for an adjournment, and that was O K. with me, but now we were supposed to come back and vote because yesterday Dr Lochner had to go somewhere and could not be back, and we wanted to hear him. But if it had not been that that chain of events developed, the discussion would have continued, the Reference Committee would not have had time to be interviewed again by the opponents Two hours were spent in the Reference Committee originally, at which Dr Lochner, Dr Hannon, Dr Rooney, and other gentlemen came in and spoke against it Two hours more other than those were spent without anyone being there outside of the Committee, after which the Committee came in with an approval. Therefore, we should consider that report out of courtesy to me I represent Livingston County We are not used to that kind of handling As we were courteous enough to advance no opposition to hearing Dr Lochner, we should now at least consider the report and the recommendation that was on the floor at that time If now the members of the Reference Committee want to talk against it, that is their privilege as Americans.

DR. RAWLS May I say a word, gentlemen? Dr Gullo has spoken, but let me assure you there has been nothing changed or nothing suggested on what I said yesterday I only asked permission to read the resolution.

SPEAKER ANDRESEN I don't see that that applies to the rereading of the resolution. I don't think your point of order is well taken on that.

DR. RAWLS Resolution

"WHEREAS, the injunctive procedure for the control of illegal practice failed of being enacted at the last session of the Legislature, and

"WHEREAS, illegal practice in New York State constitutes a serious menace to public health, therefore be it

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York recommend that through proper channels it have introduced a bill at the next session of the New York State Legislature which will incorporate the principle of the basic science law, namely, that anyone, without any exemptions whatsoever, who holds himself qualified to treat the sick must take an examination in those sciences which are basic in all schools of practice of the healing art. This applies whether the law provides for licensure or not, unless he is expressly exempted, and be it further

"*Resolved*, that any basic science law granting any exemptions to anyone under any circumstances be actively opposed by this Society"

As I started to say a moment ago, I would like the privilege—and the question has been raised as to whether it is constitutional for a committee to change its opinion after discussion has once been begun on the floor I was going to ask that of the Speaker before Dr Gullo raised his point of order

SPEAKER ANDRESEN In view of the fact that the discussion was deferred, I see no reason why the Committee as well as any of our delegates could not discuss the matter further We are not a jury that is locked up I don't see why the Committee could not meet again as long as they had some extra time

Will anybody dispute that decision?

DR. MOSES KRAKOW, *Bronx* I would suggest that we get both opinions, the one that was arrived at before and the one that was arrived at after the discussion.

SPEAKER ANDRESEN Is there any objection to the ruling which I have just made?

DR. JOSEPH A GEIS, *Essex* The matter before the House is the report of the Committee as reported yesterday, and I believe that is the matter that should be debated. The report of the Committee as of yesterday, that is the matter before the House.

chairman of the Workmen's Compensation Board when she goes to the Budget Committee of the State or to private individuals, such as insurance companies, to try and get them to donate funds with which we can get out this vast accumulation of material which, when published, will, I am sure, be of great interest to all of the medical profession

DR. KENNEY The resolved in the resolution is

"*Therefore Be It Resolved* that the House of Delegates of the Medical Society of the State of New York requests the chairman of the New York State Workmen's Compensation Board to attempt to obtain the necessary funds needed for study and tabulation of such medical records so that these end results may be published and made available to the medical profession"

I so move

DR. ROONEY I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

Section 186

Vote of Thanks to Mr Dwight Anderson and his Staff, also Exhibitors

DR. LOUIS H BAUER, *Past President* I would like to move that we extend thanks and commendation to Mr Dwight Anderson and his staff and to the exhibitors who are here in this meeting, not only for the exhibits which have been prepared but for the great aid they have given in making this meeting a success I so move

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 187

Vote of Thanks to Chairman and Members of Scientific Program Committee

DR. FREDERIC W HOLCOMB, *Councilor* Mr Speaker and members of the House, I would like to move that the chairman of our Scientific Program Committee, Dr Alfred Ingegno, of Brooklyn, and members of his committee be thanked for the excellent scientific program they have arranged for this meeting

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 188

Vote of Thanks to the Chairman and Members of Arrangements Committee

DR. FLOYD S WINSLOW, *Councilor* I move a vote of thanks and appreciation on behalf of the House to Dr Harold F R. Brown, chairman of the Arrangements Committee of this meeting and the other members of his committee Considering the difficulty of carrying on this very comprehensive program, he should have a lot of credit and our appreciation for the work that he and his committee have done in entertaining the House of Delegates of the Medical Society of the State of New York and the other departments of the Society at our annual meeting I, therefore, move we extend such vote of thanks and appreciation

The motion was seconded

SPEAKER ANDRESEN Dr Brown is in the back of the room I will call for that vote by acclamation

The delegates arose and applauded

SPEAKER ANDRESEN Dr Brown, you very modestly kept in the background. We thank you.

Section 189

Vote of Thanks to Management of the Hotel

DR. A. W MARTIN MARINO, *Section Delegate.* Mr Speaker and members of the House, as our Speaker said this morning this has been one of the most successful meetings that our Society has held. Without the eager cooperation of the management of this Hotel I don't think that our Arrangements Committee would have been as successful as it has been I, therefore, move that the management of the Hotel Statler in Buffalo be commended for its eager cooperation in making the arrangements for this meeting and for the fine manner in which those arrangements were carried out

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 190

Report of Committee on Prize Essays

SPEAKER ANDRESEN Has the chairman of the Committee on Prize Essays anything to report?

SECRETARY ANDERTON Yes, I have his report, Mr Speaker, under date of April 20, 1949

"*To the House of Delegates, Gentlemen*

"Seven papers were submitted for the Merritt H. Cash Prize After careful consideration the Committee decided that none was worthy of the prize award. All showed evidence of thought and hard work and we were grateful to the authors for their interest and assiduity

"One paper, 'Perimetry in Retinitis Pigmentosa,' submitted for the Lucien Howe Prize, we recommend for honorable mention

"We send our thanks and appreciation to the disappointed authors and hope they may try again

"Respectfully submitted,
ARMITAGE WHITMAN, M D, *Chairman*
ROGER F LAPHAM, M D
A. H AARON, M D

For the essay, "Perimetry in Retinitis Pigmentosa A Review of 234 Cases," offered in competition for the Lucien Howe Prize, the authors use this sentence to designate themselves, "Somewhere beneath the stars is something that you alone can do, never rest until you find it" The authors are Dan M Gordon, M D, and Namlyn R. Kong, B A., of the New York Hospital-Cornell University Medical College I move that the report of the Committee be accepted and approved with thanks

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

Section 191

Remarks of New President-Elect

SPEAKER ANDRESEN I want you to meet our new President-Elect, Dr Wertz

The delegates arose and applauded.

SPEAKER ANDRESEN Will Dr Winslow please escort Dr Wertz to the platform to say a few words to us?

Dr Floyd S Winslow escorted Dr Carlton E. Wertz to the platform amid applause.

DR. CARLTON E WERTZ Mr Speaker and fellow members of the House of Delegates, you have had a long tedious session here How you got up this morning to attend this meeting I don't know You

have had lots of talks and lots of speeches so I am not going to bore you with another

We have many difficult things in front of us now, and we will have more for some time to come I just want to say that I want to thank you for the honor you have bestowed upon me I feel very humble, and I pledge to do all in my power to help the progress of medicine in the State of New York.

Section 192

Remarks of New Vice-President

SPEAKER ANDRESEN Will Dr Dan Mellen escort Dr McAskill to the platform.

There was applause as Dr Dan Mellen escorted Dr James E McAskill to the platform.

DR. JAMES E MCASKILL Mr Speaker and gentlemen of the House of Delegates, I wish to express my sincere appreciation for the honor you have conferred upon me I hope I may be worthy of your confidence

This promises to be a very strenuous year for the top officials of our Society It shall be my daily prayer that nothing shall happen to incapacitate our president or president-elect

I hope the Society will have a very successful year I think we might well keep in mind a remark made by our Speaker Monday morning, that our actions will be watched with interest by the public

Thank you!

SPEAKER ANDRESEN Thank you, Dr McAskill!

Section 193 (*See 72, 106, 181*)

Continuation of Report of Reference Committee on Report of Council, Part IX Basic Science Law

SPEAKER ANDRESEN Earlier this morning action was deferred on Dr Gullo's resolution which is under consideration by the Reference Committee on Report of Council, Part IX. Dr Rawls, will you resume the discussion of this subject.

DR. WILLIAM B RAWLS, *New York* This resolution was read yesterday I believe, and there was a short discussion of it, then adjournment was taken, and it was to go on again this morning

I have a short statement, with the permission of the Speaker, that I would like to read because since the meeting yesterday there has been a meeting of this Reference Committee I have discussed this at great length. I think the Committee now has spent six or eight hours on this particular resolution.

Yesterday your Committee recommended that this resolution—and perhaps I should read this resolution again, maybe you have forgotten it

DR. CHARLES GULLO, *Livingston* A point of order

SPEAKER ANDRESEN What is your point of order?

DR. GULLO I have been a member of this Society for a long time I have come here for eleven years, and I don't like to stop this This is a democracy, and a democracy demands debate, so everybody can be heard. I don't like to stop debate on anything, but also there is a parliamentary procedure that is to be followed in a democracy

Yesterday out of courtesy to Dr Rawls and to the opponents of our resolution, you did not hear me get up and say, "I will not have Dr Lochner speak." I welcomed his coming here, and we will see who has the correct information. However, there is a parliamentary procedure to be followed. Debate was was started yesterday, and Dr Knickerbocker spoke in its favor Dr Bernstein spoke against it Dr Moore asked for an adjournment, and that was O K with me, but now we were supposed to come back and vote because yesterday Dr Lochner had to go somewhere and could not be back, and we wanted to hear him But if it had not been that that chain of events developed, the discussion would have continued, the Reference Committee would not have had time to be interviewed again by the opponents Two hours were spent in the Reference Committee originally, at which Dr Lochner, Dr Hannon, Dr Rooney, and other gentlemen came in and spoke against it. Two hours more other than those were spent without anyone being there outside of the Committee, after which the Committee came in with an approval. Therefore, we should consider that report out of courtesy to me I represent Livingston County We are not used to that kind of handling As we were courteous enough to advance no opposition to hearing Dr Lochner, we should now at least consider the report and the recommendation that was on the floor at that time If now the members of the Reference Committee want to talk against it, that is their privilege as Americans

DR. RAWLS May I say a word, gentlemen? Dr Gullo has spoken, but let me assure you there has been nothing changed or nothing suggested on what I said yesterday I only asked permission to read the resolution.

SPEAKER ANDRESEN I don't see that that applies to the rereading of the resolution. I don't think your point of order is well taken on that

DR. RAWLS Resolution

"WHEREAS, the injunctive procedure for the control of illegal practice failed of being enacted at the last session of the Legislature, and

"WHEREAS, illegal practice in New York State constitutes a serious menace to public health, therefore be it

"*Resolved*, that the House of Delegates of the Medical Society of the State of New York recommend that through proper channels it have introduced a bill at the next session of the New York State Legislature which will incorporate the principle of the basic science law, namely, that anyone, without any exemptions whatsoever, who holds himself qualified to treat the sick must take an examination in those sciences which are basic in all schools of practice of the healing art. This applies whether the law provides for licensure or not, unless he is expressly exempted, and be it further

"*Resolved*, that any basic science law granting any exemptions to anyone under any circumstances be actively opposed by this Society"

As I started to say a moment ago, I would like the privilege—and the question has been raised as to whether it is constitutional for a committee to change its opinion after discussion has once been begun on the floor I was going to ask that of the Speaker before Dr Gullo raised his point of order

SPEAKER ANDRESEN In view of the fact that the discussion was deferred, I see no reason why the Committee as well as any of our delegates could not discuss the matter further We are not a jury that is locked up I don't see why the Committee could not meet again as long as they had some extra time

Will anybody dispute that decision?

DR. MOSES KRAKOW, *Bronx* I would suggest that we get both opinions, the one that was arrived at before and the one that was arrived at after the discussion

SPEAKER ANDRESEN Is there any objection to the ruling which I have just made?

DR. JOSEPH A. GEIS, *Essex* The matter before the House is the report of the Committee as reported yesterday, and I believe that is the matter that should be debated The report of the Committee as of yesterday, that is the matter before the House.

SPEAKER ANDRESEN I think that is fair absolutely

DR. GULLO I remove my objection to Dr Rawls' making his further statement The Committee may proceed as far as I am concerned to make what statement they so wish. I reserve the right to speak again

SPEAKER ANDRESEN I think the point that Dr Geis made that we are to consider the report the Committee made yesterday, and then later have any further discussion that may have taken place since then, would be the fair way to look at it, Dr Rawls

DR. RAWLS I would like to state then after further consideration with this Committee over a period of two or three hours without—

SPEAKER ANDRESEN We want to get your recommendation of yesterday first

DR. RAWLS The recommendation yesterday was to approve the motions I read.

SPEAKER ANDRESEN Now go on with any further discussion

DR. RAWLS I would like the privilege then to give you the reasonings of this Committee as it has taken place not only since yesterday when this was read but before that time

Your Reference Committee spent about six hours, listened to various discussions, both pro and con, later discussing this at great length themselves

The Committee had great difficulty in arriving at a conclusion—this is preceding this, this is yesterday—and considered returning this resolution to the House without a recommendation and allowing the House to decide the issue I at no time tried to influence my Committee as I did not have any particular convictions either way, although I had voted against this resolution several times before

In discussing this resolution certain facts seemed apparent to the Committee

1 If a basic science law is passed, a law to license chiropractors and perhaps other cults will inevitably follow

2 That we were opposed to a basic science law containing a grandfather clause, but it did not seem possible that such a law could be passed without a grandfather clause

3 That the advocating of a basic science law which will lead to licensing of chiropractors in reality would be tantamount to a tacit approval of their method of treatment

4 That we thoroughly disliked to be put in the position of seeming to give even tacit approval to this

5 That we had to forget our conscience on this score and consider it on the basis of political expediency, namely, whether it is better to have a basic science law even with a grandfather clause with the hope that it would eventually help to rid this State of cults and quacks and in the end be better for the health of this State, or whether it is wiser to continue our present policy of opposing the chiropractic bill each year even though there may be a very good chance that it will become a law within a few years

Now since yesterday, speaking as an individual without a recommendation from the Committee, this Committee has met and discussed this, and the Committee has been unanimous in feeling that our recommendations yesterday were not sound, and we would like to reverse ourselves

Other Committee members from the floor can speak for themselves

SPEAKER ANDRESEN I think the best way to do about that would be to accept that as a discussion rather than as a change

DR. RAWLS It is not a resolution nor a change I only asked for permission from the Speaker to state the different conclusion the Committee had arrived at after a further discussion

DR. GULLO I probably am not a parliamentarian, and I am certainly not a politician. I am just a country doctor, but it would seem to me that it is presumptive on the part of any reference committee to reconsider after discussion has begun.

SPEAKER ANDRESEN I ruled before that a committee does not differ from an individual in that we cannot gag them and tell them they cannot discuss between the interval of yesterday's and today's discussion, and I am not accepting this as a retraction of yesterday's recommendation. It is simply being accepted as a discussion of the subject that we are now considering

DR. LOUIS H BAUER, *Past President* I believe the matter could be settled satisfactorily from the parliamentary standpoint if the Committee would ask permission to withdraw its report of yesterday and then resubmit whatever they wish to submit now

SPEAKER ANDRESEN Do you wish to do that?

DR. RAWLS I am quite sure that my Committee members would be perfectly willing to withdraw what we submitted yesterday if that is the way to do it I came here asking for advice and permission as to what was the proper way to proceed in this matter

I will move the withdrawal of the motion we presented yesterday

The motion was seconded, and as there was no discussion, it was put to a vote and was carried.

SPEAKER ANDRESEN The Committee's report of yesterday has now been withdrawn, and they will now offer us a substitute recommendation Is that what you have just read?

DR. RAWLS What I would do then is move disapproval of the motion to take the place of our moving of approval yesterday

The motion was seconded

SPEAKER ANDRESEN Do you wish any discussion on disapproving the original motion?

DR. BENJAMIN F GLASSER, *Queens* I cannot see why the original report has to come under consideration at all

SPEAKER ANDRESEN It is just the recommendation that it be approved, which has now been changed to disapproval.

DR. GLASSER The original resolution or report of this Committee has been withdrawn I think the chairman of that Committee should now give us his new resolution or new report.

SPEAKER ANDRESEN He just gave that

DR. GLASSER What was it?

DR. RAWLS Disapproval of the resolution

SPEAKER ANDRESEN Is there any discussion on the recommendation that they disapprove of the original resolution?

DR. GULLO I was waiting for those who wanted to talk against it to talk first They don't want to do so evidently, therefore, I will talk first That just should not be on my time

SPEAKER ANDRESEN It won't be

DR. GULLO I did not say any more, gentlemen, out of respect to this body I am a gentleman if someone else may not think so, but I want to avoid any acrimonious debate in this House. I will now proceed with the discussion of this subject

I was a member of the Cult Committee that served you last year, with Dr Dattelbaum, Dr Simpson, Dr Higgons, and our beloved Dr Mitchell. I was delegated by this committee to collect the material I worked two months at it That was my vacation

We got this material together, and we went over it The eventual result was to recommend an injunction though the basic science law had merit We thought we would put it off You know what happened to the injunction bill

The injunction procedure is no different in effect from a few bees on a rhinoceros' back. Dr Woodward, legal adviser or legal counsel of the American Medical Association, and our deceased Attorney General Ullman—their reports that this committee collected show that the injunction procedure is no good.

We found out as a committee that there are two methods tried out for the control of cults—and not just control but eliminate is what we want to do, and that is what you want to do We don't compromise with a murderer We have had cases in Livingston County, we had one about ten years ago, a man with a blood dyscrasia, who had a headache, and two hours later that man was dead after a chiropractor touched him. Let the editors put that in their newspapers and see what will happen in Albany It happened in New York too, and it is mentioned in a periodical the State Society put out The death of one man, however, is enough to take action on their part to eliminate these people

The first was licensure We know that method was tried, but has failed, as Dr Dattelbaum told you, so we need not discuss it The injunctive procedure has been tried, and that has failed in the State of Iowa. We have got a letter from the State Medical Society to that effect, and each and every member of that committee had a copy of every bit of literature that we received from the state medical societies of each state that has a basic science law, so each and every one of them know what I am talking about and that everything I say is the truth

The report from Iowa says that the injunctive procedure accomplished zero, yet they got some convictions, but they licensed 65 chiropractors every year—until when? Until the basic science law was enacted in 1927 The effect of that law was not instantaneous You could not see its effects until 1939 Its effects did not appear until 1939, and then you had 10, and the next year you had six, and now last year it was five That is the result in all of the states of the Union that have that law

We have a report from Mr Holloway He is the legal counsel of the American Medical Association Some of you may know him He came to Albany, and I said to him, "I want to know how many chiropractors have been licensed since the basic science law was passed, and how many were licensed before it was passed " We found out from each and every one of the state societies that had a basic science law We found out how many had been licensed prior to the advent of the law, the average per year over a period of five years just immediately preceding the law In the State of Minnesota it was 42, in Iowa it was 65, in Wisconsin it was 41 We took five states and calculated the average of that over a period of years It runs to 4,001 chiropractors that would have been licensed in those states if they had not had a basic science law That is only in five states, mind you

What happened? What happened in the eighteen states that had the law? What happened since the law was enacted did Mr Holloway say, Dr Dattelbaum? Just one thing He said that only 125 had been able to pass the basic science law since 1925

What does it mean? They don't even dare try an examination in the basic science law

And what does that mean? If they have not got a qualifying certificate they cannot even approach the door to the examining board so they cannot get a license

But that is not the argument In the State of New York we are not talking about the licensing of chiropractors In the State of New York we are talking about the destruction of the chiropractors, the elimination of murderers

Your resolution reads expressly that such a law should be introduced—and every member of the Council in this Society knows that several years ago at the expense of the Livingston County Medical Society such a law was drawn up, which is a condensation of the Minnesota law and that of Rhode Island, eliminating some of the objectionable features, so that we have the ideal law

In this law it provides specifically that it applies to those professions now licensed and any other system of healing that may be licensed in the future If licensing per se of these illegal practitioners is to take place it will not take place because of you or me—yes, it might because of our neglect—but it will take place because this particular kind of cultist will have to introduce a bill asking for its licensure, and it is up to us to defeat them when they do I think we have the strength to do that, though some say we don't have it, but I am not concerned if we don't have it, I took the oath to be a doctor and not a politician If we have the strength to prevent the licensure of these men, yes, we will have our cake and we will be able to eat it too, for we will have the basic science law and they still will remain unlicensed Then you will have something with teeth in it that will knock every man of them in this State, so there won't be any more in the State of New York of all cultists

Why? Because the law as we have suggested it calls for something—something that no other law has It will provide the teeth that Minnesota has for the money that goes to the Basic Science Board, which is composed of men who teach in our medical schools—and that is the way the law was made in every state—plus—

SPEAKER ANDRESEN I am sorry to interrupt, but your time is up

DR. GULLO Can I have thirty seconds more?

SPEAKER ANDRESEN Proceed

DR. GULLO Plus the necessary enforcement agency Gentlemen, if you do this, you are just going to take the chiropractor out of the picture for once because then the words of J B Palmer, the daddy of all cultists, will come true when he said that the basic science law is the buckshot that sounds the death knell of all cultists

I thank you

SPEAKER ANDRESEN I want to thank Dr Gullo for again as he has done so many times before, giving us this explanation of the many advantages inherent in the basic science law

Is there any further discussion?

DR. SAMUEL Z FREEDMAN, *New York* As chairman of the Committee on the Illegal Practice of Medicine in the County of New York, I have become very much interested in trying to find out what are the practical realities that now exist and what possible solutions there may be, if any

To do so, at a meeting last November we invited to one of our regular meetings the representatives of all the departments of the State and City which may have to do with the arrest and prosecution of the illegal practitioners of medicine Of course, in the City of New York we have a particular problem in that we have so many of these chiropractors particularly, and they are listed in the telephone book as such, and they practice openly

The individual who gave us, in my opinion, the most practical information and the most practical advice was the Assistant Attorney General, Mr Sidney Tartikoff, whose job it is to prosecute the illegal practitioners of medicine, among other things Mr Malenny, who is the legal representative of the State Education Department in New York City, and whose job corresponds, shall we say, to that of the policeman in that it is to investigate complaints and gather evidence and make the arrest, so to speak, appeared also before us Then we had representatives of the District Attorney's office and others, none of whom have anything to do apparently with the subject under discussion

Mr Tartikoff at that time was very optimistic about the injunction bill which was being studied by the Wicks Commission, and he made the categorical statement to us that were that bill passed he could put out of existence all of the chiropractors in the State of New York within twenty-four hours That was a categorical statement made by an attorney who we believe watches every word he says, and that is what he said to us

Unfortunately, as has happened before and it happened now, not only did the injunction bill not pass but the author of that injunction bill I am given to understand voted for the chiropractic bill I mention this because of the theme I would like to develop The practical aspect is that the Senate of this State passed the chiropractic measure, but through a parliamentary maneuver two individuals I am told were instructed not to appear so that instead of them receiving 29 votes they received 27 or 26, so that it did not pass, but it did receive a majority of the senators present and voting

As practical individuals, I would like to ask this question In how many states of the Union are the chiropractors licensed now? I would like to get that answer

CHORUS Forty-four

DR. FREEDMAN Does anybody in this room have any information as to how many convictions there have been of illegal practitioners, chiropractors, in those states where they have the law?

DR. GULLO I can answer that

DR. FREEDMAN May I have that answer, with the indulgence of the Speaker?

DR. GULLO Will you permit that?

SPEAKER ANDRESEN Yes, you can give that information if you have it

DR. GULLO Our committee found from a statement from the Minnesota State Medical Society that since the enactment of the law there were over 800 investigations, 251 prosecutions and 87 per cent convictions

DR. FREEDMAN That is interesting to me The statement is made that if that law were passed you would kill the chiropractors off completely, but the fact of the matter is that in the very state which is held up as the ideal for us to follow in spite of the passage of this law more than 800 investigations were made and 251 prosecutions were carried out with a conviction rate of 87 per cent

DR. FREDERICK S WETHERELL, *Onondaga* Before you jump at a conclusion, remember that those convictions—

SPEAKER ANDRESEN You can discuss just as soon as Dr Freedman finishes He has another half minute

DR. WETHERELL But I want him to understand that these were not all chiropractors who were prosecuted Some of those were medical men, abortionists, and other cultists

DR. FREEDMAN That is not the question I asked I asked how many so-called chiropractors were being arrested, investigated, and convicted. I am not interested in the other because that can be thrown out immediately

DR. GULLO A point of correction, this is important They were not chiropractors that were prosecuted that were licensed there They were the naturopaths They were the men who were illegally practicing at the time the law was enacted and continued to practice illegally Chiropractors at that time were licensed there so you could not prosecute them if they had a license, but you prosecuted each and every one that did not have a basic science law certificate, and that is what you would do here. Your chiropractors in New York are like your naturopaths there You can prosecute them.

DR. FREEDMAN That is not the question I asked.

DR. GULLO You asked how many illegal practitioners were prosecuted.

DR. FREEDMAN I wanted to know if you had the information It is quite possible there is not any such information How many individuals were investigated, prosecuted, and convicted for the illegal practice of chiropractic in the State of Minnesota.

DR. GULLO None

DR. WETHERELL That is the same kind of a question that was asked in a forum of Dr Fishbein's. It is loaded

DR. FREEDMAN If anybody is loaded, I will plead guilty to being loaded with the facts, and others may be loaded with some hot air We are trying to get facts here, and we are not trying to speak before this august body with loaded figures We are trying to get information upon which to make a very serious decision

SPEAKER ANDRESEN I am sorry, your time is up

DR. FREEDMAN They are taking up part of my time I wanted to say that inasmuch as I was convinced at one time that the basic science law might do the job, after listening to the greatest proponent of it, I now have my very serious doubts

SPEAKER ANDRESEN Do you want to discuss it, Dr Wetherell?

DR. WETHERELL Not right now

SPEAKER ANDRESEN You were on your feet just now

DR. WETHERELL I merely wanted to say this is no time to ask for statistics without properly notifying us in advance. We did not know that question was coming up You might have had the answer to it, if you had let us know I said it was a poor time to put it now, with all due respect to Dr Freedman, who never has any hot air

DR. GULLO I have the answer They do not prosecute these men for practicing chiropractic

SPEAKER ANDRESEN You have mentioned that before You answered it, and we all heard it

DR GULLO It was for the practice of healing that they were prosecuted for, and that is all we do know

DR. FELIX OTTAVIANO, *Madison* Gentlemen, I am an instructed delegate here I have been instructed by my constituents back home We are all country doctors, you know but they have instructed me to vote positively should this question come up We decided to so vote there some two or three years ago after investigating this problem, and in this discussion I hope I may be able to keep on the question which is the disapproving of the report of the Committee

I must go back to my constituents with some reason for the defeat of this particular thing I must be able to give intelligent answers why such action was taken, because those boys are pretty sharp I don't know of any I must be able to go back with

something that will say to them that the seven chiropractors who are practicing medicine in the City of Oneida, a city of 10,000 people, will be stopped I don't have any such facts now I should be able to go back and say that the New York State Medical Society has positively worked out this particular scheme In the some five years that I have heard this discussed I have heard no such scheme I remember the time two years ago at the auditorium when the vote was so close after a due and intelligent exposition of this matter, Mr Speaker, that as you may remember we had to take two or three standing votes It was so close that some people must have been convinced by open debate that the thing had some merit in it After that we decided that we would appoint a cult committee Ultimately that cult committee presented facts at the last meeting of the House, and at that last meeting we decided that if the injunction law did not work we would come back and discuss the basic science law Well, we came back and discussed it, not very openly I should say, or that is my impression.

My impression, gentlemen, is simply this—and I am going to be perfectly frank because I want to go back to my county society with some frank statements—we sat here today and listened to a committee which reversed its decision That is perfectly democratic I would like to be certain, however, that that reversal was not unduly influenced. Whether it was or was not does not make any difference, but should this thing be disapproved—and it seems it will be—I should like to warn the House, Mr Speaker, that we want some positive action

We were told that the Senate almost passed the chiropractic bill We were a bit upset at that news, and I would like to point out something now if I may—it will only take another thirty seconds—and this ought to be broadcast as well throughout the nation. We sit back and listen to a bunch of politicians tell us what to do, whose minds are supposedly far above ours, when ours are so far above theirs that it is not even funny They tell us that we cannot do anything about social legislation. Well, we are going to do something about it in Madison County

SPEAKER ANDRESEN Do you wish to answer?

DR. RAWLS May I have the privilege of answering the remarks about the Committee being unduly influenced.

I would like to state to this House that following our presentation here yesterday we had not seen or had anyone before the Committee, that our Committee had met outside here at intervals and talked it over with each other The conclusion to reverse its decision was made before anybody appeared befor the Committee Dr Gullo appeared this morning, but our decision had by then already been arrived at, it was arrived before anybody appeared before us We have been disturbed about it, too It took a little bit of courage for us to come before you and say we were wrong and get up and say, "Gentlemen, we were wrong yesterday We want to correct a wrong decision" However, since we were wrong, we felt that is the way to do it, and that was how that decision was arrived at

DR. REGINALD A. HIGGONS, *Westchester* Gentlemen I rise with fear and trepidation and also with a sense of foregone conclusions, but I think that it is only fair to make one statement which I believe to be true I worked last year on the Committee of Cults We worked all year and had many meetings, and we heard many experts on both sides On the eve preceding the meeting of the House of Delegates the members of that committee met with one exception After considerable discussion a report was written, which was in complete approval of the principle of the basic science law That report was signed by four members The following morning, after the House had convened, we were urged to return to the session by our chairman The upshot of that return was the action which you gentlemen heard

As a democratic citizen of this country I cannot help feeling that the issue at stake here is no longer the basic science law but it is the issue as to whether or not this House does act democratically

DR. BENJAMIN BERNSTEIN, *Kings* I have two mortgages on the future of the practice of medicine One son is studying to be a doctor and the other will be one some day rather soon I am interested in the practice of medicine If we could by some action of a basic science law stop the chiropractors and cultists from practicing medicine, I might also ask for a basic science law Also the radio stations that sell Dolsone on the air, who are the naturopaths in reverse, those people also practice medicine now No law, basic science or otherwise, will stop a man from trying to sell his neighbor over the radio or by word of mouth some method of treating a particular ill. The men who propose basic science admit that this is aimed only at the chiropractors, and apparently we are taking a defeatist attitude, saying that the chiropractic law must come and, therefore, we are going to try to stop it by a basic science law On the contrary, gentlemen, the chiropractic law will come if you are going to take it lying down, and then you will have additional practitioners of a so-called healing art who are really a menace to the public health

It is funny to think we are here talking about a basic science law to stop a cult. Only by education, only, as I said yesterday, by teaching the legislators and by teaching your patients and by teaching those who are in control of radio facilities one thing—and one thing only—that only a doctor knows how to practice medicine, that only a doctor knows how to care for people who are ill, will we get anywhere Unless we can teach that, no basic science law is worth the paper it is written on

SPEAKER ANDRESEN Is there any further discussion?

DR. JAMES F ROONEY I would like to ask the privilege of the floor so that we might hear the secretary of the State Board of Medical Examiners of New York. He will be brief, and it will be explicit

DR. SAMUEL B BURK, *New York* I second that

There being no discussion, the motion was put to a vote, and was unanimously carried.

SPEAKER ANDRESEN Dr Lochner, will you take the rostrum?

DR. JACOB LOCHNER Mr Speaker and members of the House of Delegates of the Medical Society of the State of New York, in the first place I have no personal axe to grind in this matter at all. I did not approach Dr Rawls or the Committee or say a word in opposition to this resolution with any member of the Committee I am not a politician. This is not a political appointment, and I am not a lobbyist

I believe you men would be interested in knowing how the basic science law works in other states, information that comes from doctors and not from basic science board representatives

The members of the New York State Board of Medical Examiners have given this matter considerable thought since the very first year I held this position, and when this matter came up there, after studying the basic science laws in other states, and finding out how they worked, it is their unanimous opinion that no basic science law will under any circumstance control this evil of chiropractic

The Assistant Attorney General representing our department is a very smart lawyer He is convinced that he can stop them in twenty-four hours with an injunction bill

Senator Wicks came out in no uncertain terms, based on the advice of his counsel, Mr Eagan, and said too that the injunction bill was the only thing that would stop them

Three professions now have the injunction law, and it is up to the State Medical Society in my personal and humble opinion to work for the injunction bill, because with that bill you will stop them

You might also be interested in knowing something about the basic science law There are 19 basic science boards Only nine of the basic science boards endorse the certificate of the National Board Only two basic science boards endorse examinations given in the basic science subjects by other state boards of medical examiners Only four basic science boards endorse the basic science examinations given by other basic science boards In the State of Washington the Board of Medical Examiners endorses the certificate of the National Board, the Basic Science Board in Washington will not endorse it. I think three basic science boards endorse the basic science certificates given by their own state board of medical examiners I don't know whether any of you have seen a diploma issued to a chiropractor It reads, "John Jones, Doctor of Chiropractic, Doctor of Public Health, Doctor of Naturopathy, Doctor of Physiotherapy"—he gets four degrees for the price of one

In talking with the State Board of Medical Examiners in the basic science states I have been told that these chiropractors don't even bother to take the basic science examination They know they cannot pass it, so they simply practice under the guise of naturopathy, drugless therapy, or physiotherapy They tell me they have as many illegal practitioners, chiropractors, in their states today as New York State, the only difference is they don't have a sign out "Chiropractor"

I think that is all the information I can give you unless there are some questions (*Applause*)

SPEAKER ANDRESEN While we have Dr Lochner here, I would like to know if anybody would like to ask him any questions

DR. A W MARTIN MARINO, *Kings* This is not a question, but I would like to make some remarks

SPEAKER ANDRESEN Shall we dispose of the questions, if there are any, first?

DR. MARINO Yes

SPEAKER ANDRESEN Are there any questions anyone would like to ask Dr Lochner?

DR. HIGGONS How many states in these United States will now accept reciprocity with our own medical examining board?

DR. LOCHNER At least thirty states will endorse the New York State medical license, and there are two basic science boards, Iowa and one other, that will endorse the basic science given in our own medical licensing examination

SPEAKER ANDRESEN Are there any other questions?

There was no response

SPEAKER ANDRESEN If there are no further questions, Dr Marino, you wish to make a few remarks?

DR. MARINO Mr Speaker and members of the House, there are two comments I would like to make First, I wonder if Dr Bernstein would allow to have stricken from the record certain of his remarks regarding chiropractors who have passed a two-year basic science examination, or whatever it is, and whether he would not prefer to have substituted rather they would be additional members of a so-called healing art who would be a menace to public health. Will you accept that?

DR. BERNSTEIN Yes

DR. MARINO The other remark I would like to make is this If that is agreeable—

DR. BERNSTEIN Yes

SPEAKER ANDRESEN If he accepts that correction, I think we will have to vote that directive motion

CHORUS No

SPEAKER ANDRESEN You all accept it?

CHORUS Yes

DR. MARINO The other remark I would like to make is this That as a member of the Committee on Legislation I was one of the members who held out against the basic science law from the start, and no one, including the chairman of the committee, used any pressure upon me as a member of that committee

SPEAKER ANDRESEN Is there any other discussion?

DR EZRA A. WOLFF, *Queens* Mr Chairman and fellow delegates, our fellow delegate from upstate wants some facts. I think Dr Lochner has provided us with some very significant facts On the other hand, I think that facts should be supplied by the proponents of a given proposition I think that the burden of proof should be on them. So far they have supplied us with none that carry too much weight We have no statement to the effect that the basic science laws have prevented the licensing of chiropractors We have had no statement that basic science laws have prevented or even limited in effective measure the illegal practice of medicine, but in general it seems to me that we become so involved in maneuvers and procedural mechanisms we sort of lose sight of basic fundamentals

Chiropractic is unsound, unscientific quackery Not one of us here believes in it If we approve of any clause, regardless of the purpose it may serve, which will give one chiropractor the standing of a State-licensed practitioner we are being hypocritical in the extreme Let us not be expedient Let us just be honest

SPEAKER ANDRESEN Is there any further discussion?

DR. WETHERELL May I ask for the privilege of the floor for Dr Hannon?

SPEAKER ANDRESEN Will you come up, Dr Hannon?

Dr Wetherell asks for the privilege of the floor for Dr Hannon Is that seconded?

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.

SPEAKER ANDRESEN Dr Hannon is our executive officer and our representative in Albany, as you all know

DR. ROBERT R. HANNON Gentlemen, as executive officer, and being responsible for any legislation's introduction that results from your action here today, I would prefer not to take any sides on this question. I will answer any questions you would like to ask me, but I do not think it would be wise for me to stand here on one side of the question or the other I will endeavor to carry through as a servant of the Society your actions, whatever you think.

SPEAKER ANDRESEN Do you want to answer any questions?

DR. HANNON Yes

SPEAKER ANDRESEN Are there any questions anybody wants to ask of Dr Hannon now that he is here?

DR. HOMER J KNICKERBOCKER, *Ontario* Is it true that the vote in the Senate on the Chiropractic Bill was by order of Governor Dewey?

DR. HANNON So far as I know, it was not, as a matter of fact, I do not think Governor Dewey was in favor of the action of the Senate

SPEAKER ANDRESEN Any other questions?

DR. JOSEPH A GEIS, *Essex* I would like to ask Dr Hannon whether there is any improvement in a basic science law over our present law, which gives us an examination in basic science, and carefully avoids any question of therapeutics?

DR. HANNON I don't know that I can answer that What is the point of your question?

SPEAKER ANDRESEN Will you state it again, Dr Geis? Dr Hannon does not quite understand it

DR. GEIS I would like to ask in what way a basic science law would be an improvement over our present law which gives us an examination in basic sciences and also carefully avoids any question of an examination in therapeutics, so that there is no reason why chiropractors cannot take the examination if they put in the required number of hours Osteopaths do

DR. WETHERELL Why not turn that question around What advantages our present law has as against the basic science law? I think he would rather answer it that way

DR. GEIS I will turn the question around then.

SPEAKER ANDRESEN Answer it either way

DR HANNON Well, the purpose of a basic science law was to be, in the states that passed it, a protection to the public so that everyone that had the privilege of holding themselves out as practitioners of medicine or the healing art would have a fundamental basic science education. It was not for the prosecution of illegal practice

I think that we have gone on the wrong direction in our basic science idea and discussions here The basic science law was to protect the public so that the people that were permitted to practice the healing art must have passed an examination in the basic sciences sufficiently high to make it safe for them to practice on the public

That was put through in the states that had multiple examining boards Many of those examining boards were just a farce, a person wrote his name, and he was certified It was those examining boards in the multiple various cults as well as the various schools of the practice of medicine that brought about the passage of a basic science law They were deemed as not being of sufficient protection to the public That was the purpose of the basic science examination in those states

Very early, shortly after 1900, New York State had a unified examination Everybody must take the same examination In that way the public in New York State is protected, and in that way New York State does not need a basic science law for the protection of the public The endeavor to pass a basic science law in this State is to use it for the secondary or third purpose, that is, prosecution of illegal practice That is not the purpose of the basic science law It has been used to advantage in certain states for that purpose, but there is no guarantee that it can be used to that same advantage in New York State We cannot get a conviction before a jury now if a person is shown to practice medicine unlawfully because of the sympathy of the jury There is no reason to believe that we can get a conviction from that same jury because he does not have a certificate to practice the healing art

While we are talking about it, I want to call to your attention that in this resolution you bring out the point that there are no exceptions, that a person must have a basic science certificate That would mean, as I understand your resolution, that if you drew that up in the form of a law, every practicing physician must take the basic science examination and get that certificate even though you are licensed at the present time If, on the other hand, you turn around and put a grandfather clause in it for those that are practicing, then you open the door for other grandfather clauses for other groups

I want to say, too, that in recent years the chiropractors have gotten to the point, and they are so well organized, that in states that have passed basic science laws they have been so amended when introduced as to make them worthless, and we can expect that here Don't expect that the bill you introduce will go through the Legislature without amendments, and you may have to fight the very bill that you put in

DR. GEIS Thank you for calling on me, Mr Speaker I had four or five other questions here that I had written down for Dr Hannon, but he has answered them all in advance

DR. GULLO May I ask Dr Hannon a few questions? Is it true, Dr Hannon, that there are in some of these states that have the law a provision in it that any man who has a certificate in a profession of healing, and is licensed and can show the equivalent qualifications as contained in the basic science law, is automatically given a basic science certificate, and therefore need not appear before the basic science board? Is that correct of Iowa?

DR. HANNON I am sure you can put that in your bill that you would introduce in New York, and that is what I am speaking about as a grandfather clause If you start putting grandfather clauses of that nature in your bill, you open it up to other amendments along the same line

DR. GULLO May I ask another question? Is it not true that a grandfather clause means that at the time that a basic science law is passed an illegal cult like the chiropractors in the State would turn in a concurrent bill separate from the basic science law which would ask that they be licensed automatically and be expressly exempted from taking the basic science law only for that time? That is what the grandfather clause refers to and not what you said before. I would like to correct that because it is an important thing Am I not correct? I am sure that I am.

DR. HANNON The term "grandfather clause" is applied to many exceptions of all kinds It could be applied to what I say and to what you say also

There were calls for the question

DR. WETHERELL Mr Speaker and members of the House, there has been confusion added to confusion I hope I may clarify one thing, and that is what are we after Are we medical practitioners in the State of New York of the opinion that eventually, be it ever so ideal, there will be no more cultists of any description practicing in our fair Empire State? I am not going to orate but that is the way I feel about it

My reason for going into this matter of the basic science law in the beginning was to investigate the possibility of getting into the laws of the State of New York some measure which would gradually eliminate, not this year, nor even next year, but it was hoped that it might by the time my grandson grows up, cultists So I have studied this, and I have studied it carefully, and been fair in my analysis. I have spoken with men in other states As I have said before this House previously, there is a man who is highly respected in the profession, whose respect

I have and he has mine too, and that is Dr Adson, who is head of the department of neurology at the Mayo Clinic, and who has spent a great many days and weeks of his life in the service of the profession of Minnesota—and no one will gainsay that He has been an adviser and has told me many of the things that I know about basic science laws and the prosecution of cultists

Let us be practical Laws are enacted by our representatives in Albany Yesterday noon I heard for the first time that Senator Hughes of Onondaga County, Syracuse, New York, voted for the chiropractic bill This he did despite the fact that our delegates and our legislative committee met with Senator Hughes and with the assemblymen at the University Club at lunch, where we talked it out with them Their reaction was this—and this is what he told me yesterday—"I voted for it because I feel that we should begin to have some control over them"

I said, "You asked and we explained to you that with a basic science law we would have the beginning of control Do you believe, Senator and Assemblymen, that anyone should be allowed to touch a sick human being who does not even know as much as a second year medical student?"

"No, I don't," he said.

Brees said the same thing in a hearing in Albany when I asked him about that

To get back, I said, "Senator Hughes and Assemblymen, why don't you give us something like that to bite into to start off with?"

"Fine," they said.

This is not intended to just stop the chiropractors tomorrow We are not only talking about chiropractors, we are talking about all cultists That is the idea I am told behind the basic science law, and we could pass a basic science law in New York which is just a bit better and which would recognize the National Board Basic Science Examination There is nothing to stop us from doing that Unless we start though we will never be able to draw up such a law

That would give them a chance at least to do something about arresting these illegal practitioners because the basic science board has its own policemen. A basic science certificate in an office—and I am not condoning this practice at all—acts the same as a driver's license Anyone who does not have it displayed is guilty of a misdemeanor A practitioner who is seeing one, two, or three patients, no matter who he is, in his office, does not have to be shown to be treating sick people The policeman walks in and says, "Do you have a basic science certificate?" If he says, "No, ' the reply is, "Then see the judge" After once, twice, three, four, or five times he finally lands in jail That is what happens It is the constant rapping at them It is not something we are going to stop today or tomorrow Of course we have got to fight, but do we want to fight? Do we have the health of the people at heart, and do we want to help the people of the State of New York out of this dilemma, which is the flooding of cultists into our State, namely, because we have no control? I don't want to have a thing happen like nearly happened two weeks ago that a chiropractic bill nearly did go through

Gentlemen, I will be through in just two minutes, though it may be two minutes and sixteen seconds This is a report of the Committee of the Council which studied this subject—

SPEAKER ANDRESEN You have exceeded your time.

DR WETHERELL I would ask if I may have three minutes to say what this committee told us, consisting of Drs Aranow, Mott, Simpson, Holcomb, and Hannon May I read it because this is the important thing?

SPEAKER ANDRESEN I am powerless to grant it. It requires the permission of the House

CHORUS Question

VOICE Move it

DR WETHERELL I move it be granted

The motion was seconded, and as there was no discussion it was put to a vote, and was carried.

SPEAKER ANDRESEN I think the "ayes" have it, and you have three minutes more

DR WETHERELL The committee, consisting of Drs Aranow, Mott, Simpson, Holcomb, and Hannon, studied it carefully, and had this to say

> "It has been found in some states, however, that this law setting up the requirement for a basic science certificate could be used to advantage in eliminating illegal practitioners It was found that convictions could be obtained under the penal code if the illegal practitioner had not complied with the law requiring a basic science certificate"

And before the conclusion of the last paragraph—and I am not taking it from its context—the report says

> "Its value might well be proved as an effective rearguard action, if passed concurrently with or immediately following a chiropractic licensing act"

which nearly happened two weeks ago—

> "If such an unfortunate event should come to pass, the experience of other states indicates that basic science requirements are an effective method of controlling the flood of newly arrived cultists'

For heaven's sake how in the world is Dr Hannon going to call from Albany, New York, and everywhere else, and say, "We must act quick and introduce a basic science law because otherwise they are going to pass a chiropractic law," or "They are going to pass a chiropractic law, so we will have to introduce a basic science law first"? That is what I am afraid of Let us say at least that we favor this resolution and let us draw up a basic science law and be ready, because this report says, "After it is passed, then we shall draw up one" That will be after their own chiropractic board has been set up with their own board examiners in the basic sciences

Why not let us say now, very well, and have the legislative committee or a special committee draw up a good basic science law with the help of Dr Hannon and with the help of our representatives, and then we are ready at least? For goodness sake get it in before next year We will surely have a chiropractic licensing act then

DR. ROONEY I move the previous question to limit debate

The motion was seconded, and as there was no discussion, it was put to a vote, and was carried

SPEAKER ANDRESEN We will now put the motion to a vote The recommendation of your Reference Committee is to disapprove the resolution of Dr Gullo, and we are now voting on the approval of the recommendation of the Reference Committee which means the disapproval of Dr Gullo's original motion Do you all understand what you are voting for?

CHORUS No

DR. WOLFF If I vote yes, does that mean I am disapproving the basic science law?

SPEAKER ANDRESEN Yes A vote of yes means

disapproval of Dr Gullo's resolution which favored the basic science law with certain restrictions Does everybody understand the question now?

CHORUS Yes

The motion was put to a vote, and was carried

DR. RAWLS I would like to thank the members of my Committee for the time they have spent and for the work they have done here

Section 194

Remarks of Dr Morris Fishbein

SPEAKER ANDRESEN We have an important visitor Those who are fortunate to have television have lately seen him. I will ask Dr Bauer to escort Dr Fishbein to the rostrum

Dr Louis H. Bauer escorted Dr Morris Fishbein to the rostrum amid applause

DR. MORRIS FISHBEIN Mr Speaker and members of the House of Delegates, I just told Dr Bauer that I had thought previously that a certain western state possessed most of the orators of American medicine, but I am convinced now that New York has them licked three to one The oratory on the subject of attacks on cultists was extremely interesting to me because I have spent some thirty-five years on that particular problem with a certain amount of success

Quite recently the issue of chiropractic has arisen again more strongly than previously, the answer being that the Federal government through the G I. Bill of Rights now pays for the complete education of some thousands of chiropractors In the Davenport School there are at the present time 2,500 students, almost the largest enrolment they have ever had, all of them with their tuition and maintenance paid by the United States government

In Iowa they have a basic science law, and in the most recent examination in Iowa some hundreds of chiropractors took the basic science examination, and I have reliable reports from people who were present that they sat so closely together in the crowded accommodations available for conducting the examination that it turned out to be relatively a farce In fact, I was reminded of the story of the football player who was trying to make good, and he took a special examination along with another student When the papers came in, one of the examiners had flunked the football player and the question was raised as to why "Well," he said, "the first eight questions that he answered were absolutely right and were exactly the same as those of the man who sat next to him, but the ninth answer was different"

"What was the ninth answer?"

"The man who sat next to him wrote, 'don't know,' and your man wrote, 'I don't know either'" (*Laughter*) Which merely means that no examination is any better than the administration, and no basic science law is any better than the method by which it is administered and the extent to which those who are charged with administrations of the law take care of their duty

I propose to talk tonight on medical science—not on chiropractic, thank God—and I am convinced personally that what we need in the United States is even more education of the people of the United States as to just what are the differences between the scientific practice of medicine and the practice of a variety of cultists

I am quite sure that we will never eliminate cultism entirely As I have said before publicly, there is rising now an illegal practice of medicine under the guise of psychologic counseling There are 25,000 people in the United States today practicing psychologic counseling, of whom only 3,000 are qualified These people diagnose and treat disease, and only in a very few states are there anything even resembling laws that can control them

Incidentally, all of you are familiar with the fiasco that took place in the State of Tennessee when a naturopathic bill went through A special school was opened in which they educated 2,500 of them in a year and a half They all took the examination in Tennessee They were paid for it by the United States government, which states that any qualified school in the state can receive funds under the G I Bill of Rights for education, so you see the problem is so broad and so tremendous that we must rest finally on that clause in the Principles of Ethics of the American Medical Association which says that a physician must calmly and fiercely expose all attempts to introduce cultism and low-grade practice in the care of the sick. The battle is a never-ending one, but we must carry it on

Thanks very much!

Section 195 (*See 175*)

Report of Reference Committee on Report of Planning Committee Annual Per Capita Assessment

SPEAKER ANDRESEN We have two more reference committees to report We first will hear from Dr D'Angelo's Reference Committee on Report of the Planning Committee for Medical Policies.

DR. THOMAS M. D'ANGELO, *Queens* Your Reference Committee is reporting on the resolution introduced by Dr Stephen R. Monteith, from Rockland County, subject "Annual Per Capita Assessment," and I will read his resolution

> "*Be It Hereby Resolved* by this House of Delegates that the annual per capita assessment on each component county society for the incoming fiscal year shall be $25"

These are our comments The need for increased expenditures for public relations and legislation is self-evident. Unless we spend more money for our public relations and legislative campaign, we may not achieve the goal

The individuals who appeared before our Committee expressed themselves as individuals and as representatives of their respective county societies They all agreed that an increase in dues is desirable, but they thought that this was not the opportune time to do this

The Board of Trustees and Council have not asked for this increase The American Medical Association has not received the support in this State which we anticipated Our own War Memorial Fund is still far from complete. Numerous county societies have recently raised their dues These are some of the arguments against this increase at this time

The Committee, however, is mindful of the fact that this is not the time to practice economy in public relations and legislative matters It feels that this House of Delegates should express an opinion on this point and should memorialize the Council and Trustees to appropriate all necessary funds for this campaign, even if a deficit develops at the end of the year Then we can raise our dues to take care of this deficit We, therefore, introduce a substitute resolution

> "WHEREAS, an increased appropriation for the public relations and legislative campaign is at present desirable, and
>
> "WHEREAS, the Council and Board of Trustees have been most diligent in guarding the funds of our Society so as to avoid a deficit in our budget therefore be it

"*Resolved*, that this House of Delegates memorialize the Council and the Board of Trustees to appropriate all necessary funds for a successful public relations and legislative campaign, even if a deficit should develop at the end of the year"

I move the adoption of this report

The motion was seconded

SPEAKER ANDRESEN Is there any discussion?

DR. JAMES F ROONEY, *Trustee* I did not appear before this Committee I think it is rather unwise and furthermore that it is unnecessary to take any action in relation to raising the dues It was proposed purely in order to secure enough money to pay approximately $80,000 a year to establish the office of an executive secretary for each district branch That was the primary purpose for which this motion was made

So far as concerns the expenditures of money for this campaign that we are carrying on, the Board of Trustees has already acted in regard to it The Board of Trustees has already acted, and will continue to act without the necessity of raising any more money By the action of the House this proposition for eight additional executive officers was not adopted, so we will not need money for that purpose this year, and we will probably be able to carry on the additional activities in all probability without any gross deficit and without having to touch our capital investment funds I have given you the situation, and you can vote on it to suit your own judgment

DR. HOMER J KNICKERBOCKER, *Ontario* As usual, Rooney steels the thunder It has been suggested that the district branches organize and finance their own areas This will work very nicely where they are already organized, but to a large extent in this State they are not organized. It will come too little and too late There is money in the treasury which can be used, and, as Dr Rooney has said, will be used That is encouraging We can use these new field officers to help us in this matter if permission is given There is great need for enlightening the rank and file of the county societies as to what the State Society should mean to them Until the rank and file are enlightened you cannot expect anything but apathy Unless you can have the active support of the real grass roots, any proposition we may initiate will fail Ignorance is why the A M A assessment and the War Memorial Fund are light The men don't understand what it is for I was shocked a few minutes ago when even in this House of Delegates I heard a man say when Dr Hannon was called upon to speak, "Who is Dr Hannon?" Now if the men in this House of Delegates don't know who Dr Hannon is, what about the rank and file?

We are in a period of crisis We must not fail We cannot get something for nothing You cannot operate a successful program on a shoestring We must have adequate funds regardless of where they come from If you want to win, give it your support, if you want to fail, don't

DR D'ANGELO I would like to answer Dr Rooney in this respect The Council and the Board of Trustees have always felt that they must live within their budget, and we have commended and applauded them for doing so We think that at times they would have expanded certain of their activities in the legislative and public relations field if they had had more funds to do so However, they were reluctant to expend these funds if they had to show a deficit at the end of the year We are now asking this House to ask the Board of Trustees and the Council to go ahead and do just that thing if they feel it is necessary, and if there be a deficit this House then will be glad, and I am sure the members of the component county societies will be glad, to make up that deficit

DR. SAMUEL B BURK, *New York* I may perhaps be out of order, and if I am I hope you will rule that way This recommendation has strings attached to it I am quite satisfied that our Board of Trustees and our Council are sufficiently cognizant of the situation and will take whatever steps are necessary, and under those circumstances I would move that this matter be referred to the Council for further action

DR. WILLIAM H ROSS, *Trustee* I second that motion.

SPEAKER ANDRESEN Is there any discussion of the motion to refer?

DR. D'ANGELO What Dr Burk is asking is exactly the same as I am asking He is referring this matter to the Council for study This is being referred to the Council, of course, for study If they see fit to appropriate more money than the budgetary allowance, they can go ahead and do it If they have enough money in their budget to carry on all the necessary public relations and legislative work they will certainly not go in the red Dr Burk's motion and mine are exactly the same, and I think that the Speaker may very well rule that the original motion should take precedence

SPEAKER ANDRESEN Will you withdraw your motion?

DR. BURK Under those circumstances, yes, because I thought there were strings attached to it

DR. ROSS I will withdraw my second.

DR GULLO What Dr Rooney said that it is not necessary to raise this money because it would not be used for the running of the district branches because yesterday's resolution that you passed said that the district branches were to be operated and paid for by the members of those district branches is true However, as it is necessary to have money, and because of the apathy that may be present to start off with, while each district branch who wishes to remain independent to operate as a district branch should be permitted to do so, in fact, I believe it would resent dictation from our New York office, it would be wise to have this money as a grant-in-aid, or whatever you want to call it, to these district branches I move a substitute motion to the effect that the State Society give financial aid to these groups to start these district branches going, and to continue to do that if it is found necessary to do it in the future, but that the district branches are to operate as independent entities as they are today

SPEAKER ANDRESEN Dr Gullo, the House of Delegates yesterday passed a resolution which practically covers what you say, isn't that so?

DR. ROONEY A point of order—

SPEAKER ANDRESEN So I would rule that motion out of order

The question was called, and the motion was put to a vote, and was carried

Section 196 (See 148)

Report of Reference Committee on Report of Council, Part I General Practitioner—Section, Training

DR. SCOTT LORD SMITH, *Dutchess* Your Reference Committee on Report of Council, Part I, has a resolution which was referred to it by Dr J J Zimring, of Nassau County

(*Resolution given in full—Section 148*)

Your Reference Committee is in most hearty accord with the spirit, intent, and proposals carried in this resolution, and recommends its approval by the House of Delegates

If it is within its province, your Committee would like to suggest that steps be taken to form a Section on General Practice in the Medical Society of the State of New York, following the precedent of the American Medical Association, and that this suggestion be referred to the Council for consideration

I move the acceptance of this report

SPEAKER ANDRESEN That final clause is simply a suggestion to the Council. A new section can only be formed I believe on the recommendation of the Council, so this being merely a suggestion is perfectly all right

DR. SMITH Yes

The motion was seconded, and as there was no discussion, was put to a vote, and was unanimously carried.

Section 197

Reappointment of Planning Committee for Medical Policies

SPEAKER ANDRESEN I wish to make an announcement that the Planning Committee which served us so well in the past year, and which has been ordered to function again this year, shall consist of the same members as last year

Section 198

Editing of Minutes

DR. JAMES F ROONEY, *Trustee* If I am in order, I should like to make a motion that is most essential, and that is that the president and the secretary be given authority to edit the minutes of this meeting, and that said editing is merely to make good English out of poor English and will in no way change the language or the intent of any of the motions It is merely to facilitate the proper recording of the proceedings

DR. CLARENCE G BANDLER, *New York* I second that motion

DR. EZRA A WOLFF, *Queens* May I point out that it is the prerogative of the secretary at all times to do that I don't feel we need a motion I am quite sure our secretary can do so without our prompting

DR ROONEY It is too small to argue about, but as a matter of fact that is not the function of the secretary, and never has been in this House. It has always required a motion in order that the House might feel certain that the limitation of that power of editing was embodied in the motion of the House, and that is why I make it

The question was called, and the motion was put to a vote, and was unanimously carried

Section 199

Announcements

SPEAKER ANDRESEN I wish also to announce the Workmen's Compensation Conference which is to take place at 2 30 in the Chinese Room on the mezzanine

I would also ask you again to purchase dinner tickets, and to call your attention again to the urgent need of your going up to the seventeenth floor to satisfy those technical exhibitors

Is there any further business to come before the House? If not, I wish to say that whatever success we have had in this meeting I want to give credit for the efficient help of our secretary, Dr Anderton, and our assistant secretary, Dr Frey, Miss Dougherty, Mrs Grimm, and the other members of the staff, not only during the past few days but throughout the year when we were planning for this meeting

The Council meets at two o'clock on the eighteenth floor in the Erie County Medical Society's rooms

DR. BURK May I ask that there also be included the group in Buffalo who helped us, so that we did not have to travel all the way down to the auditorium

SPEAKER ANDRESEN Those motions have already been made earlier this morning

Section 200

Vote of Thanks and Appreciation to the Speaker

DR. JAMES F ROONEY, *Trustee* I should like to be allowed the honor and the privilege of moving that this House extend our thanks and appreciation and admiration for the manifestly admirable way in which the sessions of this House have been conducted by our Speaker, and I so move.

The delegates arose and applauded

SECRETARY ANDERTON That motion was carried by a rising vote.

SPEAKER ANDRESEN Thank you very much! It has been a pleasure to preside over your deliberations even though it has been very exhausting

If there is no further business to come before the House, the House is adjourned until next year

.At 1 05 P M., an adjournment was taken, sine die

"*Resolved*, that this House of Delegates memorialize the Council and the Board of Trustees to appropriate all necessary funds for a successful public relations and legislative campaign, even if a deficit should develop at the end of the year"

I move the adoption of this report

The motion was seconded.

SPEAKER ANDRESEN Is there any discussion?

DR. JAMES F ROONEY, *Trustee* I did not appear before this Committee I think it is rather unwise and furthermore that it is unnecessary to take any action in relation to raising the dues It was proposed purely in order to secure enough money to pay approximately $80,000 a year to establish the office of an executive secretary for each district branch That was the primary purpose for which this motion was made

So far as concerns the expenditures of money for this campaign that we are carrying on, the Board of Trustees has already acted in regard to it The Board of Trustees has already acted, and will continue to act without the necessity of raising any more money By the action of the House this proposition for eight additional executive officers was not adopted, so we will not need money for that purpose this year, and we will probably be able to carry on the additional activities in all probability without any gross deficit and without having to touch our capital investment funds I have given you the situation, and you can vote on it to suit your own judgment

DR. HOMER J KNICKERBOCKER, *Ontario* As usual, Rooney steels the thunder It has been suggested that the district branches organize and finance their own areas This will work very nicely where they are already organized, but to a large extent in this State they are not organized It will come too little and too late There is money in the treasury which can be used, and, as Dr Rooney has said, will be used. That is encouraging We can use these new field officers to help us in this matter if permission is given There is great need for enlightening the rank and file of the county societies as to what the State Society should mean to them Until the rank and file are enlightened you cannot expect anything but apathy Unless you can have the active support of the real grass roots, any proposition we may initiate will fail Ignorance is why the A.M A assessment and the War Memorial Fund are light The men don't understand what it is for I was shocked a few minutes ago when even in this House of Delegates I heard a man say when Dr Hannon was called upon to speak, "Who is Dr Hannon?" Now if the men in this House of Delegates don't know who Dr Hannon is, what about the rank and file?

We are in a period of crisis We must not fail We cannot get something for nothing You cannot operate a successful program on a shoestring We must have adequate funds regardless of where they come from If you want to win, give it your support, if you want to fail, don't

DR. D'ANGELO I would like to answer Dr Rooney in this respect The Council and the Board of Trustees have always felt that they must live within their budget, and we have commended and applauded them for doing so We think that at times they would have expanded certain of their activities in the legislative and public relations field if they had had more funds to do so However, they were reluctant to expend these funds if they had to show a deficit at the end of the year We are now asking this House to ask the Board of Trustees and the Council to go ahead and do just that thing if they feel it is necessary, and if there be a deficit this House then will be glad, and I am sure the members of the component county societies will be glad, to make up that deficit

DR. SAMUEL B BURK, *New York* I may perhaps be out of order, and if I am I hope you will rule that way This recommendation has strings attached to it I am quite satisfied that our Board of Trustees and our Council are sufficiently cognizant of the situation and will take whatever steps are necessary, and under those circumstances I would move that this matter be referred to the Council for further action

DR. WILLIAM H ROSS, *Trustee* I second that motion

SPEAKER ANDRESEN Is there any discussion of the motion to refer?

DR. D'ANGELO What Dr Burk is asking is exactly the same as I am asking He is referring this matter to the Council for study This is being referred to the Council, of course, for study If they see fit to appropriate more money than the budgetary allowance, they can go ahead and do it If they have enough money in their budget to carry on all the necessary public relations and legislative work they will certainly not go in the red Dr Burk's motion and mine are exactly the same, and I think that the Speaker may very well rule that the original motion should take precedence

SPEAKER ANDRESEN Will you withdraw your motion?

DR. BURK Under those circumstances, yes, because I thought there were strings attached to it

DR. ROSS I will withdraw my second

DR. GULLO What Dr Rooney said that it is not necessary to raise this money because it would not be used for the running of the district branches because yesterday's resolution that you passed said that the district branches were to be operated and paid for by the members of those district branches is true However, as it is necessary to have money, and because of the apathy that may be present to start off with, while each district branch who wishes to remain independent to operate as a district branch should be permitted to do so, in fact, I believe it would resent dictation from our New York office, it would be wise to have this money as a grant-in-aid, or whatever you want to call it, to these district branches I move a substitute motion to the effect that the State Society give financial aid to these groups to start these district branches going, and to continue to do that if it is found necessary to do it in the future, but that the district branches are to operate as independent entities as they are today

SPEAKER ANDRESEN Dr Gullo, the House of Delegates yesterday passed a resolution which practically covers what you say, isn't that so?

DR ROONEY A point of order—

SPEAKER ANDRESEN So I would rule that motion out of order

The question was called, and the motion was put to a vote, and was carried

Section 196 (*See 148*)

Report of Reference Committee on Report of Council, Part I General Practitioner—Section, Training

DR. SCOTT LORD SMITH, *Dutchess* Your Reference Committee on Report of Council, Part I, has a resolution which was referred to it by Dr J J Zimring, of Nassau County

(*Resolution given in full—Section 148*)

Your Reference Committee is in most hearty accord with the spirit, intent, and proposals carried in this resolution, and recommends its approval by the House of Delegates

Swifter Healing in Open Lesions

A varicose or diabetic leg ulcer, bedsore, or a traumatic condition such as an avulsion or laceration, will benefit by the tissue-stimulating action of White's Vitamin A & D Ointment

Speeds healing after circumcision, pilonidal cyst excision, hemorrhoidectomy, etc

As in burns, White's Vitamin A & D Ointment aids in relieving pain, hastens the growth of epithelial tissue, minimizing contracture

Supplied in 1 5 oz tubes, 8 oz and 16 oz jars and 5 lb containers

White's

Vitamin A & D Ointment

promotes healthy granulation
accelerates liquefaction of dead tissue
softens the eschar
protects the surfc--
aids in relieving pa

IT CAN BE DONE
. . . but don't try it!

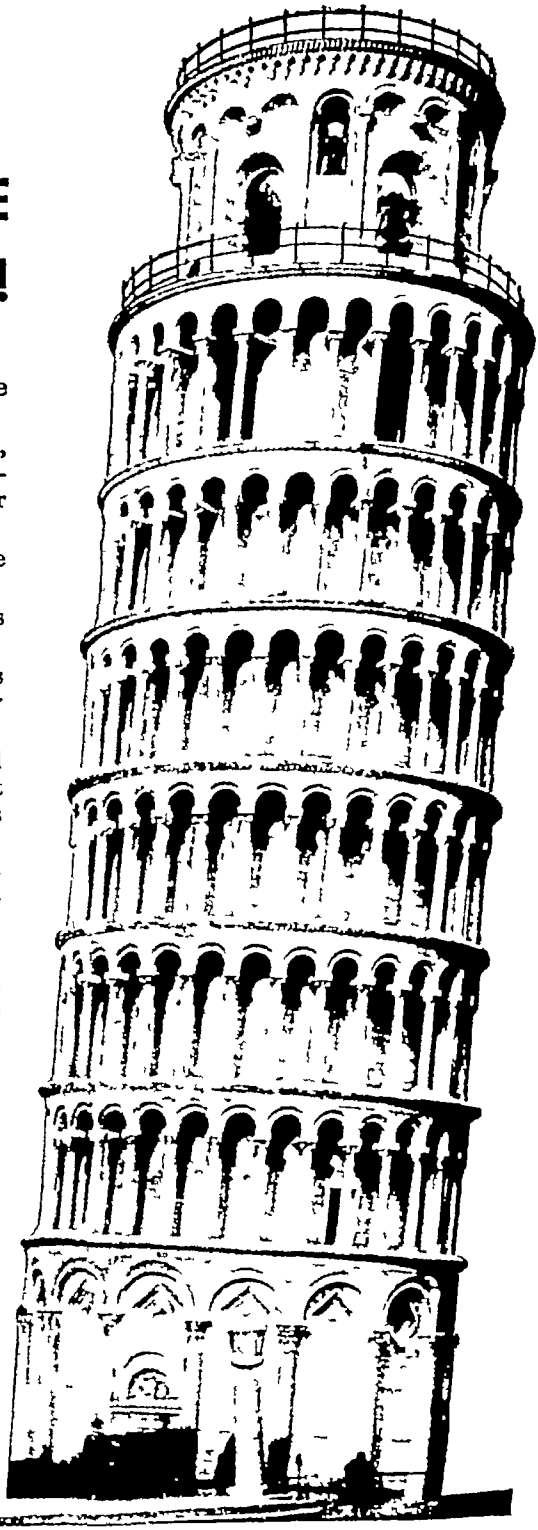
Sometimes it's possible to break all the rules—and get away with it

The famous Tower of Pisa, for instance, has successfully defied both sound engineering practice and the law of gravity for over 800 years

But for most of us, most of the time, the rules hold

That is particularly true when it comes to saving money

The first rule of successful saving is *regularity* salting away part of every pay check, month after month



Once in a blue moon, of course, you'll come across someone who can break that rule and get away with it But the fact is that most of us *cannot*

For most of us, the one and only way to accumulate a decent-size nest egg for the future and for emergencies is through regular, automatic saving

In all history there's never been an easier, surer, more profitable way to save regularly than the U S Savings Bond way

Those of us on a payroll are eligible to use the wonderful Payroll Savings Plan The rest of us can use the equally wonderful Bond-A-Month Plan through our local bank

Use whichever is best for you But—*use one of them!*

AUTOMATIC SAVING
IS SURE SAVING—
U. S. SAVINGS BONDS

Swifter Healing in Open Lesions

A varicose or diabetic leg ulcer, bedsore, or a traumatic condition such as an avulsion or laceration, will benefit by the tissue-stimulating action of White's Vitamin A & D Ointment

Speeds healing after circumcision, pilonidal cyst excision, hemorrhoidectomy, etc

As in burns, White's Vitamin A & D Ointment aids in relieving pain, hastens the growth of epithelial tissue, minimizing contracture

Supplied in 1 5 oz tubes, 8 oz and 16 oz jars and 5 lb containers

A potent vasodilator effective by mouth...

PRISCOLINE

FORMERLY PRISCOL*

In doses of 25 to 75 mg, administered either orally or parenterally, Priscoline hydrochloride "is a useful adjunct to treatment of many peripheral vascular diseases or circulatory disorders, and in this dose range usually is tolerated with few side effects"[1]

Priscoline "improves the circulation by dilatation of blood vessels The drug acts in three ways it has a histamine-like effect upon smaller blood vessels, it blocks the augmentor sympathetic vascular receptors, and has an adrenolytic effect which also results in dilatation of blood vessels numerous reports have shown favorable results."[2]

Patients should be closely observed until optimal dosage is established, for possible paradoxical effects or orthostatic hypotension

METANDREN LINGUETS

LOW-COST MALE HORMONE THERAPY

. . . with nearly twice the potency of ingested tablets

Metandren Linguets contain methyltestosterone for sublingual or buccal administration

The superiority of Metandren Linguets over other androgens by this route may be partly attributed to the fact that only methyltestosterone is effective orally In contrast, when free testosterone or testosterone propionate is given sublingually, that portion unavoidably swallowed is almost completely destroyed

Metandren Linguets of methyltestosterone are the 'most economical and also efficient way of administering testosterone," according to Lisser [1] Tyler finds that 140 mg of methyltestosterone weekly in the form of Linguets is equivalent to an ingested dosage of approximately 210 mg , or to an injected dosage of 75 mg of testosterone propionate [2]

PERANDREN
is the pioneer brand of testosterone propionate, the most potent injectable androgen

Adult maintenance dosage is from one to three 5 mg Linguets daily Most children need only one-half to one 5 mg Linguet daily Literature on request

A REALLY DELICIOUS STOUT

...WITH SPECIAL QUALITIES

★ Since the introduction of MACKESON'S MILK STOUT to America, this internationally-known brew has met with the most favorable acceptance by leading members of the medical profession ★ Brewed from the finest British malt, MACKESON'S MILK STOUT is a product of the highest grade in respect to purity and body It differs from ordinary stout in that it contains the carbohydrates of dairy milk which increase its nutritive value—and to which its distinctive mellowness and very palatable flavor are due ★ These special qualities of MACKESON'S MILK STOUT have long been recognized as beneficial in all cases where a stout may be recommended on medical grounds

a valuable aid

in postsurgical recovery

A large percentage of patients enter surgery at a low plasma protein level, and the operative procedure makes further inroads on the already depleted protein reserves.[1,2] A lowered protein level is unfavorable to recovery. It predisposes the patient to pulmonary edema and infection, retarded wound and fracture healing and impaired liver function.[3,4] A high protein level is conducive to rapid healing.[5]

Since diets immediately following surgery are usually inadequate, protein digests given intravenously result in improved strength, appetite, and wound healing. Consequently, they greatly accelerate recovery.[6,7]

2000 cc. of TRAVAMIN 5% a day will satisfy the protein requirements of a high percentage of surgical patients. 2000 to 4000 cc. a day are given according to requirements.[8] TRAVAMIN is made from bovine plasma.

TRAVAMIN 5% IN WATER
TRAVAMIN 5%, DEXTROSE 5% IN WATER

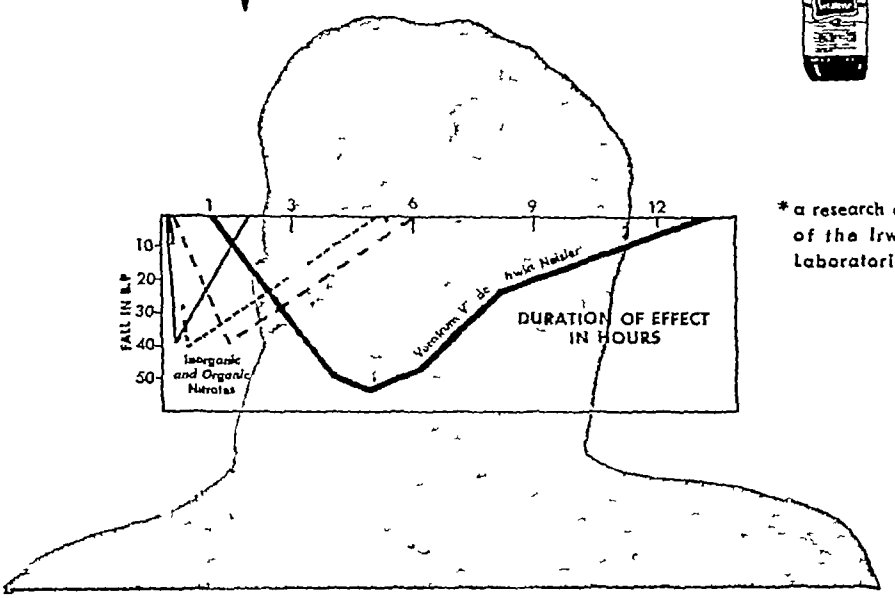
for a

PHYSIOLOGIC FALL

in blood pressure

Of the many drugs commonly used to lower arterial pressure in hypertension, Biologically Standardized veratrum viride (in CRAW UNITS*) is the only drug that produces a physiologic fall in blood pressure

Thus, a prominent feature in the integrated response to oral doses of veratrum viride in CRAW UNITS is a reduction in peripheral resistance without compromise of circulation and without disrupting circulatory equilibrium



VERATRITE represents a practical modification of this effective hypotensive drug for everyday management of the mild and moderate cases of essential hypertension

Prolonged action, wide range of therapeutic safety and complete simplicity of administration are specific advantages of Veratrite therapy Each Veratrite Tabule contains Biologically Standardized veratrum viride 3 CRAW UNITS, sodium nitrite 1 grain, phenobarbital ¼ grain

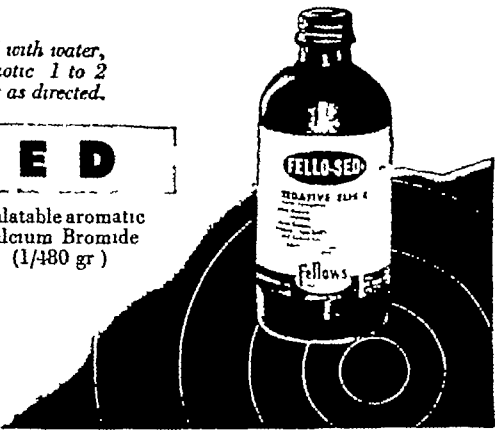
STANDARD PHARMACEUTICAL CO., INC., 1123 Broadway, New York
Manufacturers of NUCARPON ® Compound Charcoal Tablets for Intestinal Dysfunction

Chloral hydrate, used in medicine since 1869, is, even today, "the standard hypnotic of its class"[1]

Goodman and Gilman observe that it "is unfortunately neglected today," and that the present widespread use of the barbiturates has " caused the physician to lose sight of the fact that chloral hydrate is still one of the cheapest and most effective hypnotics"[2]

In FELLO SED, supplementation with calcium bromide and atropine sulfate largely overcomes unwanted side-actions, enhances the sedative effect and provides valuable antispasmodic activity It is presented in palatable liquid form



[1]N.N R., 1947 p 398
[2]Goodman L. & Gilman, A., The Pharmacological Basis of Therapeutics MacMillan, 1944, pp 177-8.

Available in 8 fluidounce bottles

Adult Dose As a sedative. ½ to 1 teaspoonful with water, every 3 or 4 hours or as directed As a hypnotic 1 to 2 teaspoonfuls or more with water at bedtime, or as directed.

FELLO-SED

FORMULA: Each fluidram (4 cc) contains in a palatable aromatic vehicle Chloral Hydrate, 0 5 Gm (7½ gr), Calcium Bromide 0 5 Gm (7½ gr), Atropine Sulfate, 0 125 mg (1/480 gr)

The most "persuasive" oral germicide you can prescribe

1. Cēpacol persuades a wide range of oral bacteria to surrender within 15 seconds after contact[1]

2. Cēpacol's pleasant taste persuades your patients to use it

The rapid antisepsis[2] and soothing relief which Cēpacol brings to inflamed, sore throats are important Along with the fact that Cēpacol is non irritating, nontoxic, and does not interfere with tissue healing Too, patients are extremely grateful to you for prescribing something so effective that also is so *pleasant* to use—as either gargle or spray

CĒPACOL

The alkaline germicidal solution that works in partnership with saliva

Merrell

Chemoprophylaxis Against Pharyngeal Infections

SAFE, TOPICAL METHOD

In Neiman's study* on chemoprophylaxis with White's Sulfathiazole Gum conducted over a 9-month period on 199 medical students

1 The incidence of primary pharyngitis in the treated group was *less than half* that in the controls A less marked, but statistically significant, decrease was also observed in the incidence of colds and irritational pharyngitis

2 "It is worthy of note that the mouths of over 100 persons were exposed to the drug in concentrated form daily for eight months, *with no untoward effects*"

As with the therapeutic use of Sulfathiazole Gum, the prophylactic application is safe because it is topical. In this series, for example, repeated examination of blood samples from unselected individuals in no case gave a positive test for sulfathiazole

The dosage in these experiments was one to three tablets a day—an obviously economical procedure. No reactions were observed.

Tablets

SULFATHIAZOLE GUM

SAFE, TOPICAL CHEMOTHERAPY

Supplied in packages of 24 tablets—3¾ grs. (0.25 Gm.) per tablet—sanitaped in slip-sleeve prescription boxes

Aluminum PENICILLIN.*

ORAL TABLETS

Aluminum Penicillin Oral Tablets are clinically effective in the treatment of penicillin susceptible infections

Containing the almost insoluble trivalent aluminum salt (not a mixture), they provide for maximum utilization of the dose administered

Low solubility of Aluminum Penicillin renders it much less liable to inactivation in the stomach Destruction in the intestinal tract is inhibited by the addition of sodium benzoate Slow conversion to a readily absorbed form in the more alkaline conditions of the intestinal tract enhances clinical effectiveness

Aluminum Penicillin is not toxic in doses far exceeding those used therapeutically and does not cause gastric disturbance.

Specify Aluminum Penicillin Oral Tablets, H W & D

Supplied in vials of twelve tablets each containing Aluminum Penicillin, 50,000 units, and sodium benzoate, 0 3 gram

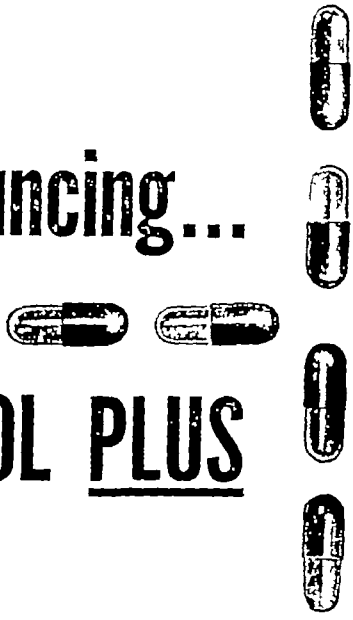
AUREO-MYCIN



The Newest and Most Broadly Useful of the Antibiotics

AUREOMYCIN HYDROCHLORIDE LEDERLE

Aureomycin is now generally accepted as one of the most versatile antibiotics yet isolated In addition to attacking the Gram-positive cocci with great effectiveness, it is useful against many Gram-negative organisms, particularly those of the coli-aerogenes group It is also effective against rickettsial infections and certain diseases of unknown etiologies, such as primary atypical pneumonia Aureomycin in solution with sodium borate has been found highly effective in the eye in a concentration of one-half per cent Among others it is active against the diplobacillus of Morax-Axenfeld, Friedlander's bacillus, staphylococcus pneumococcus, and *Hemophilus influenzae*

LEDERLE LABORATORIES DIVISION American Cyanamid Company 30 Rockefeller Plaza, New York 20, N Y

announcing...

FEOSOL PLUS

A worthy "running-mate" to S K F.'s famous Feosol

FEOSOL PLUS *is a logical new preparation for the treatment of those ill-defined secondary anemias which resist treatment with iron alone*

As the physician well knows, iron deficiency is often complicated and prolonged by a lack of certain other factors essential to erythropoiesis To combat such multiple-deficiency anemias, S K F now offers FEOSOL PLUS, a delicately balanced, broad-range formula

Each FEOSOL PLUS capsule contains

Ferrous sulfate, exsiccated, U S P	200 0 mg
Liver concentrate powder (35 1)	325 0 mg
Folic acid	0 4 mg
Thiamine hydrochloride, U S P (B_1)	2 0 mg
Riboflavin, U S P (B_2)	2 0 mg
Nicotinic acid (Niacin), U S P	10 0 mg
Pyridoxine hydrochloride (B_6)	1 0 mg
Ascorbic acid, U S P (C)	50 0 mg
Pantothenic acid	2 0 mg

FEOSOL PLUS by no means replaces Feosol Feosol is the standard therapy in simple iron-deficiency anemias

DOSAGE—3 capsules daily, one after each meal

HOW PACKAGED—in bottles of 100 capsules

Smith, Kline & French Laboratories, Philadelphia

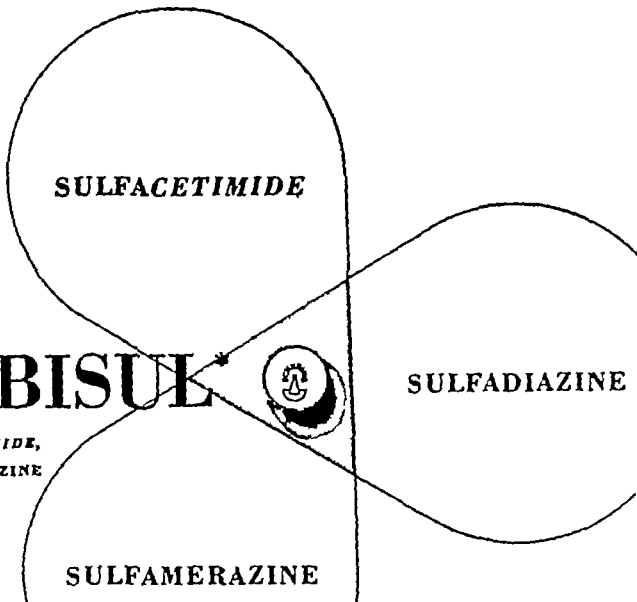
and now

even



greater

safety

in sulfonamide therapy

TRICOMBISUL*

A COMBINATION OF SULFA*CETIMIDE*, SULFADIAZINE AND SULFAMERAZINE

The superior clinical efficacy and enhanced safety of triple sulfonamide mixtures have been well established. Now, even greater safety and clinical effectiveness have been achieved by substituting sulfacetimide for the less desirable sulfathiazole. Sensitivity reactions often encountered with sulfathiazole are rarely observed with sulfacetimide.

Lehr[1] states that this new combination is "a highly satisfactory sulfonamide mixture because of its low toxicity, excellent tissue distribution and good therapeutic efficiency."

TRICOMBISUL: Tablets of 0.5 Gm. containing 0.166 Gm. each of sulfa*cetimide* sulfadiazine and sulfamerazine in bottles of 100 and 1000

now, better relief

a distinctive, new, non-narcotic antitussive-expectorant

At last, something really new in cough syrups — something completely rational — clinically sound — Robitussin 'Robins' Robitussin employs glyceryl guaiacolate and desoxyephedrine hydrochloride, in a palatable aromatic syrup vehicle

Glyceryl guaiacolate has proven an effective aid to expectoration, and a cough ameliorator with prolonged action, through its increase in and thinning of respiratory tract fluid,[1 2 3] yet it has no ill effect upon digestion [1]

Desoxyephedrine's sympathomimetic action is also well recognized[4 5 6] by relaxing spasm of the bronchial musculature and helping maintain normal respiratory smooth muscle tone, it greatly minimizes the provocation of cough from spasm [5] At the same time it affords relief from psychic depression or a feeling of fatigue

The syrupy vehicle, with its aromatic volatile oils, has a local demulcent effect Furthermore, it assures patient cooperation by providing a base which makes Robitussin one of the most palatable of all antitussive-expectorants

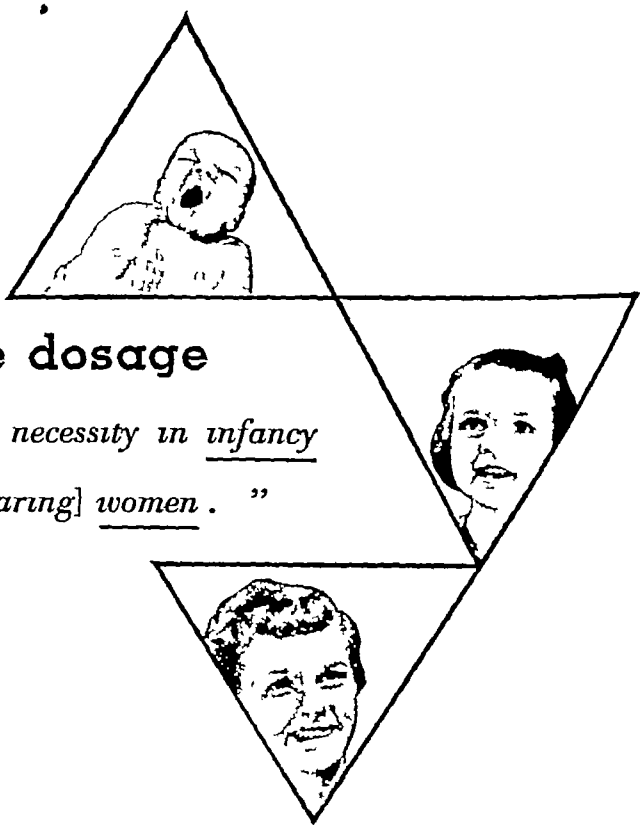
You will find Robitussin 'Robins' an exceptionally efficient, safe, therapeutic tool in the management of cough—for both adults and children

Robitussin

FORMULA Each 5 cc. (1 teaspoonful) of Robitussin contains

Glyceryl Guaiacolate	100 mg
Desoxyephedrine Hydrochloride	1 mg

In a palatable aromatic syrup



DOSAGE Children one-half to one teaspoonful according to age three or more times daily Adults: one or two teaspoonfuls as necessary every two to three hours.

SUPPLIED Pint and gallon bottles.

the standard forms of iron therapy

"Our results with the molybdenum-iron complex have been...striking..."

Dieckmann W J and Priddle, H. D ;
Am. J. Obst & Gynec. 57 541 (1949)

UNTIL recently Dieckmann has repeatedly reported that true hypochromic anemia of pregnancy did not respond satisfactorily to orally administered iron [1 2]

Now, however, following his latest investigation—a study of the value of molybdenized ferrous sulfate (Mol-Iron)—he states

> 'We have never had other iron salts so efficacious in pregnant patients Our results with the molybdenum-iron complex have been striking increases in hemoglobin were dramatic and rapid "[3]

This most recent evaluation of molybdenized ferrous sulfate (Mol-Iron) confirms the findings of all earlier investigators, who found Mol-Iron to be

> " unusually efficacious "[4]
> " a true example of potentiation of the therapeutic action of iron '[5]
> " hemopoietically more active "[6]

and remarkably well tolerated [5 7]

White's **Mol-iron** MOLYBDENIZED FERROUS SULFATE **Tablets, Liquid**

—a specially processed, co precipitated, stable complex of molybdenum oxide 3 mg (1/20 gr) and ferrous sulfate 195 mg (3 gr) Recommended adult dosage 2 Tablets, t.i d Available in bottles of 100 and 1000 Tablets and in a highly palatable Liquid, in bottles of 12 fluid ounces (each teaspoonful equivalent to one Tablet)

incidence of mastitis and other breast complications is reduced with the Plastishield Technic of Aseptic Breast Care

- Mastitis is frequently the result of excessive handling of breasts and nipples as well as insufficient cleanliness in postpartum breast care
- Most cases of mastitis can be traced to nipple fissures or sore nipples which DeLee estimates affect more than half of all lactating women
- Many breast complications can be avoided when the use of PLASTISHIELDS begun in the hospital immediately after parturition, is continued at home.
- PLASTISHIELDS are clean simple to use and comfortably worn
- They are easily sterilized and prevent soreness, cracking and fissuring of nipples
- You are invited to write for further information on the PLASTISHIELD Technic of Aseptic Breast Care

emotional equilibrium for the geriatric patient

Thousands of doctors know that BENZEBAR* allays the mental depression, apprehension and nervousness so frequently found in the elderly patient

'Benzebar' is S K F 's logical combination of Benzedrine* Sulfate and phenobarbital It provides the unique improvement of mood of 'Benzedrine' Sulfate and the calming, soothing influence of phenobarbital These two established agents work together to restore the elderly person's zest for life and living, to quiet his nervousness and, at the same time, to keep him from overdoing

Each 'Benzebar' tablet contains 'Benzedrine' Sulfate, N N R (racemic amphetamine sulfate, S K F), 5 mg , phenobarbital, ¼ gr

Smith, Kline & French Laboratories, Philadelphia

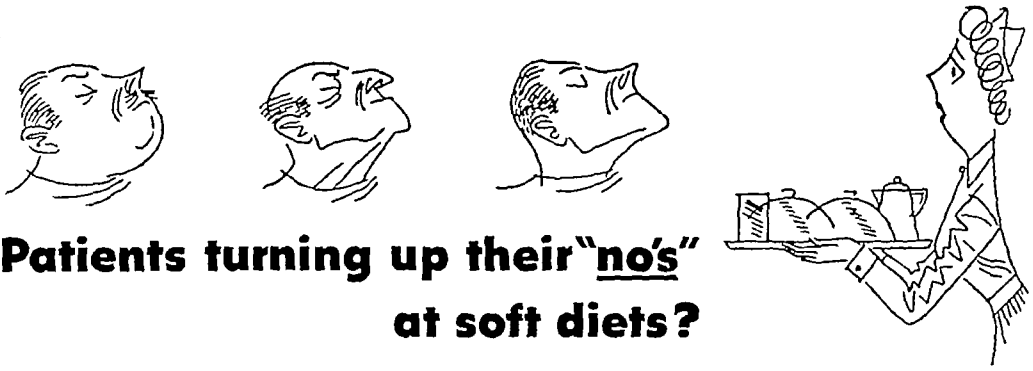
what's "ham" got to do with x-ray films?

If you lived on the eastern seaboard at the time, you'll *never* forget the '38 hurricane. It bit chunks out of the shoreline, toppled trees like a lawn mower, and marooned hundreds of towns. At the height of its fury, with casualties limping in from all sides, a large hospital in the stricken area found itself drained of x-ray films. Local supplies exhausted, too—all wires down, highways swamped, trains stalled, *and on a Sunday* into the bargain!



That's where the "hams" come in. Their chattering keys soon had the hospital's desperate plight on the air, where it was picked up and relayed to Picker men who sped to the office, got the films packed and off by plane and other hastily improvised transport. There's a happy ending—*they got through in time*.

It's happened before, and it's happened since—the dreadful holocaust at Texas City not long ago was a similar challenge similarly met. Fair weather or foul, war time shortage or peace time plenty, you can count on Picker to see you through. Not only capable organization, but *zest* for service makes the difference. That's why the roll of Picker customers is rich with accounts of ten, twenty, thirty or more years of uninterrupted standing.

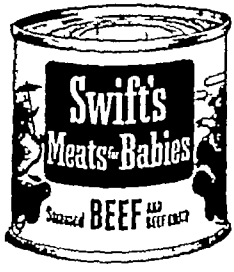
Patients turning up their "no's" at soft diets?



Try tasty, protein-rich Swift's Strained Meats!

A palatable, natural source of complete, high-quality proteins

It's not surprising that soft-diet patients develop appetite-apathy The things they have to eat!

To help overcome this anorexia many doctors now recommend Swift's Strained Meats Delicious, *real* meat that patients on soft, smooth diets can eat and *enjoy* Swift's Strained Meats provide an excellent base for a high-protein, low-residue diet Rich in iron, they're chemically and physically non-irritating They make *all* the essential amino acids available *simultaneously* for optimum protein synthesis

Swift's Strained Meats are tasty enough to tempt tired appetites They supply goodly amounts of B vitamin to help stimulate patients' natural appetite for other foods Swift's Strained Meats are 100% meat—a variety of six kinds beef, lamb, pork, veal, liver, heart Originally prepared for infant feeding, they're exceptionally fine in texture—may easily be used in tube feeding Convenient—ready to heat and serve.

6 varieties
Beef, lamb, pork veal, liver, heart

For patients who can take foods of less fine consistency—Swift's Diced Meats offer tender morsels of nutritious meats with tempting flavors patients appreciate.

The makers of Swift's Strained Meats invite you to send for your copy of The Importance of Protein Foods in Health and Disease —a physicians handbook of protein feeding, written by a doctor Send to

Medicine and the Honorable, the Legislature of the State of New York, II

In 1818, an amendment to the act of 1806 provided for filing with the clerk of the county a copy of his diploma from any reputable college of medicine or medical society by any physician or surgeon from outside the State coming to reside here, and in addition stated, "No person could be licensed to practice until he shall be of the age of twenty-one," and further provided, "That hereafter it shall be the duty of every practitioner of medicine in this State to report himself to, and connect himself with, the medical society in the county where he resides, by lodging with the president of such society a certificate under his hand to that effect" A later act of April 7, 1821, according to Hannon, "seems to be the beginning of protective measures in the medical statute for the purpose of conserving the medical practice acts and maintaining the standards set by these acts"[1]

Illegal practice, in an act of April 17, 1830, was penalized by a "sum not exceeding $25 for each offense" But this was not to apply to any person "using or applying for the benefit of any sick person any roots, barks, or herbs, the growth or produce of the United States" As late as 1834, the statutes still "permitted the use of roots, barks, and herbs by unlicensed persons but prohibited such persons from accepting fees for such application or use, thus taking the profit out of such practice" The profit then was derived from selling of roots, barks, and herbs Many persons still had belief in "Indian medicine" and "herb doctors" Their descendants, in this more enlightened age of nuclear fission, now hold with, for example, chiropractic and naturopathy, and assist such illegal practitioners in their campaigns to break down the medical practice act by besieging the honorable, the Legislature, with petitions and letters in favor of licensing their pet cults.

MEDICAL RESEARCH IS IN THIS PICTURE

Take away the joy of participating in the affairs of youth, and life would lose much of its sparkle This middle-aged mother is enjoying the occasion of her daughter's first formal "prom" as much as if it were her own

Fortunately, most women undergoing the menopause do not need the help of an endocrinologist For those who do, his knowledge and services may mean the difference between semi-invalidism and comparatively normal health

Pharmaceutical preparations of the sex hormones, whenever indicated, are valuable tools of the physician Many useful products have already been made available At the Lilly Research Laboratories, pharmacologic and clinical investigations are being energetically pursued with the view of further clarifying this complex subject Significant developments are reported to the medical profession without delay

Lilly

LILLY SPECIALISTS SERVE THE MEDICAL PROFESS

forth, in the public interest and to which the citizens of the State may look with pride and confidence, since it assures to them the benefits of the most scientific medical education and practice yet attainable.

It is to be hoped that the honorable, the Legislature will now and in the future give due weight to its notable record as here shown in securing to the citizens of the State nothing less than the best in medical matters. The medical practice act of today denies to no one who can qualify the opportunity to become a physician or surgeon. Those not so qualified have no place in the serious and responsible field of ministering to the sick and disabled.

Cortisone

This new drug, used apparently successfully in the so far experimental treatment of some of the degenerative diseases together with arthritis, rheumatism, and the like, may be processed from plants of the Strophanthus family, of which some eighteen or twenty species exist in Africa, Burma, India, the East Indies, and the Philippines. At present quite limited quantities derived from ox bile must suffice for experimental work.

Once again medical science has pioneered what may well be another source of relief for suffering humanity, as, for example, it did in the cases of insulin, penicillin, the sulfa drugs, and countless other substances. There is nothing extraordinary about this. It is the job of medical scientists to do just what has been done in the case of cortisone. But the *discovery* is in some ways possibly the easiest part of a complicated chain of necessary events.

Great quantities of the substance are necessary if large-scale experimental treatment work is to be done. Ox bile, the present source, yields so little that new sources must be found. Apparently, plants of the Strophanthus family, or at least some of them, may be a high-yield source. According to the United States Public Health Service, the crude product of the botanic source could be processed in twenty procedures. Chemical synthesis now requires thirty-seven to produce a product of commercial value. The desired end is a cheap, standardized product available in quantity domestically.

The resources of government quite properly should be and are being marshalled, together with private enterprise, to track out sources of crude strophanthus. A request to the Budget Bureau for $1,750,000 reportedly has been made for research into plant sources. Of this amount, $250,000 reportedly would be spent to find and grow materials, the balance to be devoted to grants-in-aid to promote further research in scientific institutions.[1]

Teamwork of this kind in the public interest seems to us to be of the greatest value. In the case of cortisone, the news story of its relation to substances derived from plants of the Strophanthus family was written by William L. Laurence, one of the foremost present day science writers, a factual account free from the absurd emotionalism not infrequently encountered in the products of some other authors.[2]

The story was followed up by a further account detailing the governmental interest of Dr. Leonard A. Scheele, surgeon general of the U.S.P.H.S., Dr. Norman H. Topping, associate director of the National Institutes of Health, and Mr. Carol O. Carlanson, chief of the Division of Plant Exploration and Introduction, Department of Agriculture.

Development of new plant and mineral resources by the government is highly necessary. In this instance, it promises large-scale supply quickly, and we hope with a minimum of red tape, unnecessary chatter, and official gobbledygook, of material whereby advanced therapy of arthritis by the medical profession and further research into other possible uses of cortisone may be facilitated.

The possible value to industry alone may

[1] *New York Times*, August 17, 1949.
[2] *New York Times*, August 16, 1949.

Between 1830 and 1845 the number of medical colleges in the United States more than doubled In 1839, at the annual meeting in February of the Medical Society of the State of New York, a resolution was introduced declaring that the business of teaching should be separated as far as possible from the privilege of granting diplomas It was adopted by a large majority In 1844, delegates to the State Medical Society from Broome and Cayuga Counties attacked the abuse of the procedure by which college faculties both taught and licensed medical students They attacked the brief course of education leading to the receipt of a diploma as well and urged higher standards Homeopathic and eclectic practitioners were not then considered "regular physicians" and were not, apparently, admitted to the county medical society, the licensing examinations, and the practice of medicine An act of May 6, 1844, however, permitted them to practice and collect fees Separate homeopathic county medical societies were incorporated by an act of 1857, and the State Homeopathic Medical Society was next incorporated in 1862

In 1865 the Eclectic Medical Society of the State of New York was incorporated, and in April of that year the Eclectic Medical College of the City of New York was also incorporated Both the Homeopathic and the Eclectic Colleges were subject to visitation by the Regents of the University

By 1880, a new law required physicians to register their licenses with the county clerk This was a step forward But in 1884–1885 and 1885–1886 the Legislature failed to pass bills presented to it by the medical societies "because lack of unanimity among the physicians themselves as to what regulation was necessary" left the lawmakers in a quandary Walsh states "Divisions among physicians even more than lobbying legislation have been the source of unfortunate laws "[2] In justice to the legislators of that time they are said to have stated their quite reasonable position as being willing to cooperate "Whenever a bill is brought here that the doctors themselves agree on, we will pass it "

Only in 1872 was a law enacted by which the principle was first established that licenses should be granted by a State department and not by those engaged in (a) teaching and/or (b) practicing medicine The principle was limited in application But in 1880 the Regents were given additional power The medical societies, one of the three contenders for regulatory powers, were definitely out of the picture The power of licensure was now divided between the Regents and the colleges Only in 1890 was the power to grant licenses placed wholly by legislation in the hands of the Regents. Boards of medical examiners were subsequently created "representing the regular medical profession and two sectarian schools of medicine, and a license to practice was issued only after passing their examination "

Commissioner Draper, head of the New York Education Department, early in the twentieth century formulated the principle that "the State should establish a fundamental standard for all medical practice, which would protect the people against ignorance and let those who can come up to that standard practice " In 1907, a single examining board replaced the three previous boards of the regular, the homeopathic, and the eclectic schools

The act of 1907, with a few amendments relating to standards and disciplinary procedures, was effective until 1927 In this year the medical practice act was re-enacted into the Education Law and the control over the practice of medicine came under the Regents of the State of New York Annual registration of physicians was required and the Medical Grievance Committee under the Board of Regents was established With a few interim amendments this statute remains as the medical practice act as we now know it

It would be well for the membership of the Medical Society of the State of New York to consider the evolution of this act through nearly 189 years of constant endeavor by the medical profession and the honorable, the Legislature of the State of New York to provide the highest standards of medical education and practice for the citizens of the Empire State The recent years have witnessed more and more determined attempts, notably by the chiropractors, to undermine a structure laboriously built up as herein set

[2] Walsh J J History of the Medical Society of the State of New York New York City 1907 p 87

forth, in the public interest and to which the citizens of the State may look with pride and confidence, since it assures to them the benefits of the most scientific medical education and practice yet attainable

It is to be hoped that the honorable, the Legislature will now and in the future give due weight to its notable record as here shown in securing to the citizens of the State nothing less than the best in medical matters The medical practice act of today denies to no one who can qualify the opportunity to become a physician or surgeon Those not so qualified have no place in the serious and responsible field of ministering to the sick and disabled

Cortisone

This new drug, used apparently successfully in the so far experimental treatment of some of the degenerative diseases together with arthritis, rheumatism, and the like, may be processed from plants of the Strophanthus family, of which some eighteen or twenty species exist in Africa, Burma, India, the East Indies, and the Philippines At present quite limited quantities derived from ox bile must suffice for experimental work

be visualized if present forecasts of success in the treatment of arthritis and rheumatism by cortisone are confirmed, since these diseases are among the top ranking causes of disability among older and highly skilled employes

New Members of the House of Delegates

It is encouraging to note that at the 1949 session of the House of Delegates there were over 50 new members, including alternates, out of a total of 154 elected delegates [1] Of the whole group 22 per cent were general practitioners Another 28 per cent were specialists in 13 different categories

The fluid character of any legislative body is essential to maintain And apparently the several county societies are wisely adding new blood, fresh ideas, and the vigor of youth to their delegations In our view this is as it should be Also encouraging is the balance apparently being maintained well between general practitioners and specialists

The problems now crowding upon us for solution demand time and energy freely expended The younger men and women in the profession seem willing to assume their obligations if encouraged to do so, at least in this State as the above cited figures indicate

Unquestionably it is harder for younger men and women in the process of establishing their practices and their families to carry their share of the load of responsibility the profession has assumed, but there is no easy way to preserve those values and high quality service to the public which have always been the pride of the physician It is not enough just to preserve them in our view, they must be extended far beyond present horizons

We by no means underestimate the worth to the profession of its older heads, they are invaluable, and a great part of that value lies in their conservatism, usually the result of hard schooling and much experience of life

But we do need and must have the bolder, more aggressive help of new delegates, young or old, as soon as they can qualify themselves for election by their several county societies, and the more general practitioners the better

Current Editorial Comment

"Sing Out Sweet Land." From the *New England Journal of Medicine* comes the following account [1]

> By action of the Council of the Massachusetts Medical Society taken at its annual meeting on May 23, the appointment of a coordinating committee to cooperate with the National Education Campaign of the American Medical Association was confirmed The committee, which has been functioning since April, is composed of the officers of the Society, the delegates to the American Medical Association, representatives from the committees on medical economics, legislation, public relations, and the subcommittee on national legislation, the director of information and education, and the editor of the *Journal* The chairman is Dr Frank H Lahey, former president of the American Medical Association
>
> The committee considers the time now appropriate to render an account of its activities as well as to offer its program for the future
>
> Of special importance has been the assembly that took place on May 1 at the Hotel Statler, to which each district society was invited to send ten per cent of its members The attendance was estimated at six hundred, and considerable enthusiasm for the campaign was evidenced
>
> A speaker's bureau has been established and

[1] New England Journal of Medicine August, 1949

some twenty physicians have given nearly three hundred talks before various lay groups Editorial support has been elicited, and numerous press and radio writers and commentators have supported the campaign to bring the Association's program before the public Many lay groups have been active and a number of organizations have passed resolutions in support of the medical profession Much literature has been distributed, and more is available at the Society headquarters

Although the government's campaign in favor of compulsory health insurance has been relatively inactive of late, the coordinating committee is planning its own future program This is based largely on the activities of the district societies, most of which have not yet swung into satisfactory action, Franklin being a notable exception

District coordinating committees must be set up where they are still lacking Cooperation with the "Tell It To Twenty" division of the Massachusetts campaign must be strengthened, in order that a continuous flow of information to the list of twenty contacts made by each physician may make an informed group capable of substantial action and results at the proper time Resolutions against compulsory national health insurance should be adopted by every district society and auxiliary Local press and radio committees should be organized and contact made with local professional groups Lay speakers must be enlisted, and, above all, the district woman's auxiliaries must be utilized in the campaign

If socialized medicine is to form the wedge for a socialized state, it shall not be for lack of an informed and intelligent opposition *

Should such a coordinating committee be considered by the Medical Society of the State of New York? Speaker's bureaus have already been set up in this State by the several county societies, and the Public Relations Bureau of the State Society has assisted in their formation where requested

Coordination of this activity might be productive of more effective action throughout the State

Costs of Hospitalization

"Far from all resort of mirth,
Save from the cricket on the hearth"
—John Milton

Commenting on the recent wave of hospital rate increases, a staff member of The Presbyterian Hospital in the City of New York said, "This wave of increases reminds me of that early pseudo-scientific experiment upon the cricket It was discovered that an increase in application of heat to a cricket increased not only the tempo of his chirps but also their intensity This increase was maintained in a steady upward curve until the cricket suddenly burned up!"

With this touching obituary upon the cricket we are one hundred per cent in sympathy If the cost of hospitalization continues to rise, these benevolent institutions will eventually consume themselves and their patients with them It reminds us of Charles Lamb's *Dissertation on Roast Pig*

We have a remedy to propose Appoint to every hospital an *Advocatus Diaboli* He could be an older man of wide clinical experience, attached to the resident in charge of medicine or surgery He will never leave the side of the unhappy young man When the resident calls for a "full work up" on such and such a case, before the patient has been seen by either the attending physician or surgeon, the *Advocatus Diaboli* will ask him what is the significance of such and such a test? Why is it necessary in this particular case?

In the course of such proceedings the older man will learn a great deal about the most modern laboratory tests The resident will learn how to do without them by the use of the five senses that God gave him It will be a process of highly beneficial mutual education

In the course of it the hospital will save a great deal of money

The *Advocatus Diaboli* would never order a laboratory test without asking himself how much it was going to cost the patient and was such an expenditure essential to the diagnosis of the case He would be as nice in his judgment in recommending a "G I series of x-rays" as if he were ordering them for his own wife, and as if he had to pay for them

According to our prescription the older man would be brought up to date on a number of tests of which he had never heard, and without which he and his patients had been getting along quite well

The resident would learn that the employment of his five senses would open to him delightful fields of research that the laboratory could never offer him He might learn that a well-taken history could shed more light upon his patient in the psychoso-

matic field than could any x-ray or microscope

And during the process of mutual education both hospital and patients would save considerable money

Distorted Figures The *New York Journal American* of August 25, 1949, brought us the following good news

"Sister Elizabeth Kenny, founder of the revolutionary method of treating poliomyelitis, arrived today aboard the Queen Mary and offered to meet with local health authorities, "if invited," to discuss the current polio outbreak

When she first came to this country in 1940, she said, the rate of recovery in polio cases was only 15 per cent Since then, she added, the recovery rate has risen to 75 per cent "and could be 10 per cent higher"

Unfortunately for Sister Kenny we chanced to have upon our desk the supplement to the *Quarterly Bulletin* issued by the Department of Health of the City of New York from which we quote [1]

The number of cases and deaths reported during the epidemic years were

Year	Cases	Deaths
1916	9,023	2,448
1931	4,138	504
1935	2,054	91
1944	1,890	102

We have confidence in the figures provided by the New York City Department of Health, going back to 1916 Sister Kenny does not specify whether by "rate of recovery" she means recovery in the sense that the patient did not die, or recovery with no residual paralysis No matter which she means, her claims are equally absurd During an epidemic, when the public consciousness is aroused, any number of otherwise undiagnosed diseases are reported as poliomyelitis If, in a doubtful case, the doctor scratches his head, and says, "Of course, I don't know, but it might be polio," he is put down as a man ever alert for the worst, and if a case of acute indigestion, "summer complaint," or what have you recovers with no sign of paralysis he adds greatly to his community reputation

If, on the other hand, his diagnosis is, unfortunately, correct, his reputation also loses nothing

We have already in these columns paid tribute to the Kenny treatment Anterior poliomyelitis is as yet an unsolved disease Sister Kenny says so herself We have no sympathy with the curious pathology she has invented With her distorted statistics we have even less

Why can't the good woman with undoubted skill and reasonable silence treat such patients as are able to resort to the foundations which her charitably minded backers have provided for her? By unwarranted, exaggerated claims and by absurd distortion of statistics, we think she does herself, the public, and her patrons the worst of disservices

Correction In this JOURNAL for September 1, the announcement covering page 2038 should have been labelled as an advertisement We regret this omission —THE EDITORS

PSYCHOSURGERY

Successes and Failures Following Frontal Lobotomy

BURNESS E MOORE, M D , New Haven, Connecticut, BENJAMIN SIMON, M D , Middletown, Connecticut, SAMUEL FRIEDMAN, M D , Newtown, Connecticut, and CONRAD O RANGER, M D , Norwich, Connecticut

(From the Department of Psychiatry and Mental Hygiene and the Psychiatric Clinic, Yale University School of Medicine, New Haven, the Connecticut State Hospital, Middletown, the Fairfield State Hospital, Newtown, and the Norwich State Hospital, Norwich, Connecticut)

SURGICAL procedures for the treatment of mental disease are rapidly increasing in number The development of the transorbital approach by Fiamberti and Freeman, the introduction of topectomy by the Columbia-Greystone Associates under the able direction of Mettler, Pool, and Heath, and the experiments of Spiegel and Wycis with thalamotomy are indicative of the advances to be expected from new and imaginative approaches based on sound knowledge of neuroanatomy and physiology [1–4] At the same time neurosurgeons are constantly modifying their older technics and devising new ones, such as the selective cortical undercutting recently described by Scoville [5] Modern surgical treatment of psychiatric disorders is only fourteen years old, and the present investigations indicate that this form of treatment has passed from its infantile and early childhood periods into one of adolescent striving and experimental exploration With its increasing maturity have come recognition of the value of surgical therapy and acceptance of the responsibilities implied

Operations on psychotic patients provide a unique opportunity, incidental to treatment, for psychophysiologic research on human subjects While the physician has an obligation to take advantage of such opportunities to advance knowledge, the primary objective of these procedures—specifically, benefit to the patient—must not be overlooked

Lobotomy has recently been subjected to critical scrutiny because its wide clinical use has not provided conclusive answers to the problem of the relationship of the frontal lobes to mental disease [6] To some extent this criticism ignores the excellent work which has been done and the difficulties inherent in study of psychotic patients with inadequate facilities and personnel, nevertheless, such appraisal is justified and wholesome The already demonstrated value of lobotomy as a therapeutic procedure makes its application indicated even in the absence of knowledge of the mechanisms by which improvement is achieved

However, the psychiatrist is likely to become confused by the availability of a number of surgical procedures for which the indications are still problematic and the results uncertain A single case exhibiting dramatic improvement or unfortunate sequelae is more impressive clinically than a large series of patients who have exhibited less striking changes, and we are likely to correlate the dramatic change with whatever procedure has been used, failing to keep in mind the fact that a multiplicity of factors may materially influence the prognosis of the patient If operations are varied on the basis of such clinically impressive cases without reference to other mitigating factors, results are even more difficult to evaluate It is important, therefore, as we have pointed out before, that each new procedure be studied by means of carefully planned observations on a

Presented, by invitation, at the 143rd Annual Meeting of the Medical Society of the State of New York, Buffalo Section on Neurology and Psychiatry May 6 1949

This paper is a report of the Connecticut Lobotomy Study a cooperative project of the above institutions. The work was supported in part by the Joint Committee of State Mental Hospitals of the State of Connecticut The operations were performed by Dr Bernard S. Brody and Dr William German, of New Haven, and by Dr William B Scoville and Dr Benjamin Whitcomb of Hartford.

New type antacid

Carmethose

for better management of peptic ulcer

Carmethose gives prolonged control with no adverse effects

Carmethose promptly lowers gastric acidity, and its protective tenacious coating has been observed in the stomach for as long as three hours [1]

Adult dose is 2 to 4 tablets or teaspoonfuls 4 times daily between meals

Carmethose Tablets: *sodium carboxymethylcellulose, 225mg and magnesium oxide, 75mg Bottles of 100*
Carmethose Liquid: *5% concentration of sodium carboxymethylcellulose Bottles of 12 oz.*

Advantages over adsorbent gels:

1 *Non-constipating*—hydrophilic gel promotes normal elimination [1,2]

2. *Reduction of acidity in two ways*—prompt action by ion exchange is followed by classical buffering action

3 *Palatable*—small, easily swallowed tablets and pleasantly flavored liquid—preferred by patients [1]

Advantages over soluble alkalis:

1 *No acid rebound*—effectively inhibits acid-pepsin activity, with no secondary hypersecretion

2 *Protective coating*—mucin-like gel is rapidly formed and clings to ulcer crater and gastric mucosa

3 *Non-systemic*—cannot disturb acid-base balance because it is non-absorbable

Not working	106	36 0

* The patients in this category do not total 100 per cent because of overlapping in those patients working part and full time and at the same level of employment.

in the schizophrenic group was over five years Some type of somatic treatment, usually electric convulsive therapy, had been administered to 194 patients, or 66 per cent of the group, prior to lobotomy However, in 11 9 per cent such treatment was inadequate by present-day standards No somatic therapy had been given to 100 patients before operation, but these chronic patients were of the type who have been shown to have no favorable response to electric convulsive therapy or insulin coma Ninety-nine per cent were on closed hospital wards, and 53 1 per cent were in restraint, in seclusion, or on disturbed wards Less than 7 5 per cent were capable of work before operation, and 12 6 per cent had never worked even before illness

Results

Results following operation were evaluated in terms of environmental adjustment, level of work ability and accomplishment, and symptomatic change Improvement in these three phases of adjustment, as recorded in Table 1, was graded according to criteria which have been presented elsewhere [9] At the end of one year postoperatively, 29 6 per cent of our 294 patients were markedly improved or symptom-free, 31 2 per cent were moderately improved, and 38 8 per cent only slightly improved or unimproved (Fig 2) Thirty-six per cent of the patients had been discharged to their homes, and the percentage of disturbed ward patients had decreased from 53 1 per cent to 10.2 per cent (Fig 3) Of the entire group 63 3 per cent were working, 27 9 per cent full time and 16 6 per cent at the same level of ability as before their illnesses (Fig 4) It is difficult to compare these results with those reported in other large series because the data have been presented differently

population large enough for statistically valid conclusions [7]

The problem of validation of lobotomy as a practical therapeutic procedure in the treatment of psychoses has been of particular interest to the Connecticut Cooperative Lobotomy Study In this paper we are reporting our results to date with special emphasis on analysis of the factors which may contribute to success or failure following lobotomy It is our hope that this study will help to establish better criteria of selection of patients for near-total, open lobotomy

Methodologic Considerations

In the presence of multiple variables, two general types of methodology may be utilized to establish the validity of a new therapeutic procedure Mettler has succinctly described these as (1) the analysis of organized complexities and (2) the analysis of unorganized complexities [8] The Columbia-Greystone Associates chose the first method and have attempted to select patients carefully in accordance with well-defined and limited criteria, controlling all possible variables with the single exception of the operative procedure This method is expensive in time, money, and effort, and it is usually necessary to work with very small groups of patients Thoroughly sound from an investigative standpoint, it provides valid answers to specific questions The second method, employed by the Connecticut Cooperative Lobotomy Study, is based on the selection of patients in accordance with presently accepted therapeutic criteria of selection with subsequent analysis of results in terms of the multiple variables In our situation these variables could not be controlled in advance, since therapeutic goals and the desire to meet the immediate needs of the community were balanced against the demands of the investigation Our method has been rewarding in benefit to a large number of patients and families and in abundant material for research

The association of the three state mental hospitals of Connecticut and the Yale Psychiatric Clinic and Department of Psychiatry in a cooperative clinical study of lobotomy has already been described in a previous paper [9] A committee has been responsible for devising a common case protocol and for the definition of descriptive and diagnostic terms, criteria of selection, determination of operative procedures, and for the methodology of clinical study It was decided that the clinical progress of patients should be recorded at specific time intervals of three months, six months, twelve months, two years, and five years, postoperatively The records are filed in a central registry, are periodically reviewed by the Committee, coded, punched and analyzed on IBM cards

The weaknesses of such a study are obvious. Although terms are defined and criteria of levels of improvement specified in advance, the factor of varied personnel in four different institutions inevitably introduces some discrepancies In so far as possible this difficulty has been minimized by having all patients and case protocols checked by the clinical director of each hospital, who is thoroughly familiar with the standards set for the study The number of patients involved also nullifies such discrepancies to some degree Although based on careful clinical study of each individual case, the material gathered becomes essentially a statistical study and, therefore, lacks the detailed, personal information concerning patients' reactions which may be obtained by intensive study of a small group of individuals However, statistical analysis of large groups of patients avoids the errors which may enter into conclusions based upon a small number of subjects in which the variables have not been controlled One other point the data given represent individual correlations of each factor with clinical results following operation, and multiple correlations, taking into account all factors simultaneously, may yield additional information of value that will modify some of the conclusions reached

Operative Technic, Mortality, and Complications

The operations on this series of patients were performed by Dr Bernard S Brody, Dr William German, Dr William B Scoville, and Dr Benjamin Whitcomb Modifications of the Lyerly or open technic were used in all cases In the surgical approach the coronal suture, the lesser wing of the sphenoid bone, and the anterior tip of the lateral ventricles were used for orientation (Fig 1) The plane of section was usually made parallel to the coronal suture and just anterior to the landmarks mentioned, and a near-total section of the subcortical fiber connections was made In a later publication we hope to correlate results with the plane of section and the extent of fibers divided To date 532 patients have been operated on, with 15 operative deaths, a mortality of 2 8 per cent After the first hundred cases, with the ripening of experience, the mortality has been reduced to 1 7 per cent Intracranial hemorrhage, which accounts for the largest percentage of deaths in patients operated on by the closed technic, was responsible for only four deaths in this series Urinary incontinence, lasting longer than one month, in 17 3 per cent, epileptiform seizures in 9 8 per cent, and various neurologic signs, most of them transient, in 2 7

* Included are seven patients of simple type and nine patients showing mixed syndromes presenting hebephrenic catatonic and paranoid symptoms. Ten schizophrenics could not be classified.

(Fig 5) This trend was largely attributable to relapses among the 35 patients with mood disorders

Within the schizophrenic group, paranoid patients showed the most significant and progressive improvement, and hebephrenics the poorest (Fig 6) Although the degree of significant improvement (marked and moderate) attained by the catatonic group is higher than that of the hebephrenic group, there is a tendency, not observed in the other schizophrenic types, for these patients to remain stationary or even to regress Certainly, from this data, significant improvement during the latter part of the year should not be anticipated in catatonic patients who have not achieved at least moderate improvement by the end of the initial three-month period

Grouped together as "others," because of the small numbers of cases in each category, are a miscellaneous assortment of schizophrenic patients including the simple type, unclassified

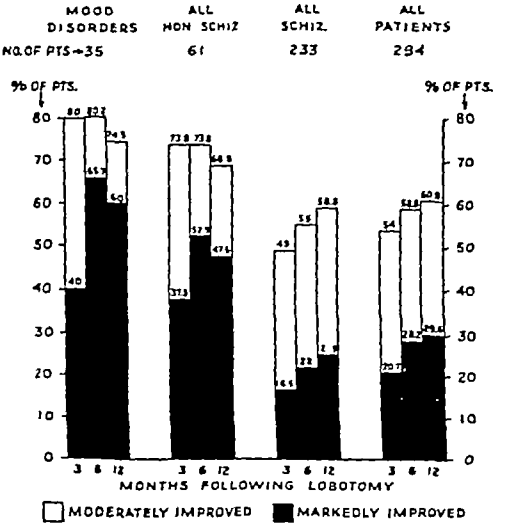

FIG 5 Changes in improvement following lobotomy in 294 patients.

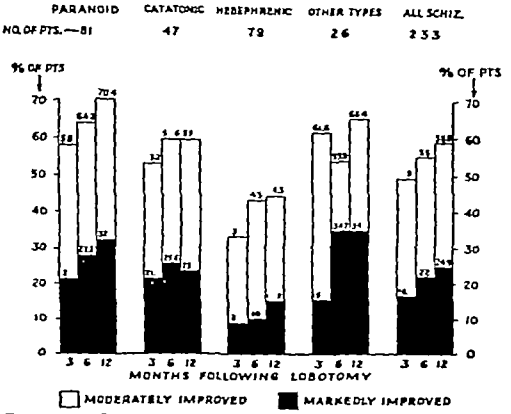

FIG 6 Changes in improvement following lobotomy in 233 schizophrenic patients.

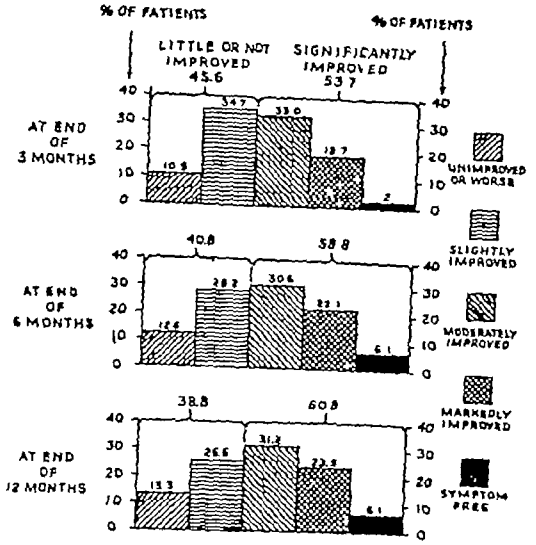

FIG 2 Status of 294 patients following lobotomy

and the criteria for evaluation of improvement are not always the same [10–12] It is for this reason that we have been careful to define in advance the criteria to be used, in order that our data might be comparable at least within our own cooperative group These results at the end of one year are in essential agreement with those reported on 200 of the same patients at the end of three months and confirm our earlier impression that the status at three months represents the minimal improvement which may be expected in a group of patients

Changes in Improvement During the Year

Although Table 2 shows that, as time elapsed, there appeared to be a constant trend in the direction of progressive improvement of the group as a whole, it seemed important to us to determine whether there was a considerable shift in the status of individual patients at the various follow-up periods Comparison of results at the three months period and at the six months period showed that 73 1 per cent of the patients remained the same in status, 19 per cent improved, and 7 9 per cent regressed From six to twelve months 80.2 per cent did not change, 10 9 per cent improved, and 8 9 per cent regressed Fluctuations of more than two grades in improvement or regression were observed in only 2 8 per cent of the patients These figures indicate that most patients reach stability by the end of three months, but some additional improvement may be expected, primarily during the early period from three to six months, while improvement and regression are about equal during the last six months of the first postoperative year

The value of recording the progress of patients

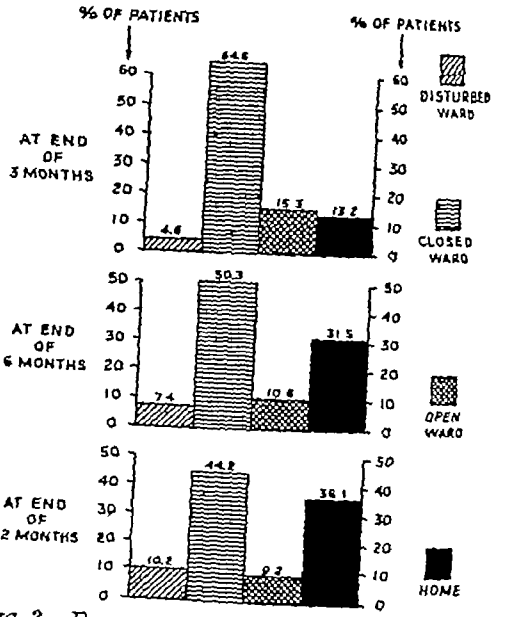

FIG 3 Environmental adjustment of 294 patients following lobotomy

at definite time intervals is further demonstrated in the analysis of changes in improvement in relation to diagnosis Table 2 shows that the total group of patients exhibited progressive improvement throughout the year and that the total schizophrenic group showed essentially the same pattern More outstanding improvement occurred initially in the 61 nonschizophrenic patients, but there was a trend toward regression in the last six months of the year following operation

schizophrenics, and those with mixed syndromes presenting hebephrenic, catatonic, and paranoid symptoms On the basis of other studies, the prognoses of these patients are generally accepted to be entirely different It is not surprising, therefore, that, when considered together, the improvement pattern of the group combines some of the features of the other types but is distinctive in that the comparatively small number of markedly improved patients at the end of the three months period had more than doubled by the end of six months, without further increase during the rest of the year Moreover, the percentage of patients who are markedly improved is greater than that of any other schizophrenic type including the paranoid

Symptomatic Changes

It is important to analyze changes in individual symptoms as well as alterations in the general clinical picture This is always a difficult task, since as yet no very satisfactory method of quantifying symptomatology has been devised In this and in our previous report, we have followed a plan of study by Simon and Holt, using a group of readily defined, easily distinguishable symptoms common to psychiatric patients[13] The presence or absence of symptoms in significant degree was recorded at the time of follow-up Partial remission of symptoms was ignored for the purposes of this study In Table 3 loss of symptoms is analyzed without reference to diagnosis because of the overlapping in the symptomatic manifestations of various psychiatric disorders Similarly, the degree of improvement is not considered in this table, since the continuation of old symptoms or the acquisition of new ones is not necessarily correlated with the degree of improvement based on evaluation of the total clinical picture

The percentile recovery from specific symptoms at the end of the first postoperative year is shown Recovery was most striking in respect to certain frankly behavioristic symptoms, but affective relief and even improvement in ideational symptomatology are also obvious Hypochondriasis, depression, obsessive-compulsive behavior, and anxiety—symptoms which are ordinarily most disturbing to the patient—were lost in over 85 per cent of cases The disappearance in more than three fourths of the group of impulsive, overactive, aggressive behavior, suicidal attempts, and constant refusal of food often facilitated the acceptance of patients within their homes if their prolonged illness had not meant readjustment of the families to their absence and reluctance to undertake the responsibilities of even minimal care Even when patients could

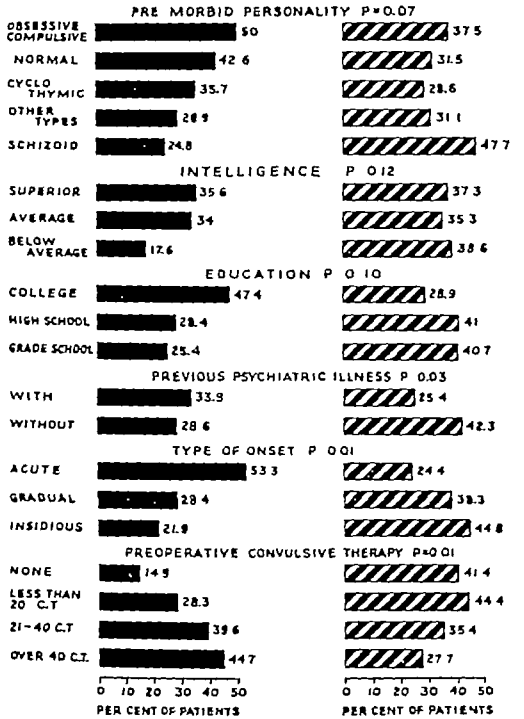

FIG 8 Correlation of significant preoperative clinical features with therapeutic success or failure at the end of one year following lobotomy

difficulty The meaning of this finding, which holds true for other forms of psychiatric treatment as well, is still obscure

Patients who have been given large amounts of convulsive treatment showed a higher percentage of marked improvement after lobotomy This suggests that the criteria upon which they were selected for convulsive therapy were valid, even though that treatment resulted in failure, or it may indicate merely that there was sufficient interest on the part of the family and the physicians to give the patient every therapeutic opportunity possible There is a better result in marked improvement (33 9 per cent as compared to 28 6 per cent) in those patients who had previous episodes of psychiatric illness Since those patients who showed most marked improvement had had more than 40 convulsive treatments, it seems likely that a considerable number of these patients may have had remissions and relapses, suggesting that the tendency to remit has good prognostic value

It seems evident that schizoid personalities have a poor prognosis for any type of therapy including lobotomy, while so-called "normal," premorbid personalities offer promise of good results Excellent response was noted in our series for cyclothymic and obsessive-compulsive patients, but the numbers are too small to have any high degree of reliability That patients

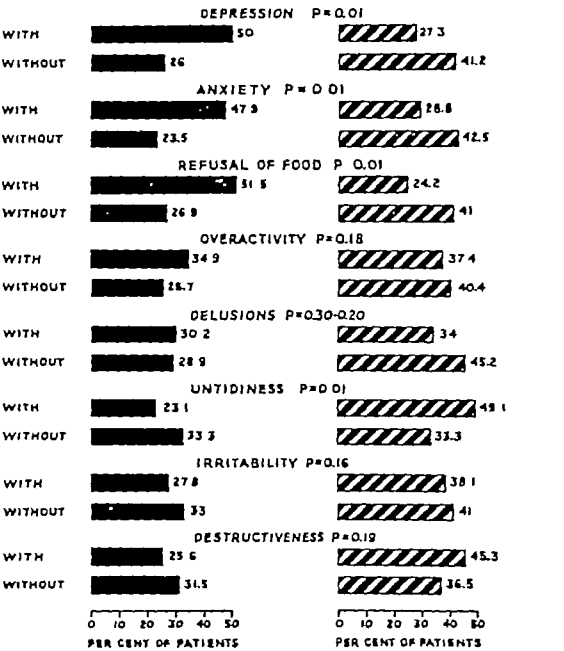

FIG 9 Correlation of specific symptoms with success or failure one year following operation

with superior intelligence and college education do better than those less well endowed was not unexpected, although our earlier correlation of intelligence with improvement on a smaller series had not shown any valid differences *

Since a large number of disturbing symptoms disappeared in over 70 per cent of cases after lobotomy, it would seem logical to suppose that the presence or absence of such symptoms might have some prognostic value This was not true, however, except in the case of anxiety, depression, food refusal, and untidiness, valid at the 1 per cent level, and overactivity, destructiveness, and irritability at the 10 to 20 per cent level (Fig 9) While the commonly held belief that patients with a high degree of tension and anxiety do well after lobotomy is confirmed, our data do not support the hypothesis that patients exhibiting other symptoms which disappear in a high percentage of cases after lobotomy are necessarily the best candidates for lobotomy It is true that their symptoms will probably disappear after lobotomy, but patients without such symptoms showed an almost equally good response If patients are selected according to such criteria, very likely they will improve, but a large number of patients who might have improved, had they been given a chance, will be missed

* The optimum intellectual level was based on psychologic examination if the patient was testable before operation, but in the majority of cases judgment was dependent on clinical evaluation which took into consideration school history occupational level, and social and economic attainment.

16 2 per cent, and cessation of overtalkativeness in 10 per cent Appreciable gains were also made in respect to symptoms such as mutism and anxiety With regard to inappropriate affect, bizarre speech, and euphoria, additional improvement was more notable late in the first postoperative year Except for the reappearance of hallucinations in 16 6 per cent of cases in the last half of the year, no appreciable losses in symptomatic improvement occurred during either follow-up period

The addition of symptoms attributable to brain damage was to be expected as a result of lobotomy Loss of interest in self and surroundings was the most common accretion in our experience It was observed in 37 6 per cent of patients who had not exhibited this symptom previously Approximately the same percentage of patients who had this symptom before operation lost it afterward Underactivity appeared for the first time in 14 per cent of patients after operation, inappropriate affect in 13 per cent, and withdrawal in 9 6 per cent These undesirable sequelae to lobotomy require greater effort from the hospital staff in their attempts at rehabilitation, but the only new symptom which gave rise to problems in practical management was irritability, which developed in 8 per cent of the patients Anxiety, depression, refusal of food, and suicidal attempts have been conspicuous by their absence after operation The remainder of the symptoms studied appeared for the first time after lobotomy in less than 6 per cent of patients

Comparison of Successes and Failures

While the improvement in symptomatology and environmental and work adjustment previously described is encouraging, the analysis of such data should provide us with important clues as to criteria for better selection of patients for operation In order to study this aspect, the patients at the end of a year following lobotomy were divided into three groups markedly improved, moderately improved, and insignificantly improved These degrees of improvement were then correlated with the clinical features of the cases and the reliability of the differences tested by means of Chi square The data resulting from comparison of the clinical features of those cases which may be regarded as successes or failures are presented in Table 4 together with the degree of reliability to be placed on this material It will be observed that the most valid differences between the two extremes are to be found in relation to duration of recognizable illness, duration of present illness, length of hospitalization, type of onset, and amount of convulsive therapy preoperatively Four symptoms have a similar high degree of correlation

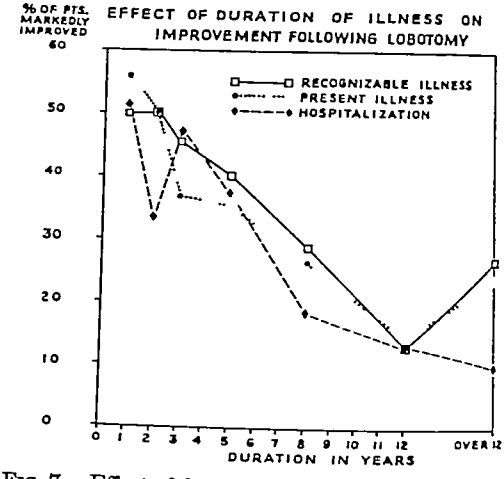

FIG 7 Effect of duration of illness on improvement following lobotomy

depression, anxiety, and food refusal with improvement, and untidiness with lack of improvement

Although there is a steady decline in marked improvement and an increasing number of failures in direct relationship to the duration of recognizable illness, present illness, and length of hospitalization, we have shown previously that there is no significant difference in response in those patients hospitalized less than five years (Fig 7) The upswing in marked improvement in patients with the longest duration of illness is surprising and contrary to the general trend * It is only partly attributable to a small group of patients with manic-depressive and involutional disorders It does not hold true for the duration of hospitalization and is certainly not significant, since the percentage of failures continues to increase in this group with longest illness It is evident, however, that there is considerable hope for marked improvement, and very prolonged illness should not be the only cause for rejection of these unfortunate patients for operation As we have pointed out before, five years of preliminary hospital treatment seems to be the maximum period of delay before operation if the results of lobotomy are not to be influenced unfavorably [9]

When the onset was acute and less than a month had elapsed between the time of recognizable abnormality in behavior and hospitalization, marked improvement resulted from lobotomy in 53 3 per cent (Fig 8) It was harder to differentiate the gradual from the insidious onset, and the smaller difference, 26 4 per cent as compared to 21 9 per cent successes, probably reflects this

* See Table 4 and compare the group ill over twelve years with the eight- to twelve-year group.

THALAMOTOMY NEUROPSYCHIATRIC ASPECTS

E A Spiegel, M D , H T Wycis, M D , and H Freed, M D , Philadelphia, Pennsylvania

(From the Departments of Experimental Neurology, Neurosurgery, and Psychiatry, Temple University School of Medicine and Hospital)

THERE is a fundamental difference between thalamotomy and the other neurosurgical procedures of the frontal lobe, such as lobotomy, lobectomy, or topectomy Thalamotomy leaves the association systems between the frontal lobes and the other parts of the cortex intact and interferes only with the connections between the frontal lobe and the dorsomedial (dm) nucleus of the thalamus by placing small lesions in the latter nucleus (Fig 1) In this way one may hope to avoid most of the undesirable side-effects, due to lesions of association systems, of the various frontal lobe operations, and to produce only beneficial effects on emotional disturbances This expectation is based on the assumption that emotional reactions are chiefly the result of an interplay between cortex and diencephalon and, in particular, between the frontal pole and the dorsomedial nucleus [1]

Our material was selected according to the usual criteria for prefrontal lobotomy Thirty-seven patients, mostly institutionalized cases of schizophrenia, depression, and severe compulsion neuroses, have been operated on by means of our previously described stereoencephalotome [2] Most of these patients were under psychiatric treatment for a period of from two to fifteen years and had been subjected to the various shock therapies without relief In two patients with obsessive compulsive neurosis, prefrontal lobotomies had been performed at other institutions without alleviating the disturbances

In group I (three cases), one or two small coagulations, about 3 mm in diameter, were produced on each side In group II (eight patients), five such coagulations were placed in each dorsomedial nucleus through three puncture canals In the remaining cases (group III) larger electrolytic lesions were produced bilaterally by means of a special electrode requiring only one puncture canal about 1 mm. in diameter on each side In the first postoperative days in groups II and III the patients often exhibited somnolence, more rarely restlessness, disorientation, particularly for time, memory defects, sometimes euphoria or apathy, and psychomotor retardation Tension, anxiety, depression, irritability, agitation, compulsive behavior, hallucinations, and, in some instances, paranoid delusions were favorably influenced, sometimes after a latent period of several weeks

The question may be raised Why are not only tension and anxiety relieved but also such symptoms as delusions and hallucinations? If one recognizes with Bleuler the dominant role of affectivity among psychic functions and the influence of emotional disturbances in the genesis of pathologic associations,[3] it becomes likely that lessening of tension and anxiety may also favorably influence pathologic associations and related symptoms However, it should be emphasized that operative procedures relieving emotional disturbances and allied phenomena do not

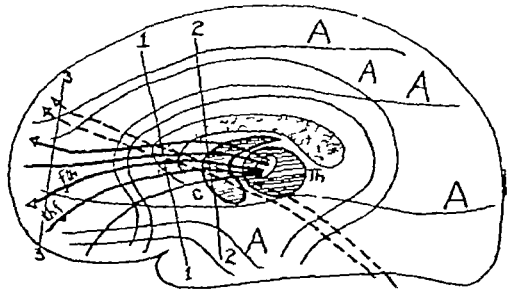

Fig 1 Schematic diagram showing that prefrontal lobotomies (1-1, 2-2) or topectomies (3-3) interrupt not only frontothalamic (fth) and thalamofrontal (thf) fibers, but also association systems (A) of the frontal lobe The same applies to transorbital lobotomy (also corresponds to 3-3) Thalamotomy tries to place lesions in the white area within the thalamus (Th) C represents the caudate nucleus.

Presented by invitation at the 143rd Annual Meeting of the Medical Society of the State of New York, Buffalo Section on Neurology and Psychiatry May 6 1949

Comment

An attempt has been made to present the facts which have emerged from preliminary survey of one-year follow-up of 294 patients in the Connecticut Lobotomy Study Certain clinical impressions have been confirmed and others disproved Interpretation of much of the data is impossible at this stage However, a few leads are evident, and the assembly of facts provides a starting point for further study which should be carefully planned to answer specific questions The recording of cases on IBM punch cards provides us with figures for necessary statistical evaluation, but more importantly it enables us to index and find case material for more intensive clinical investigation that would otherwise be lost in a series of cases so large as to be unwieldy

With regard to the objective of our study—to provide better criteria for selection of patients for lobotomy—it must be confessed that the results are somewhat disappointing We have found that we still do not have absolute bases for predicting good or bad results The positive information which we have may be summarized as follows

Greatest improvement may be expected in patients with "normal," cyclothymic, or obsessive-compulsive personalities before their illness, with superior intelligence and good education, whose psychosis has been sudden in onset, following one or more previous episodes during which the large amount of convulsive therapy given may imply a tendency to remission and relapse, with a clinical picture characterized by affective symptoms of depression or anxiety, behavioristic changes such as refusal of food, overactivity, and delusional ideas of paranoid nature In regard to diagnostic categories, superior results have occurred in descending order as follows in the mood disorders, other nonschizophrenic conditions, paranoid schizophrenia, undetermined or mixed types of schizophrenia, catatonic schizophrenia, and lastly in the hebephrenic and simple types Illness and hospitalization of less than five years seem to indicate a better prognosis From our previous studies age and sex do not seriously influence results, although there is a slight margin in favor of the males and against the middle age group

It is obvious that lobotomy in many patients presenting these supposedly favorable criteria resulted in either success or failure For this reason it would seem wise not to regard such single factors as absolute criteria for or against lobotomy Multiple correlations to be carried out later may show significant relationships between various clinical features which will further clarify the indications for lobotomy The statistical nature of the study undertaken precludes expression of purely clinical opinions Indeed, the data suggest that these may at times be misleading, at least with respect to symptomatology However, until multiple correlations have been made, clinical judgment is the only means by which the numerous features of a patient may be synthesized to yield some prognostic conclusion

In this study it has not been possible as yet to include the plane and extent of surgical section, the influence of the family, or the rehabilitation measures undertaken by the respective hospitals. These undoubtedly play a most important role in determining therapeutic success or failure.

Our symptomatic review is by no means complete, and the descriptive categories used are so comprehensive that much valuable information has been missed It is tempting to try to expand on the data which we have, for example, to assume, because refusal of food is a good prognostic sign, that other forms of negativism might be equally favorable prognostic symptoms However, we believe rather strongly that such assumptions are not reliable and that it is better to admit the limitations in our knowledge of the factors that may indicate a good prognosis than to be misled by preconceived ideas In some clinics there is a definite tendency to vary the operation in accordance with certain symptoms which are believed to respond well to section of a particular area or segment This practice will undoubtedly continue, but until it has been demonstrated conclusively by statistical study, which takes into consideration all of the variables, that symptoms are associated with specific areas of the brain, we believe that for investigative purposes it is better to vary the operation only after a given procedure has been tried out on a large and varied segment of the patient population Unfortunately, even a standardized lobotomy operation does not meet these requirements fully, since, even in the hands of the same neurosurgeon, it is a varying procedure without neuroanatomic specificity

Lobotomy has proved a valuable addition to psychiatric treatment It is possible that it will be replaced eventually by more definitive surgical measures Such progress will occur only through careful clinical study, and, because of the complexities of adjustment between man and his environment, the data will require critical examination by every means at our command

THALAMOTOMY AND MESENCEPHALOTHALAMOTOMY NEUROSURGICAL ASPECTS (INCLUDING TREATMENT OF PAIN)

HENRY T WYCIS, M D , and E A SPIEGEL, M D , Philadelphia, Pennsylvania

(From the Departments of Neurosurgery and Experimental Neurology, Temple University Hospital and School of Medicine)

FOR nearly half a century the stereotaxic method of Horsley and Clarke has been used in experimental animals in order to produce subcortical lesions without significant injury to the overlying structures [1] Curiously enough, this method had not been applied to humans prior to our first communication, chiefly because in the animals used for this method (rat, cat, and monkey), it is sufficient to rely on the relationship between the coordinates of the skull and the part of the brain to be injured because of the relative constancy in the shape of the skull [2] In the human the great variability in the shape of the skull precludes such a simple application In the method developed by us (stereoencephalotomy) we have attempted to overcome the variability of the skull by using a landmark within the patient's brain as a reference point, namely, the pineal gland visualized by roentgenography or adjacent structures visualized by pneumoencephalography

Procedure

The apparatus, which we have called the stereoencephalotome, consists of two parts, superstructure and base The base consists of a ring upon which is mounted a plaster cast of the skull prepared individually for each patient The superstructure is a four-legged frame with a needle carrier which allows the electrode to be moved in any plane A newer modification eliminates the plaster cast and anchors the base of the stereoencephalotome to the skull by means of four rubber plugs or by four stainless steel pins which are inserted into small drill holes of the skull (Fig 1) The base of the apparatus is aligned so that its frame is parallel to a plane determined by the inferior border of the orbits and the external auditory canals, the so-called horizontal plane As already mentioned, the coordinates of the apparatus are referred to a point within the brain, namely, the pineal gland The patient is x-rayed with the apparatus in position and the relationship of the pineal gland to the electrode is established

In order to be able to reapply the base at operation in exactly the same position as it was during roentgenography, the following precautions are taken An additional superstructure containing five movable pins (one at the intersection of the sagittal and interaural planes, two in the sagittal plane, and two in the interaural plane) is mounted to the base, and the points of the scalp touched by the pins are tattooed before roentgenography Furthermore, the distance between the upper end of the tubes, in which the pins are movable, and the corresponding tattoo marks is measured Before operation the base has to be reapplied in such a way that the pins exactly touch the tattoo marks and that the above mentioned distances are the same as at the time of roentgenography If the pineal gland is not visualized, a pneumoencephalogram is done, and the electrode is oriented with reference to the suprapineal recess or other structures in the neighborhood of the third ventricle With this data and the aid of brain specimens sectioned in the planes of the stereoencephalotome, one can compute the coordinates necessary to produce the lesions desired, e g , the dorsomedial nucleus of the thalamus (thalamotomy [thy]) or the spinothalamic tract in the midbrain (mesencephalotomy [my])

Under local or endotracheal nitrous oxide-ether anesthesia the patient is placed in a sitting position and the base of the apparatus is applied An 8 cm transverse scalp incision is made, usually in the interaural plane A trephine opening is made just to the right or left of the midline and the superior longitudinal sinus is exposed The superstructure is applied to the base and the midline identified The dura is punctured 6 to 7 mm lateral from the midline, and the electrode is lowered at this point according to the measurements obtained from the roentgen film.

Lesions may be made either by electrolysis using direct current or by electrocoagulation using a high frequency current of the Davis-Bovie unit Two types of electrodes may be employed Where a small spherical lesion is desired, the electrode consists of a hollow stainless steel tube through which passes an insulated wire bared at its tip for a distance of 1 5 mm Where several large lesions are desired, the electrode consists of an outer insulated tube through which passes a stainless steel stylet The stylet may be withdrawn and the entire electrode rotated In this manner one can make several rosettes of lesions

Presented by invitation at the 143rd Annual Meeting of the Medical Society of the State of New York Buffalo Section on Neurology and Psychiatry May 6 1949

eliminate the as yet unknown, basic disturbance underlying dementia precox

Of the 37 cases, the first three may serve as controls showing that the operative procedures without sufficient lesions of the dorsomedial nucleus are not able to produce permanent emotional changes One patient each in groups II and III died In the last five patients, the postoperative period is too short to permit conclusions Of the remaining 27 cases, observed from four to twenty-two months after operation, five returned home with almost complete working capacity, ten returned home with reduced working capacity, seven are more manageable at the hospital, five are unchanged, and six have relapsed The relapses may be due partly to the smallness of the lesions, particularly in group II, and partly to the fact that other systems, perhaps frontohypothalamic connections, may also participate in the mechanism of emotions and compensate for the loss of the dorsomedial nucleus

In this respect it is interesting to note the case of an agitated, hallucinating schizophrenic who improved to such an extent after the first thalamotomy that he could be considered nearly normal One and one-half years after the operation he relapsed, again became hallucinated, and had to be readmitted in view of his catatonic excitement Since a second thalamotomy increasing the lesion of the dorsomedial nuclei failed to change his condition, it was decided to place a small lesion on either side of the posterior hypothalamus in a two-stage operation Following this procedure, he quieted down and became easily manageable Although he still shows schizophrenic traits and laughs inappropriately, he could be discharged from the hospital, and his parents are now trying to readjust him on a farm

Undesirable side-effects usually were rather slight, particularly since our improved technic permits one to produce the thalamic lesions through a single puncture canal on either side There was a slight ptosis of one eyelid for two days in one case, an impairment of upward movements of the eyes in three cases, a transitory unilateral weakness of the oral branch of the facial in two instances, and a slight weakness of one arm for less than one week in one patient The motility of one leg was twice impaired for two to three weeks in two patients, and the Babinski phenomenon was demonstrable in five cases of group II for less than two weeks This is probably due to the fact that the puncture canal passes through the region or the vicinity of the paracentral lobe In group III, where only one puncture was necessary on each side, there developed only once a weakness of a leg of two days duration Disturbances of sensation developed only in group II (once hypalgesia of one arm for five days, once ulnar hyperalgesia for two weeks) The so-called psychoreflexes were not affected.

In the vegetative sphere, the most frequent side-effect was incontinence of the urinary bladder (five cases in group II, ten in group III), lasting from a few days to two to three weeks A transient decline of the blood pressure was recorded four times, particularly marked in a case of hypertension where a drop from average values of 210/118 to 115/90 occurred In three patients there was a definite increase of appetite and weight

There was a small drop of the I Q in four patients in the first three weeks after operation, in the others tested the I Q remained unchanged or showed an increase, perhaps due partly to the relief from tension and anxiety which permitted the patient better concentration on his task. The mean I Q of all patients tested failed to show statistically significant changes * In three cases there were defects of memory lasting for several months, and in two cases a diminution of initiative was noted One of these patients had previously been subjected to prefrontal lobotomy at another hospital This latter patient is also more careless in personal appearance

One of the main objections raised against psychosurgery is the pronounced personality change, of which it has been said that the patient "loses his soul" It would seem that one of the chief advantages of thalamotomy is that a relief of emotional disorders may be obtained and that most of the undesirable personality changes following prefrontal lobotomy, such as distractibility, childishness, facetiousness, or a lack of tact or discipline, do not appear Since none or only minimal scarring of cortical tissue results, epileptiform convulsions did not appear in our material in either the early or later postoperative stages (observation up to nearly two years) The electroencephalograms showed either no changes or very slight transitory slowing, particularly in the frontal leads

We wish to express our sincere appreciation to Dr E L Sielke superintendent of the Philadelphia State Hospital Dr A P Noyes superintendent of the Norristown State Hospital Dr O S English professor of psychiatry Temple University School of Medicine Dr J F Stouffer chief psychopathologist Philadelphia General Hospital and their staffs for their kind help and interest.

* The psychometric studies were carried out by Miss R. Kooh, Mrs. F Nassfe Mr C Orchinik Mrs C Krusen Scholz Miss J K. Trasoff and Miss P C Walsh.

asked about the pain, she admitted that there was still an area of pain around the buttocks, but she said, "I do not feel like yelling" After the state of confusion had subsided, she again complained spontaneously about this pain, but the pain area had receded from the entire leg to an area around the right buttock, and she no longer required narcotics, while before operation she required 100 mg of Demerol or 30 mg of Pantopon every three hours

Case 3.—This fifty-nine-year-old white woman also suffered from tic douloureux Following a retrogasserian rhizotomy performed ten years previously by another neurosurgeon, she still suffered attacks of severe pain about the right eye, radiating toward the right side of her nose Following unilateral mesencephalothalamotomy on the contralateral side, she experienced a considerable relief of her pain and has not had to continue with narcotics She developed a slight but distinct hemialgesia on the side opposite the lesions

In a review of these cases the first can be classified as a complete success and Cases 2 and 3 as partial successes, at least We were particularly interested in the problem of whether the addition of the thalamic lesion to that in the midbrain produced a state of indifference to pain transmitted by fibers that had escaped the mesencephalic lesion In this respect, Case 2, particularly, yielded valuable information During the state of confusion developing after the second operation a state of indifference, resembling, to a certain extent, that described by Freeman and Watts after prefrontal lobotomy, was observed [5] However, it subsided after some weeks, and the patient again complained about the pain spontaneously, although the pain area had receded and the intensity of the pain was diminished so that narcotics were no longer required It seems, therefore, that bilateral lesions of the dorsomedial nucleus produce only a transient state of indifference to pain We decided, therefore, in the following group of cases to limit the operation to lesions of the pain-conducting pathways in the midbrain (mesencephalotomy [my])

Case 4.—This forty-six-year-old woman had a carcinoma of the uterus with marked extension to surrounding viscera. The carcinoma was considered inoperable by the gynecologist She complained of severe low back pain which was aggravated by any movement of the lumbar spine Vertebral metastasis was not demonstrable by x-ray, but the pain was so intense that she had to lie quietly in bed in order to avoid severe pain by movement Following bilateral mesencephalotomy, there was a considerable reduction in pain, and she could move about and perform her household duties with only slight pain Narcotics were no longer necessary

Case 5.—This was an elderly woman with carcinoma of the uterus with extensive metastasis to surrounding viscera resulting in a rectovaginal fistula and a so-called "frozen pelvis" The pain was chiefly in the lumbosacral region and was not relieved by large frequent doses of morphine Following bilateral mesencephalotomy she experienced complete relief of pain for three weeks At this time she fell while going to the bathroom, at which time the pain returned but only in a mild degree Demerol, 100 mg once or twice daily, was sufficient to give her relief

Case 6.—A sixty-three-year-old white man with inoperable carcinoma of the bladder complained of severe penile pain, particularly following micturition Morphine in 15 mg.-doses every fourth hour gave only partial relief Following bilateral mesencephalotomy there was a definite reduction but not complete relief of pain His pain could now be alleviated with Demerol in 100-mg doses.

In this second group it seems that lesions of only the pain-conducting pathways in the midbrain, without thalamic lesions, may be able to reduce the pain of these patients sufficiently to make their conditions tolerable The omission of thalamic lesions has the advantages of smaller lesions being performed with the avoidance of the transitory state of disorientation for time and temporary memory defects

PROGRAMS FOR DISTRICT BRANCH MEETINGS ARE PUBLISHED IN EACH ISSUE SEE PAGE 2328 FOR THE SIXTH DISTRICT BRANCH

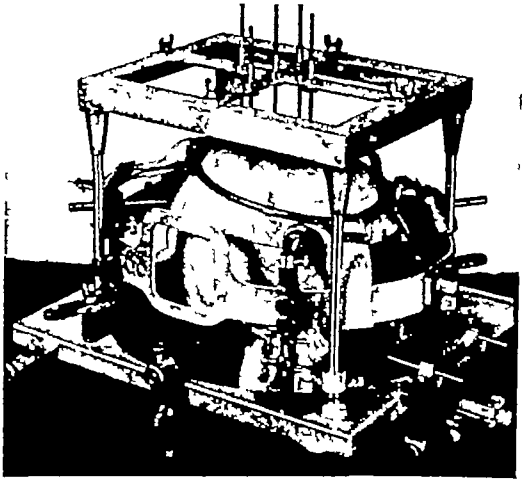

FIG 1 Base of stereotaxic apparatus with superstructure containing 5 pins for checking of proper position

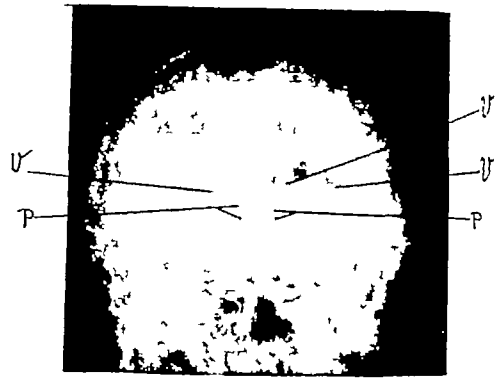

FIG 2 Pantopaque in the puncture canal (P) on either side of third ventricle, V marks pantopaque in the lateral ventricles

at any desired level, all through a single puncture With this electrode the lesions are produced by electrolysis When the final lesion is made, a droplet of pantopaque or lipiodol may be instilled through the stainless steel tube and its position verified by x-ray postoperatively (Fig 2) In some instances where there is residual air in the ventricle one can ascertain the position of the electrode by recording subcortical potentials as the electrode passes through the lateral ventricle

Stereoencephalotomy has been applied not only for the treatment of mental disorders, but also for unbearable pain unrelieved by other procedures [3] The pain-conducting pathways (spinothalamic and trigeminothalamic tracts) can be interrupted in the midbrain where they lie close together near the dorsolateral surface of the midbrain Walker performed such lesions by means of his mesencephalic tractotomy [4] This operation necessitates a major craniotomy with elevation of the occipital lobe Even in very skillful hands this procedure may be followed by undesirable side-effects, such as softening of the occipital lobe By means of the stereotaxic method, a procedure has been developed whereby lesions of the spinothalamic and trigeminothalamic tracts are made, alone (mesencephalotomy [my]) or in combination with lesions of the dorsomedial nucleus of the thalamus (mthy), without significant injury to the overlying cerebrum [2] In the midbrain the spinothalamic and trigeminothalamic tracts lie close together and may be reached by punctures in a frontal plane, 1 to 2 mm behind the pineal gland

In the first group (three cases), lesions of the pain-conducting pathways in the midbrain (my) were combined with lesions of the dorsomedial nucleus of the thalamus (mthy) Since lesions of the long pain-conducting systems (such as the spinothalamic tract) may leave accessory path ways intact, the thalamic lesions were added to the mesencephalotomy in the hope that the thal amic lesions would produce a state of indifference to remaining pain similar to that observed after prefrontal lobotomy by Freeman and Watts [5]

Case 1 —This forty-seven-year-old white woman was diagnosed seven years prior to admission as having tic douloureux for which she underwent a retrogasserian rhizotomy by another neurosurgeon. Her pain was lightening-like in character and localized in the right face and temple, it was aggravated by the operation so that she complained frequently and bitterly Morphine in 15 mg -doses several times daily failed to relieve her Following unilateral mesencephalothalamotomy on the left side, the pain disappeared except for occasional paresthesias around the right eye She had a right-sided hypalgesia which lasted several months and then subsided. However, the pain did not reappear, and she has been free of this symptom since her operation eighteen months ago

Case 2 —This was a thirty-four-year-old white woman with severe diffuse burning pain of the right lower extremity following spinal trauma. Several disk operations, bilateral chordotomies, rhizotomy, sympathectomy, and intraspinal injection of alcohol did not relieve her Since a first mesencephalothalamotomy was insufficient to relieve her, a second operation was performed Following the second operation, the patient presented first a picture of confusion, particularly a disorientation for time, memory disturbances, and psychomotor retardation. During this stage the patient was rather indifferent to pain in that she did not complain about it When

each, one patient has had four seizures, and in all cases these were controlled by appropriate medication which could be discontinued about six to eight months after operation A fifth patient (Parkinson's disease with marked cerebral atrophy) had several convulsions before adequate medication could be prescribed

The patients were usually alert and able to take nourishment on the first postoperative day, although many (particularly the schizophrenics) were slow to finish meals and had to be encouraged to eat In most instances the patients were able to be up and about the ward by the fourth day after operation, and discharge from the hospital was usually on the ninth to fourteenth day

Material

The 42 cases included in this report were all private patients, most of whom were operated on at the Neurological Institute of New York. The first operation took place in October, 1946, and all the patients have been followed, personally or by mail, for at least six months after operation Some of the cases have been reported in other publications [2,3,7] In every case, when operation was undertaken, the individual was already hospitalized in a mental institution, or hospitalization was imminent and operation was undertaken to forestall institutionalization if possible

The patients ranged in age from twenty to sixty-nine years at the time of operation Sixteen of the patients were men, and 26 were women The shortest duration of illness was one and one-half years, while the usual duration was much longer, ranging up to twenty years

Except for two patients, shock treatment had been tried without success in all of these individuals, and in these two patients it was felt that the schizophrenic process was too malignant and progressing too fast to postpone operation Such psychotherapy as was available had been tried in all cases (including psychoanalysis in several), and it appeared to have little more to offer these patients in their preoperative state Briefly then, the outlook with any of the usual types of therapy was poor in these individuals, and all of the illnesses carried a grave prognosis

By far the larger number were diagnosed schizophrenia (32), and among the schizophrenics the paranoid form of the illness predominated (15) Many of the patients did not fit easily into the usual subcategories of schizophrenia and have, therefore, been listed according to the predominating form of behavior disturbance or symptom formation (Table 1) The nonschizophrenic cases fell into the group of affective disorders

TABLE 1 —SOCIAL AND VOCATIONAL STATUS OF 42 OPERATED PATIENTS WITH FOLLOW-UPS OF SIX MONTHS OR LONGER

	Number of Cases	Social Rating* 0	1	2	3	4

* Key 0—no improvement 1—patient was still institutionalized but more easily manageable 2—patient was capable of supervised living at home or in an institution (ground parole) 3—patient was at home and working or capable of working at a level below his pre-illness capacity 4—patient was at home and capable of functioning socially and vocationally at a level as good as his pre-illness capacity

(seven), obsessive-compulsive and phobic neuroses (two), and psychopaths (one)

Psychiatric Management

Immediately after operation and for a variable amount of time extending up to several weeks, the patients went through a period in which they could be described as distractible and hollow For several days or a week after operation there might be outbursts of anger or resentment, but the patients were usually cooperative, correctly oriented, and presented no great problem in management As soon as they were able to get out of bed, they were encouraged to participate in occupational therapy, to go for walks with the nurse, and to attempt other activities before they left the hospital at the end of the nine- to fourteen-day period Further handling depended on the patient's condition and the sociologic setting which was available after discharge Whenever the family was sympathetic and able to undertake his care, the patient was returned home, since we believe that progress is quicker when there is someone available on whom the patient can lean for support and when he is returned to the stimulating surroundings which everyday living affords In cases where too much psychopathology remained immediately after operation, care at a rest home, convalescent farm, or sanitarium was recommended for a period of several months When this was done, it proved highly desirable that the patient should not be returned to a regime of routine handling along with other chronic psychotics Under

RESULTS OF TOPECTOMY IN THE TREATMENT OF PSYCHIATRIC CONDITIONS

JOHN J WEBER, M D ,* New York City, ROBERT G HEATH, M D ,* New Orleans, Louisiana, and J LAWRENCE POOL, M D , New York City

(From the College of Physicians and Surgeons, Columbia University, and the Tulane University Medical School)

THE name topectomy (Gr *topos*, place, *ektome*, to cut out) was first used by the investigators of the original Columbia-Greystone project in March, 1948, to apply to the bilateral, symmetric removal of a portion of frontal lobe cortex [1] In earlier publications by Heath and Pool the same procedure has been referred to as fractional ablation of frontal lobe cortex [2,3] Penfield has referred to a similar procedure as gyrectomy, a term which suggests removal according to the anatomy of gyri [4] Since the operation, which is the subject of this paper, is not carried out on that basis, we have chosen to use the less specific term of topectomy

Operative Procedure

The experimental work of Mettler and Richter and Hines, as well as the clinical observations of the Columbia-Greystone Associates, led to the development of the present technic [5,6] Operation is now carried out by turning a single bone flap and exposing the frontal cortex The rostromedial portions of Brodmann's areas 9 and 10 are then resected on both sides (Fig 1) ** The removal includes those portions of areas 9 and 10 which lie on the medial surfaces of the brain, and resection is carried as far as the depth of the gray matter only, sparing white matter entirely except for small portions which extend into the resected convolutions themselves The amount of tissue removed in this way is approximately 25 to 35 Gm on each side

Fifteen of the patients included in this series had area 9 alone removed, since they were operated upon early in the development of this technic Five of this group subsequently had a second operation in which area 10 was removed after they failed to maintain improvement following the ablation of area 9 alone Three of these five made and maintained significant improvement after the second operation This fact, as well as experience gained from the Columbia-Greystone series, led to the standardization of the operation as it is now practiced

Additional data concerning the operative technic have been submitted for publication, but it may be seen even from this brief description that the amount of gray matter sacrificed by topectomy is far less than the amount disconnected by the conventional lobotomy and is probably somewhat more than the amount disconnected by a transorbital lobotomy [7-9] However, as compared with either of the lobotomy operations, topectomy would appear to offer the advantages of an open procedure, in which the operative field is clearly visible at all times and bleeding can be well controlled

Operative Results

Among 95 patients operated on to date by Pool there have been no operative fatalities Among a total of 130 patients who have had topectomies performed by various neurosurgeons, we have learned of only one operative death, making an over-all mortality of less than 1 per cent None of the patients in the present series has had any serious complications as a result of operation. Prolonged or permanent incontinence has not occurred Three patients have had two seizures

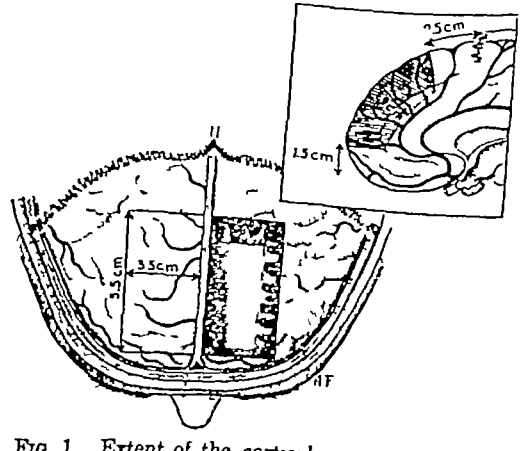

FIG 1 Extent of the cortical removal (viewed from above) Insert indicates the extent of the removal on the medial surface.

* By invitation.

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York Buffalo Section on Neurology and Psychiatry May 6 1949

** The use of Brodmann a chart in selecting the operative site is not meant to imply that the authors accept this map as being physiologically significant Brodmann s designations were taken only because they are widely known and any other standard system of topography could serve equally well as a guide for the operative removal.

functioning, thus making a more constructive and self-satisfying life possible in spite of inherent handicaps Patients with affective illnesses and obsessive-compulsive neuroses present a different picture in that these individuals are usually well-organized (even rigid) before illness and are capable of achieving some sort of interpersonal relations and emotional rapport with others The repression of anxiety and other unpleasant emotions plays a more specific part in the genesis of their illnesses, and, therefore, operation with its release of emotional tension is of greater value Integration is better achieved in this group than in the schizophrenics, and the results of operation are, therefore, more gratifying

We have come to regard the effect of operation as one associated with alteration of affective responses Objectively, the patients appear more relaxed immediately after operation, and subjectively they express the change in themselves in phrases such as "I don't feel as tense as I used to, things don't bother me so much now," etc There does not appear to be any blunting of emotional responses associated with personal relations with other people, and they continue to react appropriately with fear, anxiety, weeping, and rage when these emotions are called for by environmental stimuli There is, however, a marked reduction in their response to painful memories associated with the past which is accompanied by increased ability to verbalize distressing incidents which had previously to be repressed It may take considerable time for the patient to accept and act upon this change in his emotional responses even though he may verbalize the difference in his feelings immediately after operation Improvement in behavior and symptomatology, therefore, occurs gradually in most instances, and changes may be expected six months after operation or even longer, while the patient is testing out his newly acquired emotional freedom and making steps toward integrating without having to labor under his former tension

Results of Operation

It is difficult to arrive at a quantitative evaluation of psychiatric improvement following any type of supposedly therapeutic procedure, and this difficulty is just as great when considering psychosurgery patients as it is with other forms of treatment We have chosen to grade the patients numerically according to their social and vocational adaptation after operation, realizing full well that this is not a complete account of the changes which occurred following surgery (Table 1) For some patients and in some conditions, the rating of 2 (indicating that the patient is capable of supervised living, at home or in an institution) is an indication of great strides toward improvement For others, a top rating of 4 is actually less of an achievement In addition, there are differences in individual adaptation which cannot be reflected in such ratings Thus, the schizophrenic patient retains a schizoid personality structure even in the most successful cases, but this may not seriously interfere with the patient's social and vocational adjustment, and a top rating may, therefore, be possible The obsessive-compulsive patients, on the other hand, retain their rigidity and their dependence on meticulous performance, even though they lose most or all of their presenting compulsions, Such traits are not reflected in a numerical rating

In all cases improvement took place gradually over a period of many months, except for overt anxiety which was immediately diminished by operation Depressions and obsessive-compulsive symptoms also had an initial prompt response to operation, but the postoperative course of these patients showed further, more gradual improvement of their symptoms with the passage of time In the case of schizophrenics there was often an increase in symptomatology immediately after operation followed then by the usual period of gradual improvement In some cases, this progressed to a point where psychotic material was difficult to obtain even when the patient was being seen frequently in follow-up sessions In other patients, delusions and hallucinations persisted in their old form but were not spontaneously expressed or were expressed without any emotional intensity or any desire to act upon them In those schizophrenics who did not improve, psychotic behavior, including delusions and hallucinations, remained apparently unaffected by operation

Two patients (both schizophrenic and in one of whom a diagnosis of postencephalitic behavior had been suggested) had topectomies performed after a conventional lobotomy had already been carried out unsuccessfully No improvement resulted in either of these cases

Two patients relapsed after achieving ratings of 3, six months after operation Both had to be rehospitalized about one year after operation

Indications for Operation

The present series of cases includes many patients with complicating organic brain disease as well as chronic, deteriorated schizophrenics on whom operation was carried out as a last resort Experience has shown that little gain can be expected after topectomy in such patients, and our present view is that the patients who are most suitable candidates for this procedure are those with the following disorders (1) obsessive-compulsive and phobic neuroses who have not

such conditions there is little opportunity for identification with healthy individuals, and the patients tended to regress into their old patterns This was particularly true of schizophrenics in whom the pattern is frequently one of imitating the behavior of those about them When sanitarium care has been thought necessary, a program similar to "total push" has been recommended with the emphasis being on reviving old interests and creating new ones

Sanitarium care was also resorted to with many patients whose families were unwilling or unable to accept the patient at home In such cases, the impersonal atmosphere of an institution, no matter how well managed, sometimes served to increase the feelings of rejection which already existed It was sometimes helpful in these cases to board the patient at a private home with a psychiatric nurse or some other capable and understanding person, and in several instances the results of such handling were most gratifying

Psychotherapy was carried out on every patient for whom it was practically feasible, and it was begun while the patient was still in the hospital In most instances, the patients were too shallow to make reconstructive therapy possible immediately after operation, and the psychiatric handling was superficial and reassuring at this time Psychotic material which was previously latent sometimes came out during these first days, however, and the information gained was of considerable value to the psychiatrist later on in treatment Subsequent psychotherapy varied widely in its intensity, type, and quantity among different patients Some of them returned to the care of referring psychiatrists and analysts in and around New York. Among those who were followed by the authors, an attempt was made to achieve some insight into the basic problems of illness and to support them in their attempts to achieve a more realistic adjustment to life The schizophrenics received the most psychotherapy by and large, although the emphasis in this group was largely supportive and less directed to the achievement of insight Among the obsessive-compulsive and phobic patients, psychotherapy was sometimes helpful in gaining understanding of the basic mechanisms of illness, and in this group it was usually possible to discuss material which would not have been available before operation because of the profound anxiety with which it was associated Involutional psychotics and depressed patients received the least amount of psychotherapy and, in general, seemed to require it less than did the other patients

Regardless of the type of illness, the attitude of the family toward the patient and their handling of him seemed to be of great importance. Kind and sympathetic assistance in the period of readjustment was of great help Conversely, a rejecting family or an overdemanding or over solicitous one could be a great obstacle to the patient's recovery Whenever possible, the family was coached on the nature of the problems which the patient would be facing and was offered practical suggestions on how to handle them

Evaluation of Personality Changes Following Topectomy

In any psychosurgery operation the achievement of desirable personality changes poses a challenge in attempting to describe the nature of the changes observed and the means by which these changes occurred Topectomy has provided a unique opportunity for such study, since these discrete cortical removals have not resulted in gross deterioration of personality function in any patient It has, therefore, been possible to concentrate more closely upon the changes which accompany improvement and the way in which these changes are apparently brought about. Reports from families of patients followed at least one year after operation, as well as clinical follow-up interviews, have not demonstrated that operation produces any loss of conscientiousness, social responsibility, or initiative Wechsler-Bellevue intelligence tests have not consistently revealed a loss (even though most of the retests were done in the period seven to ten days after operation), and in some patients there has been an actual increase in I Q, presumably a reflection of decreased preoccupation with psychotic material following operation

The clinical course following topectomy shows considerable variation depending upon the type of patient operated, and we feel it necessary to stress this factor of individual variability if the effect of operation itself is to be understood at all In the light of clinical experience with topectomy, it now seems clear that the psychopathology, personality organization, and adaptive patterns of the patient who is operated on must be considered, as well as the nature of the operation itself, if any light is to be shed on the meaning of the personality changes consequent to surgery For practical purposes, this problem is most important in considering the schizophrenic patient as opposed to the patient with an affective illness or an obsessive-compulsive neurosis In the case of the schizophrenics, operation is carried out on a patient whose integration is already loose, whose adaptive mechanisms are faulty, and whose effective avenues of emotional expression are limited Operation cannot change these basic factors, and all that can be hoped for is that a maximum utilization of assets can be achieved by relieving the affective pressure under which the patient is

A COMPARISON BETWEEN VARIOUS FORMS OF PSYCHOSURGERY

FRED A METTLER, M D , New York City

(Director, New York State Brain Research Project, Department of Mental Hygiene of the State of New York)

BEFORE one can draw any useful conclusions about the usefulness of the various forms of psychosurgery more or less widely employed, it is necessary to come to some conclusion about how any form of psychiatric therapy can be evaluated In attempting to evaluate any form of therapy—either psychiatric or more broadly medical—one needs to establish certain specific definitions and criteria

Criteria for Evaluating Therapy

1 The condition to be treated must be qualitatively and, if possible, quantitatively defined Ordinarily, the qualitative aspects of such a definition will include objective demonstrations of all pertinent etiologic and pathologic circumstances In the case of psychiatric disorders it is difficult, if not impossible, to proceed beyond impressions and often purely personal estimates of etiology and "pathology" Under ordinary circumstances physiologic and chemical tests afford many opportunities to express the extent of the disorder in a quantitative manner This is still not feasible in psychiatry, but the quantitative aspects of the temporal circumstances of psychiatric disorders, at least, should be given in some consistent and meaningful manner If one is concerned with limited aspects of a broader condition, these limited aspects should now be defined further

2 The next requirement is an estimate of the degree of accuracy with which the condition to be studied can be diagnosed and how accurately the precise phases to be studied can be known to exist It is, in other words, of no practical use to construct an elaborate definition which is unclear and difficult of application. The mathematical possibility of effectively applying the definition to a large number of cases chosen at random should be known.

3 Having defined the nature of the condition to be treated, having determined the precise segment of it which is to be studied, and knowing how confident one can be in applying these definitions, it is necessary to ascertain what "spontaneous" fluctuations may occur in the studied segment of the condition Is spontaneous cure possible, and if not, what is the range of improvement which can be expected in a large number of comparable cases? How long does such improvement last, and how notable is it? If such observations can be quantitated, they should be

4 With the above information at hand one must now establish how the fluctuations of the process under study are affected, not only by the therapy to be evaluated but also by a reasonable number of the other nonspecific operational aspects of the therapy, which aspects might be expected to exert an influence on the processes under study For example, psychosurgical procedures involve considerable operational pother beyond the actual surgery What influence does this exert?

While the above criteria can be accurately applied to a large body of medical therapeusis, these criteria require to be supplemented wherever the nature and extent of improvement are themselves obscure If it is necessary to inquire, as it certainly is in psychiatry and in the case of certain recalcitrant chronic diseases, whether a particular change in the patient's condition constitutes real improvement, then it is surely necessary to establish a specific and exclusive definition of improvement Such a definition should state what varieties of alterations are not to be considered improvement, as well as wherein improvement consists. The definition should be of such a nature as to render improvement expressible in an objective and preferably measurable manner, and the factor of error in arriving at an estimate of the existence and degree of improvement should be stated

To recapitulate The degree of accuracy with which the particular aspect of the condition to be treated can be defined must be determined and so must the degree of accuracy with which the existence and extent of improvement can be determined To determine the influence of spontaneous change and the nonspecific effects from the therapeutic procedure, two or three comparable groups of cases should be established under comparable conditions One group should be followed to determine the degree of spontaneous improvement which may occur, and another should receive the specific therapy to be evaluated If a third group exists, it should be subjected to all the nonspecific aspects of the therapeusis to be evaluated.

Presented, by invitation at the 143rd Annual Meeting of the Medical Society of the State of New York, Buffalo Section on Neurology and Psychiatry May 6 1949

responded to psychotherapy, (2) affective illnesses including involutional psychoses and manic-depressive psychoses who have not improved with psychotherapy and shock treatment, and (3) schizophrenics in whom some degree of appropriate affective response remains and in whom emotional tension appears to play an important part in the production of symptoms Those schizophrenics, whose illness came on very early in life and who had been capable of little achievement before they broke down, appear to do poorly after operation Apparently, the genetic (constitutional) element in such cases is too large and the capacity for integration too small to make topectomy of value In general, the hebephrenic type of schizophrenia has responded least well to operation, while the paranoid and catatonic patients have shown more impressive improvement We do not feel, however, that the choice of operation can be determined on the basis of clinical subcategories alone The extent to which the symptoms are circumscribed, related to emotional tension, and free of markedly regressive, reparative features appears to be of greater importance in predicting the eventual outcome after operation.

We continue to feel that operation should not be carried out until psychotherapy and shock treatment have been tried first, as these procedures may be indicated by the specific condition. Shock treatment, whether insulin or electroshock, should not be excessively prolonged This is particularly important among the schizophrenic patients, since regression and emotional deterioration may proceed, even during shock treatment, to a point where operation is no longer of value Electroshock is frequently resorted to among obsessive-compulsive patients who are resistant to psychotherapy In our experience, it has not helped these patients and may cause further difficulties by interfering with memory The obsessive-compulsives do respond well to topectomy, however, and since recovery comes with no apparent impairment of personality function, one may question the necessity for subjecting this group of individuals to shock treatment before operation is advised

As a final comment on shock treatment and the choice of patients for operation, it should be added that a favorable temporary response to shock treatment appears to be a good prognostic sign for the outcome of operation Although far from infallible, this has been useful to us and appears to be a point worth taking into consideration when taking the history

Summary

1 The development of topectomy and the technic of operation are described briefly

2 The effect of operation in altering the course of illness is evaluated in terms of affective change associated with painful memories

3 Results of operation are given for 42 psychiatric patients who were followed at least six months after operation.

4 Suggestions are made concerning the choice of patients for whom operation is to be recommended

HOTEL STATLER, NEW YORK CITY

from psychosurgery Patients who show few or no lucid intervals and who are extensively deteriorated cannot be expected to show much benefit There is no reason to believe that these circumstances vary with different forms of psychosurgery

Psychosurgery in the Individual Case

Little definitive evidence has so far appeared to show that benefit from psychosurgery follows conventional diagnostic lines In general, cases exhibiting "tension" or "painful affect" may be expected to show a lessening of this In the present writer's opinion it is worth making an attempt to arrive at an estimation of the apparent source of the patient's disturbance and to determine whether this is apparently of endogenous origin or whether he seems to be overresponding to real external stimulus situations It is my personal impression that cases showing the greatest concern with themselves, their sensations, delusions, hallucinations, or personal productions tend to lose such concern as a result of psychosurgery, but that patients who are overresponding to external stimulation may actually show an exaggeration of this tendency It is only fair to say that there are those who disagree with this point of view, which regards deprivation of frontal tissues as a process which "externalizes" the patient and directs his attention outward and which is, therefore, undesirable when the patient is already abnormally extroverted

Whatever view we take of these matters, there is still no evidence to indicate that any one of the psychosurgical technics acts in a manner fundamentally different from any other in so far as "improvement" is concerned, and it is by no means certain that all aspects of "improvement" are causally related to operation

"Adverse" Effects of Psychosurgery

The principal differences which have thus far emerged between the various forms of psychosurgery are in the nature of variations in number and extent of undesirable effects

Disregarding leucotomy by coring, which has now generally been abandoned as likely to yield unpredictable results, and lobectomy, which does not give results essentially different from complete lobotomy and is technically less satisfactory, the highest death rate and greatest number of "undesirable" effects, such as incontinence, inertia, and inability to care for oneself, occur after complete radical lateral transcranial lobotomy By rendering the operation less complete and thus less drastic, the death rate and number of "undesirable" phenomena can be substantially reduced When only the frontal poles are disconnected, as in transorbital lobotomy, the death rate is negligible and "undesirable" signs are difficult, if not impossible, to detect The death rate in topectomy is nil, and "undesirable" phenomena can be entirely avoided While adequate data are still not available, the same should be true of thermocoagulation and of undercutting of the cortex Thalamotomy seems to carry a higher death rate

It should be recalled, in passing, that there are occasions, as in suicidal cases, where "undesirable" phenomena, such as inertia, may be just what one wants to produce In such cases none of the other technics can be expected to yield the results obtained by drastic lobotomy

Postoperative Convulsions

Thus far it would appear that the highest incidence of convulsions may be expected after radical lobotomy and the fewest after transorbital lobotomy, with topectomy occupying an intermediary position depending on the location ablated Undercutting of cortex should be in the same class with topectomy and thermocoagulation safer than either Data on thalamotomy are still incomplete

In the case of lateral transcranial lobotomy, reoperation produces a very high percentage of convulsions If it is anticipated that failure may attend an initial operation, a drastic lobotomy should be performed immediately, or else the initial operation should be of a type other than lobotomy

Pain

The literature on the effect of psychosurgical technics on intractable pain is still fragmentary and obscure but suggests that almost any psychosurgical procedure may give equally satisfactory results Apparently, it is immaterial whether the operation is bilateral or unilateral, and, if the latter, also immaterial which side is selected for operation, even though the pain be unilateral Such data indicate their own unsatisfactory nature One of the difficulties with the literature of this subject is that really adequate determinations of the threshold for pain have been arrived at in only a small number of studies On the whole, the effect of psychosurgery on pain is rather unpredictable

Physiologic Effects of Psychosurgery

The amount of factual material to indicate what effects psychosurgery produces is so slight that there is little to be gained from theoretic speculations about the differences between the various forms of psychosurgery thus far introduced

In theory, lobotomy differs from topectomy, undercutting of cortex, or thermocoagulation by

Does Any Form of Psychosurgery Exert a Beneficial Effect?

That cases do "improve" after psychosurgery no one will deny, but there will be much argument about the nature of such "improvement" It is by no means clear how many patients who have been subjected to psychosurgery would have improved without it, nor is it at all certain whether the so-called improvement is significant, piffling, or even existent Moreover, there are those who feel that the patient subjected to psychosurgery has lost more than he has gained In any event, to say that some patients do improve after psychosurgery is not particularly edifying, since cases also improve after electroconvulsive therapy, insulin coma, metrazol shock, psychotherapy, or when left to themselves without benefit of any "therapy" Thoroughly satisfying figures, demonstrating the degree of efficacy of any existing technic of psychiatric treatment, are lacking Worse still, it is very difficult to come by reliable information which would enable one to evaluate the accuracy of methods of psychiatric diagnoses or the mathematical value of prognoses in that field Such uncertainties, familiar enough to the psychiatrist who picks his way about with evasive caution, constitute a quagmire in which the neurosurgeon attempting to evaluate his results soon flounders Until psychiatrists are able to develop adequate technics for the objective and incontrovertible evaluation of therapy or until this is done for them, it is obviously impossible to compare the subtler aspects of the different psychosurgical approaches In particular we know little or nothing about the most critical question of all, "Why does psychosurgery have a beneficial effect in those cases in which beneficial effects have been reported?" One might also be tempted to add, "And are such beneficial effects related to the performance of such psychosurgery?"

Influence of Duration and Nature of Illness on Improvement After Psychosurgery

On the last point mentioned in the previous paragraph it is possible to develop some information which, even though it would not enable us to determine whether an operation had been of value in a particular case, may indicate what probability exists for a lack of such a relationship Thus, if one considers discharge from an institution as a measure of improvement, psychosurgery should produce results superior to the known rates of discharge which were obtained prior to 1940 (since before that date few, if any, discharges could have been attributed to psychosurgery) According to Landis and Page the pertinent percentages of discharges within the first twelve months after admission, prior to that time, may be expected to be approximately as follows for psychoneuroses, 70 to 75, for manic-depressive psychoses, 65 to 70, for involutional psychoses, 40 to 45, for schizophrenia, 25 to 30, or for mental diseases as a whole, about 40[1] After the first year of institutionalization the percentage of discharges falls and, although continuing perceptible, is small after the third year It is clear enough that in using discharge of institutionalized patients as a measure of their improvement, one is dealing with the terminal fragment of a curve which begins at a very high level and rapidly flattens almost to a plateau after three years of institutionalism It is obvious, if discharge is related to improvement, that the rate of improvement must be very much higher in patients who have not progressed to the point where institutionalization becomes necessary or advisable Bearing in mind that the criteria used for reporting improvement after psychosurgery often have quite different implications from those in which discharge from an institution is used as a measure of improvement, the present author is aware of no body of reliable data which indicates that any psychosurgical technic produces, in a large group of noninstitutionalized cases or cases institutionalized for less than three years, results which are superlatively better than can be achieved by other methods of therapy or even by no therapy at all While psychosurgery may actually be capable of a more favorable showing, the data have not yet been brought forward to prove this, and to find the benefits to be derived from such procedures, one is forced to the entirely unreliable practice of particularizing about individual cases or dealing with cases in the aggregate which have been institutionalized for at least three years

Psychosurgery in the Chronic Institutionalized Case

Although results in Schrader's early series of lobotomies indicated that better than chance improvement could be obtained in chronic institutionalized patients, the majority of early writers in this country tended to avoid the chronic institutionalized case Recent statistics, however, indicate that the results obtainable in cases of this sort are really better than were originally anticipated Topectomy (ablation of restricted amounts of cerebral cortex) evidently is also capable of giving better than chance results in chronic cases Transorbital lobotomy is not thought to be so useful in late as in early cases Little is yet known about what the other forms of psychosurgery may yield in chronic cases

Among chronic institutionalized cases those who have shown favorable reactions to shock therapy are most apt to show beneficial effects

THE PLACENTAL STAGE AND POSTPARTUM HEMORRHAGE

WILLIAM J DIECKMANN, M D , A G SESKI, M D , C P MCCARTNEY, M D , and R C SMITTER, M D , Chicago, Illinois

(From the Department of Obstetrics and Gynecology of the University of Chicago and the Chicago Lying-In Hospital)

HEMORRHAGE is one of the three principal causes of maternal mortality and in some areas ranks first These deaths are either preventable or have preventable factors Some of the patients do not die from the hemorrhage, but their resistance is lowered to such a degree that they succumb to infection There are no figures available as to the incidence of postpartum hemorrhage for the country as a whole, but, since the number of hemorrhages in teaching hospitals is still 1 per cent or more, the incidence for the country must be considerably greater The vital statistics for 1946 showed that, after omitting abortions, ectopic pregnancies, and patients dying undelivered, there were 3,530 women who died from maternal causes Infection accounted for 30 per cent and toxemia 21 per cent, 13 per cent died from hemorrhages of childbirth and the puerperium and 9 per cent from placenta previa or abruptio placenta Postpartum hemorrhage will always occur However, proper instruction as to the conduct of the placental stage will not only reduce the incidence of this complication to a minimum but will prevent maternal mortality Doctors must acknowledge that death from postpartum hemorrhage is preventable in all hospital services and even in home deliveries If death does occur, the doctor must admit his error or possible culpability at the staff meeting

Gordon studied the 286 maternal deaths in Brooklyn for the period 1937 to 1941 and noted that the death certificates gave hemorrhage as the cause of death in 28 per cent, but, when the patients' records were reviewed, hemorrhage accounted for 41 per cent and was number one "killer"[1] Grimes and coworkers in 1948 reported that in Georgia hemorrhage accounted for 13 per cent of the maternal deaths in 1936 and 31 per cent in 1947[2] Four per cent of our deaths and 9 per cent of the maternal deaths at the New York Lying-In Hospital over a fourteen year period were due primarily to postpartum hemorrhage[3,4] On our service the hemorrhage was an important contributory factor in another 4 per cent These are preventable deaths

On our service 16 per cent of the cases of fatal postpartum hemorrhage were due to retained placental tissue and 36 per cent to atony (no other demonstrable cause) This latter group is much larger in the nonfatal cases and is of particular concern because a properly conducted second and third stage of labor will prevent almost all of these hemorrhages

Studies of deaths due to postpartum hemorrhage by Beecham in Philadelphia, by Glass and Rosenthal in Brooklyn, New York, and by other investigators in Chicago, reveal the following factors

1 There are usually two or more hours between delivery and death—sufficient time for adequate therapy

2 Blood loss is markedly underestimated

3 Doctors are opposed to manual removal of the placenta and to examination of the uterine cavity, even if there is bleeding or possibility of retained placental tissue

4 There is too much reliance on repeated injections of oxytocic drugs

5 Blood transfusions are given too late and are too small in quantity[5-7]

Some of the case abstracts read as if they were taken from hospital records of the last century Apparently nothing was done for some of the patients who died Glass and Rosenthal report a patient who was transferred to her room with the placenta retained and found dead in bed from hemorrhage thirty-six hours later[8] They also report five deaths due to inversion of the uterus Allen and coworkers report four cases, three of which occurred in 5,000 deliveries[8] Johnson reports nine cases[9] The senior author has been in a maternity hospital since 1921 as house officer or member of the staff in a full-time capacity and has never seen an inversion of the uterus Only one occurred during the twenty-eight years

Several tragic cases of postpartum hemorrhage resulted in a recommendation from the Chicago Maternal Mortality Committee that every hospital with an obstetric service must have a procedure established by which, if the patient's doctor could not be reached in an emergency, some *qualified doctor must see the patient within an hour*

In the past two years there have been at least four reports on the management of the placental stage There still is uncertainty about it and especially fear of invading the uterus Joyce and Lennon in 1948 reported that at Oxford in

Presented by invitation at the 143rd Annual Meeting of the Medical Society of the State of New York, Buffalo Section on Obstetrics and Gynecology May 4 1949

virtue of preservation of the associational connections It is difficult to see why preserving a few association fibers would be of any value in view of the necessarily larger number of projection fibers which are sacrificed in lobotomy It has also been said that lobotomy severs primarily the thalamocortical radiations of the medial nuclear mass and thus interrupts a circuit proceeding centrifugally from the dorsal thalamus to the cortex (for the elaboration of the psychic aspects of the disorder) and centripetally from the dorsal thalamus to the hypothalamus (for the elaboration of the affective component of the psychosis) The factual basis for this theory is weak, and it is not clear why the severance of thalamocortical fibers should be of more significance than severance of projection fibers

Assuming that autonomic effects play a role of greater significance than the end result of mere affective display, it might be anticipated that topectomies, undercuttings, or thermocoagulations of the cingulate or basal frontal regions might give results superior to those of operations upon the lateral granular frontal cortex, inasmuch as the two former regions appear to be more active in the autonomic sphere than does the lateral granular cortex. Conclusive data are still unavailable

The advantages or disadvantages of thalamotomy, if such exist, would appear to be of a practical rather than theoretic nature

Conclusion

It is illogical to imagine that one form of psychosurgery or even one form of a particular operative procedure is applicable to all psychotic individuals or even to all individuals suffering from the same sort of psychosis or symptomatology The field of psychosurgery is a peculiar one in that it is not a simple matter for the general practitioner to decide how to get a proper consultation for a case There is much emotional feeling among psychiatrists about whether psychosurgery should or should not be done, and few of the psychiatrists who do recommend psychosurgery display an impartial point of view toward all procedures The neurosurgeon is, of course, not trained in psychiatric diagnosis as he is in neurologic diagnosis and must depend on his associates for a proper evaluation of the case It is, therefore, unfortunate that transorbital lobotomy is being done by some psychiatrists themselves The operation is surprisingly free from complications despite its apparent barbarity, and as it comes to be done more and more widely by psychiatrists of varying grades of competence, it will ultimately be taken up by opportunists with little or no psychiatric training Psychiatrists would probably have done better to have left this procedure to the neurosurgeons than to have opened the door to exploitation. The day is probably not far off when the more precise legal aspects surrounding psychosurgery will have to be determined Meanwhile, the cautious neurosurgeon will leave psychiatric diagnosis and prognosis to the psychiatrist, and the latter will allow the neurosurgeon to do any cutting he feels should be done.

In any event no case should be subjected to psychosurgery unless (1) a complete, recent, and energetic restudy of the case has been made by a competent and industrious psychiatrist, (2) strenuous efforts have been made to readjust the patient's home environment without success, and, (3) all available, promising, less drastic therapeutic methods have been exhausted Now, as ever, our guiding principle should be "*nihil nocere*"

BIRTH RATE INCREASES

The reproduction rate of college-educated women in this country has made "remarkable progress" since 1940, with an 81 per cent increase between 1940 and 1947, the Population Reference Bureau, a nonprofit organization in Washington, D C, announced recently

The reproduction rate of women college graduates was 40 per cent below replacement in 1924 and 48 per cent below in 1940 In 1947, women college graduates had a rate only 5 per cent below that needed for replacement

The Bureau reported also that graduates of co-educational and Western colleges produced the largest families.

the muscular portion of the uterus may contract about a portion of the placenta and make the expression difficult If this happens, the placenta, which is almost always protruding into the upper vagina, can be grasped with the sterile gloved hand and gently extracted All placentas are removed manually, if necessary, at the end of one hour maximum, and usually within fifteen minutes If there is hemorrhage, the placenta is expressed or removed manually at once

Dieckmann's data indicate that, where an oxytocic was used in the late second stage of labor, the incidence of hemorrhage amounting to 300 ml or more with (2 per cent) and after the placenta (7 per cent) was very definitely decreased, and postpartum hemorrhage, i e, 500 ml or more, was practically eliminated [3]

The senior author has been advocating manual removal of the placenta as a teaching procedure for many years We believe that the only way one can learn how to remove the placenta manually is to do it in normal cases under supervision If doctors would learn this procedure, they would not be removing omentum and intestine mistakenly for placenta They would also be able to recognize the rare case of adherent placenta, inversion of the uterus, incomplete rupture of the uterus, and myomas within the uterus

We have no hesitancy in performing manual removal of the placenta, in fact every assistant resident during his initial three-month period in the birth rooms removes three to five placentas manually for teaching purposes In a six-month period in 1945 there were 18 placentas removed manually During similar six-month periods since January 1, 1946, the number of placentas removed manually has ranged from 80 to 176, the majority, of course, for teaching purposes There have been more than 1,206 manual removals of the placenta between July 1, 1933, and March 1, 1949, of which 681 occurred since January 1, 1946 In September and October there were 48 manual removals, and the total obstetric morbidity was 4 1 per cent, in November and December the figures are 105 with 2 8 per cent morbidity, and in January and February there were 45 manual removals with a 3 7 per cent total morbidity Cacciarelli reports 1,625 routine manual removals of the placenta with no increase in morbidity [16]

Some of the maternal mortality due to postpartum hemorrhage must be charged to various obstetricians who teach that the postpartum uterus must not be invaded without a life or death indication because of the possibility of infection If doctors will learn that it can be explored without any increase in morbidity or mortality, providing proper aseptic precautions are used, they will have less hesitancy in examining the interior of the uterus whenever there are any complications

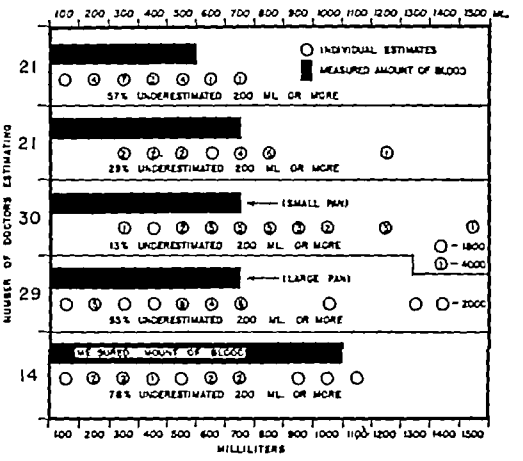

FIG 1 Estimates of blood.

Dieckmann and Daily reported in 1935 that the average total blood loss at delivery (episiotomy plus uterine) was 342 ml [17] Odell and Seski in a study on our service found that the average blood loss from an episiotomy was 253 ml [18] Our data indicate that most patients lose approximately 50 ml with the placenta and 129 ml after the delivery of the placenta, and if there has been an episiotomy or extensive laceration, an additional 250 ml or more, making a total of approximately 430 ml. or more of blood in presumably normal deliveries (episiotomy) [3] The pregnant woman does not have an extra supply of blood which will permit her to bleed excessively at delivery The withdrawal by venesection of 500 ml of blood from pregnant patients can be detected by changes in the blood within five minutes, and within twenty-four hours each patient shows an appreciable drop in hemoglobin, hematocrit, and serum protein concentration If either placental or episiotomy bleeding is slightly excessive, the total blood loss at delivery will be well over 500 ml. of blood

Many of the fatalities from postpartum hemorrhage have occurred in women in whom there has been a slow trickle of blood over hours, either with or without the placenta in utero Everyone, almost without exception, underestimates blood loss One of the authors (A S), during his residency, had the various members of the house staff and staff make estimates of known amounts of blood (Fig 1) It is noteworthy that on a teaching service where an attempt is made to keep blood loss at a minimum, 62 per cent of the doctors underestimated by 200 ml or more the blood contained in basins Very few overestimated Where the patient is watched over a period of hours

the last ten years there were 156 cases of postpartum hemorrhage with only 56 manual removals of the placenta [10] The average blood loss in these cases amounted to 990 ml , but there were only 38 blood transfusions There were two deaths They advise obstetricians to wait twenty to thirty minutes for natural separation and expulsion They still advise the use of Ahlfeld's signs and the intramuscular injection of ergotrate

McLean, McDowell, and Sadugor in 1948 reported that, through the employment of a recovery room, they have been able to reduce the maternal mortality of postpartum hemorrhage from 50 per cent to 0 [11] During the period 1941 to 1945 there were 15,371 deliveries with 33 maternal deaths, 18 of which were due to postpartum hemorrhage and shock Sixty-three per cent were due to atony of the uterus They also report two hemorrhage deaths after cesarean section We have had only one such death from placenta previa in over 2,800 sections The patient remains in the recovery room for eight hours The method now in use should have been the practice during the preceding years, namely, watch for hemorrhage, control it, and replace blood

A discussion by various obstetricians in England in 1946 revealed that, since the teachers themselves have no definite plans of treatment, it is obvious why the general practitioner and even the specialist have so many cases of postpartum hemorrhage and why the maternal mortality from this condition is still so high [12]

In reading these reports of fatal postpartum hemorrhage, as well as hearing of similar cases in our own city, and looking back over some fatal cases of our own, it is obvious that the difficulty lies in a failure of the doctor to conduct the placental stage properly and to evaluate blood loss For many years we have concentrated our teaching efforts on the management of the placental stage We tell the students and house staff that 95 per cent of the patients will deliver themselves if given time, but the complications of the placental stage and the maternal mortality from hemorrhage have not been appreciably lowered during the past decade

Hemorrhage from the placental site is controlled (1) by the contraction of the uterus (compressing the uterine vessels) and by the time the contraction is over, retraction of the muscle bundles has occurred and the vessels are permanently compressed, and (2) by clotting of the blood in these vessels If there is no retraction—complete loss of muscle tone—bleeding will recur each time that the contraction is over, for no uterus can remain in a state of constant contraction

The anatomic and physiologic changes occurring in the uterus in the late second and third stages of labor have been known since 1918, but very little attention has been given to these changes by the clinician Unfortunately, the authors of our textbooks usually ascribe postpartum hemorrhage to mismanagement of the third stage of labor Davis and Boynton stated that if 0 2 mg of ergotrate were given intravenously after the delivery of the anterior shoulder and thirty seconds allowed for its action, in 72 per cent of their cases the placenta could be expressed within three minutes [13] However, all the evidence at hand indicates that the decrease in the size of the uterus during the end of the second stage causes a shearing of the placental attachments, and the contracting uterus expels the placenta as a foreign body [3] Irrespective of the use of an oxytocic drug, the placenta can be expressed in over 95 per cent of the cases within six minutes after delivery if two to four minutes were required for the birth of the baby [3] If the woman were in the upright or squatting position, gravity would cause the early delivery of the placenta With the patient in the supine position external force must be used to expel the placenta

The so-called Duncan and Schultze methods of placental separation and extrusion from the uterus are only of historical interest, and discussion should be omitted from textbooks The retroplacental hematoma is almost nonexistent if the second and third stages are properly conducted, and most obstetricians now know it has nothing to do with placental separation.

Dieckmann and coworkers reported in 1947 that slow delivery of the fetus was the factor which favored the normal separation of the placenta [3] Obviously, the uterine wall requires some time to readjust itself to the decreasing size of its cavity as the baby is expelled The final technic was to deliver the anterior shoulder, wait thirty seconds, deliver the posterior shoulder, inject 0 1 ml (1 unit) solution of posterior pituitary (1 ml of pituitary or pitocin plus 9 ml saline solution, using 1 ml. of this dilution), wait thirty seconds, and then slowly deliver the baby * The cord was held close to the vulva, stripped once toward the baby, and then clamped It has required considerable effort to keep the house staff from hurrying the delivery of the baby once the head has been born

The doctor must watch the uterus closely, and as soon as Calkins' sign is present (persistence of a globular uterus during relaxation), the placenta is expressed by the Pastore technic wherein the uterus is squeezed but kept out of the pelvis [14,15] Slight traction is exerted on the cord, once the placenta is in the vagina If one waits too long,

* Eli Lilly & Co supplied in 1 ml. ampules containing 1 unit of solution of posterior pituitary

the muscular portion of the uterus may contract about a portion of the placenta and make the expression difficult If this happens, the placenta, which is almost always protruding into the upper vagina, can be grasped with the sterile gloved hand and gently extracted All placentas are removed manually, if necessary, at the end of one hour maximum, and usually within fifteen minutes. If there is hemorrhage, the placenta is expressed or removed manually at once.

Dieckmann's data indicate that, where an oxytocic was used in the late second stage of labor, the incidence of hemorrhage amounting to 300 ml. or more with (2 per cent) and after the placenta (7 per cent) was very definitely decreased, and postpartum hemorrhage, i e, 500 ml or more, was practically eliminated [3]

The senior author has been advocating manual removal of the placenta as a teaching procedure for many years We believe that the only way one can learn how to remove the placenta manually is to do it in normal cases under supervision If doctors would learn this procedure, they would not be removing omentum and intestine mistakenly for placenta They would also be able to recognize the rare case of adherent placenta, inversion of the uterus, incomplete rupture of the uterus, and myomas within the uterus

We have no hesitancy in performing manual removal of the placenta, in fact every assistant resident during his initial three-month period in the birth rooms removes three to five placentas manually for teaching purposes In a six-month period in 1945 there were 18 placentas removed manually During similar six-month periods since January 1, 1946, the number of placentas removed manually has ranged from 80 to 176, the majority, of course, for teaching purposes There have been more than 1,206 manual removals of the placenta between July 1, 1933, and March 1, 1949, of which 681 occurred since January 1, 1946 In September and October there were 48 manual removals, and the total obstetric morbidity was 4 1 per cent, in November and December the figures are 105 with 2 8 per cent morbidity, and in January and February there were 45 manual removals with a 3 7 per cent total morbidity Cacciarelli reports 1,625 routine manual removals of the placenta with no increase in morbidity [16]

Some of the maternal mortality due to postpartum hemorrhage must be charged to various obstetricians who teach that the postpartum uterus must not be invaded without a life or death indication because of the possibility of infection If doctors will learn that it can be explored without any increase in morbidity or mortality, providing proper aseptic precautions are used, they will have less hesitancy in examining the interior of the uterus whenever there are any complications

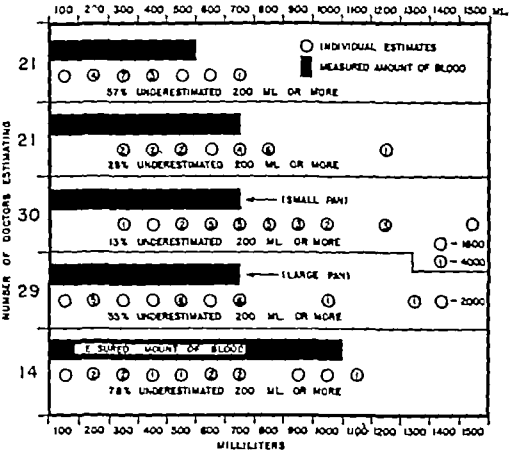

FIG 1 Estimates of blood.

Dieckmann and Daily reported in 1935 that the average total blood loss at delivery (episiotomy plus uterine) was 342 ml [17] Odell and Seski in a study on our service found that the average blood loss from an episiotomy was 253 ml [18] Our data indicate that most patients lose approximately 50 ml with the placenta and 129 ml after the delivery of the placenta, and if there has been an episiotomy or extensive laceration, an additional 250 ml. or more, making a total of approximately 430 ml or more of blood in presumably normal deliveries (episiotomy) [3] The pregnant woman does not have an extra supply of blood which will permit her to bleed excessively at delivery The withdrawal by venesection of 500 ml of blood from pregnant patients can be detected by changes in the blood within five minutes, and within twenty-four hours each patient shows an appreciable drop in hemoglobin, hematocrit, and serum protein concentration If either placental or episiotomy bleeding is slightly excessive, the total blood loss at delivery will be well over 500 ml of blood

1949	358	*Both* simultaneous	1 68	0 56	0	0

* Corrected for blood loss from episiotomy and lacerations

and the pads are not saved, it is obvious how blood loss will be underestimated until the patient is in shock with air hunger By this time the shock has frequently become irreversible An ordinary lap pad measuring 8 inches by 16 inches, not dripping, will contain 150 ml of blood A 4 inch square sponge used in perineal work, not dripping, will contain 7 ml , and the ordinary Kotex pad will contain 60 ml of blood If doctors and nurses will remember these amounts of blood and have all pads saved after delivery where the blood loss seems excessive, fewer patients will die from undiagnosed postpartum hemorrhage

Additional statistics on the placental stage are given in Table 1 It is noteworthy that, despite the repeated studies on the proper use of oxytocics, as well as concentration on the conduct of the placental stage, immediate and delayed postpartum hemorrhage still occurs, both in the cases delivered by the residents and the staff An experienced resident must be present at all staff deliveries during the first six weeks of the initial three-month birth room period and must also be present at all operative deliveries

Note the immediate hemorrhage incidence of 0 35 per cent for 1,159 deliveries in 1946, as compared with 455 deliveries in 1948, incidence 2 63, and 358 in 1949, incidence 0 56 The latter two series were delivered by different groups of assistant residents and residents The resident is the one person who can by example and by proper teaching prevent postpartum hemorrhage The corrections are for blood loss from episiotomies or lacerations

In general, the incidence of postpartum hemorrhage is highest with each new group of assistant residents, and it tends to decrease as they become experienced We do not believe that postpartum hemorrhage of 500 to 1,000 ml can be completely prevented We do believe that the incidence can be kept to 0 5 per cent, or less, and that hemorrhages exceeding 1,000 ml are, in most instances, chargeable to the doctor Patients with multiple pregnancies, polyhydramnios, or prolonged labor are the only ones in whom uterine hemorrhage exceeding 1,000 ml may occasionally occur However, in such cases the experienced doctor has made his plans in advance, and the hemorrhage can be kept at a minimum In general, we believe that any hemorrhage of 300 ml or more is excessive in the properly handled placental stage

Dieckmann believed that the intravenous injection of 1 unit of a solution of posterior pituitary was more efficacious in producing uterine contractions than ergotrate, but the latter had a longer action [3] The data in Table 1 seem to demonstrate, beyond question, that delayed and late postpartum hemorrhage, as defined in the table, is much more likely to occur when ergotrate has been used in the placental stage We have a total number of 3,378 deliveries with ergotrate with an incidence of delayed and late postpartum hemorrhage of 0 09 per cent and 0 53 per cent and 2,644 deliveries with pituitary solution with 0 per cent and 0 per cent, respectively Placental tissue is rarely found in the delayed or late hemorrhages The usual report from the pathologic laboratory is thrombosed vessels from the placental site It is striking that in the only two cases of late postpartum hemorrhage (twenty-five and thirty days after delivery) where pituitary solution was injected intravenously and ergotrate was also given, a piece of placental tissue about the size of a golf ball was removed in each case We discontinued the oral administration of ergotrate in 1943 We can detect no difference in the morbidity or in the incidence of postpartum hemorrhage This has resulted in a marked reduction in our drug bill and in the nurses' time

We have been determining the latent period for ergotrate and pituitary solution when given intravenously We have tried with intrauterine bags attached for kymograph recording, with the hand in the uterus and with the hand on the abdomen Since the uterus is undergoing normal rhythmical contractions, it is not easy

BLE 2.—TIME TO FIRST UTERINE CONTRACTION AFTER DELIVERY OF BABY (SECONDS)

termine the exact latent periods for these drugs Several reports are summarized in e 2 Our mean for pituitary solution is eight seconds (range 10 to 69), and for rate the mean is eighty-three seconds (range 180 plus seconds) Grimes and coworkers made similar observations by palpation gh the drapes, and they stated that the tary action was rather sudden and easily while the ergotrate action was somewhat difficult to recognize, the contraction being r in onset but of a more sustained char- [2] They had cases in which ergotrate failed oduce a contraction in two minutes, whereas ngest interval with oxytocin was fifty sec-

ere have been several reports about the r of solution of posterior pituitary, and it is ually contraindicated, according to one r, in patients receiving cyclopropane hesia The senior author has had over y-eight years experience with pituitary on, and the only deaths caused by the drug due to uterine rupture Only one patient ound to be highly sensitive We have seen few reactions from pituitary solution at ery, the most striking being an occasional ycardia

a controlled study in postpartum patients were given on successive days intravenously t of pituitary solution, 0 4 mg of erogtrate, 5 ml of normal saline solution, we were sur- d to find that eight out of twelve patients bdominal cramps, nausea, vomiting, vertigo, aches, flushing, desire to urinate or defecate ergotrate, 11 after pituitary solution, and fter saline Those responding to the pitu- solution also had a slight transient hyper- on. Grimes and coworkers observed no nizable general reaction in more than 4,000 nts who were given undiluted oxytocin ion intravenously [2] They also noted that supposedly harmless intravenous injection gotrate not infrequently produces a peculiar osis of the upper part of the body which is ected by oxygen They also noted brady- a in some patients

e causes of postpartum hemorrhage are as ws

I Abnormal placental site or attachments
- (*a*) Placenta previa
- (*b*) Abruptio placenta
- (*c*) Placenta accreta

II Trauma—Duehrssen's incisions or lacerations of the vagina, cervix, or uterus

III Uterine atony
- (*a*) Incomplete separation of the placenta or retention of a piece
- (*b*) Overdistention (multiple pregnancy, polyhydramnios, etc)
- (*c*) Anesthesia, and to a less degree, analgesia
- (*d*) Prolonged labor
- (*e*) Tendency for postpartum hemorrhage

IV Blood dyscrasia
- (*a*) Acquired fibrinogenopenia
- (*b*) Heparin-like substance in the blood

V Neoplasms of the uterus

If the placenta has been delivered *intact*, and bleeding still continues from the uterus, the following treatment is indicated

1 *Repeat only once* the intravenous injection of ergotrate or pituitary

2 Explore the uterus manually for an accessory placental lobe and to exclude rupture of the uterus or tumors Inspect vagina and cervix

3 Briskly massage the uterus through the abdominal wall.

4 Pack the uterus properly (not too tightly or too loosely) *only once*, if bleeding continues despite 1, 2, and 3 Doctors must also practice insertion of uterine packs This systematic treatment will control uterine bleeding from atony in almost 100 per cent of the cases

5 During and after the period of hemorrhage, the patient must be given saline solution, 1,000 to 2,000 ml by hypodermoclysis and blood in amounts more than sufficient to replace what was lost (minimum 1,000 ml), which is always underestimated

Serum, plasma, 20 per cent glucose, and saline solutions are only stopgaps until blood is available If 500 ml of any of these solutions are injected intravenously, the blood pressure will increase and the patient improve, but the injection must not be repeated unless blood is also given

In those rare cases where the uterine pack and the oxytocic fail to control the hemorrhage, one of the following procedures must be used immediately (1) The uterine arteries must be ligated vaginally, according to the technic of Kerwin, or clamped, and (2) the uterus must be removed by abdominal or vaginal hysterectomy [19] In almost eighteen years, only two uteri were removed in normal patients because of atony, and probably only one was absolutely necessary

Five of our patients (two had an abruptio placenta) resembled purpura in that there were hemorrhages not only from the uterus but also

and the pads are not saved, it is obvious how blood loss will be underestimated until the patient is in shock with air hunger By this time the shock has frequently become irreversible An ordinary lap pad measuring 8 inches by 16 inches, not dripping, will contain 150 ml of blood A 4 inch square sponge used in perineal work, not dripping, will contain 7 ml , and the ordinary Kotex pad will contain 60 ml of blood If doctors and nurses will remember these amounts of blood and have all pads saved after delivery where the blood loss seems excessive, fewer patients will die from undiagnosed postpartum hemorrhage

Additional statistics on the placental stage are given in Table 1 It is noteworthy that, despite the repeated studies on the proper use of oxytocics, as well as concentration on the conduct of the placental stage, immediate and delayed postpartum hemorrhage still occurs, both in the cases delivered by the residents and the staff An experienced resident must be present at all staff deliveries during the first six weeks of the initial three-month birth room period and must also be present at all operative deliveries

Note the immediate hemorrhage incidence of 0 35 per cent for 1,159 deliveries in 1946, as compared with 455 deliveries in 1948, incidence 2 63, and 358 in 1949, incidence 0 56 The latter two series were delivered by different groups of assistant residents and residents The resident is the one person who can by example and by proper teaching prevent postpartum hemorrhage The corrections are for blood loss from episiotomies or lacerations

In general, the incidence of postpartum hemorrhage is highest with each new group of assistant residents, and it tends to decrease as they become experienced We do not believe that postpartum hemorrhage of 500 to 1,000 ml can be completely prevented We do believe that the incidence can be kept to 0 5 per cent, or less, and that hemorrhages exceeding 1,000 ml are, in most instances, chargeable to the doctor Patients with multiple pregnancies, polyhydramnios, or prolonged labor are the only ones in whom uterine hemorrhage exceeding 1,000 mL may occasionally occur However, in such cases the experienced doctor has made his plans in advance, and the hemorrhage can be kept at a minimum In general, we believe that any hemorrhage of 300 ml or more is excessive in the properly handled placental stage

Dieckmann believed that the intravenous injection of 1 unit of a solution of posterior pituitary was more efficacious in producing uterine contractions than ergotrate, but the latter had a longer action [3] The data in Table 1 seem to demonstrate, beyond question, that delayed and late postpartum hemorrhage, as defined in the table, is much more likely to occur when ergotrate has been used in the placental stage We have a total number of 3,378 deliveries with ergotrate with an incidence of delayed and late postpartum hemorrhage of 0 09 per cent and 0 53 per cent and 2,644 deliveries with pituitary solution with 0 per cent and 0 per cent, respectively Placental tissue is rarely found in the delayed or late hemorrhages The usual report from the pathologic laboratory is thrombosed vessels from the placental site It is striking that in the only two cases of late postpartum hemorrhage (twenty-five and thirty days after delivery) where pituitary solution was injected intravenously and ergotrate was also given, a piece of placental tissue about the size of a golf ball was removed in each case We discontinued the oral administration of ergotrate in 1948 We can detect no difference in the morbidity or in the incidence of postpartum hemorrhage This has resulted in a marked reduction in our drug bill and in the nurses' time

We have been determining the latent period for ergotrate and pituitary solution when given intravenously We have tried with intrauterine bag attached for kymograph recording, with the hand in the uterus and with the hand on the abdomen Since the uterus is undergoing normal rhythmical contractions, it is not easy

the uterine cavity and visual inspection of the vagina and cervix. One of the above oxytocics should be injected intravenously, and if the bleeding continues, the uterus must be packed At least 1,000 ml of blood, and more if necessary, must be given at once Periodic hemoglobin or hematocrit determinations must be made

Doctors must be taught that the postpartum uterine cavity can be explored with safety if asepsis is practiced

Discussion

Edward C Hughes, M D, *Syracuse*—Analyses of the maternal mortalities that occur in each hospital and throughout the nation as a whole still reveal that hemorrhage accounts for a large number of deaths each year Dr Dieckmann, in his presentation, has covered the topic completely and again brings this important subject to our attention

It is difficult and almost impossible to believe that, with the comparative ease with which blood and plasma can be obtained, the incidence of death from hemorrhage is such an appreciable one However, it remains a fact that these deaths are not entirely prevented by blood replacement per se Hemorrhage in the third stage has accounted for 33 per cent of the deaths in the Syracuse Memorial Hospital since 1935 The maternal mortality since 1943, with a total of 10,600 deliveries, was 0 8 per 1,000 births. Hemorrhage caused one third of these deaths, although only three cases actually died

The author reports that Davis and Boynton were the first to state that the proper management of the third stage begins late in the second stage of labor I would like to emphasize this fact but go a little farther back and say that the proper conduct of the third stage starts with a proper understanding, a careful appreciation, and anticipated outlook of the difficulties that might arise

In attempting to reduce the incidence of hemorrhage during and after the third stage, it must be remembered that the first and second stages must be properly and carefully supervised, always keeping in mind the possibility of the dangers of the third stage.

As Dr Dieckmann has stated in his discussion, the bleeding from the placental site is controlled by a definite mechanism. The uterine sinuses are composed of a single layer of endothelial cells They have no muscular coats of their own and must depend upon the contraction and retraction of the muscle fiber for compression. After compression has occurred, clotting of the blood in the sinuses results, which causes thrombosis of the vessels It is important then to remember the many things that influence this mechanism during the entire course of labor We must always live in fear of postpartum hemorrhage We must always look ahead and do nothing that is going to hamper the normal physiology of hemorrhage control, which nature has provided for us What does this mean? Dr Dieckmann has stated in his paper that there are certain fundamental procedures that must be kept in mind. I might re-emphasize these things

1 Atony of the uterus causes the greatest number of immediate hemorrhages Dieckmann quotes one series where 63 per cent of the cases resulted from atony There are many things which cause atony, such as (1) too many drugs during the first and second stages, (2) deep anesthesia, (3) prolonged labor, (4) overdistention of the uterus, and (5) intrauterine manipulation.

It seems to me that with the many safe analgesic drugs which we have today, there is no need for "snowing the patient under" as in the days of old. There is no need for heavy anesthesia At the Syracuse Memorial Hospital during the past five years, our anesthesia problem has been changed About 20 per cent of the patients are given general anesthesia The rest are given caudal, saddle, or local anesthesia In 8,125 cases of caudal analgesia, which is now given as terminal anesthesia, we have had no serious results, and frequency of postpartum hemorrhage has been greatly reduced It is true that this type of anesthesia must be carefully watched and must be conducted by those who are familiar with it Saddle block and local anesthesia have offered the same prevention against hemorrhage by allowing the uterus to contract and relax at will Light analgesia and anesthesia have given us fewer placental problems. The tone of the uterus remains good, giving a better and more prompt separation of the placenta It has been found that with this type of anesthesia the placenta can generally be expressed when the first uterine contraction occurs after the delivery of the fetus In these cases, ergotrate and pituitrin have not been used before the delivery, and it has seemed to make little difference in the separation and expulsion of the placenta Ergotrate is generally given after the placenta has been expelled

2 In cases of over-distention of the uterus, it is to be anticipated that atony may result, and preparation for bleeding must be made in these cases. The anesthesia, particularly, is the important factor This also holds true in cases of prolonged labor, where, in one series of postpartum hemorrhage, it accounted for 14 per cent of such disasters. We feel that any condition which may affect the contractibility and retractibility of the uterine musculature must be eliminated as far as possible

Another reason for bleeding emphasized by Dr Dieckmann is the possibility of laceration Many times laceration of the tissue occurs in an invisible spot If careful inspection and visualization of this tract is done, these tears will not be missed It is true that many have died because the doctor did not look into the vagina and inspect the cervix or he did not feel the uterus for laceration or breaks in the lower segment At the Syracuse Memorial Hospital, it is a rule that the lower segment is inspected and palpated in all cases of difficult forceps, breech deliveries, either spontaneous or manually performed, and after any intrauterine manipulation Dr Dieckmann has stated that he feels it safe to invade the uterus, provided the proper precautions are carried out We feel quite the same way, with some reservations

In reviewing our statistical report since 1935, I

from incisions, needle punctures, and any site of injury The plasma fibrinogen was very low in two and absent in one Large transfusions of citrate blood are necessary to treat the shock, but 300 to 500 ml of fresh unmodified blood must also be transfused by some method (syringe-cannula) to cure the bleeding tendency

The presence of a heparin-like substance, first described by Allen as due to excessive irradiation, has been observed in six patients with late postpartum hemorrhage [20] In one patient, forty-eight hours after hysterectomy for postpartum hemorrhage on the ninth day (no retained placental tissue), persistent bleeding began from the vaginal mucosa of the episiotomy Repeated suturing, blood transfusions, and, finally, protamine sulfate controlled the hemorrhage A total of 3,600 ml of blood was given

There is one real danger from blood transfusions, namely, an incompatibility resulting in transfusion nephritis with oliguria or anuria, uremia, and, in many instances, death Careful technic in cross matching, especially when using the test tube macroscopic method, will decrease the possibility of incompatible blood but not absolutely prevent it If O group Rh negative cells suspended in pooled serum could be made available in all institutions with obstetric services, the danger of an incompatibility would be eliminated We have always favored O group blood, but a recent case of transfusion kidney, due to a high titer of isoagglutinin A, has impressed upon us the value of either determining the titer of the blood or neutralizing both isoagglutinins with the blood group specific substances now available

Dieckmann and Kramer stated that patients with oliguria or anuria should be given nothing by mouth and no parenteral electrolyte solutions [21] Intravenous injections of glucose solutions in water, giving 200 (50 per cent), 500 (30 per cent), or 1,000 ml (20 per cent) amounts, two to four times daily, would produce a secretion of urine and give the highest recovery rate The amount of glucose solution should not exceed the urinary output by more than 50 per cent Continuous intestinal irrigation must be considered

Since 1943, we have alkalinized the urine in all patients who are given a medical transfusion by giving 4 Gm of sodium bicarbonate every two hours for a total of eighteen hours, beginning twelve hours before the time of transfusion All patients requiring transfusions must have the urine measured for forty-eight hours after transfusion, and if there is any hemoglobinemia or hemoglobinuria or any question about the compatibility of the blood, the patient is given 200 mL of molar sodium lactate, diluted to 1,500 ml. with 5 per cent glucose, intravenously and 1,000 ml. of a similar solution by clysis The urine must be kept alkaline to bromcresol purple for twenty-four hours Three of our patients have had transfusion kidneys since 1943, and although we were able with hypertonic glucose solutions to maintain a urinary output, there was still a temporary retention of blood nonprotein nitrogen However, all three patients recovered, although one was left with very definitely impaired kidneys

In patients who are in shock and have air hunger, fluids and blood will occasionally not flow into veins Formerly, we used pressure, but the work of Page and coworkers has shown that such patients can frequently be saved if an artery is cannulated and the arterial system filled with blood rather than the venous system [22] All maternity and surgical services should be equipped for this arterial transfusion Furthermore, the house staff must be taught how to expose a vein and artery and to insert either a needle or cannula into them The senior author had one tragic case in 1942 where it took too much time for the resident to expose and cannulate a vein The patient was given 1,500 ml of blood but did not survive, probably because of the irreversible stage of shock.

We had four postpartum hemorrhage deaths in the period 1931 to 1942 and none since Other maternity services have similar mortalities The importance of early uterine exploration and the early transfusion of adequate amounts of blood have caused the marked decrease in deaths due to this dread condition A death from postpartum hemorrhage is a serious indictment of the doctor's ability and the hospital's administration

Summary

The baby should be delivered slowly, requiring a total of at least three minutes The placenta has usually separated within one minute After the fetus has been expelled and as soon as the uterus retains its globular form, it should be compressed but not pushed into the pelvis When the placenta is in the vagina, it should be extracted by pulling on the cord An intravenous injection of 0 1 ml (1 unit) of solution of posterior pituitary or 0 2 to 0 4 mg ergotrate may be injected intravenously after the posterior shoulder has been delivered if the doctor is experienced or after the delivery of the placenta if the doctor is not experienced

If the placenta cannot be delivered and there is no bleeding, one may wait a maximum of one hour, but all retained placentas should be manually removed at the end of that time

Uterine hemorrhage is treated by immediate removal of the placenta, manually if necessary, or after the third stage by manual palpation of

the uterine cavity and visual inspection of the vagina and cervix. One of the above oxytocics should be injected intravenously, and if the bleeding continues, the uterus must be packed At least 1,000 ml of blood, and more if necessary, must be given at once Periodic hemoglobin or hematocrit determinations must be made

Doctors must be taught that the postpartum uterine cavity can be explored with safety if asepsis is practiced

Discussion

Edward C Hughes, M D, *Syracuse*—Analyses of the maternal mortalities that occur in each hospital and throughout the nation as a whole still reveal that hemorrhage accounts for a large number of deaths each year Dr Dieckmann, in his presentation, has covered the topic completely and again brings this important subject to our attention

It is difficult and almost impossible to believe that, with the comparative ease with which blood and plasma can be obtained, the incidence of death from hemorrhage is such an appreciable one However, it remains a fact that these deaths are not entirely prevented by blood replacement per se Hemorrhage in the third stage has accounted for 33 per cent of the deaths in the Syracuse Memorial Hospital since 1935 The maternal mortality since 1943, with a total of 10,600 deliveries, was 0 8 per 1,000 births Hemorrhage caused one third of these deaths, although only three cases actually died

The author reports that Davis and Boynton were the first to state that the proper management of the third stage begins late in the second stage of labor I would like to emphasize this fact but go a little farther back and say that the proper conduct of the third stage starts with a proper understanding, a careful appreciation, and anticipated outlook of the difficulties that might arise

In attempting to reduce the incidence of hemorrhage during and after the third stage, it must be remembered that the first and second stages must be properly and carefully supervised, always keeping in mind the possibility of the dangers of the third stage

As Dr Dieckmann has stated in his discussion, the bleeding from the placental site is controlled by a definite mechanism. Discussion

Edward C Hughes, M.D , *Syracuse*—Analyses of the maternal mortalities that occur in each hospital and throughout the nation as a whole still reveal that hemorrhage accounts for a large number of deaths each year Dr Dieckmann, in his presentation, has covered the topic completely and again brings this important subject to our attention.

It is difficult and almost impossible to believe that, with the comparative ease with which blood and plasma can be obtained, the incidence of death from hemorrhage is such an appreciable one However, it remains a fact that these deaths are not entirely prevented by blood replacement per se Hemorrhage in the third stage has accounted for 33 per cent of the deaths in the Syracuse Memorial Hospital since 1935 The maternal mortality since 1943, with a total of 10,600 deliveries, was 0 8 per 1,000 births Hemorrhage caused one third of these deaths, although only three cases actually died

The author reports that Davis and Boynton were the first to state that the proper management of the third stage begins late in the second stage of labor I would like to emphasize this fact but go a little farther back and say that the proper conduct of the third stage starts with a proper understanding, a careful appreciation, and anticipated outlook of the difficulties that might arise

In attempting to reduce the incidence of hemorrhage during and after the third stage, it must be remembered that the first and second stages must be properly and carefully supervised, always keeping in mind the possibility of the dangers of the third stage

As Dr Dieckmann has stated in his discussion, the bleeding from the placental site is controlled by a definite mechanism. The uterine sinuses are composed of a single layer of endothelial cells. They have no muscular coats of their own and must depend upon the contraction and retraction of the muscle fiber for compression After compression has occurred, clotting of the blood in the sinuses results, which causes thrombosis of the vessels It is important then to remember the many things that influence this mechanism during the entire course of labor We must always live in fear of postpartum hemorrhage We must always look ahead and do nothing that is going to hamper the normal physiology of hemorrhage control, which nature has provided for us What does this mean? Dr Dieckmann has stated in his paper that there are certain fundamental procedures that must be kept in mind. I might re-emphasize these things

1 Atony of the uterus causes the greatest number of immediate hemorrhages Dieckmann quotes one series where 63 per cent of the cases resulted from atony There are many things which cause atony, such as (1) too many drugs during the first and second stages, (2) deep anesthesia, (3) prolonged labor, (4) overdistention of the uterus, and (5) intrauterine manipulation.

It seems to me that with the many safe analgesic drugs which we have today, there is no need for "snowing the patient under" as in the days of old There is no need for heavy anesthesia At the Syracuse Memorial Hospital during the past five years, our anesthesia problem has been changed. About 20 per cent of the patients are given general anesthesia The rest are given caudal, saddle, or local anesthesia In 8,125 cases of caudal analgesia, which is now given as terminal anesthesia, we have had no serious results, and frequency of postpartum hemorrhage has been greatly reduced It is true that this type of anesthesia must be carefully watched and must be conducted by those who are familiar with it Saddle block and local anesthesia have offered the same prevention against hemorrhage by allowing the uterus to contract and relax at will Light analgesia and anesthesia have given us fewer placental problems The tone of the uterus remains good, giving a better and more prompt separation of the placenta. It has been found that with this type of anesthesia the placenta can generally be expressed when the first uterine contraction occurs after the delivery of the fetus. In these cases, ergotrate and pituitrin have not been used before the delivery, and it has seemed to make little difference in the separation and expulsion of the placenta Ergotrate is generally given after the placenta has been expelled

2 In cases of over-distention of the uterus, it is to be anticipated that atony may result, and preparation for bleeding must be made in these cases. The anesthesia, particularly, is the important factor This also holds true in cases of prolonged labor, where, in one series of postpartum hemorrhage, it accounted for 14 per cent of such disasters We feel that any condition which may affect the contractibility and retractibility of the uterine musculature must be eliminated as far as possible

Another reason for bleeding emphasized by Dr Dieckmann is the possibility of laceration Many times laceration of the tissue occurs in an invisible spot. If careful inspection and visualization of this tract is done, these tears will not be missed It is true that many have died because the doctor did not look into the vagina and inspect the cervix or he did not feel the uterus for laceration or breaks in the lower segment At the Syracuse Memorial Hospital, it is a rule that the lower segment is inspected and palpated in all cases of difficult forceps, breech deliveries, either spontaneous or manually performed, and after any intrauterine manipulation. Dr Dieckmann has stated that he feels it safe to invade the uterus, provided the proper precautions are carried out We feel quite the same way, with some reservations

In reviewing our statistical report since 1935, I

have found that there were five cases of spontaneous rupture of the uterus which resulted in as many deaths In going over these records, it is noted that careful intrauterine examinations were not made manually for the fear of uterine invasion and infection. Had such a careful survey been conducted, surgical interference could have saved the lives of these patients Since explorations of the uterine cavities have been conducted manually in unusual cases since 1943, no death from rupture of the uterus is recorded

The conduct of the third stage of labor varies with each hospital With the type of anesthesia used in the Memorial Hospital, it is rarely necessary to remove the placenta manually However, where this structure does not separate within a period of an hour or if there is partial separation with bleeding, manual removal is performed. We feel that careful examination of the placenta and membranes should be done without reservation, and if missing cotyledon are discovered, manual removal is performed Dr Dieckmann has stated that this procedure has not increased his morbidity Our morbidity in the past eighteen years has varied between 2 5 and 3 4 per cent, although the incidence of uterine invasion in the third stage has increased during the past few years However, a survey of the 92 cases of retained placenta, where the placenta was either removed manually or delivered spontaneously some hours after the retention, showed that there was 15 5 per cent morbidity in the private cases and 28 8 per cent in the ward cases However, these cases included those which were sent to the hospital from the outside and where some time had elapsed since the second stage was completed

It would seem that, if the uterus is to be invaded, it is important that it should be done probably within the hour after completion of the second stage

Dr Dieckmann has discussed the advantages of pituitrin versus ergotrate It has been routine, except when general anesthesia is used, not to use either pituitrin or ergotrate until after expulsion of the placenta. The uterus is immediately pulled out of the pelvis, and when the first contraction occurs after delivery, manual expression is performed Most placentas are obtained within five minutes. If general anesthesia is used, pituitrin, 1 cc , is given to stimulate the uterus to contract and relax to favor separation. Expulsion again is attempted on the first contraction After expulsion, ergotrate is used intravenously The patient is placed in a convalescence room where the uterus is watched for at least one hour It is massaged, held out of the pelvis, and kept small Records of the pulse, blood pressure, and vaginal drainage are recorded

There is no question of the importance of blood replacement In surveying the hemorrhage deaths, it is true that there has been delay in cross matching or starting transfusion. It is important to anticipate disaster by having a needle in the vein, blood available, and someone to start such a procedure immediately If blood matching is satisfactory, there should be little danger of the anurias and other troubles that follow poorly administered blood.

If I may add something to the complete and excellent presentation of Dr Dieckmann, I might ask that anticipation of blood loss be foremost in our minds, that nothing be done during the stages of labor that hampers the physiology of the uterus, and that we be sure of our cause of bleeding and begin to replace the blood long before the patient shows the signs of hemorrhage

AUSTRALIAN DOCTORS FIGHT PHARMACY ACT

The British Medical Association has challenged in the high court of Australia the constitutionality of the Commonwealth Government's Pharmaceutical Benefits Act This act orders doctors to prescribe as free medicine all specifics and compounds listed in the government's formulary of about 600 items

The Association charges the legislation amounts to civil conscription of doctors, which is expressly forbidden by an amendment of the Commonwealth Constitution approved in 1946

EXTRAPERITONEAL CESAREAN SECTION IS THERE STILL A NEED FOR IT?

WILLIAM F NELMS, M D , Brooklyn, New York

(From the Departments of Obstetrics and Gynecology, Brooklyn Hospital and the Long Island College of Medicine)

TODAY among obstetricians there is considerable controversy regarding the need for extraperitoneal cesarean section Majority opinion, based on views the writer has read in the recent literature and heard expressed at various meetings, seems to be that the need is so slight that it is no longer necessary to include it in the armamentarium of the obstetrician

This operation was designed to protect the cesarean section patient from peritonitis It consists in approaching the lower uterine segment from behind the bladder and below the vesicouterine peritoneal fold An area on the lower uterine segment is then exposed through which the baby and placenta are extracted without opening the peritoneal cavity

Indications

Advocates of this procedure claim that it is indicated in all patients requiring cesarean section who are potentially or actually infected Criteria as to what constitutes potential or actual infection vary somewhat with different authorities Cosgrove and Waters define them as follows "Potentially infected cases are those in labor more than twenty-four hours, those with ruptured membranes more than twelve hours, and those with any other manipulation than a very few rectal examinations and/or one ideally guarded vaginal examination Actually infected cases are all those which, in addition to the factors constituting potential infection, exhibit an exaggeration of those factors and actual clinical signs of infection such as intrapartum chills, fever, rapid pulse, dehydration, foul amniotic fluid, excessive leukocytosis, or positive cultures for pathogenic organisms in the amniotic fluid or blood stream "[1]

Advantages

1 It prevents soiling of the peritoneal cavity by spill of infected amniotic fluid when the uterus is opened

2 It prevents seepage of infected material through the sutured uterine incision into the peritoneal cavity

3 It provides extraperitoneal drainage of any uterine discharge

4 It allows many patients to have a longer test of labor with safety Waters, in discussing a paper by Daichmann and Pomerance, states that his incidence of cesarean section has been cut in half since he has been doing extraperitoneal sections [2]

5 It saves the uterus in those actually infected patients who might otherwise have had a cesarean hysterectomy

6 These patients have a remarkably smooth postoperative convalescence with little or no distention or other symptoms or sequellae which may result from invasion of the peritoneal cavity and handling intestines

Reported Results

Extraperitoneal cesarean section has been used extensively in several hospitals, and reports indicate that it has reduced the mortality in cesarean section Heffernan and Sullivan have collected a series of 1,089 cases in which the maternal mortality was 0 82 per cent [3] Four patients succumbed to sepsis and two to postpartum hemorrhage In comparing this mortality with that reported in a large series of classic and low flap sections they find that extraperitoneal section is almost twice as safe as the low flap operation and four times as safe as classic section The writer can add 33 personal cases with no maternal deaths

Criticism by Opponents

1 The technic of the operation is too difficult This results in a longer operating time which subjects the mother and baby to the hazards of longer anesthesia

2 Even in the most expert hands a large percentage of perforations of the peritoneum occur Its critics argue that if the peritoneum is perforated, it ceases to be an extraperitoneal operation Cosgrove and Waters collected over 800 cases reported by five authors in which the peritoneum was perforated 232 times, or in about 27 per cent [1] The maternal mortality was 0 5 per cent They claim that most of these perforations are small nicks which occur before the uterus is opened If they are ligated and tied off before the uterus is opened, sufficient protection is provided against spill and seepage into the

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York Buffalo Section on Obstetrics and Gynecology May 4 1949

peritoneal cavity The low mortality of 0 5 per cent tends to support this contention

3 The bladder may be accidentally perforated, or its nerve supply so disturbed from stripping it from its fascia and the lower uterine segment that deformities and dysfunctions will result Cosgrove states that bladder injuries have not been very frequent at the Margaret Hague Hospital [1] One fatal result has been reported In the remainder of their bladder injuries there were no persistent fistulas, and no injuries required subsequent surgery Mangone tested the bladder function of eighteen patients three months after extraperitoneal section by cystoscopic examination and either intravenous or retrograde pyelography [4] These observations showed that in the uncomplicated case where bladder injury does not occur, there is no impairment of bladder function and no disturbance of bladder or ureteral anatomy

4 Ovarian or uterine tumors which may seriously complicate the postpartum course are not discovered and treated because the peritoneum is not opened

5 The patient cannot be sterilized

6 In frankly infected cases the extraperitoneal section is not as safe as cesarean hysterectomy where the infected uterus and its contents are completely removed At the Chicago Lying-In Hospital the mortality from cesarean hysterectomy is reported as 1 4 per cent [5] Most other series reported in the literature range from 5 to 12 per cent McCall believes that cesarean hysterectomy is a dangerous and shocking procedure to the seriously ill and violently infected patient, and since the peritoneal cavity is invaded, peritonitis is still liable to develop even though the uterus is removed [6] He has reported a series of 64 extraperitoneal sections in severely infected cases with no maternal mortality

The personal experience of the author with these criticisms extends over an eight-year period and is based on 33 cases Twenty-four were potentially infected and six actually infected There were no deaths However, one patient died two years later The cause was an ovarian tumor which was known to be present at the time of the extraperitoneal cesarean section

Case 1 —A twenty-one-year old primipara had been in labor over sixty hours, and the membranes had been ruptured over forty-eight hours When first seen in consultation, she had fever, rapid pulse, and a foul vaginal discharge Examination revealed a large, fixed, semicystic mass which filled the pelvis This mass had apparently been mistaken for the vertex which was out of the pelvis and in the right iliac fossa It was decided that the patient's condition was too poor to risk cesarean hysterectomy and removal of the tumor Accordingly, a supravesical extraperitoneal section was done without injury to the peritoneum or bladder A living baby was delivered which survived The patient recovered uneventfully Although she had been advised to return within three months for removal of the tumor, she did not appear until eighteen months later A large teratoma with areas of malignant degeneration was found and removed There were extensive metastases throughout the pelvis and peritoneal cavity She died six months later

The operating time was reduced from one and one-half hours in the early cases to fifty minutes in the later ones The bladder was perforated in two cases In each instance it healed promptly without sequellae The ureters were not injured, nor were they seen in any case The peritoneum was perforated or nicked six times, in each case before the uterus was opened The last two perforations occurred because of haste in an effort to save operating time Since then fractional spinal anesthesia has been used in these cases, which has the advantage of being safe for both the mother and baby and which allows one to take sufficient time for careful and meticulous dissection The hazards of perforation are considered more important to the patient than the shortening of operating time by ten or fifteen minutes

The majority of those who object to extraperitoneal cesarean section do so largely because they believe that chemotherapy and antibiotics have been so successful in preventing and treating peritonitis that this operation is no longer, or seldom, needed Several leading authorities have expressed this opinion. More and more reports are appearing in the literature which give extremely low mortality figures for transperitoneal cesarean section. The role of antibiotics is emphasized in these articles Douglas and Landesman of the New York Lying-In Hospital state that potentially infected cases, even those in labor over forty-eight hours, are now treated by transperitoneal rather than extraperitoneal section unless there has been no prohylactic sulfa and penicillin therapy [7] All potentially infected cases are given 6 Gm of sulfadiazine and 300,000 units of penicillin daily as a prophylactic measure They have had no deaths from infection in the past eight years The representatives of other well-known New York hospitals have stated at recent obstetric meetings that they no longer or seldom perform extraperitoneal cesarean section

It must be remembered that these hospitals are staffed by expert obstetricians who follow and study their patients closely throughout pregnancy and labor Reports from communities and hospitals at large might present a somewhat different picture For example, a

study of the case histories of the last 30 consecutive cesarean section deaths occurring in the Borough of Brooklyn which were reported to the Maternal Mortality Committee reveals that eight, or 26 6 per cent, died from infection Seven were due to peritonitis and one to pyelonephritis All received vigorous treatment with sulfa drugs, penicillin, and in some instances streptomycin There was one classic section in the group The remainder were low flap operations Prior to 1945, it was estimated that 38 per cent of cesarean section deaths were due to infection, usually peritonitis [6] In Brooklyn, then, the mortality has apparently been reduced only from 38 to 26 6 per cent by the use of chemotherapy and antibiotics

Three of these eight patients had had no labor, and the membranes were intact at operation In the remainder the membranes had been ruptured for from six to eighteen hours In one case culture of the uterus postmortem showed the presence of gas bacilli (Welsh) Holstrom and Murata in a study of the bacterial flora of the postpartum uterus in 96 cases found that very few, if any, postpartum uteri are completely free of organisms after the first forty-eight hours following delivery [8] They found 83 different species of organisms in 93 positive cultures Sixty-one per cent were anaerobic or facultative anaerobes, some of which were penicillin and sulfa-resistant

The following case is an illustration of the fact that certain strains of infecting organisms may be present in the uterus, even before the membranes have ruptured or may be introduced into the peritoneal cavity by laparotomy, which will cause peritonitis and death following cesarean section in spite of vigorous antibiotic therapy

Case 2—The patient had a transperitoneal section because of previous classic section She was not in labor, and the membranes were intact Penicillin, 600,000 units, was left in the abdominal cavity, and 50,000 units started every three hours postoperatively On the third day she developed fever and abdominal distention A Wangensteen tube was passed One-half gram of streptomycin every four hours was ordered. All medication was continued, and on the seventh day 15 grams of sulfathaladine were added because of no improvement She died on the ninth day of generalized peritonitis and paralytic ileus

In the next case extraperitoneal cesarean section might have provided the one added safety factor necessary for survival The peritoneal cavity would not have been invaded, and extraperitoneal drainage would have prevented seepage from the uterus into the peritoneal cavity

Case 3—A twenty-one-year-old primipara had an unengaged vertex after fourteen hours of labor and eighteen hours of ruptured membranes One hundred thousand units of penicillin were administered before a transperitoneal section was performed Four grams of sulfanilamide were left beneath the bladder flap Thirty thousand units of penicillin every three hours were started immediately after the operation and continued until the third day when she developed signs of peritonitis In spite of larger doses of penicillin intravenously and transfusions, she died on the sixth day of generalized peritonitis

Comment

The results reported with the prophylactic use of antibiotics are impressive and seem to indicate that transperitoneal section is relatively safe in potentially infected patients who are closely watched To be effective the treatment must be started early before pus and exudate have formed Any procedure, however, should be evaluated in the light of the facilities and skills available in communities and hospitals at large rather than in ideally situated groups Many patients do not and will not receive the benefit of this care, and some will develop peritonitis in spite of it It is this group of potentially infected patients who need extraperitoneal section most and will be fortunate in having a consultant who can perform the operation In fact, any potentially infected case will probably be safer by receiving the double protection of extraperitoneal section plus antibiotics It has been the observation and experience of the author that those who do no more than a moderate amount of this work can master the supposedly difficult technic of the procedure with safety

In the actually or frankly infected cases the procedure of choice will usually lie between extraperitoneal section and cesarean hysterectomy Since a large proportion of these cases are primiparas, great consideration should be given to preservation of the uterus The results reported with extraperitoneal section are remarkably good, and used in conjunction with antibiotics, it should be the method of choice in treating many of these cases Here, in the opinion of the writer, there certainly is a need for this type of operation.

Summary and Conclusions

1 Majority opinion among obstetricians seems to be that chemotherapy and antibiotics are so successful in preventing and treating peritonitis following transperitoneal cesarean section that there is little or no need for extraperitoneal cesarean section

2 The advantages and criticisms of the operation have been presented and discussed

3 The author's experience with 33 cases has been reported

4. Seven deaths from peritonitis in transperitoneal section cases in Brooklyn who received vigorous antibiotic and chemotherapy have been reported

5 The author believes that there is still a real need for extraperitoneal cesarean section.

Discussion

Charles A. Gordon, M D , *Brooklyn* —Dr Nelms has stated the question on extraperitoneal cesarean section very clearly It is a fact that because of the effectiveness of antibiotics, enthusiasm for extraperitoneal cesarean section is waning

It is clear that the relative merits of various types of operation must depend on accumulation of a great number of statistics, and even then it will be difficult to weigh all the factors of success or failure It is not uncommon for apparently hopelessly infected patients to survive any type of operation, even classic

The statistics of Marshall ten years ago, before the advent of chemotherapy or antibiotics, are still remarkable [a] In 1939, he reported 246 lower segment operations without a maternal death, in 70 cases in which infection was present or suspected, labor had been surgically induced in 15, forceps delivery had failed in five, and in 10 more a variety of vaginal procedures like attempted version or dilating bags had been tried

More than twenty years ago, Harris and Brown found no sterile cultures at operation after only six hours of labor [b] Risk rises rapidly with potential or actual uterine infection

It is not my experience that cesarean hysterectomy is a dangerous and shocking procedure on the infected patient On the contrary, convalescence is usually very smooth The serious objection to hysterectomy is the loss of the uterus during the reproductive period In frankly infected cases, however, I have always preferred to remove the uterus

NEW YORK STATE MEDICAL LIBRARY

Doctors of New York State are reminded of the facilities of the State Medical Library at Albany. They are invited to visit, telephone, or write to the Library where a trained staff of librarians will take care of their requests

Upon request, a copy of the regulations will be sent, which lists the services of the Library, including the compiling of bibliographies, sending material on specific subjects, or filling requests for definite book or journal references

A collection of over 57,000 books and the receipt of approximately 600 current medical journals enable the Medical Library to offer a real service to the doctors of the State.

Letters may be addressed to Miss Maude E Nesbit, Librarian, New York State Medical Library, Education Building, Albany 1, New York

THE PRESENT STATUS OF Rh COUNTERIMMUNIZATION

CHARLES A GWYNN, M D , Syracuse, New York

(From the Departments of Obstetrics, Syracuse University College of Medicine and Syracuse Memorial Hospital)

BETWEEN 1938 and 1941, the Rh factor was discovered and associated with erythroblastosis fetalis With this association there was immediately born the desire to defeat the ill effects. It took about two years more to show that the total results would have to come with treatment of the mother The progress with the various types of exsanguination have produced excellent results However, these all depend upon the fact the baby must be born alive and mostly undamaged The exsanguination originally was believed to be the answer to the badly damaged babies, but time has shown that the kernicterus and extreme jaundice are an irreversible equation Thus, we must obtain results before the reaction occurs Furthermore, as we know, each successive Rh positive pregnancy becomes effected earlier in utero and usually results in the stillborn fetus We say "usually results in the stillborn fetus" because cases have been reported in which the subsequent reactions were no more severe than those occurring with previous pregnancies Thus, in this hopeless type of case, results must be obtained early in pregnancy in all but a few instances This report is an attempt to summarize the known work done up to this point throughout the United States There have been four types of approach to the treatment of sensitivity in the Rh negative women degree of immunization reaction, maternal exchange transfusions for dilution, chemical reactions, and hapten.

Degree of Immunization Reaction

The degree of immunization reaction is expressed by Wiener as follows "When an experimental animal is injected with a mixture of two substances, one a good antigen and the other a poor antigen, the antigenicity of the weaker antigen is often suppressed "[1] The theory was expressed that on this basis typhoid or tetanus vaccines might supress the formation of Rh antibodies, because of the fact that the Rh antibodies are known to be so weak in reaction that only once in 25 to 50 times does a transfusion of positive blood cause a reaction in a negative individual Pregnancy causes approximately one in 20 reactions [2] Both tetanus and typhoid vaccines were experimentally tried by Wiener [2] The majority of cases showed no results whatsoever Although some few cases apparently reacted in a favorable manner, he feels that they would have recovered by themselves This is so stated because ultimate opinion has been expressed with regard to the injection of vaccines "This is evidently useless once sensitivity has developed "[2] At the International Society of Hematology in Buffalo in 1948, a favorable report using pertussis vaccine was given by one worker No other favorable reports can be found in literature

Working on the same theory of competition of antigens, we find that anti-A or anti-B is a stronger antibody than anti-Rh Originally it was stated that a negative woman with Rh positive incompatible husband, i e, type O wife and type A husband, is slightly better off than an Rh negative woman with an Rh positive compatible husband [1] This has not been proved In our own series we have not used incompatible fathers but have gone closer to the source of difficulty and used the babies blood types as a factor We found that the proportion of incompatible babies producing antibodies has actually been slightly greater than those completely compatible Checking our series we have compared the ratio of 1 20 as outlined by other workers and find that we have a ratio of 1 12 in which negative mothers with compatible positive babies show antibodies This whole series naturally compares unfavorably with the accepted 1 20, since it represents more instances of patients sent in for tests because the doctor feels there are antibodies present than a random cross section of all Rh negative mothers bearing Rh positive children The ratio of incompatible babies which produced antibodies was 1 4 Furthermore, we have two cases that produced anti-A reactions with one pregnancy and with the next pregnancy produced Rh erythroblastotic babies with high hyperimmune Rh antibody titers With these last named pregnancies the A titer did not rise, so we feel it was a pure reaction of the weaker antibody formation We may state then that the competition of antibodies probably has no future use with our present known antigens

Maternal Exchange Transfusions

The second approach to the problem was through repeated exchange transfusions for the women with high antibody titer These were tried by individual doctors throughout the

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York Buffalo Section on Obstetrics and Gynecology May 5 1949

country The results were so universally poor that we cannot find that anyone has reported a series The general idea seemed to be on a dilution basis, and, although it was worth trying as almost any effort is worth while, nevertheless, it seemed doomed to failure from the start, and it was We have seen in Syracuse two cases coming from other areas in which the mothers had undergone repeated exchange transfusions with absolutely no results Wiener also speaks of his failure [2]

Chemical Reaction

A third approach has been through chemical reaction As far as we can find, ethylene disulfonate is the only such reagent reported in literature Kariher in Rochester originated the idea and reported a series of three cases in 1947, and he has continued his work with a fair amount of success [3,4] To quote his figures at the end of 1948, 20 cases had been completed with 13 living babies resulting, six of them entirely normal while seven had more or less degrees of mild hemolytic disease As a result of Kariher's original report, we started a small series of our own. The results are quite interesting We have two cases which appear to be extraordinary successes However, the other six are such complete failures we must conclude that here again we are dealing with unaccountable successes We have included here two successes and two failures to illustrate our point Notice that all four of these cases are apparently hopeless This type of patient has been required in all the work, both ethylene and hapten However, one of the cases which gave such good results had not yet had a dead child, and the other good case did not have a particularly high antibody titer at any time, in spite of the tragic history The two failures are such obvious hopeless failures that we can only conclude that nothing affected these cases The same was true of our other failures They were absolute and complete, showing no effect from the injections of ethylene disulfonate

Case 1.—Mrs M K, type O, Rh negative, husband A, Rh positive, gave a previous history of bleeding peptic ulcer A severe postpartum hemorrhage necessitated a transfusion in 1934 of unknown Rh type blood In 1939 she had O, Rh positive blood following an abortion There was one normal pregnancy The present pregnancy showed a titration of 1 128 at four months At six months the titration was 1 512, and ethylene disulfonate was started. Response was immediate, and the titer dropped steadily to 1 16 by the eighth month This rose again to 1 32 at term, and labor was induced Baby showed antibodies 1 4, 20 nucleated cells, 3,200,000 red cells, and 11 Gm hemoglobin Partial replacement of blood was done with 150 cc withdrawn and 210 cc replaced. Note that the patient's response was immediate and sharp at beginning of treatment, but six weeks postpartum the titer was back to 512

Case 2.—Mrs B S was B, Rh negative with homozygous AB, Rh_1, Rh_2 husband. First pregnancy resulted in a stillborn macerated fetus, due to cord around the neck. A postpartum hemorrhage necessitated a transfusion of blood, later proved to be Rh positive A second pregnancy in 1943 produced a six and one-half months macerated fetus, and a third pregnancy fetus died twenty-four hours before labor, apparently of hemolytic disease

Present pregnancy started with 1 64 titer at five and one-half months A rapid reduction occurred simultaneously with the injections of ethylene disulfonate There were two rises, then a fall to about zero A perfectly normal baby which was type B, Rh positive with no antibodies and unaffected was delivered by cesarean section Probably these good results were a coincidence, as our typical hopeless cases show When the titers are of high value, the ethylene disulfonate seems to have absolutely no effect, and this was true of all our cases

Case 3.—Mrs J S, type B, Rh negative (homozygous husband, A, Rh positive) gave a history of normal pregnancy in 1945 In 1946 she was delivered of a seven months fetus which lived five hours No defects were noted During her third pregnancy with expected date of confinement March 16, 1948, first titration on August 20, 1947, was 1 256, next titration was 1 512 Ethylene disulfonate was started with absolutely no response Highest titer was 1 2,048 Baby died and titer returned to 1 512 It was a typical macerated fetus with heart fluid containing hyperimmune antibodies 1 512

Case 4.—The second typical failure was Mrs M J C, type A, Rh negative (husband probably homozygous O, Rh_1, Rh_2) Past history was negative One normal pregnancy produced a type A, Rh positive child Second pregnancy produced an infant which was normal at birth, jaundiced in twenty-four hours, and died in forty-eight hours after an attempted exsanguination This tragedy was due to an error in a commercial laboratory, for she was diagnosed as Rh positive Present pregnancy, due June, 1948, started with titration in November of 1 2,048 Injections started immediately, and there seemed to be several falls in titer of some degree, even to 1 256 However, titers immediately rose to 1 2,048, and baby died in utero with 1 128 hyperimmune titer in its heart fluid

We should conclude, therefore, that to the present time the chemical effort has not been overly successful and, at least as far as ethylene disulfonate is concerned, has no real future

Hapten

The fourth line of approach is the hapten This term apparently was originated by Landsteiner to distinguish the specifically reacting fractions from their complete antigens [5] Because of its nature, there is no danger of a

hapten's producing its own antibody when injected into a human However, it will combine with its own antibody when so injected Ever since the Rh antibody was discovered, the literature has had much comment regarding the hapten. The consistent feeling has been that when it is isolated, it will contain the answer The problem, therefore, seems very simple, "Has the hapten been produced?"

In 1946, Calvin *et al* in Baltimore reported that they had isolated a fatlike substance which they believed to be hapten or to contain it [6] At least it reacted with the antibodies In the meantime Bettina Carter in Pittsburgh was working along similar lines [7] From the Rh positive red cells she obtained a lipoid fraction which she felt was the hapten In general this is produced by first placing Rh positive cells in water The resultant mass and solution are diluted in an alcohol series of varying percentages which removes the A and B factors The filtered mass is mixed with anesthesia grade ether which dissolves the lipoids When this ether is evaporated, a yellowish resinous substance results This, dissolved in 95 per cent alcohol, is the hapten. The hapten thus produced is then mixed with physiologic saline for injection.

It sounds very simple to make but at the present time has been produced in less than five or six known places So far there has been no commercial production of the hapten, although it has been attempted somewhat unsuccessfully by several establishments It is a time-consuming procedure, and the necessary equipment is to be found only in well-equipped research centers In vitro the potency of the hapten may be tested by the complement fixation test similar to that used in the diagnosis of syphilis The potency is also assayed by the specific inhibition of agglutination by the hapten. If the reaction in vivo will be as consistent as it is in vitro, then the antibodies will no longer be feared.

We find then that the hapten has been used for two purposes The first is in erythroblastosis fetalis itself and the second in the sensitized pregnant woman We shall report only this second phase

We have included here the latest available figures on Mrs Carter's work given to us on March 15 [8] She reports that a total of 61 Rh negative sensitized mothers have been treated with the hapten produced in her laboratory She herself has treated 37 women with the following results 19 delivered normal babies, seven lost their babies, and 11 are undelivered to date All 37 women showed a decline in titer after treatment Some responded after the first inoculation, but a few required several inoculations The mothers of the seven lost babies had each lost at least one baby previously Mrs Carter feels that none of these cases was treated early enough three were treated at the second month, but one died of cord around the neck, one from placenta previa, and only the third was a macerated fetus at seven months One patient was treated at the fourth month and was delivered of a macerated fetus the next month Another was treated the fifth month and delivered a macerated fetus the eighth month The sixth case was treated beginning the sixth month and delivered a living child at term which died of hemorrhagic disease The seventh did not have treatment started until two weeks prior to term and delivered a stillborn. Thus, of the seven, perhaps two were unattached to the Rh factor as a cause of death, and the other five definitely were treated too late

The other 24 women treated by others in different localities using Mrs Carter's hapten do not show as good results This is the usual story in any such work. The records are incomplete, the treatment begins too late and is stopped too early A generalized, over-all picture of those 24 patients shows that 20 were started at seven months or later, and the records show failure or incomplete results, the other four had good babies when treated early This work certainly shows that late treatment will probably produce poor results However, the figures of early treatment are remarkable and indicate a trend in the right direction We have just started our own series this spring, using hapten produced by us As previously mentioned, the greatest problem at the present time seems to be the matter of production. Our figures are too small to be worth comment Our hapten does produce a drop in antibody titer, but beyond that we shall have to await the results of time We have the figures from three other sources to report, however

Dr Erf of Jefferson Medical College has treated six cases.[9] Two cases had no substantial reduction in antibody titer Two patients that were not pregnant did have marked antibody reaction of 1 64 which went down to 1 4 after about 1/2 Gm. of hapten. One pregnant woman given 3 Gm. of hapten over a period of six months had a reduction in titer from 1 512 to 1 4. A second pregnant woman had a reduction in two weeks from 1 4,000 to 1 100 However, the baby was delivered at this point and was already erythroblastotic, surviving only three hours Dr Erf feels that he cannot give an opinion now and that we must keep an open mind, because it will be a long time before the true value of the hapten therapy is known

Dr Levinson of Chicago has treated or is treating a total of 15 cases of which, at the present time, only four have delivered [10] These were not treated sufficiently long enough to produce

striking reaction, the other 11 have all received hapten for three months or longer and apparently are showing slightly more favorable results From his present efforts Dr Levinson feels that there is evidence that hapten has suppressive action upon circulative antibodies He states, "Whether this action is sufficiently strong enough to overcome the development of erythroblastosis remains to be seen!"

Dr Goldsmith reports the use of Mrs Carter's hapten on three cases [11] Over the course of twenty weeks the antibody titer was reduced from 1 64 down to zero on one case When the titer reappeared, labor was induced and a normal, living infant was delivered Patient had a titer of 1 2 on the day of delivery

The second case had a titer of 1 4 at twenty-two weeks gestation. Hapten, 100 mg, was given weekly, starting at the twentieth week and continuing until delivery No antibodies were found after the beginning of treatment, and a normal, Rh positive child was delivered by section at eight and one-half months

The third case had previous normal pregnancies and one erythroblastotic fetus The present pregnancy at twenty-four weeks had a titer of 1 32 and at thirty-two weeks a titer of 1 512 Treatment reduced the titer to 1 28 Baby showed marked and typical erythroblastosis fetalis and died one hour after birth All three of these patients had previously had cases of erythroblastosis and should have been hopeless, although, as we know, this is not always a fact

Summary and Conclusions

1 There is no real evidence that vaccines are of any real value in counterimmunization

2 The competition of antigens does not seem to have any present or future use in counterimmunization

3 Repeated exchange transfusions for Rh negative women with high antibody titer have no apparent value

4. Only one type of chemical reaction has been reported in the literature This is ethylene disulfonate Notwithstanding some apparently hopeful response to the treatment, it does not seem to have any real future in truly hopeless cases

5 Hapten, as produced by the Carter method, has given some hope for the future That hope, in spite of some present failures, lies in early injection and consistent use through the entire term of pregnancy It also depends on quantity of production and definite refinement

608 East Genesee Street

Discussion

Leslie Hughes Tisdall, M.D, *Brooklyn*—The problem of treatment for the Rh isoimmunized woman is of twofold importance There is no question of the desperate need for a means to counteract the antibodies present in these women when pregnant There is also the distressing problem of the need for counterimmunization in women who have had an erythroblastotic baby and whose prognosis for future living children is bad These women are justifiably fearful of another pregnancy Some therapeutic agent must be found to give these women hope for the future Until recently, as Dr Gwynn has stated, all efforts to neutralize or counteract Rh antibodies have been unsuccessful.

At least from theoretic considerations, Rh hapten would seem to be the ideal method of combating Rh antibodies, since, by definition, it will neutralize these antibodies without stimulating the formation of additional ones The problem, of course, has been of isolating this hapten in pure form The recent work of Carter has focused intense interest on this subject Dr Gwynn has very thoroughly detailed the progress of this work to date. Unfortunately, most of the investigators in this field, notably Levine, Diamond, and Wiener, as well as the English workers, have been unable to duplicate Carter's results and have expressed doubt as to the accuracy of her findings Nevertheless, one must be impressed by the clinical results as compiled by Dr Gwynn While we have done no actual work with the Rh hapten at St Catherine's Hospital, Brooklyn, we are seriously contemplating a large scale project to attempt to isolate it and test its efficacy

While not entirely pertinent to the scope of this paper, I believe attention should be drawn to the work of Philpotts on the use of methionine in isoimmunized mothers Methionine is an amino acid which has been used extensively in the treatment of liver disease. Since there is considerable liver damage in erythroblastosis, methionine has been administered to the mother with antibodies in the hope of preventing or minimizing liver damage in the fetus It does not in any way diminish or counteract the antibodies Philpotts has shown some rather excellent results in his series to date, and we have had apparently good results in a few cases. Further clinical trial is certainly indicated.

Despite the controversial reports at present, I am of the firm opinion that the isolation and use of the Rh hapten is the answer to the problem of Rh isoimmunization. Obviously, more laboratory and clinical studies remain to be done before this matter is finally solved.

VAGINAL SMEAR EXAMINATION AS A DIAGNOSTIC AID IN GYNECOLOGY

LOCKE L MACKENZIE, M D , New York City

(From the Department of Obstetrics and Gynecology, New York Post-Graduate Medical School, New York University)

IT IS the purpose of this paper to illustrate how exfoliative cytology may be employed in gynecologic practice By its use it is hoped that diagnosis may be improved and prognosis aided It is necessary to detail some of the conditions in which this may be helpful Also, some statements as to its accuracy should be made

Papanicolaou is the originator of modern exfoliative cytology, and to him credit must be given for a fundamental medical discovery His many years of work and his classic papers and monographs on all phases of this subject are too well known to review in detail Papanicolaou's studies are all the more remarkable when one realizes that for many years he worked alone in this field, with nothing but disinterest from most of his colleagues Indeed, it is only recently that universal acceptance has been accorded his work and that pathologists in particular have begun to appreciate the importance of his methods of diagnosis

At present it is safe to say that a study of the vaginal cytology is of great value in gynecologic diagnosis It is true that there is no short cut in learning the interpretation of vaginal smears, this requires study and experience Yet this is not truly a disadvantage One cannot become a pathologist overnight—nor even a gynecologist!

Most recent work on exfoliative cytology has been directed toward the diagnosis of malignancy Important as this is, there are many other fields in our specialty in which cytology will help us The study of the menstrual cycle furnishes important data on the secretion of ovarian hormones and aids in recognizing the occurrence and time of ovulation The appearance, for instance, of endometrial cells in the vaginal fluid at times other than at menstruation indicates an abnormal situation Hyperestrinemia may be recognized, and a disturbed luteal phase may be apparent Anovulatory cycles may be postulated with considerable accuracy

Much more work is needed to describe a cellular pattern of pregnancy How important such a picture might be in the rapid diagnosis of extrauterine pregnancy need hardly be stressed Secondary amenorrheas may generally be recognized, together with an estimation of the degree of dysfunction, although no very definite knowledge of the etiology may be elicited, here a prognosis for treatment may be offered

Various infections of the lower vaginal tract may be studied, and trichomonads and monilia are easy to see One finds smears which seem somewhat typical of polypi and, we are beginning to think, of fibromyomata

Especially useful is the employment of the smear technic in the diagnosis of menopause and in evaluating the results of estrogenic therapy The use of this technic in this connection is very widespread, as it is very simple and easy to interpret

When one turns to the field of cancer diagnosis, it may be said that vaginal, cervical, and endometrial smears have proved to be the single most important addition to the detection of malignancy of the female genitalia of the last decade When dealing with cancer diagnosis, it is the accuracy of any method that is all important Here, as in any laboratory procedure, both technical skills and human equations are involved Statistics from representative centers throughout the world demonstrate uniformly high correlations between diagnoses by tissue biopsy and by cytology It should be stressed at this point that biopsy must remain the last resort In squamous cell carcinoma the per cent of agreement between these two methods is usually over 95 per cent, in adenocarcinoma it is lower by about 5 to 7 per cent

The most frequent objection to this method is that it is too time-consuming Actually, familiarity with smears tends to obviate this objection Indeed, it is not the positive cases which take a long time to interpret but the negative and suspicious ones It takes but a few minutes for the experienced cytologist to screen the average slide However, the word "experienced" should be given its proper meaning, and nothing more unfortunate could happen to this method than to have well-meaning but inexperienced cytologists attempt to use it Wrong diagnoses would be sure to follow, thus forcing the clinician to place little credence in interpretations Centers where the method may be taught to interested physicians are urgently needed, and the American Cancer Society is to be commended on its present program of fellowships in exfoliative cytology A well-trained man often may be able to make a

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York, Buffalo, Section on Obstetrics and Gynecology, May 5 1949

diagnosis of carcinoma one-half hour after he has examined the patient, and this allows at least twenty minutes for the staining technic

A second objection often heard is that the staining technics are complicated, and this is a valid criticism There is now no rapid stain which gives sufficient transparency to see internal nuclear structure, although such technics have been described which are entirely adequate for endocrine study Work is going on at present in an attempt to develop a more rapid stain and, even more important, to develop a differential stain for malignant cells The problem is also being attacked from various other points of view, and the concentration of nuclei by physicochemical processes holds a certain promise of success

The use of properly trained nonmedical technicians as screeners should be encouraged, but such personnel should not be held responsible for the final diagnosis An ideal setup in a general hospital envisages a cytology laboratory in which the material is stained and screened by trained technicians The laboratory should be under the direction of a pathologist with training in cytology, and there should be representatives from the departments of surgery, medicine, and gynecology assigned to it Residents, especially those in pathology, should spend a specified time working here as a part of their training Material from outside sources should be welcomed, thus providing a diagnostic center for the community A nominal fee can be charged, and in a short time such a laboratory will become self supporting

Exfoliative cytology is still in its infancy In certain gynecologic problems it offers relatively little help For instance, it assists us hardly at all in the diagnosis of early pregnancy The correct evaluation of the menstrual cycle is difficult and not always clear cut, and this is especially true of the latter half of the cycle

The future of this technic, if it is not exploited by too much lay publicity or thrown into disrepute by the work of untrained men, is almost limitless This is not the proper place to discuss its value in the detection of cancer in other organ systems, important as this is proving to be A start has been made in an attempt to recognize premalignant lesions, and much more remains to be accomplished in this direction Fortunately, investigations with this method of Papanicolaou's are now proceeding in medical centers throughout the world Vitally needed now are strategically located laboratories to which physicians from all localities may forward material for interpretation As gynecologists, the early diagnosis of cancer of the female genitalia is all important to us, and this method provides another means to accomplish this objective

471 Park Avenue

Discussion

Hannah Peters, M D , *Rochester* —We would like to agree with Dr Mackenzie's statement that the study of vaginal cytology is of great value in gynecologic diagnosis Recently, we have become impressed with the value this rather simple procedure has in the treatment of seemingly ordinary cervical erosion Ideally, perhaps all cases of cervical erosion ought to be biopsied before local routine treatment is instituted. Realistically, however, in office practice a biopsy is too often not taken, and local treatment is started as soon as clinical examination and diagnosis are made

In a study of 200 consecutive office gynecologic cases, vaginal smears were taken as a routine in the course of a complete pelvic examination. Among these there were 64 cases of clinical cervical erosion. None of these lesions was clinically suspected of cancer The smear in two of these cases with erosion was reported as positive for malignant cells. Early malignancy was found in both these cases on histologic examination Prior to the use of the vaginal smear as a routine part of a gynecologic examination these patients would have been locally treated which would have prolonged the interval before treatment for malignancy could start.

Dr Mackenzie has mentioned the help the gynecologist can get from the smear in the guidance of endocrine therapy in the menopausal patient Much can be learned from the smear in the case of the woman entering the menopause whose menstrual flow has become irregular in amount, frequency, and duration

The estrogen-induced bleeding in the menopausal patient so frequently referred to the specialist's office will at times be as puzzling to the cytologist as estrogen-induced atypical hyperplasia might be to the pathologist.

A group of patients in whom we can learn much from the vaginal smear is those who have carcinoma of the cervix and who are treated by radiation therapy Daily study of the vaginal cytology during radiation therapy can give us information about tumor response and probable ultimate prognosis Moreover, if we are familiar with the cell changes during radiation therapy, if we have watched a positive smear become free of malignant cells after radiation therapy is completed, the reappearance of malignant cells at a later date becomes significant

If the vaginal smear should become part of a routine gynecologic examination, as we believe it should, two facts must be stressed in the procedure of preparing a satisfactory slide, which, of course, is necessary for satisfactory interpretation One involves re-education of the patient, namely, she must be instructed to present herself at the gynecologist's office without having taken a douche. The other involves the re-education of the physician, as the slide must be prepared before a palpatory examination is made.

It is hoped that the high correlation of accuracy between pathologic diagnosis and cytology will stimulate the practicing gynecologist to incorporate the vaginal smear into the routine of a complete pelvic examination.

SPONTANEOUS RUPTURE OF GRANULOSA CELL TUMORS OF THE OVARY WITH MASSIVE INTRA-ABDOMINAL HEMORRHAGE

WILLARD G FRENCH, M D , Brooklyn, New York

(From the Department of Obstetrics and Gynecology of the Methodist Hospital)

SPONTANEOUS rupture of a granulosa cell tumor in association with massive intra-abdominal hemorrhage is a problem encountered infrequently The occurrence of two such cases at the Methodist Hospital within less than eighteen months seemed worthy of report Survey of our records for thirty years revealed no other similar instances These two cases are presented as contributory evidence of the bizarre behavior of this interesting neoplasm During the past several years our concept of the behavior of granulosa cell tumors has been enhanced greatly The frequently quoted report of Novak and Brawner of 28 1 per cent clinical malignancy rate of these neoplasms has been substantiated in a greater or lesser percentage by many investigators [1-4] We have learned that recurrence of these tumors may be very delayed The report of Jones and Te Linde of three cases, dying eighteen, twenty, and twenty-one years after removal of the primary tumor, has recently been surpassed by Aimes *et al* [5 6] This French group reports excision of a retroperitoneal mass thirty-three years after primary removal of a granulosa cell tumor from a girl eight years of age We may go to Jones' and Te Linde's report again for a case illustrating the marked ascites and hydrothorax occasionally seen with granulosa cell tumor They report a case in which 2,000 cc of fluid was removed preoperatively from the chest cavity and 19,500 cc from the abdomen This tumor at operation revealed an intact capsule, no implants, and only slight adhesions to the broad ligament

We have grown accustomed to associating sterility with granulosa cell tumor in the menstruating woman, yet several cases of these neoplasms found in association with pregnancy have been reported, and Greenhill describes a case he operated on, in which the tumor was discovered by the family doctor immediately after full-term delivery [7 8] Another behavior aspect of granulosa cell tumor may be noted in the increasing reports of its association with adenocarcinoma of the uterus, hypertrophy of the uterus, and leiomyomas [9 10]

In the field of lower species experimentation we have been shown that the granulosa cell tumor forms readily in the ovaries of mice subjected to radiation and that these tumors will metastasize to distant organs, again, transplantation of a piece of such a tumor in the peritoneal cavity of related mice has resulted in growth [11] Li and Gardner in their work with mice are attempting to prove that the overaction of gonadotropic hormones is responsible for the development of granulosa cell tumors [12]

Case Reports

Case 1 —E S , thirty-two-year old, white Jewish housewife, gravida II, Para 1, was seen at home, complaining of seven-hour history of dull pain in right lower abdominal quadrant, slowly progressive in severity Ten weeks prior, operation had been advised by another gynecologist for a right ovarian cyst For three and one-half years patient had been sterile and for a three-year period had had irregular and infrequent menstrual periods, occurring every five, six, eight weeks to three months and lasting five days The past two cycles had been prolonged, averaging fourteen and ten days, respectively Her last menstrual period was forty-three days prior to admission. Slight increase in libido had been noted over past three years, weight was constant, no breast change and no hair distribution change had been noted Obstetric history revealed a spontaneous early abortion at twenty-three years, followed by a normal, full-term pregnancy at twenty-four years Examination at home disclosed a slightly enlarged, retroverted and sinisterverted uterus displaced by a moderately tender 10- to 12-cm. right ovarian cystic tumor

On admission to the hospital temperature was 99 8 F , pulse 65, and respirations 22, hemoglobin 11 7 Gm. (79 per cent), red blood cells 4,010,000, white blood cells 21,500 (polymorphonuclears 91 per cent), urine was negative, and sedimentation time fifteen minutes On moving the patient from her bed to a stretcher for examination, the patient went into sudden marked shock. She was taken immediately to the operating room and 1,000-cc transfusion of citrated whole blood begun

Operation was performed immediately under general anesthesia A right salpingo-oöphorectomy with cystectomy was performed The abdominal cavity contained an estimated 1,500 cc of gross, fresh blood. The cyst was anterior and revealed a 7-cm tear in its capsule No torsion was noted, the uterus, left tube, and ovary were grossly normal

Report of tissue examination was as follows Gross Description—Specimen consists of ovary and fallopian tube The ovary has been previously

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York Buffalo Section on Obstetrics and Gynecology May 5 1949

ruptured at one pole The ovary measures 11 0 by 9 0 by 4 0 cm. In the area of the rupture, the interior of the ovary is seen to consist of friable medullary type of tissue which contains a good deal of what is apparently fresh blood clot. In the poorly fixed portions of the specimen, the wall of the tumor is seen to consist of a brilliant yellow, soft, medullary type of tissue Cross section through the center of the tumor reveals a yellow stroma intermixed with areas of pinkish liquid softening

Microscopic examination—Section of ovarian tumor shows a moderately thick fibrous capsule which in one area shows a defect and some hemorrhage The tumor itself is a well-preserved, highly cellular tumor composed of fairly uniform polyhedral to elongated cells with vesicular nuclei and moderately prominent nucleoli The arrangement varies from solid sheets of cells to cylindromatous pattern and in a few places a microfollicular pattern The whole tumor is quite vascular, and the amount of stroma varies from scanty to considerable Mitotic figures are rare

Diagnosis—Granulosa cell tumor of right ovary with rupture and hemorrhage

The patient's postoperative course was uncomplicated Following discharge from hospital, periods became regular, occurring every thirty days and lasting five days She delivered a thirty-nine-week baby seventeen months after her date of operation Recent examination twenty-nine months after operation revealed no unusual pelvic or abdominal findings Periods are regular with thirty-day cycle and of five days duration

Case 2.—G G, thirty-five, a white telephone operator, gravida II, Para 1, complained of two-year history of sense of pressure in left lower abdomen. Menses occurred every five to six weeks for past three years, replacing normal twenty-eight-day cycle, and amount of flow decreased from five to three days There was a three-year history of sterility and no change in hair distribution, voice characteristics, or breast structure Obstetric history revealed a spontaneous abortion, early, at twenty years of age, followed by a full-term, normal pregnancy at twenty-three years

Admission pelvic examination revealed a "grapefruit-sized mass," free and slightly tender, of the left ovary, uterus was normal Temperature, pulse, and respirations were normal, hemoglobin 13 6 Gm. (92 per cent), red blood cells 4,650,000, white blood cells 9,700 (70 per cent polymorphonuclears), urine was negative, sedimentation time twenty minutes, nonprotein nitrogen 33, sugar 109

Operation consisted of curettage, total hysterectomy, bilateral salpingo-oöphorectomy, and appendectomy On opening the abdomen it was found filled with an estimated 500 cc of blood, the source of which was a left ovarian tumor with a rent in its capsule

Report of tissue examination was as follows Gross description—Specimen is totally removed uterus and cervix with attached right tube and ovary The body of the uterus measures 5 by 4 by 2 5 cm. The external os admits the tip of a pair of forceps The myometrium is firm and pinkish-gray in color The endometrium is smooth, velvety, and reddish in color The fallopian tube measures 7 by 1 5 cm. The surface is bluish-gray in color The ovary measures 4 5 by 2 5 by 2 cm and has been previously opened On section it contains small cysts measuring up to 3 mm. in diameter Another specimen consists of left ovary and tube. The ovary has a rent in its capsule, the capsule is pinkish-gray in color and appears cystic The ovary measures 6 by 4 by 3 5 cm., it is seen to contain a papillary cauliflower-like growth which is grayish-yellow in color and moderately firm in consistency

Microscopic examination—Sections of curettings show scanty endometrium in the proliferative phase. Sections of uterus show normal myometrium with attached layer of endometrium in the proliferative phase This layer is moderately thick but does not appear to be cystic or hyperplastic Sections of fallopian tubes are not remarkable A section of cervix shows parakeratotic squamous epithelium with moderate round-cell infiltration of the stroma. Sections of the right ovary show several follicle cysts immediately beneath the capsule, some of which are surrounded by a hemorrhagic zone In a deeper zone, however, apparently replacing a cystic cavity, there is a nest of tumor cells surrounded by hemorrhage The morphology of the tumor is similar to that seen in the left ovary and will not be separately described here. Numerous sections of left ovary show a tumor composed of solid sheets of round to polyhedral cells These tumor cells are rather uniform, contain round to ovoid nuclei with prominent nucleoli, and have a moderate amount of pale-staining cytoplasm and indistinct cell boundaries Occasional mitotic figures are seen The tumor as a whole has a rather solid pattern with solid nests of cells separated by a rather scanty fibrous stroma There appears to be no alveolar arrangement, and the tumor cells merge rather imperceptibly with the ovarian stroma, to which they have some resemblance In some areas of the tumor, however, the cells occur in columns and in still other areas there is suggestion of watered silk appearance. There are no microfollicles seen and only occasional acini. Still another section shows a somewhat cylindromatous pattern and in another there are rosettes but no definite follicles Fat stain of the tumors shows numerous very fine fat droplets in the cytoplasm of the well-preserved tumor cells However, there are greater amounts of fat in the degenerated areas

Diagnosis—Granulosa cell tumor of left ovary with cystic degeneration, perforation of capsule, and intraperitoneal hemorrhage, granulosa cell tumor in right ovary probably metastatic, multiple follicle cysts of right ovary, total uterus with endometrium in proliferative phase, chronic cervicitis with parakeratosis, fallopian tubes Postoperative course was uneventful

Following discharge from hospital patient received a course of fractional x-ray therapy totaling 7,200 r surface dose, depth dose 3,456 r Recent follow-up examination one year after operation re-

vealed no unusual pelvic or abdominal findings. Condition of patient was considered excellent

Comment

In Case 1 the factor precipitating rupture of the granulosa cell tumor was moving the patient from her bed to a stretcher In Case 2 the cyst apparently ruptured during the preoperative preparation or during curettage It is of interest to consider the factors that predispose the granulosa cell tumor to such ready rupture As Traut and Marchetti point out, the granulosa elements are poorly supplied with a supporting framework upon which to dispose themselves [13] They are less intimately supplied with blood vessels and thus are more prone to premature accidents. Then, too, the larger tumors may be subject to cystic degeneration, necrosis, and intracystic hemorrhage, torsion and infarction have been reported Von Friesen, of Sweden, echoes the above feeling [14] He states that spontaneous rupture of the granulosa cell tumor with hemorrhage is actually common if the relative infrequency of the neoplasm itself is considered, and rupture is not remarkable in view of the anatomic structure of the tumor He reports seven cases of rupture and massive hemorrhage in a series of 50 granulosa cell tumors

In this country the occurrence of rupture and marked hemorrhage is rather infrequently published Taussig, in 1931, reported such a case with 800 to 900 cc of blood found in the abdominal cavity [15] This cyst apparently ruptured during preoperative preparation of the vagina In 1933, Schultz described a similar rupture simulating ectopic pregnancy [16] Vogt, in 1940, reported a case of rupture occurring at the time of operation [17] No recurrence has been noted in a two year follow-up period Again in 1940, Dockerty and MacCarty published a similar case occurring in a fifty-nine-year-old gravida III, Para 1 [18] A grade 1 adenocarcinoma was found in the uterus No recurrence of symptoms was noted over a seven-year period The following year, 1941, Bach and Montgomery described a ruptured granulosa cell tumor, the diagnosis of which was made at necropsy [19] The abdominal cavity contained 900 cc of blood, and a dermoid was found in the opposite ovary This granulosa cell tumor revealed large areas of infarction and hemorrhagic necrosis A more recent case of rupture was reported by Bianco and Favorite with a total of 2,000 cc of serosanguinous fluid found in the peritoneal cavity [20] In England, Brewer noted in 1948 a rupture in two places of a 9 by 7 by 5 cm tumor associated with a total of 568 cc of blood and clots within the abdomen [21] An interesting case in which imminent rupture was avoided was reported last year by Toppozada of Farouk University Hospital in Alexandria, Egypt [22] He removed a granulosa cell tumor consisting of two large attached masses An aspiration of "2 5 L of almost pure dark blood" was performed in the second cystic mass to permit surgical delivery of the tumor

Another interesting consideration in cases of this type is the fate of the multiple tumor particles, macroscopic and microscopic, which must be strewn through the confines of the pelvic and abdominal cavities In this natural warm and moist environment can such particles survive? Have the prior degenerative changes and necrosis which would seem to be the precursors of such an accident vitiated the tissues in the area of rupture and drainage to the extent of making such particles weakly viable or nonviable? It will be necessary to follow such cases carefully for many years before one can hazard an opinion. Certainly, in the two cases presented, a follow-up of only two years and one year, respectively, is essentially valueless at this time

Summary

1 Two cases of spontaneous rupture of granulosa cell tumors with massive intra-abdominal hemorrhage are presented.

2 One case was followed by normal delivery in seventeen months

3 One case was associated with a comparable small lesion in the opposite ovary, possibly metastatic

4. Negative follow-up examinations at two years and one year, respectively, are of little prognostic value at present as to future recurrence or survival of tumor implants

502 EIGHTH AVENUE

I wish to express my appreciation to Dr G H. Davis for use of Case 2 and to Dr John Howe for his descriptions of the gross and microscopic pathology The microscopic sections of both cases were reviewed by Dr J Arnold de Veer of the Brooklyn Hospital and the sections of Case 2 were reviewed by Dr Frank Foote of the Memorial Hospital.

Discussion

Samuel A. Wolfe, M.D , *Brooklyn* —Spontaneous rupture is a rare finding in granulosa cell tumors I have had *no personal* experience with this complication. Several etiologic factors are possible (1) torsion of the tumor with interstitial hemorrhage and necrosis, (2) malignant perforation with secondary rupture, or (3) rupture of a cystic segment of the granulosa tumor due to increasing fluid pressure Such a tumor with a cystic compactment was noted by Wolfe and Kaminester in their series

Granulosa tumors originally considered benign show a high rate of malignancy reaching an incidence of almost 30 per cent Accordingly, when a granulosa cell tumor is identified at operation, decision as to therapy is difficult. In a patient over thirty-five years of age, especially if she has

borne children, radical removal of the uterus and adnexae is indicated Fortunately, this is feasible since granulosa cell tumors generally occur in elderly women. Younger patients with whom child-bearing is of consequence should have simple salpingo-oöphorectomy if there is no gross evidence of malignancy, i.e, perforation of the capsule or infiltration of the mesovarium. Immediate study of a frozen section from the removed tumor should be of great help in directing surgical therapy

23,260 VETERANS TO STUDY MEDICINE

A Veterans Administration study of the principal courses and employment objectives of 2,535,385 veterans enrolled in school and job training establishments under the G I Bill and Public Law 16 on December 1, 1948, shows that veteran-students in the medical sciences represented 3 per cent of the total number of all trainees Of the 78,143 veterans enrolled under the G I Bill, more than one third, or 23,260 were taking courses in medicine and surgery The rest were studying in the following fields

Dentistry	7,603
Nursing	3,955
Osteopathy	918
Pharmacy	11,668
Veterinary medicine	2,036
Chiropractic	3,287
Optometry	3,374
Chiropody	1,107
Physical Therapy	325
Occupational therapy	156
Laboratory technic	1,240
Dental hygiene	103
Dental mechanics	2,738
Medical service	250
Public Health	399
Bacteriology	600

Premedical, predental, and preveterinary students numbered 14,784. Seventy per cent of these, or 10,487, were in premedical courses

Under Public Law 16—an act providing training for those with service-connected disabilities—veterans training in the medical professions numbered 5,168

Of these, 1,540 were enrolled in medical courses, 1,207, pharmacy, 904, dentistry, 505, chiropracty, 469, veterinary, 194, nursing, and 349, medical services

Eligibility for G I Bill training consists of (1) active military service some time between Sept 16, 1940, and July 25, 1947, (2) service of at least 90 days, or a discharge for a service-connected disability if released before 90 days' service, and (3) a discharge under conditions other than dishonorable For Public Law 16, requirements are (1) military service between the 1940 and 1947 dates, (2) a discharge other than dishonorable, (3) a compensable service-connected disability, and (4) VA's determination that training is necessary to overcome a handicap While in training, veterans may receive a subsistence allowance from VA.—*J A M A, July 30, 1949*

MECKEL'S DIVERTICULUM

A Twenty-Year Survey and Report of an Unusual Case

RICHARD M HYMAN, M D , and STEPHEN L GUMPORT, M D , New York City

(From the Surgical Service of the Lenox Hill Hospital)

IN 1809 and again in 1812, Meckel gave the first classic description and embryologic explanation of this anomaly Since then numerous contributions have been made to the literature The occurrence of Meckel's diverticulum is not rare, since it is found in about 2 per cent of all postmortem examinations It is two to four times more frequent in males than in females In location it varies but averages 20 inches proximal to the ileocecal valve In most cases the diverticulum arises from the antimesenteric border of the ileum, although it may originate from the mesenteric aspect In size it ranges from a mere nubbin to 10 inches in length, and in diameter it may equal the ileal lumen.

The embryologic origin is from the remnant of the omphalomesenteric duct (Vitelline duct or yolk stalk) connecting the midgut with the yolk sac Several variations of development may occur Eisendrath has recorded the potential variants which may exist (1) A complete canal may persist, opening at the umbilicus and communicating with the lumen of the ileum, (2) either the umbilical or the intestinal portion of the canal may persist, the usual Meckel's diverticulum being formed when the intestinal portion exists alone, (3) an intermediate portion of the canal may persist giving rise to a cyst due to retained secretion, and (4) the entire canal may be represented by a residual cord or closed band containing the umbilical vessels [1]

Histologically, the structure is usually that of ileum, but the presence of tissues such as pancreas, stomach, colon, and duodenum have been reported It is most often asymptomatic but may initiate any of the following complications (1) acute diverticulitis, (2) acute diverticulitis with perforation and peritonitis, (3) mechanical intestinal obstruction, (4) ulceration and hemorrhage from heterotopic gastric mucosa, (5) intussusception, and (6) congenital fecal fistula Various specific infections and neoplasms may also arise in the diverticulum. All of these complicating events have been described Recently, Morlock and Bennett reported an unusual case of an umbilical fecal fistula, originating in a Meckel's diverticulum, in a seventy-five-year-old woman [2] The case which we are reporting also represents in an adult a fecal fistula exiting lateral to the umbilicus and, therefore, probably not representing a congenitally patent canal.

Case Report

A fifty-one-year-old white man was admitted to the surgical service in December, 1947 Chief complaint was a red swelling of the left abdominal wall of three weeks duration with spontaneous drainage of pus for two days prior to admission In 1917, he had been operated on for a similar abscess in the identical location This was incised and drained and closed uneventfully In 1927, he was again hospitalized and a laparotomy performed for an acute appendicitis with perforation These case records are not available The remainder of the history is negative Following appendectomy, he had been in good health until the present complaint.

Examination revealed a well-developed male, not acutely ill At the level of the umbilicus and 2 inches to the left of the midline, an irregular retracted scar was noted with a large, indurated, reddened and tender mass, 3 inches in diameter, centered over the lateral angle of the scar At the middle of this swelling a small draining sinus could be probed The blood count was normal One day after admission the abscess was incised and drained, the abscess cavity extending down to the rectus sheath, and in one area appearing to pierce the sheath Culture was returned as Escherichia coli A flat film and a barium clysma were both reported as negative There was no evidence of any foreign body The wound continued to drain purulent material and showed little evidence of closing He was discharged on the fourteenth hospital day with a final diagnosis of abscess of the abdominal wall

After several follow-up dressings the wound closed He was not seen again until three months later when he returned with a recurrent draining sinus at the same site, was readmitted, and the tract and underlying abscess cavity explored and excised Postoperatively, the draining sinus again persisted At this time the tract could be probed for a distance of 6 inches and seemed to extend towards the right lower quadrant. A Meckel's diverticulum was not considered because of the lateral exitus of the sinus A Number 12 ureteral catheter was introduced into the tract, and 20 cc of lipiodol were injected Films were reported as follows "Examination reveals an opaque catheter extending through the abdominal wall along a periumbilical tract towards the region of the terminal ileum. An opaque media has been injected and outlines the distal small intestine" (Fig 1) A Meckel's diverticulum was then considered, in spite of the aberrant location of the tract

Four months after his original admission a laparotomy was performed, a catheter being first inserted through the tract for a distance of 12 inches The abdomen was opened through a midline suprapubic incision Exploration revealed a typical

FIG 1 X-ray showing opaque catheter introduced into sinus tract with lipiodol visualization of the distal ileum

Meckel's diverticulum arising at a point 14 inches proximal to the ileocecal valve on the antimesenteric border of the bowel passing to the anterior abdominal wall lateral to the umbilicus The distal third of the diverticulum was adherent to the parietal peritoneum to the left of the midline The diverticulum was easily dissected free and resected It measured 1 inch in greatest diameter and 6 inches in length, being lined throughout by mucosa After an uneventful recovery, the patient was discharged on the twelfth postoperative day He has been clinically well during the past nine months Pathologic report was as follows "Chronically inflamed Meckel's diverticulum Mucosa of the ileal type and no heterotopic tissue observed "

Discussion

The above described complication of fecal fistula has not been reported in the literature Morlock and Bennett were unable to find any record of an umbilical fecal fistula secondary to a Meckel's diverticulum occurring in an adult, their case being the first published report [2] Considering the embryology of the anomaly, the present case in all probability does not represent a congenital persistent midline canal connecting umbilicus and ileum, since the fistulous tract exited 2 inches lateral to the midline and on exploration did not involve the umbilicus One would be led to believe that we are dealing with a diverticulum which originally rested free within the peritoneal cavity Apparently thirty years prior to his admission at Lenox Hill Hospital, he had developed an abdominal wall abscess secondary to a Meckel's diverticulum which had become adherent at its tip to the anterior abdominal wall lateral to the umbilicus This process drained and subsided and remained quiet for a period of thirty years only to recur with the development of another abdominal wall abscess at the same site with subsequent postoperative fecal fistula

Survey of Cases at the Lenox Hill Hospital—1928 to 1948 —The records of the Hospital for this twenty-year period show a total number of 21 cases of Meckelian diverticuli, excluding the present case The following statistical facts were noted

1 Age Youngest, eight months, oldest, sixty-three years, average age, twenty-seven years
2 Sex Male, 12, female, 9
3 Position Average distance from ileocecal valve, 16 inches In all but one case it arose from the antimesenteric border
4. Size 1 inch in diameter and 2 inches in length (average)
5 Ileal mucosa present in all cases except one in which gastric mucosa was noted
6 Mortality One patient died of a perforated diverticulitis with secondary peritonitis and intestinal obstruction
7 In no case where a diseased diverticulum was found was such diagnosis made preoperatively
8 Pathology
   (a) In 11 of the 21 cases a nonrelated, asymptomatic, noninflamed Meckel's diverticulum was found, in addition to the primary lesion for which the patient was operated
   (b) A noninflamed Meckel's diverticulum was the causative agent in small bowel intussusception in two cases, both under one year of age
   (c) In an eleven-month old child the diverticulum persisted as a patent umbilical fecal fistula from birth
   (d) In one case an acute Meckel's diverticulitis was found incarcerated in a right indirect inguinal hernial sac
   (e) In six cases an acute Meckel's diverticulitis existed as the primary lesion Three of these had perforated with resulting peritonitis and secondary obstruction of the ileum The preoperative diagnosis in all six cases was acute appendicitis
   (f) In no case did an ileal fistula occur in an adult

The findings in this survey coincide with those of existing reports Figures regarding age, position, and size are those usually quoted The

sex ratio shows a higher percentage of females than is expected This may well be due to the fact that several were found incidentally in patients undergoing hysterectomy The presence of ileal mucosa in all but one case conforms to the normal, although the report of gastric mucosa in one diverticulum represents an occasional histologic finding It is important to note that the diagnosis of acute Meckel's diverticulitis was not made in any of the six cases, affirming the fact that the lesion is rarely recognized and that it must be considered in any evaluation of the acute abdomen In 53 per cent of the cases the diverticulum proved to be an incidental finding, this being typical of most reported series of the anomaly The case of a congenital fecal umbilical fistula demonstrates a rare but potential complication The two cases of intussusception reinforce the impression that a Meckel's diverticulum is an important initiating factor in small bowel intussusception in infants Lastly, the finding of an acute diverticulitis incarcerated in a hernial sac is unusual and has not been previously noted, providing still more evidence of the versatility of this anomaly

Summary

A brief discussion of Meckels diverticulitis is presented An interesting case of recurrent abdominal wall abscess and ileal fistula in an adult secondary to a Meckel's diverticulum is cited, and a twenty-year incidence of the diverticulum at a large voluntary hospital is analyzed and discussed

SIGMOIDORECTAL ELECTROSURGICAL SNARE

ROBERT TURELL, M D , New York City

(*From the Surgical Services of Beth Israel and Montefiore Hospitals*)

THIS instrument consists of a pistol-like handle that fits well into the average-sized hand, affording a firm grip, and it does not interfere with the visualization of the lesion to be treated (Figs 1, 2, 3) To the top of this handle there is attached a unit which, at its distal end, receives a well insulated tube or stem with its stainless metal carrier of the snare wires The wire carrier at its distal end has four perforations, any two of which receive specially bent ends of the snare wire and determine the desired size of the wire loop, this carrier may be substituted by a hinged, loop snare wire (Fig 2)

The insulated tube or stem is made in various lengths, 6 inches (15 cm), 10 inches (25 cm.), and 14 inches (35 cm), and is held firmly by a screw-on mechanism. A similar screw-on attachment, located on the right side of the unit holding the snare wire carrier, has a range of 2 5 inches (6 5 cm) and is moved easily forward and back with the index finger of the hand grasping the

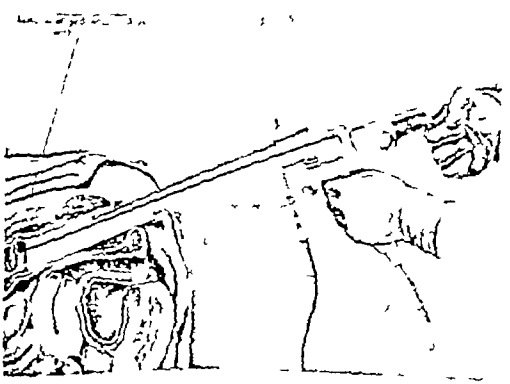

FIG 1 The snare in position for operation

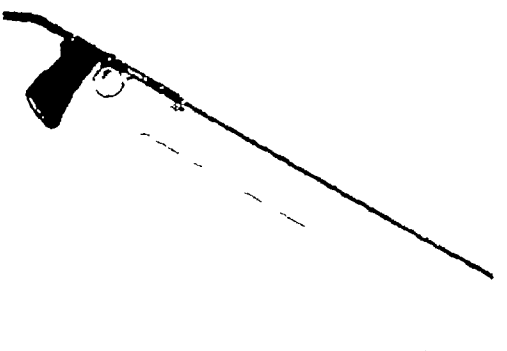

FIG 2 Handle with stem attached Adjacent to the stem lies the carrier for adjustable snare wire, and outside of this lies the hinged loop snare wire

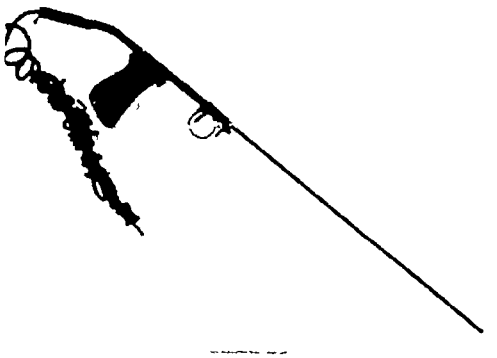

FIG 3 The assembled snare [2]

handle through a metal ring designed for this purpose (Figs 1, 2, 3) Through the distally placed tip of the handle (Figs 3, 1) the snare is connected to an electrosurgical generator designed for coagulation and cutting

To remove a polypoid lesion, its pedicle or stalk is caught in a loop about 0 25 to 0 5 cm below the mucosal base, is gradually strangulated, and finally severed or amputated by pulling the electrically activated wire loop into the stem (Figs 1, 4) Better hemostasis may be effected by the employment of the coagulating rather than the cutting current If desired the remaining short stump or base may be desiccated using the tip of the wire loop or specially designed electrodes [1]

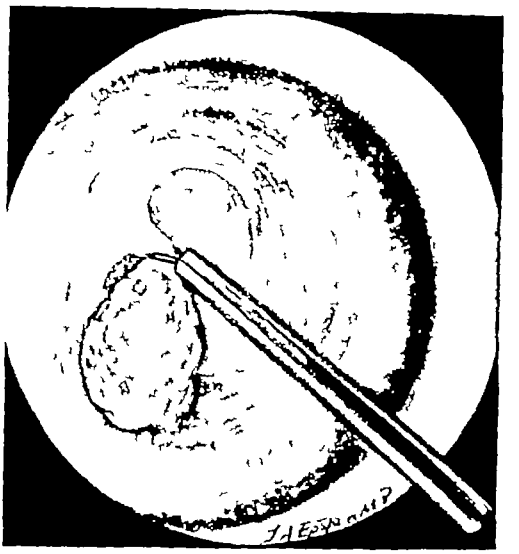

FIG 4 Magnified view showing the relationship of the wire loop to the pedicle or stalk.

PATIENTS IN BRITAIN OVERDO FREE RIDES

So many things are provided free to patients under Britain's National Health Service that it would seem, from a superficial glance that a slightly extra burden in one direction or another would hardly make much difference Yet there is a continual battle on the part of the Ministry of Health to keep the demands of ailing persons—and some not so ailing—within reasonable bounds

Free rides in "ambulances," most of which are in reality private cars provided by volunteer owners and operated by various ambulance brigades, are being taken advantage of by an increasing number of people to the point where the Ministry, according to the *London Sunday Express*, has warned that the service may break down unless the demands are curtailed

An instance was cited of a titled woman who called for a car to take her maid and herself from a London apartment to her country place on the East Coast on the ground that she was suffering from arthritis She made a small donation to the driver, but nothing what a private conveyance would have cost

Strictly speaking, the service is supposed to be only for the benefit of those patients incapable of using ordinary means of transportation, but, as it has worked out, the ambulance drivers receive calls from all sorts of people anxious to be taken on various jaunts, principally for drives into the country, where they intend to spend some time convalescing

Other patients have cars pick them up regularly each week to take them to doctors' offices for massage and other treatments. There is nothing the ambulance brigades can do about refusing the applications, it is said, provided the patient has been able to prevail upon a doctor to certify that public transport would be harmful.—*New York Times, July 9, 1949*

ANTIHISTAMINIC THERAPY OF ALLERGIC DISORDERS IN INFANTS AND CHILDREN

I Newton Kugelmass, M D , New York City

THE purpose of this study is to determine the relative effectiveness and dosage of Benadryl, Diatrin, and Pyribenzamine in over 309 infants, children, and adolescents with amenable allergic disorders The test period for each drug was two to four weeks, allowing a week for the shift to another drug The cases, ranging from one week to seventeen years of age, were examined biweekly to evaluate the effects and side-effects of the antihistaminic therapy Effects observed thirty minutes after oral administration lasted for several hours Consequently, each drug was offered after feedings and at bedtime if allergic symptoms were constant and after any feeding or whenever necessary if the symptoms were intermittent Appraisal of subjective responses was attained by teaching parents to record their observations in terms of time, duration, severity, and frequency of attacks Clinical evaluation of symptomatic drugs becomes a first approximation because of the variability of the allergic state and antiallergic activity in the same child at different times

Antihistaminic Dosage

The amount of antihistaminic administered to obtain the desired therapeutic effect without untoward manifestations was determined for each drug Each drug was offered in an elixir vehicle or in tablet form The initial dose was small and probatory, gradually increased according to tolerance and effectiveness, and decreased or discontinued with evidence of side-effects Since the dosage of Benadryl and Pyribenzamine has been established to be about 2 mg per Kg body weight for children, we estimated the dosage of Diatrin at each age level.

The three antihistaminics are well tolerated, since they act on the relatively underdeveloped cerebral cortex in infancy The response in childhood was similar to that observed in adults Continuous therapy involved four doses daily, after feedings and at bedtime Intermittent therapy involved a single dose whenever necessary, effective within thirty minutes and lasting for several hours The action of an antihistaminic is almost immediate, hence its tolerance, effectiveness, and toxicity was determined promptly Once established it was alternated with another antihistaminic within seven to ten days to compare relative value and dosage, respectively Despite promptness of action of the antihistaminics, no attempt was made to replace them for epinephrin in emergencies because their immediate effectiveness is less satisfactory

The correct dosage was difficult to estimate in terms of any simple factor such as age and weight of the child or severity and duration of the allergic illness The closest approximation was in terms of body weight, but the dose range was relatively wide for each age level depending on the intensity of the illness Application of Fried's, Clark's, or Young's rule was futile for the individual infant or child although the general principle obtained There was no substitute for close observation of

TABLE 1 —Diatrin Dosage in Infants and Children

Age	Average Weight (Pounds)	Number of Cases	Dose Range (Mg. per 24 Hours)	Average Dose (Mg. per 24 Hours)	Average Dose (Mg per Pound Body Weight)

16 5	133 0	2	150–350	200 0	1 5
17 5	140 0	2	150–400	220 0	1 5

the individual problem. Nevertheless, we found a satisfactory guide to the dosage of Diatrin Infants 5 to 25 mg per twenty-four hours or 0 5 to 0 8 mg per pound body weight, children 25 to 75 mg per twenty-four hours or 0 8 to 1 2 mg per pound of body weight, and adolescents 75 to 200 mg per twenty-four hours or 1 2 to 1 5 mg per pound of body weight (Table 1)

Gastrointestinal Allergy

Gastrointestinal symptoms, with or without other allergic manifestations, may occasionally be indicative of an antigen-antibody reaction with the intestinal wall as the shock organ Two newborns thrived on their milk mixtures for a fortnight and then began to vomit, show colicky pain, and pass loose stools tinged with bright red blood Diatrin syrup, 10 to 20 drops after feedings, decreased but did not abolish the sensitization to cow's milk. Six infants with pylorospasm, colicky pain, and diarrhea were found to be sensitive to milk, wheat, orange, tomato, and eggs, by clinical trial as well as by skin test reaction Diatrin and Pyribenzamine syrup, respectively, ½ teaspoon three times a day, relieved the intensity of the symptoms as long as the drugs were administered Complete relief was obtained only with elimination of allergic offenders

Fifteen older children with abdominal allergy were more responsive to antihistaminics Four children avoided specific foods because of the immediateness of digestive symptoms following ingestion of the reacting food Intradermal tests showed an immediate wheal reaction to known offenders Diatrin syrup after ingestion of such foods neutralized the allergic reaction and thus prevented the so-called allergic indigestion Two children developed more acute attacks of gastroenteritis with vomiting, epigastric pain, diarrhea, edema of the face and mouth, and general urticaria following ingestion of shellfish, nuts, and cottonseed products, confirmed by the immediate wheal skin test Diatrin aborted attacks, but the offending foods produced visceral discomfort Three children with recurrent vomiting due to food hypersensitiveness were not relieved of these attacks by antihistaminics Six children with chronic diarrheal disorders, with proved food allergy also failed to respond to antihistaminics (Table 2)

TABLE 2.—Therapeutic Effects of Antihistaminics in Gastrointestinal Allergy

Group	Number of Cases	Vomiting	Colic	Diarrhea
Degree of Improvement According to Symptoms				
Newborns	6	−	+	−
Infants	16	−	+	+
Children	29	+	+	+
Degree of Improvement According to Antihistaminic				
Benadryl	17	30	45	25
Diatrin	17	35	50	25
Pyribenzamine	17	35	50	25

Seasonal Hay Fever

Pollen hypersensitiveness in the infant takes the form of a recurring summer cold with watery mucous discharge, intermittent nasal blockage, and streaming eyes, but without the paroxysmal sneezing attacks that occur in the child All the 56 children studied were receiving desensitization therapy to specific pollen allergens, hence antihistaminic administration constituted adjuvant therapy The symptoms of hay fever, presented singly and in various grades and combinations, were alleviated promptly by antihistaminics. The order of response was itching of the eyes, nose, and throat, sneezing, rhinorrhea, and nasal blocking, respectively, and the effect was noticeable on the first day of treatment Each of the three antihistaminics controlled the symptoms, but it required less Diatrin than Pyribenzamine or Benadryl to obtain the desired results Even children receiving no pollen therapy were benefited by antihistaminics, but the greatest improvement was observed in cases of moderate pollen sensitiveness undergoing pollen therapy The few children with high degree of pollen sensitivity fared poorly It is obvious that the usual annual experience of providing 80 per cent relief for 80 per cent of the treated children has thus been improved with antihistaminic therapy, an improvement that was evident from the first day of treatment (Table 3)

TABLE 3.—Therapeutic Effects of Antihistaminics in Seasonal Hay Fever

	Total Cases	Rhinorrhea	Sneezing	Nasal Itching	Nasal
Degree of Improvement According to Symptom					
Infants	5	70		90	60
Children	20	84	81	92	72
Adolescents	32	82	85	88	75
Degree of Improvement According to Antihistaminic					
Benadryl	19	72	80	85	65
Diatrin	19	80	85	90	75
Pyribenzamine	19	75	82	88	70

Vasomotor Rhinitis

Perennial hay fever is characterized by attacks of sneezing, nasal obstruction, and rhinorrhea, irrespective of the season of the year In one group of children the paroxysms of sneezing, nasal itching, and congestion—often mistaken for head colds—occur on arising, persist until noon, and recur in the evening In another group of children the persistent nasal congestion, often mistaken for paranasal sinusitis, causes mouth breathing and eventually adenoid facies The causative factors in both groups are a multiplicity of sensitizations by airborne substances

TABLE 4.—THERAPEUTIC EFFECTS OF ANTIHISTAMINICS IN VASOMOTOR RHINITIS

	Number of Cases	Sneezing	Nasal Itching	Nasal Discharge	Nasal Obstruction
	Per Cent of Cases Benefited According to Symptom				
Type of rhinitis					
Recurrent	44	60	65	55	45
Chronic	28	50	55	40	90
	Per Cent of Cases Benefited According to Antihistaminic				
Type of antihistaminic					
Benadryl	34	50	50	40	40
Diatrin	24	60	65	50	45
Pyribenzamine	34	55	55	45	45

such as dusts, animal danders, and vegetable powders, by foods, drugs, spores, and bacteria, by physical allergens, such as heat and cold, and by endocrine and metabolic disturbances The affected child is usually in continuous contact with these sources of offense, hence most therapeutic attempts are without avail unless the causative allergens are determined and eliminated They can readily be ascertained by skin tests and elimination diets and the diagnosis confirmed by positive eosinophilic nasal smears Antihistaminics have been given to alternate cases in each group in the form of Benadryl, Diatrin, and Pyribenzamine, respectively The therapeutic effect was less striking than in seasonal hay fever, because the former is due to multiple allergens while the latter to pollen allergens alone The response was far better in recurrent than in chronic allergic rhinitis (Table 4)

Bronchial Asthma

Antihistaminic action differentiated the types of asthma in infants and children Each of the three antihistaminics was effective in the primary hereditary type, occasionally effective in the secondary acquired type, and completely ineffective in the residual lung injury type of asthma To negate antihistaminic value in asthma because of the high percentage of failure is to remain oblivious to the various types of asthma encountered in pediatric practice About one third of the 45 asthmatic patients were benefited by antihistaminics given early and in adequate dosage The drug was usually prescribed at the onset of or during an attack in conjunction with other therapeutic measures In a few cases, because the children complained of excessive dryness of the mucous membranes or tightness of the chest, the drug was discontinued Diatrin was more helpful than Pyribenzamine and each better than Benadryl, but severe attacks were not halted by any of the antihistaminics without aminophyllin or epinephrin.

The hereditary infantile type of asthma developed gradually with recurrent cough, wheezing, and dyspnea. Some of the five infants were treated for recurrent bronchitis until the great frequency, rapid onset and offset, characteristic wheeze, and bilateral allergic heredity established the diagnosis The cause in four cases was infection complicated by sensitivity to extrinsic agents, and in one case it was acute systemic food reaction. There was little difficulty in differentiating infectious from allergic asthma In the former, there were marked constitutional symptoms following exposure to infection, hyperemic mucous membranes, and mucopurulent discharge predominating in neutrophils In the latter, there were mild constitutional symptoms, edematous mucous membranes, unless secondarily infected, and thin mucoid secretion charged with eosinophils Each of the antihistaminics, especially Diatrin, was helpful in alleviating the cough, more effectively than the dyspnea or wheeze, if administered at the onset However, the hereditary childhood type of attack, which developed suddenly and inexplicably at night with severe dyspnea, little or no cough, and audible wheeze, was less responsive to antihistaminics The frequency and severity of the nocturnal attacks in eight cases were diminished somewhat by bedtime antihistaminic therapy until the underlying cause was determined

The secondary acquired type of asthma is a variant of the hereditary type following infantile eczema or childhood hay fever Attacks complicating eczema in 12 children tended to persist into puberty with little diminution in frequency or severity in the warmer or colder months, while attacks accompanying hay fever in 14 children were seasonal and limited to their specific pollen sensitivity Many of the cases in each group complicated by infective asthma were less violent than in infancy but more prolonged or even chronic into puberty Antihistaminics alleviated asthma due to inhalant or ingestant allergy but not that due to infective or eczematous origin. Fourteen children with pollen or food asthma responded promptly, while 12 with infective asthma and eczema-asthma syndrome, respectively, obtained no relief from antihistaminics. Evaluation of antihistaminic therapy was rather difficult because an asthmatic attack was often the resultant of infective and noninfective allergy

the individual problem Nevertheless, we found a satisfactory guide to the dosage of Diatrin Infants 5 to 25 mg per twenty-four hours or 0 5 to 0 8 mg per pound body weight, children 25 to 75 mg per twenty-four hours or 0 8 to 1 2 mg per pound of body weight, and adolescents 75 to 200 mg per twenty-four hours or 1 2 to 1 5 mg per pound of body weight (Table 1)

Gastrointestinal Allergy

Gastrointestinal symptoms, with or without other allergic manifestations, may occasionally be indicative of an antigen-antibody reaction with the intestinal wall as the shock organ Two newborns thrived on their milk mixtures for a fortnight and then began to vomit, show colicky pain, and pass loose stools tinged with bright red blood Diatrin syrup, 10 to 20 drops after feedings, decreased but did not abolish the sensitization to cow's milk. Six infants with pylorospasm, colicky pain, and diarrhea were found to be sensitive to milk, wheat, orange, tomato, and eggs, by clinical trial as well as by skin test reaction Diatrin and Pyribenzamine syrup, respectively, 1/2 teaspoon three times a day, relieved the intensity of the symptoms as long as the drugs were administered Complete relief was obtained only with elimination of allergic offenders

Fifteen older children with abdominal allergy were more responsive to antihistaminics Four children avoided specific foods because of the immediateness of digestive symptoms following ingestion of the reacting food Intradermal tests showed an immediate wheal reaction to known offenders Diatrin syrup after ingestion of such foods neutralized the allergic reaction and thus prevented the so-called allergic indigestion Two children developed more acute attacks of gastroenteritis with vomiting, epigastric pain, diarrhea, edema of the face and mouth, and general urticaria following ingestion of shellfish, nuts, and cottonseed products, confirmed by the immediate wheal skin test Diatrin aborted attacks, but the offending foods produced visceral discomfort Three children with recurrent vomiting due to food hypersensitiveness were not relieved of these attacks by antihistaminics Six children with chronic diarrheal disorders, with proved food allergy also failed to respond to antihistaminics (Table 2)

TABLE 2.—THERAPEUTIC EFFECTS OF ANTIHISTAMINICS IN GASTROINTESTINAL ALLERGY

Seasonal Hay Fever

Pollen hypersensitiveness in the infant takes the form of a recurring summer cold with watery mucous discharge, intermittent nasal blockage, and streaming eyes, but without the paroxysmal sneezing attacks that occur in the child All the 56 children studied were receiving desensitization therapy to specific pollen allergens, hence antihistaminic administration constituted adjuvant therapy The symptoms of hay fever, presented singly and in various grades and combinations, were alleviated promptly by antihistaminics. The order of response was itching of the eyes, nose, and throat, sneezing, rhinorrhea, and nasal blocking, respectively, and the effect was noticeable on the first day of treatment Each of the three antihistaminics controlled the symptoms, but it required less Diatrin than Pyribenzamine or Benadryl to obtain the desired results Even children receiving no pollen therapy were benefited by antihistaminics, but the greatest improvement was observed in cases of moderate pollen sensitiveness undergoing pollen therapy The few children with high degree of pollen sensitivity fared poorly It is obvious that the usual annual experience of providing 80 per cent relief for 80 per cent of the treated children has thus been improved with antihistaminic therapy, an improvement that was evident from the first day of treatment (Table 3)

TABLE 3.—THERAPEUTIC EFFECTS OF ANTIHISTAMINICS IN SEASONAL HAY FEVER

	Total Cases	Rhinorrhea	Sneezing	Nasal Itching	Nasal
Degree of Improvement According to Symptom					
Infants	5	70		90	60
Children	20	84	81	92	72
Adolescents	32	82	85	88	75
Degree of Improvement According to Antihistaminic					
Benadryl	19	72	80	85	65
Diatrin	19	80	85	90	75
Pyribenzamine	19	75	83	88	70

Vasomotor Rhinitis

Perennial hay fever is characterized by attacks of sneezing, nasal obstruction, and rhinorrhea, irrespective of the season of the year In one group of children the paroxysms of sneezing, nasal itching, and congestion—often mistaken for head colds—occur on arising, persist until noon, and recur in the evening In another group of children the persistent nasal congestion, often mistaken for paranasal sinusitis, causes mouth breathing and eventually adenoid facies The causative factors in both groups are a multiplicity of sensitizations by airborne substances

TABLE 4.—THERAPEUTIC EFFECTS OF ANTIHISTAMINICS IN VASOMOTOR RHINITIS

	Number of Cases	Sneezing	Nasal Itching	Nasal Discharge	Nasal Obstruction
	Per Cent of Cases Benefited According to Symptom				
Type of rhinitis					
Recurrent	44	60	65	55	45
Chronic	28	50	55	40	90
	Per Cent of Cases Benefited According to Antihistaminic				
Type of antihistaminic					
Benadryl	24	50	50	40	40
Diatrin	24	60	65	50	45
Pyribenzamine	24	55	55	45	45

such as dusts, animal danders, and vegetable powders, by foods, drugs, spores, and bacteria, by physical allergens, such as heat and cold, and by endocrine and metabolic disturbances The affected child is usually in continuous contact with these sources of offense, hence most therapeutic attempts are without avail unless the causative allergens are determined and eliminated They can readily be ascertained by skin tests and elimination diets and the diagnosis confirmed by positive eosinophilic nasal smears Antihistaminics have been given to alternate cases in each group in the form of Benadryl, Diatrin, and Pyribenzamine, respectively The therapeutic effect was less striking than in seasonal hay fever, because the former is due to multiple allergens while the latter to pollen allergens alone The response was far better in recurrent than in chronic allergic rhinitis (Table 4)

Bronchial Asthma

Antihistaminic action differentiated the types of asthma in infants and children. Each of the three antihistaminics was effective in the primary hereditary type, occasionally effective in the secondary acquired type, and completely ineffective in the residual lung injury type of asthma To negate antihistaminic value in asthma because of the high percentage of failure is to remain oblivious to the various types of asthma encountered in pediatric practice About one third of the 45 asthmatic patients were benefited by antihistaminics given early and in adequate dosage The drug was usually prescribed at the onset of or during an attack in conjunction with other therapeutic measures In a few cases, because the children complained of excessive dryness of the mucous membranes or tightness of the chest, the drug was discontinued Diatrin was more helpful than Pyribenzamine and each better than Benadryl, but severe attacks were not halted by any of the antihistaminics without aminophyllin or epinephrin

The hereditary infantile type of asthma developed gradually with recurrent cough, wheezing, and dyspnea Some of the five infants were treated for recurrent bronchitis until the great frequency, rapid onset and offset, characteristic wheeze, and bilateral allergic heredity established the diagnosis The cause in four cases was infection complicated by sensitivity to extrinsic agents, and in one case it was acute systemic food reaction There was little difficulty in differentiating infectious from allergic asthma In the former, there were marked constitutional symptoms following exposure to infection, hyperemic mucous membranes, and mucopurulent discharge predominating in neutrophils In the latter, there were mild constitutional symptoms, edematous mucous membranes, unless secondarily infected, and thin mucoid secretion charged with eosinophils Each of the antihistaminics, especially Diatrin, was helpful in alleviating the cough, more effectively than the dyspnea or wheeze, if administered at the onset However, the hereditary childhood type of attack, which developed suddenly and inexplicably at night with severe dyspnea, little or no cough, and audible wheeze, was less responsive to antihistaminics The frequency and severity of the nocturnal attacks in eight cases were diminished somewhat by bedtime antihistaminic therapy until the underlying cause was determined

The secondary acquired type of asthma is a variant of the hereditary type following infantile eczema or childhood hay fever Attacks complicating eczema in 12 children tended to persist into puberty with little diminution in frequency or severity in the warmer or colder months, while attacks accompanying hay fever in 14 children were seasonal and limited to their specific pollen sensitivity Many of the cases in each group complicated by infective asthma were less violent than in infancy but more prolonged or even chronic into puberty Antihistaminics alleviated asthma due to inhalant or ingestant allergy but not that due to infective or eczematous origin Fourteen children with pollen or food asthma responded promptly, while 12 with infective asthma and eczema-asthma syndrome, respectively, obtained no relief from antihistaminics Evaluation of antihistaminic therapy was rather difficult because an asthmatic attack was often the resultant of infective and noninfective allergy

TABLE 5.—Therapeutic Effects of Antihistaminics in Bronchial Asthma

	Number of Cases	Dyspnea (Per Cent)	Cough	Wheeze
Per Cent of Cases Benefited According to Symptom				
Type of Asthma				
Primary (Hereditary)				
Infantile	6	20	40	20
Childhood	9	25	50	20
Secondary (Acquired)				
Childhood	26	20	30	25
Residual lung injury				
Childhood	4	0	0	0
Per Cent of Cases Benefited According to Antihistaminic				
Type of Antihistaminic				
Benadryl	15	22	40	20
Diatrin	15	25	45	20
Pyribenzamine	15	20	40	20

The residual lung injury type of asthma followed severe infectious disease in four older children studied They showed but few of the characteristics of the previous types, i e, no allergic family history, no associated allergic manifestations, no attacks beyond the winter months, and no freedom from bronchitis between attacks In three children the asthma was mildly continuous but with frequent exacerbations, and in one case it was intermittent and paroxysmal accentuated by physical effort, fatigue, and exposure to cold None of the antihistaminics had the slightest beneficial effect on any of these cases (Table 5)

Allergic Dermatoses

Acute urticaria was relieved symptomatically within a day, while specific measures were instituted It is well to remember, however, that spontaneous relief occurs regardless of the type of treatment instituted The intense pruritis was alleviated more effectively than the edema or erythema in five of the six cases of food allergy accompanied by acute gastroenteritis Each of the three antihistaminics was useful in reducing the number of lesions and the skin susceptibility for scratch or intradermal tests Diatrin was equal to Pyribenzamine and better than Benadryl in efficacy at lower dosage levels

Papular urticaria was not cleared by antihistaminics, although the pruritis was mitigated by relatively large doses In the early wheal stages the response was rather favorable in two cases, but when the papular stage intervened the lesions persisted unabated Low fat elimination diets and cool surroundings were most beneficial in spite of the atopic nature of the dermatitis

Angioneurotic edema was controlled by prolonged antihistaminic therapy One of the four children continued to have mild but infrequent recurrences One infant developed angioedema with cyclic vomiting, the former cleared, but the latter recurred One child showed facial edema following excessive ingestion of berries but remained clear on Diatrin therapy during periods of berry moderation None of the children responded to epinephrin, ephedrin, or histamine

Dermographia was readily controlled by antihistaminics within several hours of performing skin tests One child who had previously been stroked with a hair brush by Duke's method to enable intradermal testing, was now skin-tested after Pyribenzamine administration. Another child with dermographia accompanied by urticaria responded to Diatrin

Serum sickness was controlled remarkably well in an unusual case with spinal cord involvement A mentally retarded boy of seven developed urticaria, anaphylactic symptoms, and signs of meningeal irritation on the seventh day after injection of tetanus antitoxin in the country Epinephrin in oil and aminophyllin proved effective, but on the next day the muscles of the neck, arms, and legs became weak, speech was lost, and convulsions appeared Diatrin in 50 mg doses every four hours was initiated and continued for five days until all symptoms cleared

Penicillin dermatitis was cleared in two of the three severe cases by large antihistaminic dosage The itching of the generalized urticaria and angioedema abated in several days, but the swollen skin and painful joints persisted Neither of the allergic children showed any reaction to penicillium mold The third case failed to respond to any of the antihistaminics even in massive doses

Sulfadiazine dermatitis responded to moderate doses of antihistaminics One infant, two children, and one adolescent developed morbilliform urticarial lesions accompanied by systemic disorders without leukopenia The itching was alleviated in two days, but the erythema persisted for a week

Liver extract dermatitis was not relieved by antihistaminics at high dosages One allergic infant treated with parenteral liver extracts for the celiac syndrome developed urticaria and another angioedema Itching was mitigated, but the rash persisted for a fortnight

Poison ivy dermatitis failed to respond to antihistaminics The intense itching was slightly relieved, but the swelling, redness, and burning were not influenced nor was vesicle formation, despite local therapy

Barbiturate dermatitis cleared in an epileptic child on antihistaminics An excessive dosage of phenobarbital produced a morbilliform rash but Diatrin, 25 mg every four hours, alleviated the itching in two days, the edema in four days, and the erythema in a week

TABLE 6.—THERAPEUTIC EFFECTS OF ANTIHISTAMINICS IN ALLERGIC DERMATOSES

Dermatitis	Number of Cases	Itching	Edema	Erythema	Results
	Per Cent of Cases Benefited According to Symptoms				
Acute urticaria	16	85	80	85	Excellent
Papular urticaria	7	++	−	−	Poor
Angioneurotic edema	4	+++	++	+	Good
Dermographia	2	+	+	+	Good
Serum sickness	1	+++	+++	+++	Excellent
Penicillin dermatitis	8	+++	+	+	Good
Sulfadiazine dermatitis	18	+++	−	+	Good
Liver extract dermatitis	2	++	−	−	Poor
Poison ivy dermatitis	6	++	+	+	Poor
Barbiturate dermatitis	1	+++	++	+	Good
Infantile eczema	19	++	+	+	Poor
	Per Cent of Cases Benefited According to Antihistaminic				
Type of antihistaminic					
Benadryl	28	80	80	80	
Diatrin	28	85	80	80	
Pyribenzamine	28	85	80	80	

Infantile eczema (atopic dermatitis) was relieved of its pruritic component by antihistaminics, but the pleomorphic exudative lesions remained unaltered None of the various combinations of erythema, papulation, oozing, crusting, or wheal formation were affected in the slightest, whether antihistaminic therapy was initiated at the very onset or at any stage of the disease in nine patients ranging in age from three months to three years Some gave cutaneous wheal reactions of the immediate type to many allergens, especially foods and inhalants, but many of these showed no causal relation to the exudative lesions Antihistaminics were used to suppress itching, eliminate mechanical trauma from scratching, and provide partial sedation (Table 6)

Toxic Reactions

Acute toxicity of antihistaminics was observed in about one fourth of the patients, while chronic toxicity was observed in none Over 70 per cent of the children treated for acute allergic disorders responsive to antihistaminics showed no side-effects on individualized dosage When reactions occurred, they were manifest within four to eight hours after oral administration Most of the reactive cases developed drowsiness accompanied by nervous symptoms such as fatigability, weakness, irritability, dizziness, headache, or palpitation, digestive symptoms such as dry mouth, bad taste, nausea, epigastric distress, or diarrhea, and skin disorders such as pallor, dermatitis, pruritis, or cold extremities Blood examinations showed no anemia, leukopenia, or other hemopoietic changes

Diatrin was least toxic with fewer reactions clinically than Pyribenzamine or Benadryl Drowsiness was the most striking disturbance, usually accompanied by one or more nervous, digestive, or, more rarely, skin reactions Infants showed more digestive symptoms, children more nervous symptoms The effects were never of sufficient intensity to necessitate discontinuance of the drug Since the effective dosage of Diatrin was relatively smaller in comparison with Benadryl or Pyribenzamine, milder side-effects were observed at each age level When larger dosages become necessary in severe acute allergic disorders, Diatrin caused the least discomfort, Pyribenzamine more discomfort, and Benadryl the most Nevertheless, temporary reduction in dosage often alleviated side reactions until more effective amounts were tolerated in several days Indeed, tolerance was always individual, for some children obtained the greatest relief with the least side reaction from any of the antihistaminics, while others obtained the least relief with maximal disturbances from the same drug (Tables 7, 8)

TABLE 7.—SYMPTOMATIC INCIDENCE OF TOXIC REACTIONS

Symptoms	Benadryl	Diatrin	Pyribenzamine
	Per Cent of Cases

Group	Benadryl (Per Cent)	Diatrin (Per Cent)	Pyribenzamine (Per Cent)
Infants	24	16	20
Children	28	20	25
Adolescents	30	22	26

Summary

1 Three of the antihistaminics most intensively studied—Benadryl, Diatrin, and Pyribenzamine—were evaluated in allergic disorders of infants and children

2 Gastrointestinal allergy was not completely alleviated by antihistaminics without elimination of offending allergens The therapeutic effect was least in newborns and most in older children

3 Seasonal hay fever in mild form was controlled by antihistaminics alone and in severe form by a combination of antihistaminics and specific immunizing procedures

4 Vasomotor rhinitis was not alleviated by antihistaminics without clearance of the multiple allergens involved, although the recurrent type showed better response than the chronic type of the disease

5 Bronchial asthma was benefited in the primary hereditary type, occasionally in the secondary acquired type and not at all in residual lung injury type Each of the antihistaminics, especially Diatrin, alleviated the cough more effectively then the dyspnea or wheeze

6 Allergic dermatoses were relieved symptomatically of the acute edema or pruritis, especially in acute urticaria, angioneurotic edema, serum sickness, and drug dermatitis

7 Dosage of antihistaminics was evaluated in terms of body weight and severity of allergic offense The dosage of Diatrin per twenty-four hours was less than that of Benadryl and Pyribenzamine, i e , for infants 5 to 25 mg , for children 25 to 75 mg , for adolescents 75 to 200 mg per twenty-four hours

8 Toxic reactions observed were acute in about 25 per cent of the cases and chronic in none of the 309 children supervised Reactions were manifest within four to eight hours in the form of drowsiness accompanied by nervous and digestive but no hemopoietic disturbances

9 Diatrin was more effective in smaller doses and better tolerated than Pyribenzamine and the latter more than Benadryl at each age level

ESSENTIALLY USELESS

The use of the right word at the right time is an accomplishment to which most medical writers and speakers aspire Oddly enough, familiar words seem to be more frequently misused than unfamiliar ones The speaker or writer is more inclined to resort to the dictionary for the meaning of the latter but often feels falsely confident with regard to the former

Certain words and phrases are vastly overworked by medical users and so indiscriminately are they employed that any special meaning they may originally have possessed has by now been lost. One such work is the modifier *essentially*, which has come to be considered indispensable in case presentation whether written or spoken At some time in the past, the word probably was used for a specific purpose, but at present it seems to be anything but indispensable One hears that a physical examination or a chest plate, or an abdominal exploration, or a battery of laboratory studies is *essentially* negative It is inserted because it is considered to protect the user from criticism In a case of coronary vascular sclerosis, for example, there may be no cardiac enlargement, murmurs, or irregularities of rhythm, the liver is not enlarged and there is no peripheral edema. For these reasons, one may consider that there are no significantly abnormal physical findings, but is afraid to say so If he does, a listener may leap to his feet and scold him for not noting that there is a *musca volitants* in the right eye and that quite obvious signs of epidermophytosis would have been found had he bothered to look between the toes The prepared defense against such onslaughts is to say that the physical examination was *essentially* negative or noncontributory

A moment's reflection should convince one that the insertion of the magic word protects him from nothing If irrelevant details are omitted in a case presentation thoroughly sensible precedent is merely being followed If truly significant details are omitted neither the word *essentially* nor any amount of linguistic adroitness can protect the speaker from criticism

Uncritical use of the language is not necessarily a sign of uncritical scientific thinking, but such use is not infrequently its bedfellow Insistence on precision, tiresome though it may seem, will eliminate a surprising amount of useless and taxing verbiage The word *essentially* is merely one example among many —*New England Journal of Medicine, July, 1949*

Case Reports

TOXIC NEPHROSIS FROM ORGANIC MERCURIAL DIURETICS

DAVID GREENBERG, M D , and JOSEPH S FEIBUSH, M D , Bronx, New York

(*From the Departments of Medicine, Lebanon and Jewish Memorial Hospitals*)

IN VIEW of the present tendency to administer the organic mercurial diuretics daily, the following case with autopsy studies is reported to indicate the need for caution Furthermore, since toxic mercurial nephrosis is largely a pathologic diagnosis, its presence may be missed in many cases where autopsies are not obtained This may account for the few reports in the literature Our case, in addition, represents the first (?) reported death following intramuscular administration of a mercurial diuretic

Case Report

F F, a thirty-eight-year-old white married woman, was first seen by one of us (D G) in 1941, at which time she had well-established rheumatic mitral insufficiency and mitral stenosis with auricular fibrillation She gave a history of rheumatic fever at the age of five years with no known subsequent attacks Her father died of cerebral hemorrhage and her mother of rheumatic heart disease Five other siblings were living and well. She had had two normal deliveries, and both children were living and well

Later in 1941, she developed an arterial embolus in the fundus of the right eye with secondary optic atrophy and very marked diminution in vision In 1944, she was treated for pneumonia Hypertension was first noted in 1944 when she had a blood pressure of 160/105 Three months later the blood pressure was 170/115 Prior to this date, her blood pressure on repeated examination had been normal

Subsequently, in March, 1946, she received x-ray therapy for a fibroid uterus because of severe menorrhagia. Artificial menopause ensued

Treatment at first consisted of limitation of fluids, Digitoxin, and rest Beginning in January, 1947, she started her repeated admissions to the hospital because of progressive deterioration in her cardiac status From January 15 to January 28, 1947, she was hospitalized at Lebanon Hospital for pulmonary infarction and congestive failure with a markedly enlarged and tender liver Her blood pressure was 194/120 Several urinalyses showed normal specific gravity with occasional albuminuria. Electrocardiogram revealed auricular fibrillation, digitalis effects, and right deviation of the electrical axis. It was during this admission, on January 25, 1947, that she received 1 cc of Mercuhydrin intramuscularly for the first time

She was readmitted to Lebanon Hospital on April 6, 1947, and discharged on April 26 This time she had developed a severe pain in the right flank associated with temperature of 103 F , and a diagnosis of right renal infarction was made On the day following admission, she developed pain in the left flank and had a very tender, nonrigid abdomen Repeated urinalyses showed microscopic hematuria. Bilateral renal infarction was the clinical diagnosis During this admission her blood pressure was 180/90 On April 26, 1947, she received her second dose of 1 cc of Mercuhydrin intramuscularly

Her third hospital admission was to the Jewish Memorial Hospital which she entered on May 9, 1947, and left May 24 She was admitted because of very severe frontal and parietal headaches associated with nausea and vomiting Spinal tap revealed crystal clear fluid under such increased pressure that it flowed out over the top of the manometer The cerebrospinal fluid showed Pandy test negative, sugar 150, and 16 polymorphonuclear leukocytes Her blood pressure ranged from 160-180/100-115 The neurologic examination was normal The blood urea nitrogen varied between 17 and 21 mg per cent She was considered to have atypical hypertensive encephalopathy, although cerebral embolus could not be excluded Atypical digitalis intoxication was also considered as a possible contributing factor

Thereafter, she did poorly at home, showing persistent evidence of chronic congestive heart failure with much edema and cyanosis. Mercuhydrin was administered weekly without much effect Blood pressure on June 9, 1947, was 196/112 The electrocardiogram revealed right deviation of the electrical axis, digitalis effects, and auricular fibrillation It was especially noted that her hands, wrists, and fingers were swollen, and cyanosis was rather marked

Finally, because of progressive congestive heart failure, she was admitted to Lebanon Hospital on June 19, 1947, and stayed there until her discharge on September 9, 1947 At this time her blood pressure was normal, ranging from 124-140/90-98 She received intramuscular Mercuhydrin every other day, then daily, and finally several times each week Her temperature was level during most of her stay with irregular rises of unknown etiology (Mercuhydrin reaction?) Sulfadiazine and sulfathiazole appeared to accentuate the erythema and edema of the hands. Blood cultures were sterile, and the urea nitrogen was 11 mg per cent. X-ray of the chest disclosed small infiltrations at the right base Despite intensive treatment with low salt diet, Mercuhydrin, and digitalis, she exhibited marked congestive failure at complete bed rest when she left the hospital, still unimproved

At home, she was almost constantly dyspneic and orthopneic and she received three intramuscular injections of Mercuhydrin or Mercupurin weekly with a fair diuretic response Early in November, 1947, it became apparent that she was becoming extremely sensitive to the injections of either Mercupurin or Mercuhydrin, complaining of severe headache, facial neuralgia, and generalized aches and pains following each administration On No-

vember 18, 1947, the injection of 1 cc of Mercuhydrin by vein resulted in marked shocklike reaction Urinalysis at this time showed a 2 plus albuminuria with occasional casts However, because of the ominously increasing edema of the extremities and lungs, it was decided to continue mercurial injections intramuscularly Accordingly, on the afternoon of November 23, 1947, 1 cc of Mercuhydrin was injected into the muscles about the left hip She again developed signs of intolerance and complained in addition, of severe chest pains. Early the next morning, she was in profound peripheral circulatory collapse and died within a few hours

Autopsy showed 300 cc fluid in pleural and peritoneal cavities and calcified mitral valve with stenosis The coronary arteries were patent throughout There was a "nutmeg" liver The right kidney weighed 90 Gm., the left 160 Gm., and healed bilateral renal infarcts were present Microscopic sections showed acute enteritis of small intestine and congestion of the lungs and liver Extensive degenerative changes were found in the convoluted tubules of the kidneys The complete histologic report was as follows

"Sections of kidney show marked degeneration and early necrosis of convoluted tubules Almost all of the tubules are involved Their lumina contain amorphous precipitate The collective tubules are involved to a much lesser degree Some of the glomeruli show fibrosis, especially in one area of an old infarct where all of the glomeruli are fibrotic Some of the glomeruli show only thickening of Bowman's capsules The majority of the glomeruli, however, do not show any significant changes The stroma near the pelvis is infiltrated by polymorphonuclear leukocytes. The remainder of the stroma shows areas of fibrosis and infiltration by round cells The large and medium-sized arteries show arteriosclerotic changes Some of the arterioles show hyalinization The capillaries are markedly congested"

Comment

In three and one-half months, this rheumatic cardiac patient began to show intolerance to mercurials, after having received approximately 80 injections of Mercuhydrin and Mercupurin

Her death was probably due to an intramuscular injection of Mercuhydrin which resulted in a shocklike reaction At necropsy, no acute coronary closures were found, and marked degeneration of kidney tubules was demonstrated

The age of therapeutics which is upon us gave us wonderful tools to work with Organic mercury is one of these tools and its accomplishments are, by now, generally acknowledged Yet, like most drugs both new and old, it is not without danger The present enthusiasm may perhaps be overdone, and it is for this reason that this report is made

In a 1942 review of the toxic manifestations of mercurial diuretics, DeGraff and Nadler stated that "when a reaction occurs another preparation should be cautiously tried, changing the mode of administration with the same preparation does not seem to help"[1] Fox, Gold, and Leon reported a case unable to tolerate as little as 0 1 cc of Mercupurin intravenously, although more than 200 intravenous Salyrgan injections of 2 cc each were well tolerated[2] Apparently it is not mercury itself which is responsible It is the molecular structure which matters Fortunately, there are at least three good preparations (Salyrgan, Mercupurin, and Mercuhydrin) which may be substituted for each other when sensitivity develops

Not infrequently, none of these preparations is tolerated, and if pursued, shocklike reactions, temperature, and local irritating phenomena, including erythema and urticaria, may appear This has been observed by us several times

Reports of death following intramuscular administration of a mercurial diuretic have not often been described in the literature, although many fatalities have been reported following intravenous injections[3,4] Toxic nephrosis occurs, and death has been reported by Waife and Pratt following prolonged treatment of cardiac failure with intravenous and later intramuscular Mercupurin.[5] Mercurial nephrosis appears to depend upon dosage and sensitivity of the patient, rather than on the route of administration Higgins observed a patient who developed chills, fever, dyspnea, and collapse with recovery following a 1 cc intramuscular injection of Mercupurin[6]

These reaction episodes probably represent an allergic manifestation to specific chemical compounds containing mercury Why some patients develop intolerance and even nephrosis and most others escape is not clear, but it is important to know that these reactions do occur and may appear quite suddenly in any patient who has not previously given any evidence of sensitivity Of the signs of intolerance, moderate rise of temperature with nausea and perhaps some abdominal pain is not a rare occurrence This was observed in a recent case This case had enough abdominal localization of pain in the right side and dome tenderness that hospitalization was necessary to rule out a surgical abdomen Leukocytosis, when it appears, tends to complicate the diagnostic problems even further All these, however, may be due to acquired sensitivity to any or all organic mercurial preparations

Summary

A case of tubular nephrosis, with autopsy findings, resulting from intramuscular administration of mercurial diuretics is reported Attention is drawn to the fact that frequent administration of mercurial diuretics must be done with great care and selection of cases, since toxic tubular nephrosis may be produced and may arise unexpectedly in the course of treatment

The authors express their thanks to Dr V Kogan associate pathologist at Lebanon Hospital for the necropsy data herein reported.

GANGRENE OF ENTIRE LARGE BOWEL TO DISTAL SIGMOID FOLLOWING VOLVULUS OF HEPATIC FLEXURE

A. R AVITABILE, M D, F A C S, and D J FIORENTINO, M D, Brooklyn, New York

(From the Kings County Hospital)

THE purpose of this paper is to add to the literature an unusual case of gangrene of the large bowel that extended from the cecum to within 8 inches of the rectosigmoid and in which the initiating factor was a postoperative band about which a torsion of the hepatic and right half of the transverse colon had occurred The case to be reported represents the third occasion in which the entire large bowel to the lower sigmoid has been resected as an acute emergency procedure, as evidenced by a careful search of the literature The unusual lesions, the difficulties in postoperative care, and the complete recovery seem worthy of report

Case Report

A. P, a forty-six-year-old white woman housework, was admitted to Kings County Hospital, County Division, October 28, 1947 Her chief complaint was severe abdominal pain of eight hours duration. She had been well until forty-eight hours before admission when she experienced moderately severe pain and tenderness in the left groin and upper thigh. There was no swelling of the thigh or leg, and she was able to continue with her work On the day of admission she was suddenly seized with severe abdominal pain, colicky in character, and accompanied by nausea and vomiting She had been constipated since onset of abdominal pain. Her past history disclosed that her gallbladder and appendix had been removed in 1936 She had suffered from bronchial asthma for more than ten years Her menstrual history was noncontributory, and she was menstruating on admission.

Examination revealed a well-developed, well-nourished, moderately obese, white female in acute distress, appearing agitated, apprehensive, and uncooperative Temperature was 98 6 F per rectum, respirations 20, blood pressure 100/65, pulse 120, small and regular The heart was essentially negative Respirations were labored Numerous sibilant and sonorous rales were heard throughout both lung fields The abdomen showed a healed right rectus surgical scar and was moderately distended, rigid throughout, and acutely tender, particularly in the upper quadrants Rectal examination was negative. Both lower extremities showed a cold but not discolored skin with slight tenderness on deep pressure over the inguinal regions Homans sign was bilaterally negative All arterial pulsations were normal

Laboratory Data.—The white blood count was 29,000 with 85 per cent polymorphonuclears and 15 per cent lymphocytes The hemoglobin was 18 Gm., plasma protein 4 5 Gm., hematocrit 53 The urine showed a 3 plus acetone The blood sugar was 120 mg per cent Roentgen survey of the abdomen showed gas in the large colon which appeared to end abruptly at the splenic flexure

A diagnosis of "acute surgical abdomen" was made, and the possibility of mesenteric thrombosis with gangrene of the bowel was considered. The patient was immediately started on penicillin, and blood was typed and cross matched Plasma was given while whole blood was being prepared, and a Levine tube was inserted and suction begun.

Operative Procedure —A spinal anesthetic, consisting of procaine 120 mg and pontocain 10 mg, was administered. The abdomen was entered through a right pararectus incision extending halfway above and below the umbilicus. This was later augmented by a subumbilical transverse incision In the abdomen, about 1,000 cc of free, blood-tinged fluid having a faint fecal odor was found. The first structure encountered was a dilated loop of hepatic flexure and proximal transverse colon, blue-black in color and rotated almost 270 degrees in a clockwise direction A dense fibrous band was found holding the bowel in this position. The band was severed and the bowel rotated to its normal position It was noted that the mesentery was markedly edematous and measured about 1½ cm. in thickness As the exploration continued, it was found that the entire large colon, including the sigmoid loop and a section of pelvic sigmoid to a point about 8 inches above the peritoneal reflection, was involved in a patchy and segmental gangrene It was impossible to resect any intervening segment of bowel. It was necessary to resect the entire diseased colon together with 8 inches of terminal ileum (Fig 1) During this procedure the cut edges of the mesentery oozed large quantities of edema fluid, and little free bleeding was seen from the cut blood vessels About 8 inches of large bowel above the peritoneal reflection remained to be utilized in the formation of a double-barreled ileocolostomy The limbs were sutured together to form a 3-inch spur, and with clamps in place this

FIG 1 Photograph of operative specimen. The site of torsion at the hepatic flexure is readily seen Gangrene of the splenic flexure is patchy, the process ending abruptly about 8 inches above the peritoneal reflexion

FIG 2 Roentgenogram showing functioning ileocolostomy (barium enema six months after resection of colon)

was brought out at the medial extremity of the transverse wound. No attempt to reperitonealize raw surfaces could be made.

Pathology —The specimen consisted of the entire large colon from cecum to rectosigmoid, including 8 inches of terminal ileum. It was blue-black in color for most of its extent, although toward the splenic flexure patches of congested but apparently viable bowel could be seen alternating with patches of frank gangrene Thrombosed blood vessels could be seen grossly No perforations in the large bowel were found Microscopically, the bowel wall was infiltrated with many polymorphonuclear cells and some lymphocytes, edema of the muscularis and mucosa was seen There was thrombosis of the blood vessels and necrosis of the tissues

Postoperative Course —During the course of the operative procedure the patient's blood pressure dropped to 50/40, necessitating the infusion of 1,000 cc. of plasma and transfusion of 1,000 cc of blood Her immediate postoperative condition was extremely poor She was placed in an oxygen tent, and sulfadiazine was given intravenously, in addition to penicillin and streptomycin intramuscularly Fluid and electrolytic balance was maintained with intravenous glucose, saline, and amigen Whole blood was given as indicated. The patient was allowed fluid by mouth as tolerated the second postoperative day At this time her Van Slyke reading showed a hemoglobin of 12 Gm., hematocrit 36, and plasma protein of 7 5 Gm. On the third postoperative day the Payr clamp was removed from the ileum, and active peristaltic movements were present, discharging liquid feces Because of the large loss of electrolytes and fluids through the ileostomy opening there was great difficulty in maintaining the patient in balance. Five to si thousand cubic centimeters of fluid were give daily The distal clamp was removed on the fift day and two heavy clamps placed across the spu On the eighth day after removal of the clamps th patient had a spontaneous liquid bowel movemer per rectum. The abdominal discharge of fec lessened remarkably and the general conditio progressively improved A mild wound infectio not apparently involving the fascia, delayed hea ing until the fourth week

On November 30, 1947, thirty-three days aft her first operative procedure, an extraperitonea closure of the colostomy was performed Pos operatively, the patient's condition was satisfa tory except for a persistent fistula which appeare one week later On January 8, 1948, the colostom was freed from its peritoneal attachment and th fistula with its attachment to the bowel excise The ensuing opening was closed and the bow dropped into the free abdominal cavity Th wound was closed layer by layer The patient wa discharged February 17, 1948, some four month after the onset of her illness, with the abdomina wound completely healed and discharging four sem solid bowel movements a day

Follow-up studies in the outpatient departmen disclosed that the patient had gained 30 pounds i weight and returned to her usual occupation as houseworker Her gastrointestinal series, take March 1, 1948, showed a well-functioning ileocolos tomy (Fig 2) When last seen in December, 194 she had no complaint of diarrhea or symptoms rel erable to her gastrointestinal tract

Comment

A careful search of the literature for the past sixt years has been made Only two recorded incident of operative procedures for gangrene of the larg bowel extending from cecum to rectosigmoid hav been found [1,2] Gangrene of small segments of th large bowel resulting from adhesive bands, hernia constriction, and volvulus is not uncommon Gan grene of large segments is usually associated wit primary arterial pathology A few isolated case of thrombosis of colic vessels, with resulting deat of large areas of the left or right colon, have been re ported by Bell-Allen [3]

We have been unable to explain satisfactorily th extensive pathology that was present in the descend ing and sigmoid colons on the basis of a volvulu of the hepatic flexure and proximal transverse colon The right and middle colic arteries arising from th superior mesenteric were directly involved in a me chanical compression A poor marginal artery formed by the anastomosis of the left branch of th middle colic with the ascending component of th left colic, would account for the patchy gangrene o the splenic flexure On normal anatomic grounds however, we should expect to have an adequat blood supply, distal to the splenic flexure, throug the inferior mesenteric artery

Many anomalies in the blood supply to the in testines have been noted It is not within the scop of this paper to describe the many variations tha may occur Some of these have been illustrated re cently by Robillard and Shapiro [4] It has also been observed that the superior mesenteric artery may supply the entire "alimentary canal from the second part of the duodenum to the end of the rec-

tum."[5] At operation we were unable to verify the existence of such a variation, but it would seem reasonable, in view of the incongruities encountered, to postulate that an abnormal blood supply was present

Summary

1 An unusual case of volvulus of the hepatic flexure and proximal transverse colon with gangrene of the large bowel from cecum to rectosigmoid is presented.

2 The complete recovery of the patient, following resection of the entire colon to the rectosigmoid, is reported

3 It is postulated that the lesions in the descending and sigmoid colons may have resulted from an anomalous blood supply to these parts

POSTPARTUM HEMORRHAGE NECESSITATING IMMEDIATE HYSTERECTOMY

JOHN J KEENAN, M D , and CHARLES R LEWIS, M D , Troy, New York

(From the Gynecological and Obstetrical Departments of St. Mary's Hospital)

IN New York State the decrease in maternal mortality during the last ten years has kept pace with the generally lower rate throughout the country While deaths from infection, toxemia, and hemorrhage continue to head the list, the sharp decline in maternal deaths from infection has been most dramatic Deaths due to hemorrhage from 1940 through 1944 in this State showed no significant decrease, although the last three years have indicated a lowering rate

In commenting briefly on the decline, beginning in 1941, in maternal deaths due to infection, the temptation exists to credit the expanding use of the sulfonamide drugs, together with penicillin, as outstanding in achieving this reduction Likewise, the failure of toxemia and hemorrhage death rates to show significant decrease during the early forties and then to drop later may indicate the lack of adequate medical care for the civilian population during the war years Such interpretations are speculative

Uterine hemorrhage in the immediate postpartum period demands promptly applied control measures The usual means employed include uterine massage, oxytocics, blood replacement, and intrauterine packing The consensus of opinion seems to be that the intravenous injection of active ergot preparations has materially lowered the need for postpartum packing The role of the newer absorbable oxidized gauze for intrauterine packing has not, as yet, been thoroughly assessed, although preliminary reports indicate its safety and effectiveness [1]

Packing of the postpartum uterus to control hemorrhage is admittedly a controversial subject The procedure is endorsed by Titus, Mussey, Stander, Greenhill, and others On the other hand, Cosgrove states in a recent discussion "We did not, in fact, use it (i e , packing) in a single case, but we lost no cases in that time (i e , 1946 with 8,400 deliveries) from postpartum hemorrhage "[2]

Day *et al* , reporting in 1948 on more than 12,000 deliveries over a twenty-eight-year span, stated that the measures as above outlined failed to control postpartum uterine bleeding in six instances [3] During this period intrauterine packing was used 267 times, giving an incidence of 2 3 per cent Following repacking of these six patients, the bleeding was controlled in three, leaving three in whom hysterectomy was performed This gives an incidence in the authors' experience of 1 4,000 deliveries in which repacking failed to control postpartum hemorrhage

Case Report

A forty-three-year-old gravida III, Para 5, was admitted to the St Mary's Hospital, September 18, 1948, in active labor Her membranes had ruptured at home The past history, including medical, surgical, and gynecologic reviews, was noncontributory, she had had three normal spontaneous deliveries, the last occurring in 1935 In 1944, she is said to have miscarried at about the fifth month of gestation but was not hospitalized Her present history began when first seen on April 28, 1948, at which time a diagnosis of intrauterine pregnancy was made Her last menstrual period was February 10, expected date of confinement was November 17 Since the size of the uterus was estimated to be that of approximately six months gestation, x-ray studies were made These were reported negative for fetal skeleton The Friedman test was positive, but no fetal heart or outlines could be elicited. Following a month's period of uneventful observation, x-ray indicated a normal single fetal skeleton estimated to be about three and one-half months The complication was believed to be either leiomyomata or hydramnios The pregnancy proceeded without otherwise significant deviation until she entered the hospital in active labor

A living female child, weighing 5 pounds, 4 ounces, and measuring 45 cm. was delivered spontaneously per vagina (vertex presentation) The infant's subsequent course was without incident, with her receiving the usual care accorded premature infants The patient was given the routine oxytocics, a pituitary preparation intramuscularly and an ergot preparation intravenously The placenta did not deliver spontaneously after thirty minutes, and with the apex of the uterus remaining above the umbilicus, intrauterine exploration and manual separation with delivery of the placenta was carried out.

FIG 2 Roentgenogram showing functioning ileocolostomy (barium enema six months after resection of colon)

was brought out at the medial extremity of the transverse wound No attempt to reperitonealize raw surfaces could be made

Pathology —The specimen consisted of the entire large colon from cecum to rectosigmoid, including 8 inches of terminal ileum. It was blue-black in color for most of its extent, although toward the splenic flexure patches of congested but apparently viable bowel could be seen alternating with patches of frank gangrene. Thrombosed blood vessels could be seen grossly No perforations in the large bowel were found Microscopically, the bowel wall was infiltrated with many polymorphonuclear cells and some lymphocytes, edema of the muscularis and mucosa was seen There was thrombosis of the blood vessels and necrosis of the tissues

Postoperative Course —During the course of the operative procedure the patient's blood pressure dropped to 50/40, necessitating the infusion of 1,000 cc. of plasma and transfusion of 1,000 cc of blood Her immediate postoperative condition was extremely poor She was placed in an oxygen tent, and sulfadiazine was given intravenously, in addition to penicillin and streptomycin intramuscularly Fluid and electrolytic balance was maintained with intravenous glucose, saline, and amigen Whole blood was given as indicated. The patient was allowed fluid by mouth as tolerated the second postoperative day At this time her Van Slyke reading showed a hemoglobin of 12 Gm., hematocrit 36, and plasma protein of 7 5 Gm. On the third postoperative day the Payr clamp was removed from the ileum, and active peristaltic movements were present, discharging liquid feces Because of the large loss of electrolytes and fluids through the ileostomy opening there was great difficulty in maintaining the patient in balance Five to six thousand cubic centimeters of fluid were given daily The distal clamp was removed on the fifth day and two heavy clamps placed across the spur On the eighth day after removal of the clamps the patient had a spontaneous liquid bowel movement per rectum. The abdominal discharge of feces lessened remarkably and the general condition progressively improved. A mild wound infection, not apparently involving the fascia, delayed healing until the fourth week.

On November 30, 1947, thirty-three days after her first operative procedure, an extraperitoneal closure of the colostomy was performed Postoperatively, the patient's condition was satisfactory except for a persistent fistula which appeared one week later On January 8, 1948, the colostomy was freed from its peritoneal attachment and the fistula with its attachment to the bowel excised. The ensuing opening was closed and the bowel dropped into the free abdominal cavity The wound was closed layer by layer The patient was discharged February 17, 1948, some four months after the onset of her illness, with the abdominal wound completely healed and discharging four semi-solid bowel movements a day

Follow-up studies in the outpatient department disclosed that the patient had gained 30 pounds in weight and returned to her usual occupation as a houseworker Her gastrointestinal series, taken March 1, 1948, showed a well-functioning ileocolostomy (Fig 2) When last seen in December, 1948, she had no complaint of diarrhea or symptoms referable to her gastrointestinal tract.

Comment

A careful search of the literature for the past sixty years has been made Only two recorded incidents of operative procedures for gangrene of the large bowel extending from cecum to rectosigmoid have been found [1,2] Gangrene of small segments of the large bowel resulting from adhesive bands, hernial constriction, and volvulus is not uncommon Gangrene of large segments is usually associated with primary arterial pathology A few isolated cases of thrombosis of colic vessels, with resulting death of large areas of the left or right colon, have been reported by Bell-Allen [3]

We have been unable to explain satisfactorily the extensive pathology that was present in the descending and sigmoid colons on the basis of a volvulus of the hepatic flexure and proximal transverse colons. The right and middle colic arteries arising from the superior mesenteric were directly involved in a mechanical compression A poor marginal artery, formed by the anastomosis of the left branch of the middle colic with the ascending component of the left colic, would account for the patchy gangrene of the splenic flexure On normal anatomic grounds, however, we should expect to have an adequate blood supply, distal to the splenic flexure, through the inferior mesenteric artery

Many anomalies in the blood supply to the intestines have been noted It is not within the scope of this paper to describe the many variations that may occur Some of these have been illustrated recently by Robillard and Shapiro [4] It has also been observed that the superior mesenteric artery may supply the entire "alimentary canal from the second part of the duodenum to the end of the rec

SENSITIVITY TO FURACIN

ISAAC H RICHTER, M D , and ANGELO C MANOCCHIO, M D , Brooklyn, New York

(From the Peripheral Vascular Clinic, Department of Medicine, Coney Island Hospital)

DURING the past few years Furacin Soluble Dressing has been used extensively for varicose ulcers with variable results The ointment was used in both gram-positive and gram-negative bacterial infections Several reports have appeared in medical literature regarding the irritating and sensitizing properties of Furacin

In 1947, Downing, Hanson, and Lamb reported that eight out of 212 patients developed sensitization to prolonged use of Furacin [1] They emphasized the value of its use in superficial dermatoses where results can be obtained in a shorter time, thus lessening the number of cases that develop sensitization Morin reported one case of sensitization to Furacin which resulted in the formation of a local erythema and vesiculation, generalized urticaria, and pruritus associated with headache and nausea [2]

In the vascular clinic at the Coney Island Hospital and in private practice we encountered three cases of sensitization to Furacin in a series of 30 cases of varicose ulcer

Case Reports

Case 1 —M E , a fifty-three-year-old white woman, gave a history of varicose veins for several years There was no history of allergy Several months ago, she sustained an abrasion to her right leg where an infected ulcer developed Furacin Dressing was applied locally for about four weeks at the end of which time she developed a macular, papular rash, most marked around the ulcer, which subsequently spread over the entire body This was associated with itching The rash disappeared after continuous use of antihistaminic drugs for four weeks The ulcer has not healed

Case 2 —M M , fifty-five-year-old white woman, gave no history of allergy, but her son was suffering from recurrent attacks of angioneurotic edema and urticaria She had moderate-sized varicosities in both legs for about eighteen years Five months ago, she developed an ulcer on the right leg, $1^1/_2$ by $^1/_2$ inches in diameter Furacin was prescribed for local application, and after one week she developed a marked generalized dermatitis which was followed by exfoliation of skin This rash subsided after three weeks of continuous use of antihistaminic drugs and local applications of calamine lotion The local infection of the ulcer subsided, but epithelization did not take place

Case 3 —A. A., a forty-three-year-old white woman with a history of hay fever and varicose veins for many years, developed an ulcer on her left leg several months prior to our first observation Local application of Furacin Dressing was started on October 21, 1948, and was used continuously until November 18, when she developed an eruption The rash covered the face, chest, lower abdomen, dorsal surface of both arms, and medial surface of both thighs and legs and was more marked around the ulcer The rash consisted of macules and papules with marked edema followed by scaling of skin This eruption was associated with marked itching One day after appearance of the skin lesion, adrenalin injection brought considerable relief and improvement, but gradually the condition became worse until antihistaminic drugs were used Patient was last seen on December 16, at which time the rash was still present, but to a lesser degree, the edema had subsided, and scaling of skin was moderate The ulcer was healed, being covered with a crust

Discussion

The above three patients with varicose ulcers developed a generalized eruption due to local use of Furacin for a period of one to four weeks One of these patients had hay fever, and two gave no previous history of allergy The type of reaction presented here belongs to the delayed, induced type of contact dermatitis Skin testing by patch method is usually negative, and hence we cannot foretell who may be sensitized to the material used The basic causative factor of varicose ulcer is not infection but rather venous stasis Therefore, there seems to be no rational basis for using an ointment for a period of several weeks in the hope that epithelization will take place Treatment should be directed toward removing the cause

Conclusions

1 The use of Furacin Dressing in the treatment of infected varicose ulcer may produce a contact dermatitis with systemic manifestations

2 The allergic symptoms respond slowly to the use of antihistaminic drugs

3 Therapy of varicose ulcer should be directed to removal of the underlying cause

References

1 Downing J G Hanson M C and Lamb M J A M A 133 299 (1947)
2 Morin L. J *ibid* 133 963 (1947)

Nodularity of the uterus was evident, and, together with the vagina, it was packed with 15 yards of plain gauze At no time did the patient exhibit signs of shock, and repeated pulse and blood pressure determinations were within normal range At the end of four hours, bleeding through the packing was present The patient was brought to the operating room, repacked, again using 15 yards, given 1,000 cc of freshly drawn citrated blood, and returned to her room About four hours after repacking, blood was seeping through the dressing, and abdominal exploration was decided upon During this operative procedure, consisting of supracervical hysterectomy and bilateral salpingo-oöphorectomy, an additional 1,000 cc of freshly drawn blood was given Her postoperative course was without event, dangling in twenty-four hours, out of bed in forty-eight hours, and home on the tenth day The wound healed by primary union

Pathologic Report—Gross examination The specimen consists of a greatly enlarged uterus amputated through the cervix It measures about 22 cm in greatest dimension and weighs 3,500 Gm. (the freshly delivered uterus weighs about 1,000 Gm.) It has been opened The cavity is lined by a rough, hemorrhagic membrane The myometrium is greatly thickened, measuring 8 cm in thickness It consists of a nodular type of tissue with indistinct nodules, varying from less than 1 cm. up to 4 cm in diameter The serosa is coarsely nodular due to the underlying tissue The tubes and ovaries are attached They are not grossly remarkable Separately received is a placenta 18 cm in diameter with membranes and cord attached The placental lobules vary in thickness from about 1 5 to 3 cm The cord is not grossly remarkable

Microscopic description Sections of the uterus show interlacing bundles of mature smooth muscle cells and collagenous fibrous tissue Some areas exhibit hyaline necrosis Sections through the circumscribed nodules show interlacing smooth muscle and fibrous tissue characteristic of myoma Van Gieson-stained sections show much collagen intermingled with smooth muscle in the wall of the uterus In places there are large foci of hyalinized dense collagen It is estimated that about 25 to 35 per cent of the uterine wall is collagen, the remainder being largely smooth muscle The uterus is lined by decidual tissue which extends irregularly into the underlying myometrium. The ovaries and tubes are not remarkable There is no microscopic evidence of malignancy The extremely large size of this uterus is accounted for by the large amount of collagen, evidence of previous subinvolution, and multiple leiomyomata

Diagnosis Chronic subinvolution and multiple leiomyomata of the corpus uteri

Comment

In a recent discussion of the surgical complications of pregnancy, Waters states "It is recognized that the incidence of abortion, premature labor, tumor necrosis, adherent and retained placenta, and postpartum hemorrhage is higher in patients with fibroids"[3] He further states that he prefers vaginal delivery and delayed operation if possible It is noted that the patient reported here exhibited, during this pregnancy, all of the above features except the first

Summary

The maternal mortality rate in New York State has declined appreciably during the past ten years. This decline prevails in deaths due to hemorrhage which in 1947 was 1 6 per 10,000 total births, falling from 7 5 in 1938

Conservative methods used in controlling postpartum hemorrhage—uterine massage, intravenous injection of active ergot preparations, blood replacement, and intrauterine tamponade—occasionally fail Repacking in such instances is indicated The failure of these measures to control the bleeding necessitates a more radical approach, including, as shown in the case presented, hysterectomy

The authors wish to express their appreciation to Dr John Clemmer pathologist for his generous cooperation during the preparation of this article.

"DR. JONES" SAYS—

We lay a lot of things to automobiles—contributing to juvenile delinquency, crime, and what not, to say nothing of accidents But one thing they've done for us, besides getting us around—they've reduced the number of flies we've had to contend with. They've done it, of course, by replacing horses Piles of horse manure were the principal breeding places of the common house fly And you folks that're under forty, you've seen a lot more automobiles than us old timers had at your age, but you've never really seen flies—not the way we had 'em in the good old days of horse-drawn transportation

In 1916, when we had our big epidemic of polio, they had a meeting of health people in New York City to discuss plans The city health commissioner said one of their serious problems, there, was disposing of stable manure He was thinking, of course, about the flies—a problem in most cities

Whether flies spread polio or not—well, they've discovered since then that the virus is in excretions of patients, and they've found flies carrying it But, apparently, they've never traced any actual cases to flies, and the experts don't seem to think they're an important factor But that doesn't relieve anything as dirty as a fly from being a suspicious character

Spreading typhoid and other intestinal infections—the way they travel back and forth between filth, folks, and food—years ago they laid a lot of the cases and outbreaks to flies With more knowledge and better investigations they've found those diseases are spread mainly through other channels But it's often next to impossible to prove where isolated cases came from. Some of 'em—it could be flies At any rate, in spite of automobiles, DDT and all the rest, there's still too many of 'em. Their habits and manners are bad and, allowing 'em the benefit of every doubt, like some other innocent looking critters, at the best they're bad company—*Paul B Brooks, M D, August 15, 1949*

SENSITIVITY TO FURACIN

ISAAC H RICHTER, M D , and ANGELO C MANOCCHIO, M D , Brooklyn, New York

(From the Peripheral Vascular Clinic, Department of Medicine, Coney Island Hospital)

DURING the past few years Furacin Soluble Dressing has been used extensively for varicose ulcers with variable results The ointment was used in both gram-positive and gram-negative bacterial infections Several reports have appeared in medical literature regarding the irritating and sensitizing properties of Furacin

In 1947, Downing, Hanson, and Lamb reported that eight out of 212 patients developed sensitization to prolonged use of Furacin [1] They emphasized the value of its use in superficial dermatoses where results can be obtained in a shorter time, thus lessening the number of cases that develop sensitization Morin reported one case of sensitization to Furacin which resulted in the formation of a local erythema and vesiculation, generalized urticaria, and pruritus associated with headache and nausea [2]

In the vascular clinic at the Coney Island Hospital and in private practice we encountered three cases of sensitization to Furacin in a series of 30 cases of varicose ulcer

Case Reports

Case 1 —M E , a fifty-three-year-old white woman, gave a history of varicose veins for several years There was no history of allergy Several months ago, she sustained an abrasion to her right leg where an infected ulcer developed Furacin Dressing was applied locally for about four weeks at the end of which time she developed a macular, papular rash, most marked around the ulcer, which subsequently spread over the entire body This was associated with itching The rash disappeared after continuous use of antihistaminic drugs for four weeks The ulcer has not healed

Case 2 —M M , fifty-five-year-old white woman, gave no history of allergy, but her son was suffering from recurrent attacks of angioneurotic edema and urticaria She had moderate-sized varicosities in both legs for about eighteen years Five months ago, she developed an ulcer on the right leg, 1 1/2 by 1/2 inches in diameter Furacin was prescribed for local application, and after one week she developed a marked generalized dermatitis which was followed by exfoliation of skin This rash subsided after three weeks of continuous use of antihistaminic drugs and local applications of calamine lotion The local infection of the ulcer subsided, but epithelization did not take place

Case 3 —A. A., a forty-three-year-old white woman with a history of hay fever and varicose veins for many years, developed an ulcer on her left leg several months prior to our first observation Local application of Furacin Dressing was started on October 21, 1948, and was used continuously until November 18, when she developed an eruption The rash covered the face, chest, lower abdomen, dorsal surface of both arms, and medial surface of both thighs and legs and was more marked around the ulcer The rash consisted of macules and papules with marked edema followed by scaling of skin This eruption was associated with marked itching One day after appearance of the skin lesion, adrenalin injection brought considerable relief and improvement, but gradually the condition became worse until antihistaminic drugs were used Patient was last seen on December 16, at which time the rash was still present, but to a lesser degree, the edema had subsided, and scaling of skin was moderate The ulcer was healed, being covered with a crust

Discussion

The above three patients with varicose ulcers developed a generalized eruption due to local use of Furacin for a period of one to four weeks One of these patients had hay fever, and two gave no previous history of allergy The type of reaction presented here belongs to the delayed, induced type of contact dermatitis Skin testing by patch method is usually negative, and hence we cannot foretell who may be sensitized to the material used The basic causative factor of varicose ulcer is not infection but rather venous stasis Therefore, there seems to be no rational basis for using an ointment for a period of several weeks in the hope that epithelization will take place Treatment should be directed toward removing the cause

Conclusions

1 The use of Furacin Dressing in the treatment of infected varicose ulcer may produce a contact dermatitis with systemic manifestations

2 The allergic symptoms respond slowly to the use of antihistaminic drugs

3 Therapy of varicose ulcer should be directed to removal of the underlying cause

DEPARTMENT OF MEDICAL CARE INSURANCE

CONDUCTED BY GEORGE P FARRELL, DIRECTOR

Medical Care Plans Record 1,886,774 Members at June 30, 1949

THE voluntary nonprofit medical care insurance plans in New York State (approved by the Medical Society of the State of New York) experienced a record increase of 347,485 members for the six months ending June 30, 1949, as compared with 284,299 for the corresponding period a year ago

Benefits to members were $4,297,529, as compared with $2,694,642 for the same period a year ago, an increase of $1 602,887, or 37 per cent.

The following tables reflect detailed progress of each plan as well as over-all totals (see Tables 1–5)

TABLE 1 —MEMBERSHIP PROGRESS—QUARTER ENDING JUNE 30 1949

FORTY-THIRD ANNUAL MEETINGS
of the
DISTRICT BRANCHES
of the
MEDICAL SOCIETY OF THE STATE OF NEW YORK

PROGRAM

SIXTH DISTRICT BRANCH

Wednesday, October 19, 1949
Cortland Country Club
Cortland, New York

Afternoon Session

2 30 P M.—"Dermatological Aspects of Interest to the General Practitioner"
David Bloom, M D , New York City, assistant clinical professor of dermatology and syphilology, New York University Post-Graduate Medical School

3 30 P M —"Thoracic Diseases 1 Differential Diagnosis, 2 More Common Uses of Thoracic Surgery, 3 The Use of Antibiotics in the Treatment of Chronic Pulmonary Pathological Conditions"
N Stanley Lincoln, M D , F A C P , director, Hermann M Biggs Memorial Hospital, Ithaca
Frederick Beck, M D , F A C P , assistant director, Hermann M Biggs Memorial Hospital, Ithaca
Richmond Douglass, M D , F A C S , Hermann M Biggs Memorial Hospital, Ithaca

4 30 P M.—"Forum on Public Relations"
Mr Dwight Anderson, executive secretary, Medical Society of the State of New York
C Stewart Wallace, M D , Ithaca, president, Tompkins County Medical Society
Bruce D Lott, M D , Binghamton, chairman, Public Relations Committee, Broome County Medical Society

5 15 P M —"Nonunion of Fractures"
Reginald Charles Farrow, M D , Ithaca, Diplomate, American Board of Orthopedic Surgery

Business Meeting—Election of Officers

Evening Session

7 00 P M.—Dinner—informal
Introduction of Officers of the Medical Society of the State of New York
Address by the president-elect, Carl ton E Wertz, M D , Buffalo
Remarks by Mrs William J Lavelle, president, Woman's Auxiliary to the Medical Society of the State of New York

8 30 P M —"Diagnosis of Tumors of the Gastro-intestinal Tract"
William A Cooper, M D , F A C A , New York Hospital

Officers—Sixth District Branch

President	Charles L Pope, M D , Binghamton
First Vice-President	Norman C Lyster, M D , Norwich
Second Vice-President	Elton R Dickson, M D , Binghamton
Secretary	Paul F Willwerth, M D , Montour Falls
Treasurer	Marshall Latcher, M D , Oneonta

Presidents of Component County Societies

Broome	Leonard J Flanagan, M D , Binghamton
Chemung	M Frederick Butler, M D , Elmira
Chenango	Newton Brachin, M D , Greene
Cortland	Robert H Kerr, M D , Cortland
Delaware	G M Palen, M D , Margaretville
Otsego	John W Latcher, M D , Oneonta
Schuyler	Francis C Ward, M D , Odessa
Tioga	Arthur J Capron, M D , Owego
Tompkins	C Stewart Wallace, M D , Ithaca

save 68 *more fetal lives in habitual abortion, threatened abortion and premature labor*

des

A review of the pertinent literature reveals that while the administration of diethylstilbestrol (**des**) will bring 86 6% of cases to term (1), progesterone will bring only 18 2% to term (2), a very significant difference of 68 4% Karnaky (3) found in his study of 35 women who were treated with massive doses of **des** that all pregnancies carried to term. This evidence shows that at least 68 4% more fetal lives may be saved with **des**

des is specifically designed for the treatment of threatened abortion, habitual abortion and premature labor **des** tablets dissolve within a few seconds and are uniformly absorbed into the blood stream Adequate dosage of **des** administered early in premature labor stops the pain in less than one minute

des 25 mg tablets of Grant Process highly micronized triple crystallized diethylstilbestrol U S P XIII are available in containers of 30, 100, and 500 tablets

save **68** *more fetal lives*

NOW! FOR PARENTERAL ADMINISTRATION

Bio-des

FOR INTRAMUSCULAR INJECTION

Bio-des (des in oil) contains 25 mg per cc. of Grant Process micronized diethylstilbestrol U S P XIII in redistilled sesame oil

Bio-des is available in vials of 10cc and 30cc.

NECROLOGY

Max Berkovsky, M.D, of the Bronx, died suddenly on September 3 while at his summer home on City Island, at the age of forty-eight. Dr Berkovsky received his medical degree from the New York Homeopathic Medical College and Flower Hospital in 1926 During World War II he served as a captain in the U S Army Medical Corps, from 1942 to 1945, seeing action in France Dr Berkovsky was associate dermatologist at the Metropolitan and Bronx Hospitals and was formerly senior clinical assistant in dermatology at the Mount Sinai Hospital outpatient department He was a member of the American Academy of Dermatology and Syphilology, the Bronx Dermatological Society, of which he was vice-president, the Bronx County and New York State Medical Societies, and the American Medical Association

Samuel Einterz, M.D, of the Bronx, died suddenly on August 25 in the Peekskill Hospital at the age of sixty Dr Einterz was graduated in 1913 from the University and Bellevue Hospital Medical College He was a member of the Bronx County and New York State Medical Societies and the American Medical Association

Solomon Hermann, M.D, of Brooklyn, died on September 6 at his summer home in Neponsit after a long illness, at the age of seventy-seven Born in Russia, Dr Hermann received his medical degree from the University of Berlin in 1898 He came to the United States and in 1905 began his practice in Brooklyn, retiring thirty years later in 1935 In 1920 Dr Hermann was an organizer and founder of the Israel Zion Hospital of Brooklyn, now the Israel Zion division of the Maimonides Hospital, and was also a founder of the New Utrecht Medical Society of Brooklyn

Arthur Fenwick Holding, M.D, of Albany, died on August 27 at his home at the age of seventy-two Dr Holding was graduated from the Albany Medical College in 1901 and interned the following year at Albany Hospital He also did postgraduate work at Johns Hopkins Medical School, Cornell University Medical College, the University of Indiana, and the University of Vienna. From 1912 to 1916 Dr Holding was director of the x-ray laboratory at Memorial Hospital, New York City, and during World War I he served overseas with the U S Army Medical Corps as a brain surgeon at a base hospital in France In 1922 he returned to Albany and began his practice limited to eye, ear, nose, and throat

Dr Holding several years ago was instrumental in organizing the Physicians and Nurses Exchange, which provided twenty-four-hour-service for persons in need of emergency medical treatment He was formerly director of the tumor clinic at Memorial Hospital, Albany, and was consulting surgeon for eye, ear, nose, and throat there A Diplomate of the American Board of Radiology, Dr Holding was a member of the New York Academy of Medicine, the American Roentgenologists Association, the American Radium Association, the Albany County and New York State Medical Societies, and the American Medical Association

Artur Meyer, M.D., of New York City, died on August 28 at the age of sixty-seven Dr Meyer received his medical degree from the University of Bonn in Strassburg, Germany, in 1907 He was a member of the New York County and State Medical Societies and the American Medical Association

Horace Clifford Montgomery, M D, of Watertown, died suddenly on September 3 from a heart attack at his home, at the age of sixty-two Dr Montgomery was graduated from Albany Medical College in 1911 For the past thirty-two years, since 1917, he had practiced in Watertown Dr Montgomery was attending physician at the House of the Good Samaritan and Mercy Hospitals, both in Watertown He was widely known through his interest and efforts to aid cancer patients In 1946 Dr Montgomery was an organizer of the Jefferson County unit of the New York State division of the American Cancer Society and had served three successive terms as president He was also a member of the executive board of the New York State division of the American Cancer Society

A charter member of the New York State Industrial Surgical Society, Dr Montgomery was a member of the Jefferson County and New York State Medical Societies and the American Medical Association

William Wellesley Percy, M D, of Rochester, died on August 9 at his summer home in Churchville at the age of seventy-five Dr Percy was graduated from the Syracuse University College of Medicine in 1901 and interned at the Rochester City Hospital and then opened his practice in Rochester Dr Percy served in the Spanish-American War and in World War I, when he spent six months in France and was also on duty at the Mexican border, in 1917 and 1918

Dr Percy retired three years ago from general practice and also resigned as executive director of the Rochester Academy of Medicine, a post he had held since 1939 At that time he was elected a life member of the Academy A Fellow of the American College of Surgeons, Dr Percy was a member of the Rochester Academy of Medicine, the Rochester Pathological Society, the Rochester Medical Association, the Monroe County and New York State Medical Societies, and the American Medical Association

Jacques Cortelyou Rushmore, M D, died on September 3 at his home in East Fishkill at the age of seventy-three Dr Rushmore received his medical degree from the Long Island College Hospital in 1903 and interned there for two years, opening his practice in Brooklyn in 1905 In 1908 Dr Rushmore was appointed head of the orthopedic clinic at the Long Island College Hospital, a position he held until his retirement in 1941 From 1911 to 1941 he was professor of orthopedics at the College During World War I, Dr Rushmore served overseas as a first lieutenant with the Marines attached to Base Hospital 1 in Brest, France

Dr Rushmore was consultant in orthopedics at Brooklyn Hospital, St John's Hospital, Kings County Hospital, and St. Giles Hospital, all in Brooklyn, and for three years was consultant in orthopedics at the Veterans Administration Hospital in Castle Point He was directing librarian of the Kings County Medical Society from 1929 until 1941 and was a member of the Brooklyn Academy of Medicine and the Doctors' Club of Brooklyn A Fellow of the American College of Surgeons, he was also a member of the Kings County and New York State Medical Societies and the American Medical Association

When the diagnosis is

Impetigo Contagiosa

Bacitracin Ointment

is the Antibiotic of Choice

The cutaneous bacterial invasion responsible for impetigo contagiosa is quickly eradicated by the specific antibiotic influence of Bacitracin Ointment-C S C This unusual antibiotic inhibits the growth of many staphylococci and streptococci, producing clinical remission of the infection within a few days

Absence of sensitization or local allergic manifestations following its use makes Bacitracin Ointment-C S C especially valuable in topical therapy The period of therapy is governed by the clinical situation under treatment, and not by the shortcomings of the medication

Bacitracin Ointment-C S C is indicated in the treatment of many cutaneous infections infectious eczematoid dermatitis, infected ringworm, infected eczema, ecthyma, infected wounds and ulcers, furuncles and carbuncles It makes an excellent surgical dressing for draining wounds

Bacitracin Ointment C S C, containing 500 units of bacitracin per gram, is supplied in ½ oz and 1 oz tubes

[Continued on page 2334]

When the diagnosis is

Impetigo Contagiosa

Bacitracin Ointment

is the Antibiotic of Choice

The cutaneous bacterial invasion responsible for impetigo contagiosa is quickly eradicated by the specific antibiotic influence of Bacitracin Ointment-C S C This unusual antibiotic inhibits the growth of many staphylococci and streptococci, producing clinical remission of the infection within a few days

Absence of sensitization or local allergic manifestations following its use makes Bacitracin Ointment-C S C especially valuable in topical therapy The period of therapy is governed by the clinical situation under treatment, and not by the shortcomings of the medication

Bacitracin Ointment-C S C is indicated in the treatment of many cutaneous infections infectious eczematoid dermatitis, infected ringworm, infected eczema, ecthyma, infected wounds and ulcers, furuncles and carbuncles It makes an excellent surgical dressing for draining wounds

Bacitracin Ointment-C S C, containing 500 units of bacitracin per gram, is supplied in ½ oz and 1 oz tubes

the fluid sulfadiazine that's

... better tasting

... faster acting

To many patients—children, the aged and those with sore throats—swallowing bulky, half-gram sulfadiazine tablets is one of the discomforts of being sick But these patients take ESKADIAZINE willingly It tastes good It is not thick and cloying, it is light and easy to swallow

Each 5 cc (one teaspoonful) of ESKADIAZINE contains 0 5 Gm (7 7 gr) sulfadiazine—the dosage equivalent of the standard sulfadiazine tablet Yet desired serum levels are attained 3 to 5 times more rapidly with ESKADIAZINE than with sulfadiazine tablets This is ascribed to the fact that ESKADIAZINE contains sulfadiazine in microcrystalline form

Smith, Kline & French Laboratories, Philadelphia

not just resin
not just mucin

but RESMICON®

mucoprotective acid-adsorbent for peptic ulcer therapy

— relieves pain and promotes healing in peptic ulcer
— relieves distress in hyperacidity

RESMICON'S anion-exchange polyamine resin combats acidity by a new—non-chemical—principle It physically adsorbs acid radicals In the stomach resin rapidly inactivates HCl and inhibits pepsin with complete freedom from side effects

RESMICON'S natural gastric mucin protects the gastric mucosa Clinicians have amply demonstrated its value in peptic ulcer therapy But mucin alone is limited by its weakness as an antacid and by the large and frequent dosage required

RESMICON, uniting resin and mucin, is an outstanding agent for the effective treatment of peptic ulcer and hyperacidity

BOOKS REVIEWED

The Medical Clinics of North America. Philadelphia Number November, 1948 Index 1946–1948 Octavo Philadelphia, W B Saunders Co, 1948 Published Bimonthly (six numbers a year) Cloth, $16 net, Paper, $12 net.

This number of the *Clinics* is devoted almost entirely to the more important advances in obstetrics and gynecology Especially good are sections on menstruation, Rh factor, prenatal syphilis, and a separate chapter on medical management following vagotomy for peptic ulcer

ANDREW BABEY

Municipal Health Services. By Norman Wilson D.P.A. Duodecimo of 178 pages New York, Macmillan Co, 1946 Cloth, $1 75

This small volume describes the services and administrative machinery which are operating to conserve health in local communities in England It is largely a subject of interest to public health officials of our country in that it will enable them to compare methods employed in England and the United States.

A. E SHIPLEY

An Atlas of Anatomy By J C Boileau Grant, M B (Eng) By Regions, Upper Limb, Abdomen, Perineum, Pelvis, Lower Limb, Vertebrae, Vertebral Column, Thorax, Head and Neck Quarto of 496 pages, illustrated Baltimore, Williams & Wilkins Co, 1947 Cloth, $11

This atlas, in the reviewer's opinion, is for all practical and teaching purposes the superior of any atlas yet produced It is of incontestable value to the student, teacher, practicing physician, and surgeon Drawings, photographs, coloring, and legends are almost perfect.

From actual observation of the dissections from which drawings and photographs were made, one cannot but be impressed with the painstaking efforts and the vast amount of work that has been done in reproducing upon paper the appearance of actual dissections

No private or group library should be without this atlas

WALTER H SCHMITT

Klinik und Therapie der Leptomeningitiden für Ärzte und Studierende By Hermann Czickeli, M D Octavo of 95 pages. Vienna, Verlag Wilhelm Maudrich (New York, Grune & Stratton), 1948

This book is a well-written compendium of the various types of meningitis. The special print in the index and the appearance on almost all even pages of the words "meningitis cerebrospinalis epidemica" do not seem to be justified With regard to certain manifestations of the diseases the author correctly states that they have decreased in frequency on account of the use of our modern drugs The therapeutic directions are rather short Some space is given to the description and evaluation of the spinal tap The book is obviously a product of the European postwar shortage of medical books

MAX G BERLINER

The Practice of Endocrinology Edited by Raymond Greene, D M (Oxon) Octavo of 366 pages, illustrated London, England, Eyre & Spottiswoode, 1948. Cloth, 52/6 ("The Practitioner" Textbooks.)

The Practice of Endocrinology presents the British point of view in respect to this ever-widening specialty It appears to be reliable, fairly complete, and is particularly useful for reference This is a sound presentation of English endocrinology by eminent clinicians and laboratory men. This volume would be difficult to equal.

ANDREW BABEY

George Crile, an Autobiography Edited by Grace Crile. Octavo of 624 pages, illustrated. Philadelphia, J B Lippincott Co, 1947 Cloth, $10 set.

This work is a compilation of autobiographic notes, with sidelights added by Mrs Crile, and published after Dr Crile's death. It is a fascinating account of a great surgeon, a leader, and a vivid personality Crile had a constantly inquiring mind which early led him into the experimental investigation of shock, and later to fundamental researches concerning the nature of living processes, which stirred up considerable controversy It is a story of a full and satisfying life, with an idyllic family relationship, during the period of the rapid growth of surgery in the late nineteenth and the present century

JOHN H. BOGLE

Subacute Bacterial Endocarditis. By Emanuel Libman, M.D, and Charles K. Friedberg, M D Edited by Henry A. Christian, M.D Octavo. Illustrated. New York, Oxford University Press, 1948. Cloth, $3 50 [Reprinted from Oxford Loose-Leaf Medicine.]

This book is the authority on subacute bacterial endocarditis The authors discuss the classification, etiology, pathology, and clinical features of the disease. They go into great detail on the symptomatology and the newer methods of treatment, and discuss the pathology of the bacteria-free stage The bibliography has been brought up to date in the new edition

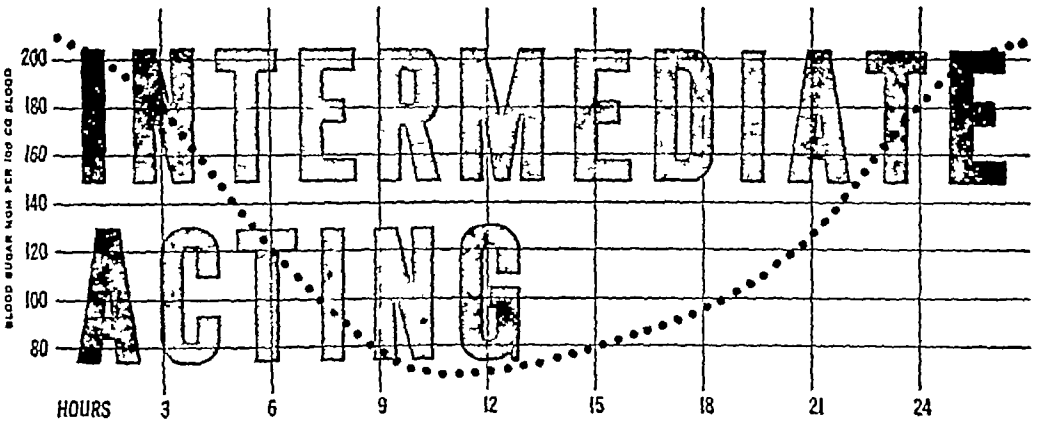
Penicillin, sulfa therapy, penicillin therapy, and streptomycin therapy are discussed, also surgical measures.

The authors stress the sensitivity of the organism to penicillin and the importance of maintaining the proper penicillin level. They also stress the remarkable change in the mortality rate since the first edition, due to the newer methods of treatment.

An excellent differential diagnosis is also given There is a preface by Dr Henry A. Christian

VINCENT ANNUNZIATA

Conditioned Reflexes and Neuron Organization By Prof Jerzy Konorski. Translated from the Polish manuscript under the author's supervision by Stephen Garry Octavo of 267 pages, illustrated. Cambridge, at the University Press (New York, Macmillan Co), 1948 Cloth, $4.00 (Cambridge Biological Studies)



This highly technical work is an attempt to extend Sherrington's conception of the functioning of the nervous system to the field of higher neural activities, and is based on intensive experimental work over a period of some forty years in Pavlov's experimental laboratory It is a book that will appeal to all who are interested in neurophysiology, as it is a fundamental work dealing with the functioning of the nervous system and covers a large experimental area in this particular field of science.

IRVING J SANDS

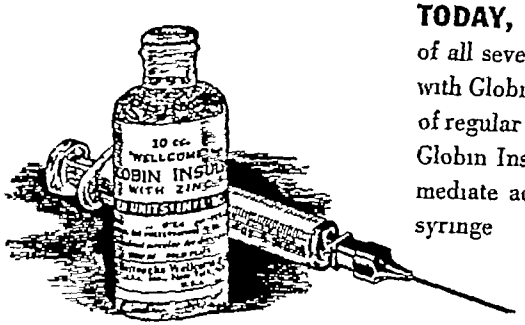
Psychiatry in General Practice By Melvin W Thorner, M D Octavo of 659 pages Philadelphia W B Saunders Co, 1948 Cloth, $8 00

This is one of the best introductory books to psychiatry that the reviewer has seen. Perhaps it is *the*

[Continued on page 2340]

GLOBIN INSULIN

'B.W.&CO.'



was developed to fill the "need for an insulin with activity intermediate between that of regular insulin and that of protamine zinc insulin"[1]

IN 1939, Reiner, Searle and Lang described a new "intermediate acting" insulin

IN 1943, after successful clinical testing, the new substance was released to the profession as 'Wellcome' brand Globin Insulin with Zinc 'B W & Co'

TODAY, according to Rohr and Colwell, "Fully 80% of all severe diabetics can be balanced satisfactorily"[2] with Globin Insulin 'B W & Co'—or with a 2 1 mixture of regular insulin protamine zinc insulin *Ready to use* Globin Insulin 'B W & Co' provides the desired intermediate action without preliminary mixing in vial or syringe

In 10 cc vials, U-40 and U-80

'B.W & CO'—*a mark to remember*

1 Rohr J H. and Colwell A.R Arch. Int Med. 82 54 1948

[Continued from page 2338]

best A very outstanding feature is the elaborate case histories of distressed patients with an excellent, sound, rational interpretation, which, it is often admitted, may not be the ultimate explanation,but which, none the less, is helpful. Another original feature is the omission of confusing terms and scientific designations The book is very warmly recommended for all practitioners and internists

ANDREW BABEY

Sterility and Impaired Fertility Pathogenesis, Investigation & Treatment. By Cedric Lane-Roberts, M S, Albert Sharman, M D, Kenneth Walker, M B, *et al.* Octavo of 400 pages, illustrated New York, Paul B Hoeber, 1948 Cloth, $6 50

In this revised text, the authors have critically reviewed the literature since the publication of their first edition in 1939 They have avoided the speculative and controversial, evaluated it, and presented the information in simple terms This is particularly evidenced in their discussions of the technic and interpretations of semen analyses, postcoital and invasion tests, basal body temperature recordings, as well as their views with regard to tubal insufflations and artificial insemination

The authors have maintained a clinical viewpoint of the application of all the procedures used in the diagnosis in infertility, both male and female, and have augmented this with many more illustrations, graphs, and tables than in their first edition

This book is recommended as a valuable addition to the library of those interested in the problems of human infertility

SAMUEL L SIEGLER

Malignant Disease and its Treatment by Radium. By Sir Stanford Cade, F R C S Volume I Second edition Octavo of 383 pages, illustrated. Baltimore, Williams & Wilkins Co, 1948 Cloth, $12 50

Sir Ernest Carling in his foreword says, "This is one of the most remarkable books in surgery that has been published in my lifetime" Carling further tells of how, like Newton and T E Lawrence, the author lost the whole first volume of his manuscript in two wartime bombing disasters Undismayed, Sir Stanford Cade has gone ahead to reproduce "his predecessors in misfortune"

As surgeon to the Westminster Hospital, Dr Cade has been in a position to care for some 4,000 cases of malignant disease in the period between 1924–1939 The author shows his true colors when he gives credit to "Several generations of House Surgeons, Chief Assistants, and Research Radiotherapists for their help in trying out new methods, obtaining records, and solving many problems in the practical application of radium."

The illustrations, including charts and schematic drawings, particularly those in color, are first class and well chosen

This book is recommended for reading by all physicians and for study by all radiotherapeutists

WILLIAM E. HOWES

Concise Anatomy By Linden F Edwards, Ph.D Quarto of 548 pages, illustrated. Philadelphia, Blakiston Co, 1947 Cloth, $5 50

This book is intended primarily for nonmedical students of physical education It is a condensed treatise on descriptive and applied human anatomy, microscopic, gross, and developmental. It considers fundamental biologic principles and processes, including a brief résumé of maladjustments of the human body to the erect position, which should be of interest to the practicing physician.

Illustrations have been culled mostly from standard textbooks

The descriptive material, although condensed, is thorough

WALTER H SCHMITT

Occupational Marks and Other Physical Signs. A Guide to Personal Identification. By Francesco Ronchese, M D Octavo of 181 pages, illustrated New York, Grune & Stratton, 1948 Cloth, $5 50

In this book the author presents various examples of characteristic marks produced on the body by different occupations These marks are of use in the diagnosis of disease They are also of considerable value as an aid to personal identification The book contains numerous illustrations depicting the various stigmata produced by occupational trauma and previous disease

EDWARD H NIDISH

Pediatric Anesthesia. By M Digby Leigh, M.D, and M. Kathleen Belton, M D Octavo of 240 pages, illustrated New York, Macmillan Co, 1948. Cloth, $5 50

Pediatric Anesthesia is an important contribution to the fields of anesthesiology and surgery, because it makes the highly developed anesthetic technics in adults applicable to children. The charts for premedication dosage, simple and detailed descriptions of technics, and the treatment of pre- and postoperative care and of postanesthetic complications make this book necessary to every physician's library The authors' indications for the endotracheal technic are much overemphasized The chapters on preoperative preparation, respiration and circulation, postoperative care, prophylaxis and therapy with oxygen, and fluid therapy are recommended reading for general practitioners and pediatricians

IRVING M PALLIN

Manual of Public Health Hygiene By J R. Currie, M D, and A. G Mearns, M D Third edition Octavo of 724 pages, illustrated Baltimore, Williams & Wilkins Co, 1948 Cloth, $9 00

The review of hygiene by Currie and Mearns is a treatise dealing with hygiene in school, home, business, and labor It outlines public health administration, statistics, food control, ventilation and warming of homes, lighting, water supply, waste disposal, housing and hospitals, infections and preventive medicine, community diseases, infestations, personal hygiene, health education, meteorology, international health relations, and social or socialized medicine

This is essentially a publication relating to English and Scottish health regulations, although there are some references to conditions found in the United States

ARTHUR D JAQUES

Hospital Trends and Developments, 1940–1946 Edited by Arthur C Bachmeyer, M D, and Gerhard Hartman, Ph D Octavo of 819 pages New York, Commonwealth Fund, 1948. Cloth, $5 50

It is reassuring to note the increasing recognition by the medical profession, public health officials, and the laity of the importance of hospitals in a comprehensive community health program.

This book, subsidized by the Commonwealth Fund, contains a tremendous amount of valuable information as to trends in the hospital field. A host of contributors, each qualified to discuss his particular subject, make this volume a notable one

A E SHIPLEY

highly effective in an unusually wide range of common skin disorders

Pragmatar is particularly useful in seborrheic dermatitis, and in the general care and hygiene of the seborrheic scalp

Pragmatar often brings dramatic improvement in the common fungous infections—even in "athlete's foot."

Pragmatar is extremely valuable in eczematous eruptions, especially those in which a seborrheic factor is involved

Smith, Kline & French Laboratories, Philadelphia

the outstanding tar-sulfur-salicylic acid ointment

[Continued from page 2348]

best. A very outstanding feature is the elaborate case histories of distressed patients with an excellent, sound, rational interpretation, which, it is often admitted, may not be the ultimate explanation, but which, none the less, is helpful. Another original feature is the omission of confusing terms and scientific designations. The book is very warmly recommended for all practitioners and internists.

ANDREW BAKEY

Sterility and Impaired Fertility. Pathogenesis, Investigation & Treatment. By Cedric Leon Roberts, M.S., Albert Sherman, M.D., Kenneth Walker, M.B., *et al.* Octavo of 400 pages, illustrated. New York, Paul B. Hoeber, 1945. Cloth, $5.50.

In this revised text, the authors have critically reviewed the literature since the publication of their first edition in 1939. They have avoided the speculative and controversial, evaluated it, and presented the information in simple terms. This is particularly evidenced in their discussions of the technic and interpretations of semen analyses, postcoital and invasion tests, basal body temperature recordings, as well as their views with regard to tubal insufflations and artificial insemination.

The authors have maintained a clinical viewpoint of the application of all the procedures used in the diagnosis in infertility, both male and female, and have augmented this with many more illustrations, graphs, and tables than in their first edition.

This book is recommended as a valuable addition to the library of those interested in the problems of human infertility.

SAMUEL L. SIEGLER

Malignant Disease and its Treatment by Radium. By Sir Stanford Cade, F.R.C.S. Volume I. Second edition. Octavo of 383 pages, illustrated. Baltimore, Williams & Wilkins Co., 1948. Cloth, $12.50.

Sir Ernest Carling in his foreword says, "This is one of the most remarkable books in surgery that has been published in my lifetime." Carling further tells of how, like Newton and T. E. Lawrence, the author lost the whole first volume of his manuscript in two wartime bombing disasters. Undismayed, Sir Stanford Cade has gone ahead to reproduce "his predecessors in misfortune."

As surgeon to the Westminster Hospital, Dr. Cade has been in a position to care for some 4,000 cases of malignant disease in the period between 1924-1939. The author shows his true colors when he gives credit to "Several generations of House Surgeons, Chief Assistants, and Research Radiotherapists for their help in trying out new methods, obtaining records, and solving many problems in the practical application of radium."

The illustrations, including charts and schematic drawings, particularly those in color, are first class and well chosen.

This book is recommended for reading by all physicians and for study by all radiotherapeutists.

WILLIAM E. HOWES

Concise Anatomy. By Linden F. Edwards, Ph.D. Quarto of 548 pages, illustrated. Philadelphia, Blakiston Co., 1947. Cloth, $5.50.

This book is intended primarily for nonmedical students of physical education. It is a condensed treatise on descriptive and applied human anatomy, macroscopic, gross, and developmental. It considers fundamental biologic principles and processes, including a brief résumé of maladjustments of the human body to the erect position, which should be of interest to the practicing physician.

Illustrations have been culled mostly from standard textbooks.

The descriptive material, although condensed, is thorough.

WALTER H. SCHMITT

Occupational Marks and Other Physical Signs. A Guide to Personal Identification. By Francesco Bonchese, M.D. Octavo of 181 pages, illustrated. New York, Grune & Stratton, 1948. Cloth, $5.50.

In this book the author presents various examples of characteristic marks produced on the body by different occupations. These marks are of use in the diagnosis of disease. They are also of considerable value as an aid to personal identification. The book contains numerous illustrations depicting the various stigmata produced by occupational trauma and previous disease.

EDWARD H. NIDISH

Pediatric Anesthesia. By M. Digby Leigh, M.D., and M. Kathleen Belton, M.D. Octavo of 240 pages, illustrated. New York, Macmillan Co., 1948. Cloth, $5.50.

Pediatric Anesthesia is an important contribution to the fields of anesthesiology and surgery, because it makes the highly developed anesthetic technics in adults applicable to children. The charts for premedication dosage, simple and detailed descriptions of technics, and the treatment of pre- and postoperative care and of postanesthetic complications make this book necessary to every physician's library. The authors' indications for the endotracheal technic are much overemphasized. The chapters on preoperative preparation, respiration and circulation, postoperative care, prophylaxis and therapy with oxygen, and fluid therapy are recommended reading for general practitioners and pediatricians.

IRVING M. PALLIN

Manual of Public Health Hygiene. By J. R. Currie, M.D., and A. G. Mearns, M.D. Third edition. Octavo of 724 pages, illustrated. Baltimore, Williams & Wilkins Co., 1948. Cloth, $9.00.

The review of hygiene by Currie and Mearns is a treatise dealing with hygiene in school, home, business, and labor. It outlines public health administration, statistics, food control, ventilation and warming of homes, lighting, water supply, waste disposal, housing and hospitals, infections and preventive medicine, community diseases, infestations, personal hygiene, health education, meteorology, international health relations, and social or socialized medicine.

This is essentially a publication relating to English and Scottish health regulations, although there are some references to conditions found in the United States.

ARTHUR D. JAQUES

Hospital Trends and Developments, 1940-1946. Edited by Arthur C. Bachmeyer, M.D., and Gerhard Hartman, Ph.D. Octavo of 819 pages. New York, Commonwealth Fund, 1948. Cloth, $5.50.

It is reassuring to note the increasing recognition by the medical profession, public health officials, and the laity of the importance of hospitals in a comprehensive community health program.

This book, subsidized by the Commonwealth Fund, contains a tremendous amount of valuable information as to trends in the hospital field. A host of contributors, each qualified to discuss his particular subject, make this volume a notable one.

A. E. SHIPLEY

Foundation for hemoglobin regeneration and Improved Well-Being!

HEMOSULES* 'WARNER *the preferred hematinic*

HEMOSULES* 'Warner' contains the several hematopoietic factors of established importance in blood regeneration for obtaining optimal results in hypochromic anemias

HEMOSULES* 'Warner' are high-potency, vitamin rich capsules which also contain liver concentrate and highly absorbable ferrous sulfate

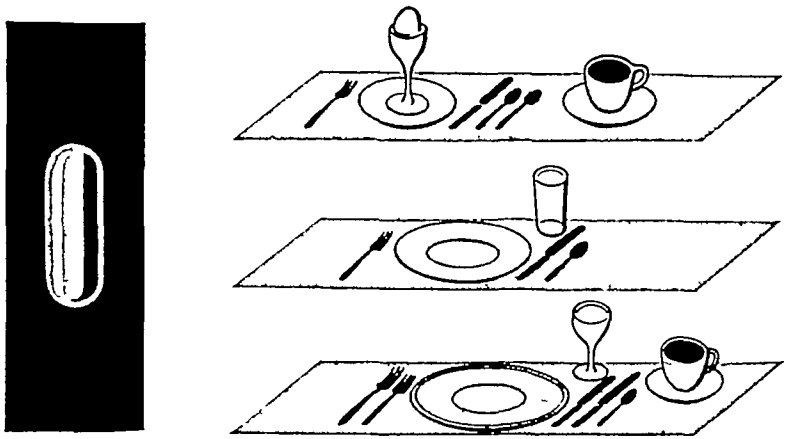
Each HEMOSULES* capsule provides	
Ferrous sulphate, Dried U.S.P	162.0 mg (2.5 grs)
Liver concentrate (1.20)	162.0 mg (2.5 grs)
Folic acid**	0.75 mg
Thiamine hydrochloride (vitamin B1)	1.0 mg
Riboflavin (vitamin B2)	1.0 mg
Niacinamide†	4.0 mg
Pyridoxine hydrochloride (vitamin B6)**	0.5 mg
Calcium pantothenate**	0.5 mg
Ascorbic acid (vitamin C)	15.0 mg

HEMOSULES* are indicated in all secondary anemias due to or *accompanying* impaired absorption or assimilation, nutritive inadequacy, increased requirements in obstetrical patients, gynecological and gastroenterological disorders, surgical operations, and infectious diseases

HEMOSULES* 'Warner'—hematinic capsules—are available in bottles of 96, 250 and 1,000 at all leading pharmacists.

WILLIAM R WARNER & CO, INC

New York St. Louis



*Trade Mark

**The need for pyridoxine hydrochloride calcium pantothenate and folic acid in human nutrition has not been established.

†The minimum daily requirement for niacinamide has not been established.

In secondary and nutritional anemias

IBEROL therapy is one tablet t.i.d.

No complicated dosage schedule to remember, just three tablets a day, one with each meal that dosage represents the accepted standard for a hematinic (210 mg elemental iron), plus generous amounts of folic acid, other B vitamins and ascorbic acid

The three-a-day dosage is possible because for all its potency the IBEROL Tablet is moderate in size It is designed so that the ferrous sulfate itself acts as one of the two subcoatings needed to seal in the unpleasant odor of the liver An outer sugar-coating covers the taste of the iron It's a tablet pleasant to taste and smell, easy to swallow

Remember IBEROL, too, for prophylaxis in pregnancy, old age and surgical after-care IBEROL is not recommended in pernicious anemia, but is an effective adjunct to liver injection. Your pharmacy has IBEROL in bottles of 100, 500 and 1000 capsule-shaped tablets Next time prescribe IBEROL Tablets ABBOTT LABORATORIES, North Chicago, Ill

a valuable aid

in postsurgical recovery

A large percentage of patients enter surgery at a low plasma protein level, and the operative procedure makes further inroads on the already depleted protein reserves [1,2] A lowered protein level is unfavorable to recovery It predisposes the patient to pulmonary edema and infection, retarded wound and fracture healing and impaired liver function [3,4] A high protein level is conducive to rapid healing [5]

Since diets immediately following surgery are usually inadequate, protein digests given intravenously result in improved strength, appetite, and wound healing Consequently, they greatly accelerate recovery [6,7]

2000 cc of TRAVAMIN 5% a day will satisfy the protein requirements of a high percentage of surgical patients 2000 to 4000 cc. a day are given according to requirements [8] TRAVAMIN is made from bovine plasma

TRAVAMIN 5% IN WATER

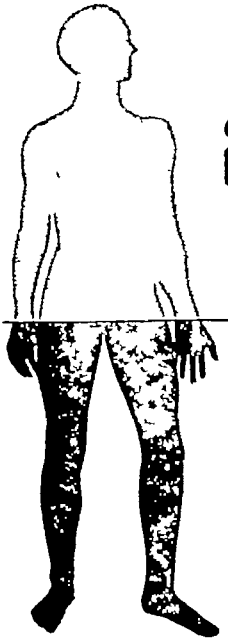
THE NEW YORK AND BROOKLYN COMMITTEE ON TRAUMA OF THE AMERICAN COLLEGE OF SURGEONS

Announces a

FOUR-DAY FRACTURE COURSE
By SIR REGINALD WATSON-JONES of London

Assisted by members of the Committee

Friday, Saturday, Sunday and Monday, February 17, 18, 19, and 20, 1950 Immediately following the meeting of the American Academy of Orthopaedic Surgeons



Lenox Hill Hospital Auditorium, New York City

Registration limited to 350—Cost of Course $50

Applications will be accepted from veterans under the G I Bill if Course receives approval of Veterans Administration Apply to

Dr William H Cassebaum,
112 East 74th Street, New York City

a valuable aid

in postsurgical recovery

A large percentage of patients enter surgery at a low plasma protein level, and the operative procedure makes further inroads on the already depleted protein reserves [1 2] A lowered protein level is unfavorable to recovery It predisposes the patient to pulmonary edema and infection, retarded wound and fracture healing and impaired liver function.[3 4] A high protein level is conducive to rapid healing [5]

Since diets immediately following surgery are usually inadequate, protein digests given intravenously result in improved strength, appetite, and wound healing Consequently, they greatly accelerate recovery [6,7]

2000 cc of TRAVAMIN 5% a day will satisfy the protein requirements of a high percentage of surgical patients 2000 to 4000 cc a day are given according to requirements [8] TRAVAMIN is made from bovine plasma

TRAVAMIN 5% IN WATER
TRAVAMIN 5%, DEXTROSE 5% IN WATER

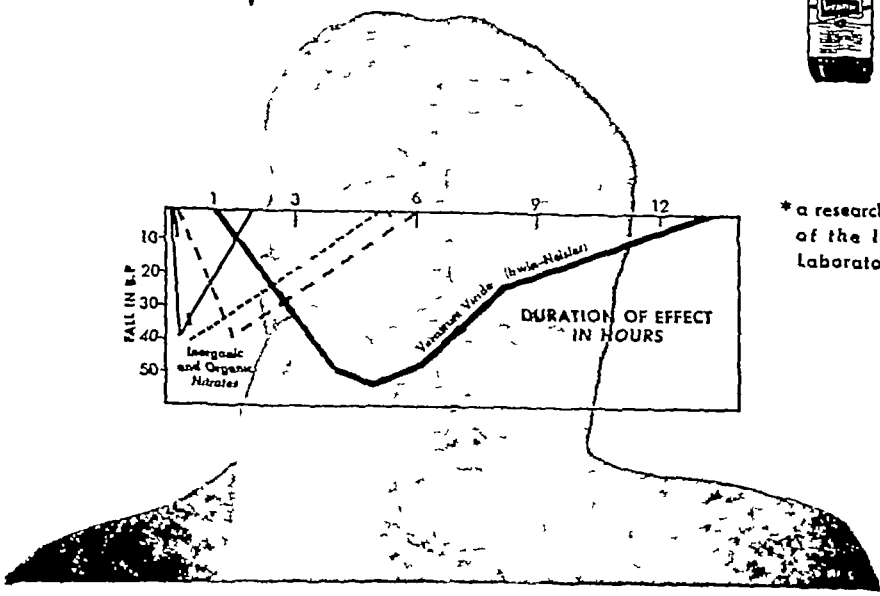
PHYSIOLOGIC FALL

in blood pressure



Of the many drugs commonly used to lower arterial pressure in hypertension, Biologically Standardized veratrum viride (in CRAW UNITS*) is the only drug that produces a physiologic fall in blood pressure Thus, a prominent feature in the integrated response to oral doses of veratrum viride in CRAW UNITS is a reduction in peripheral resistance without compromise of circulation and without disrupting circulatory equilibrium

VERATRITE represents a practical modification of this effective hypotensive drug for everyday management of the mild and moderate cases of essential hypertension Prolonged action, wide range of therapeutic safety and complete simplicity of administration are specific advantages of Veratrite therapy Each Veratrite Tabule contains Biologically Standardized veratrum viride 3 CRAW UNITS, sodium nitrite 1 grain, phenobarbital ¼ grain

Samples and literature on request

BILHUBER-KNOLL CORP ORANGE, NEW JERSEY

Chloral hydrate, used in medicine since 1869, is, even today, "the standard hypnotic of its class "[1]

Goodman and Gilman observe that it "is unfortunately neglected today," and that the present widespread use of the barbiturates has " caused the physician to lose sight of the fact that chloral hydrate is still one of the cheapest and most effective hypnotics "[2]

In FELLO SED, supplementation with calcium bromide and atropine sulfate largely overcomes unwanted side actions, enhances the sedative effect and provides valuable antispasmodic activity It is presented in palatable liquid form

[1] N.N.R., 1947 p 398.
[2] Goodman, L. & Gilman, A., The Pharmacological Basis of Therapeutics. MacMillan, 1944, pp 177-8.

Available in 8 fluidounce bottles

Adult Dose. As a sedative ½ to 1 teaspoonful with water, every 3 or 4 hours or as directed As a hypnotic, 1 to 2 teaspoonfuls or more with water at bedtime, or as directed

FELLO-SED

FORMULA: Each fluidram (4 cc.) contains, in a palatable aromatic vehicle Chloral Hydrate 0 5 Gm (7½ gr), Calcium Bromide, 0.5 Gm (7½ gr), Atropine Sulfate, 0 125 mg (1/480 gr)

"The best inhaler they have ever used!"

the new S.K.F. BENZEDREX INHALER

So much better that we have discontinued 'Benzedrine' Inhaler

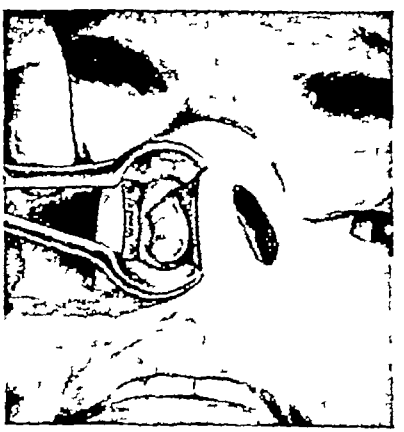
Physicians tell us that they and their patients find
BENZEDREX INHALER the best inhaler they have ever used
The active ingredient of BENZEDREX INHALER is
1-cyclohexyl-2-methylaminopropane,
a new S K F compound It has exactly the same
agreeable odor as Benzedrine*, gives even
more effective and prolonged shrinkage,
and does NOT produce excitation or wakefulness
We are sure you will find that BENZEDREX INHALER is
the best volatile vasoconstrictor you have ever used

Smith, Kline & French Laboratories, Philadelphia

Each BENZEDREX INHALER is packed with 1-cyclohexyl 2-methylaminopropane, S K.F, 250 mg, and aromatics
*"Benzedrine' (racemic amphetamine, S K.F) and 'Benzedrex
T.M Reg U S Pat. Off.

- **Prolonged intranasal shrinkage**
- **Potent bacteriostasis**
- **Safety**

Par-Pen provides all three

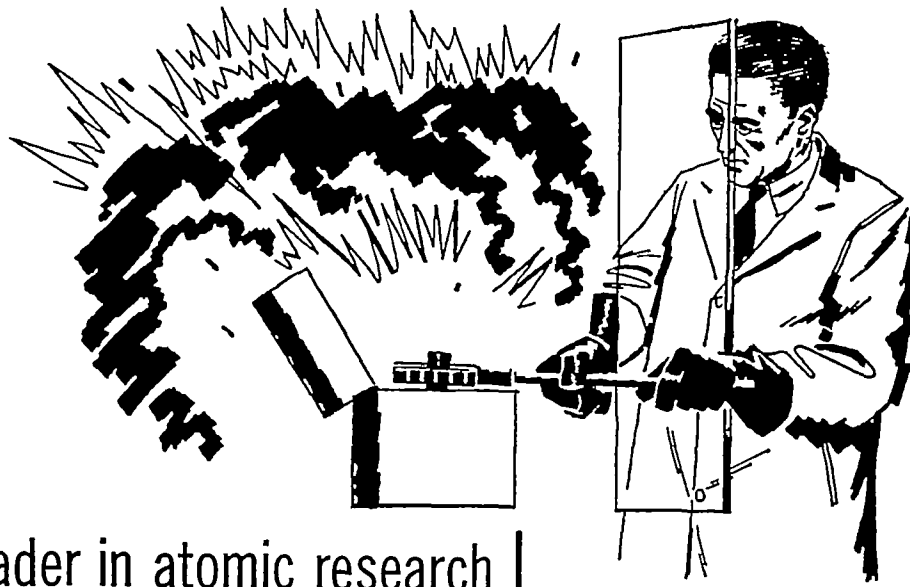


PAR-PEN contains Council accepted Aqueous Solution Paredrine Hydrobromide—the vasoconstrictor that produces more rapid, more prolonged shrinkage than ephedrine *without* ephedrine-like central effects By relieving congestion, the Paredrine opens the way to effective bacteriostasis at the site of infection

PAR-PEN contains 500 units of penicillin per cc , the accepted strength for local use Grubb and Puetzer found that local penicillin (500 units per cc) reduced intranasal bacteria from an average of 7,363 per cc to 42 per cc. of nasal washings[1]

J Lab & Clin. Med 32 566

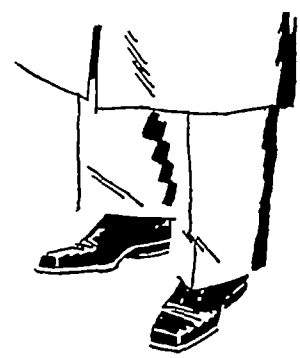
PAR-PEN is non-irritating and non-stinging
It does not inhibit ciliary action
It is harmless to nasal mucosa



Smith, Kline & French Laboratories, Philadelphia

PAR PEN is packaged in 1 fluid ounce bottles It contains crystalline sodium penicillin, 500 units per cc., Aqueous Solution 'Paredrine' Hydrobromide 1%

Par-Pen



the penicillin-vasoconstrictor combination for intranasal use

Leader in atomic research | dietary dub!

Intent upon an experiment with a hot sample, he forgets lunch—again—and his need for more sensible diet and supplementary vitamin B complex grows more pronounced For him, and other patients with avitaminosis B, SUR BEX Tablets supply the high potency vitamin B such deficiency states require SUR BEX Tablets are filled with an abundance of natural and synthetic B factors, making them suitable for both preventive and corrective use One, two or more tablets daily may be prescribed as indicated *For all their potency*, SUR BEX *Tablets are pleasant and easy to take, because they are triple-coated to seal out moisture, seal in odors of liver, yeast, thiamine and other ingredients* Pharmacists have them in bottles of 100, 500 and 1000 Remember—SUR BEX for dietary dubs

ABBOTT LABORATORIES, NORTH CHICAGO, ILLINOIS

Each triple coated SUR-BEX Tablet contains natural and synthetic vitamins in these potencies

THIAMINE HYDROCHLORIDE (6 times MDR*)	6 mg.
RIBOFLAVIN (3 times MDR*)	6 mg.
NICOTINAMIDE (2 times RDA**)	30 mg.
PYRIDOXINE HYDROCHLORIDE	1 mg
PANTOTHENIC ACID (as Calcium Pantothenate)	10 mg.
LIVER FRACTION (boiling water extract)	0.3 Gm (5 grs.)
BREWER'S YEAST DRIED	0.15 Gm (2½ grs.)

*Minimum Daily Requirement.
**Recommended Daily Dietary Allowance.

Sur-bex®

(ABBOTT'S VITAMIN B COMPLEX TABLETS)

SUR BEX WITH VITAMIN C contains the same rich store of vitamin B as regular SUR BEX, plus 150 mg ascorbic acid Bright yellow capsule-shaped tablets are supplied in bottles of 100 500 and 1000

a distinctive, new, non-narcotic antitussive-expectorant

At last, something really new in cough syrups something completely rational clinically sound Robitussin 'Robins' Robitussin employs glyceryl guaiacolate and desoxyephedrine hydrochloride, in a palatable aromatic syrup vehicle

Glyceryl guaiacolate has proven an effective aid to expectoration, and a cough ameliorator with prolonged action, through its increase in and thinning of respiratory tract fluid,[1 2 3] yet it has no ill effect upon digestion [1]

Desoxyephedrine's sympathomimetic action is also well recognized[4 5 6] by relaxing spasm of the bronchial musculature and helping maintain normal respiratory smooth muscle tone, it greatly minimizes the provocation of cough from spasm [5] At the same time it affords relief from psychic depression or a feeling of fatigue

The syrupy vehicle, with its aromatic volatile oils, has a local demulcent effect Furthermore, it assures patient cooperation by providing a base which makes Robitussin one of the most palatable of all antitussive-expectorants

You will find Robitussin 'Robins' an exceptionally efficient, safe, therapeutic tool in the management of cough—for both adults and children

Robitussin

FORMULA Each 5 cc. (1 teaspoonful) of Robitussin contains

Glyceryl Guaiacolate	100 mg
Desoxyephedrine Hydrochloride	1 mg

In a palatable aromatic syrup

DOSAGE Children one-half to one teaspoonful according to age three or more times daily Adults, one or two teaspoonfuls as necessary every two to three hours.

SUPPLIED Pint and gallon bottles.

brings beneficent blood to painful parts

ARTHRALGESIC UNGUENT

for quick relief of joint and muscle pain

ARTHRALGEN combats the pain and stiffness of rheumatic and allied disorders with deep vasodilatation Increased blood flow brings relaxing warmth, fosters healing and accelerates removal of toxic metabolites Methacholine chloride dilates both arterioles and capillaries. Menthol and thymol add their rubefacient action to perfuse the affected part with a copious supply of blood. Pain is further diminished by analgesic methyl salicylate

ARTHRALGEN is convenient to use—its penetrant ointment base is non messy and easily washable Containing no histamine, it does not cause itching or whealing of the skin Available in 1-ounce collapsible tubes and half pound jars.

OBSTETRICAL & GYNECOLOGICAL SURVEY

"... these statistics are the best that have been reported. In fact, they couldn't be any better."

Editor: Obstetrical & Gynecological Survey
Vol. 4, No. 2: April, 1949: page 190

The statistics referred to are those reported by Dr. O. W. Smith in her article, "Diethylstilbestrol in the Prevention and Treatment of Complications of Pregnancy", in the November, 1948, issue of *The American Journal of Obstetrics and Gynecology*. This study of 632 pregnancies showed that, "under stilbestrol treatment the habitual aborter enjoys the same outlook for a living baby as does the average gravida. This is what I mean by saying that these statistics are the best that have been reported" [1]

This report affords additional evidence that the treatment of threatened and habitual abortions with **des** — Grant Process diethylstilbestrol — as pioneered by Karl John Karnaky[2], is the most effective treatment available.

The work of Silbernagel and Burt[3], and of Rosenblum and Melnikoff[4] showed that with diethylstilbestrol *68.4% more* cases were carried to term than with progesterone. In fact, it is now felt that the administration of progesterone may actually hasten abortion[5].

des is the only diethylstilbestrol prepared by the unique Grant Process of triple crystallization. Highly micronized **des** tablets are dissolved within a few seconds and are uniformly absorbed into the blood stream. **des** is specifically designed for the treatment of threatened abortion, habitual abortion and premature labor. The living results obtained with **des** are the best that have been reported. "In fact, they couldn't possibly be any better."

des IS BEST

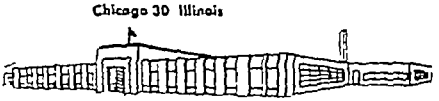
not just resin
not just mucin

but RESMICON®

mucoprotective acid-adsorbent for peptic ulcer therapy



— relieves pain and promotes healing in peptic ulcer
— relieves distress in hyperacidity

RESMICON'S anion exchange polyamine resin combats acidity by a new—non-chemical—principle It physically adsorbs acid radicals In the stomach resin rapidly inactivates HCl and inhibits pepsin with complete freedom from side effects

RESMICON'S natural gastric mucin protects the gastric mucosa Clinicians have amply demonstrated its value in peptic ulcer therapy But mucin alone is limited by its weakness as an antacid and by the large and frequent dosage required

RESMICON, uniting resin and mucin, is an outstanding agent for the effective treatment of peptic ulcer and hyperacidity

the
liver
in
certain
obstetric
complications

•
•
•

• A recent paper[1] has reported the value of Meonine as an adjunct to protect the liver in "certain obstetric complications which have frequently ended fatally." In treating toxemia of pregnancy, the authors found that in addition to a specific action in preventing fatty infiltration to the liver Meonine appeared to exert a favorable influence on impaired renal function. 'Diuresis was the most promising feature following this special treatment. There was also a coincident favorable response in the diminution of edema."

Eskadiamer combines the 2 safest sulfonamides in 1 delicious fluid preparation

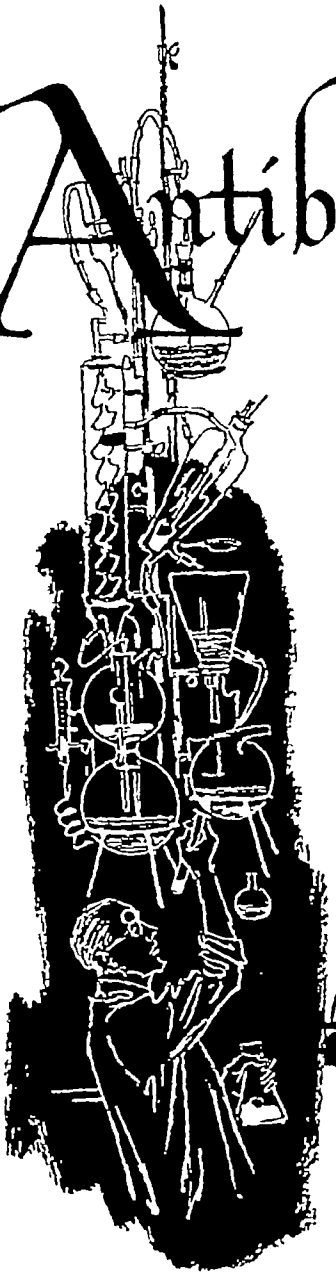
Leading clinicians have attested the greater safety of *the sulfonamides* in mixtures Now, Lehr finds that "sulfadiazine *and sulfamerazine* qualify for first and second place, respectively, as mixture components "

Federation Proceedings 8 315 (March) 1949

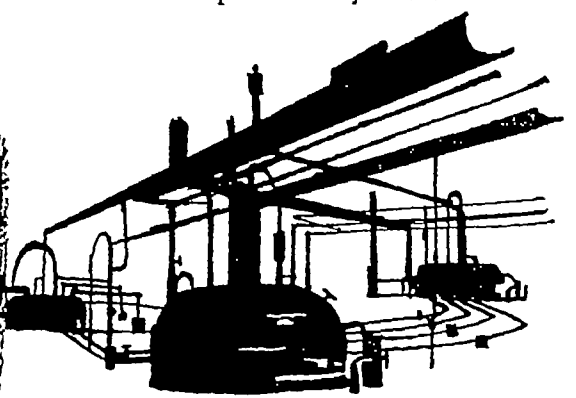
Eskadiamer, therefore, is especially welcome to the physician—not only because it is a sulfonamide mixture, but also because it is a mixture of equal parts *of the two safest sulfonamides in general use* sulfadiazine and sulfamerazine

Eskadiamer tastes so good that children—and many adults—much prefer ESKADIAMER to the usual bulky, sulfonamide tablets

Smith, Kline & French Laboratories, Philadelphia



Eskadiamer



the delicious fluid preparation of sulfamerazine and sulfadiazine

Each 5 cc (one teaspoonful) of ESKADIAMER contains 0 25 Gm (3 86 gr) microcrystalline sulfamerazine and 0 25 Gm (3.86 gr) microcrystalline sulfadiazine—the dosage equivalent of the standard 0.5 Gm. (7 7 gr) sulfonamide tablet.

Antibiotics

For the past several years, *Lederle* has conducted extensive research in the production and isolation of antibiotics Scientific competition in this field has been keen and *Lederle* leadership has been achieved at the expense of a heavy investment in personnel, materials and money Two antibiotics are widely used throughout the world—aureomycin and penicillin The former is produced solely by *Lederle* Penicillin in many new forms, both oral and parenteral, has been pioneered by *Lederle*

Lederle research never comes to a standstill, but on the contrary, proceeds apace, and will in due course produce many additional weapons for man's fight against parasitic microorganisms

Meat...

Outstanding Value...

Outstanding Nutritional Benefits

Whether the pocketbook calls for economy or permits satisfaction of that urge for the fanciest cuts, meat gives your patients full value for their money Every cut and kind of meat supplies, *in abundance,* these essential nutrients

1 Biologically complete protein the kind which satisfies the requirements for growth and which is needed daily for tissue maintenance, antibody formation, hemoglobin synthesis, and good physical condition

2 The essential B complex vitamins, thiamine, riboflavin, and niacin

3 Essential minerals, including iron in particular

In addition to these tangible values, meat ranks exceptionally high not only in taste and palate appeal, but also in satiety value

The instinctive choice of meat as man s favorite protein food has behind it sound nutritional justification *

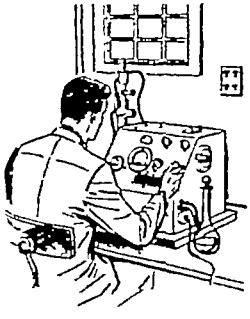
Legislative Home Work Needed, II

It is not the purpose of this editorial series to scold or to point out sins of omission It is proposed, however, to indicate the weakness of our legislative efforts, to emphasize the futility of competitive "lobbying" activities, and to urge intensive activity in county areas with respect to such legislation as seems desirable This implies a radical change in the point of view of many doctors who have held themselves aloof from politics or political affairs It has resulted in half-hearted, indolent gestures for the most part, with a certain fear of being labeled a "medical politician" This attitude has discouraged many able doctors from taking an active interest in legislative work



In a few of our county societies the legislative committees have done excellent work In a number of others there has been little or no work done by these committees It would appear that if we are to be successful the legislative committee in all county societies must be considered as one of the most important of that county society Members of the legislative committee in a county society should be chosen because of interest in such work, a willingness to work in this field, and should be kept on the committee sufficiently long to become thoroughly familiar with all the procedures connected with the activities of this group The chairman should be a physician who has served an apprenticeship through several years of membership on this committee The chairman and members of the committee should be appointed sufficiently well in advance, or carried over from the year preceding, *so that new committees are not appointed at the beginning of or during a legislative session* when it is too late for that committee to function properly

It is found that many times members of these committees do not know the procedures

EXPERTS WHO TREAT STUFFY NOSES

A quick, deft manipulation and the pledget of cotton is securely in place, a foreign body is safely removed from an eye, or a tonsil is adroitly snared Specialists in eye, ear, nose, and throat practice take for granted the high degree of skill acquired from day-to-day experience

Behind the scenes, in the medical research laboratories of the nation, groups of skilled scientists are at work on the doctor's problems Can this sympathomimetic drug be made more effective, less toxic? Will altering the chemical structure of an antihistaminic compound remove the undesirable side-effects without destroying its desirable qualities? Can this local anesthetic be improved? These are only a few of the day-to-day concerns which challenge the skills of the specialists representing all branches of medical science at the Lilly Research Laboratories The result of their findings is reflected in the continuing flow of new and better preparations destined for the patient via the physician's prescription

Lilly

LILLY SPECIALISTS SERVE THE MEDICAL PROFESSION

It is thought that if more attention were given and progress were made in this direction, the results of our efforts in legislation would be improved

The A M A Assessment in New York State

We are informed that, in the matter of payment of the A M A assessment by states, New York ranks forty-seventh at the moment Count the white stars in the blue field of the American flag and think about that rank Should the Empire State be in that position? When it is remembered that three fifths of the money raised by the assessment has been allocated to a national campaign of public education at a critical time in the medical history of the nation, the physicians of the State might be said to be enthusiastically indifferent to it, from the record, or perhaps dynamically inactive, or again just forgetful

No physician can feel proud of such a record, for, after all, he is a citizen of this State and presumably likes to consider it a leader, not a tailender His personal share of the voluntary assessment, $25, twelve and one-half cartons of cigarets, is not a backbending burden in our view, and if it were, does he not owe that much to his profession?

We feel certain that forgetfulness is the leading cause for failure of New York State physicians so far to send in their payments In a busy life it is easy to forget But now that we have reminded you, jogged your memory, won't those of you who have not already done so, kindly repair the oversight *at once?* The year is drawing to a close, and it is important that these funds be in the hands of the A M.A immediately Act now, if this reminder applies to you If it does not, take it upon yourself to speak to your friends at the next staff meeting or county society meeting They may not have seen this reminder Will you who read this assist us by acting as *remindermen?* The matter is urgent

Send your check for $25, payable to the American Medical Association, to the State Society office, 292 Madison Avenue, New York 17, New York

We find it hard to believe that New York State physicians have so little pride of accomplishment as to neglect this appeal

Current Editorial Comment

The Hospital Bond Issue On November 8 next there will be submitted to the voters of this State an amendment to the State Constitution which would permit the City of New York to raise $150,000,000 through the medium of a bond issue for the purpose of reconstructing and rehabilitating its municipal hospital system Although the money is to be spent on a local project, the electorate of the entire State must decide the question There can be no doubt as to the necessity for carrying out this project Many of the city institutions are very antiquated, they are shockingly overcrowded, they are a public hazard since they are not all fireproof and lack other modern safety and functional features

It is to be hoped that the citizenry of the entire State will develop a sufficient interest in this project to cast their votes in favor The metropolis of the western world should be able to point with pride to its hospital facilities, for they would constitute a "medical center," the influence of which extends far beyond mere municipal boundaries

The project has received wide endorsement, and the physicians of the State should lend their aid in achieving its purposes "Be a good neighbor"

Step by Step "The University Hospitals have been a source of considerable complaint in many areas because they engage in the practice of medicine That is not news Some of our very good hospitals for many years have accepted patients and taken payments for their services and applied those payments to the cost of their medical schools and their teaching staffs,

and are not sufficiently well acquainted with legislative matters to carry out their duties, until the time for such activities has passed The chairman and members of this legislative committee should acquaint all other members of the county society with legislative matters and enlist their support, not only in public education but by contact with the senators and assemblymen representing their counties They should make it known to the legislators from their counties why they are in favor of or opposed to certain legislative matters, and be thoroughly acquainted with their attitude on these questions The legislators themselves would welcome such contacts

It has long been the history of legislative matters in which the medical profession has been interested that there is a lack of unity in the profession in its efforts The legislators have said, "If you get together and decide on what you want, and if it is for the public good, we will put the matter through the Legislature" All too often, even on bills mandated by the House of Delegates, it is found that these bills are not supported, and may even be opposed, by members of the profession It cannot be expected that efforts on such legislation will be successful if there is a difference of opinion in or opposition from members of our own group This unity of support for desired legislation is most important

It is also thought that we should give more careful consideration to the type of legislation that we request to be introduced It does not improve the standing of the medical profession before members of the Legislature continually to be requesting the introduction of legislation that has no chance of being passed We could strengthen our program if we made a thorough study of all proposals being considered for introduction in the Legislature, by thoroughly working out their chances of being passed, and the proper form of presentation *before* such introduction It is thought we would improve our public relations and the attitude of the public and the legislators if for some time we did not request the introduction of matters which are strongly opposed by the administration or State departments We can surely improve our public relations by foregoing the introduction of any legislation which at this time could be considered as prompted by the selfish interest of the medical profession or the individual doctor

It has been recognized, especially in connection with our present educational campaign, that the public relations of the medical profession must be improved This includes not only the attitude of the public but the attitude of legislators in our State Legislature as well as in Congress It is found that many legislators who individually have great respect for physicians with whom they are acquainted, and for the medical profession as a whole, are not inclined to favor legislation desired by the medical profession One of the reasons for this attitude on the part of the legislators is the influence not only of the attitude of the public but the lack of unity in the medical profession, also the disinterest of the medical profession in political matters, and the apparently selfish stand presented either for or against certain types of legislation Legislators are not willing to support the medical profession in its desire for change or amendments to the laws in these times when it would appear that it would be purely for the financial benefit of members of the profession They will not support legislation for certain groups of the profession, when such legislation is opposed by other members of the profession, unless it appears to be distinctly for the public good or follows the popular trend of thought The legislators are not impressed by demands in connection with legislation from the doctors, because members of the medical profession are notoriously weak in political activities and neglectful of the support of party or candidates A legislator will listen to an organization that works more consistently in these fields quicker than he will to a group like the medical profession which lends him practically no support It is suggested, then, that members of the county societies make more effort to become acquainted with their legislators and their attitudes, and assist when possible in party and election matters This is quite a distinct change from the custom of the State Society and members of the profession of former years

It is thought that if more attention were given and progress were made in this direction, the results of our efforts in legislation would be improved

The A M A Assessment in New York State

We are informed that, in the matter of payment of the A.M.A assessment by states, New York ranks forty-seventh at the moment Count the white stars in the blue field of the American flag and think about that rank. Should the Empire State be in that position? When it is remembered that three fifths of the money raised by the assessment has been allocated to a national campaign of public education at a critical time in the medical history of the nation, the physicians of the State might be said to be enthusiastically indifferent to it, from the record, or perhaps dynamically inactive, or again just forgetful

No physician can feel proud of such a record, for, after all, he is a citizen of this State and presumably likes to consider it a leader, not a tailender His personal share of the voluntary assessment, $25, twelve and one-half cartons of cigarets, is not a backbending burden in our view, and if it were, does he not owe that much to his profession?

We feel certain that forgetfulness is the leading cause for failure of New York State physicians so far to send in their payments In a busy life it is easy to forget But now that we have reminded you, jogged your memory, won't those of you who have not already done so, kindly repair the oversight *at once?* The year is drawing to a close, and it is important that these funds be in the hands of the A M A immediately Act now, if this reminder applies to you If it does not, take it upon yourself to speak to your friends at the next staff meeting or county society meeting They may not have seen this reminder Will you who read this assist us by acting as remindermen? The matter is urgent

Send your check for $25, payable to the American Medical Association, to the State Society office, 292 Madison Avenue, New York 17, New York

We find it hard to believe that New York State physicians have so little pride of accomplishment as to neglect this appeal

Current Editorial Comment

The Hospital Bond Issue On November 8 next there will be submitted to the voters of this State an amendment to the State Constitution which would permit the City of New York to raise $150,000,000 through the medium of a bond issue for the purpose of reconstructing and rehabilitating its municipal hospital system Although the money is to be spent on a local project, the electorate of the entire State must decide the question There can be no doubt as to the necessity for carrying out this project Many of the city institutions are very antiquated, they are shockingly overcrowded, they are a public hazard since they are not all fireproof and lack other modern safety and functional features

It is to be hoped that the citizenry of the entire State will develop a sufficient interest in this project to cast their votes in favor The metropolis of the western world should be able to point with pride to its hospital facilities, for they would constitute a "medical center," the influence of which extends far beyond mere municipal boundaries

The project has received wide endorsement, and the physicians of the State should lend their aid in achieving its purposes "Be a good neighbor"

Step by Step "The University Hospitals have been a source of considerable complaint in many areas because they engage in the practice of medicine That is not news Some of our very good hospitals for many years have accepted patients and taken payments for their services and applied those payments to the cost of their medical schools and their teaching staffs,

and are not sufficiently well acquainted with legislative matters to carry out their duties, until the time for such activities has passed The chairman and members of this legislative committee should acquaint all other members of the county society with legislative matters and enlist their support, not only in public education but by contact with the senators and assemblymen representing their counties They should make it known to the legislators from their counties why they are in favor of or opposed to certain legislative matters, and be thoroughly acquainted with their attitude on these questions The legislators themselves would welcome such contacts

It has long been the history of legislative matters in which the medical profession has been interested that there is a lack of unity in the profession in its efforts The legislators have said, "If you get together and decide on what you want, and if it is for the public good, we will put the matter through the Legislature" All too often, even on bills mandated by the House of Delegates, it is found that these bills are not supported, and may even be opposed, by members of the profession It cannot be expected that efforts on such legislation will be successful if there is a difference of opinion in or opposition from members of our own group This unity of support for desired legislation is most important

It is also thought that we should give more careful consideration to the type of legislation that we request to be introduced It does not improve the standing of the medical profession before members of the Legislature continually to be requesting the introduction of legislation that has no chance of being passed We could strengthen our program if we made a thorough study of all proposals being considered for introduction in the Legislature, by thoroughly working out their chances of being passed, and the proper form of presentation *before* such introduction It is thought we would improve our public relations and the attitude of the public and the legislators if for some time we did not request the introduction of matters which are strongly opposed by the administration or State departments We can surely improve our public relations by foregoing the introduction of any legislation which at this time could be considered as prompted by the selfish interest of the medical profession or the individual doctor

It has been recognized, especially in connection with our present educational campaign, that the public relations of the medical profession must be improved This includes not only the attitude of the public but the attitude of legislators in our State Legislature as well as in Congress It is found that many legislators who individually have great respect for physicians with whom they are acquainted, and for the medical profession as a whole, are not inclined to favor legislation desired by the medical profession One of the reasons for this attitude on the part of the legislators is the influence not only of the attitude of the public but the lack of unity in the medical profession, also the disinterest of the medical profession in political matters, and the apparently selfish stand presented either for or against certain types of legislation Legislators are not willing to support the medical profession in its desire for change or amendments to the laws in these times when it would appear that it would be purely for the financial benefit of members of the profession They will not support legislation for certain groups of the profession, when such legislation is opposed by other members of the profession, unless it appears to be distinctly for the public good or follows the popular trend of thought The legislators are not impressed by demands in connection with legislation from the doctors, because members of the medical profession are notoriously weak in political activities and neglectful of the support of party or candidates A legislator will listen to an organization that works more consistently in these fields quicker than he will to a group like the medical profession which lends him practically no support It is suggested, then, that members of the county societies make more effort to become acquainted with their legislators and their attitudes, and assist when possible in party and election matters This is quite a distinct change from the custom of the State Society and members of the profession of former years

President's Page

I propose to use the unofficial medium of the "President's Page" from time to time to express some personal opinions to the members of the Medical Society of the State of New York It is hoped that these might invoke discussion and have some value as we continually work toward our common goal of professional dignity, competence, and independence

The practice of medicine is no longer the simple performance of an individual physician caring for an individual patient, important as that item still is It ranges far beyond this, and includes not only the wonderful activities of our public health services and the research and teaching functions of our medical schools and great clinics, but also the various phases of medicine in which the government itself is engaged It is the physicians who are the main actors on this stage It is they who are able to translate the results of research into the clinical practice of medicine They are the indispensable ones around whom the whole elaborate machinery revolves Great numbers of physicians are engaged in these activities The practice of medicine to them is not the same as it is to the private individual practitioner It is more abstract and less personal They are physicians, however, and members of our great profession

Our profession, as you well know, has been and is now under attack from many sources In my opinion, this attack will be long sustained, no member of the profession can stand aloof and refuse to take an active part in the ensuing engagement

It is my opinion, also, that neither the public nor the profession will gain if physicians are regimented We will all lose in those things we value most as citizens of a free country —independence and individual dignity So I appeal to all doctors, irrespective of the capacity in which they function, to be alert, and to be with our profession wholeheartedly in its legitimate struggle to maintain and further the public interest with respect to health matters and the practice of medicine We must cooperate or perish

There is comparative quiet at present in the propaganda on the part of those who would regiment the medical profession, but it would be a great mistake were we lulled into inactivity because of this

I can assure you that the proponents of compulsory health insurance are not inactive—on the contrary, I believe that they are intensifying their efforts We must therefore intensify our own educational activities and never miss an opportunity to strike a blow for the ideals of the medical profession, either by private counsel or by public speech We should, in addition, endeavor to have our efforts translated into the writing of letters of protest to our senators and congressmen in Washington, when measures we feel are not in the public interest are under discussion

This is one phase of the matter and a direct one The other is not so direct

It may be that our antagonists are not so hopeful as they were of initiating compulsory health insurance in one great and sudden move We must be prepared to recognize and combat other moves that might be made that would ultimately end up in compulsory health insurance

We are endeavoring to maintain a high quality of medical care and service With our present number of trained physicians and nurses, compulsory health insurance cannot be established without a disastrous lowering of the quality of care and service It is not selfishness on our part when we oppose compulsory health insurance It would increase the quantity but lower the quality of medical service, and the latter would be repugnant to our people They are entitled to and should have the best medical care possible

but in some areas that has been a subject of violent discussion and unfavorable reaction" [1]

Now that the president of the A M A has seen fit to comment in the pages of its *Journal* upon this controversial subject, we feel free to venture a few observations For many years some of the more rigid moralists in this country have been perplexed by the spectacle of governments doing things that no private citizen would think of doing, or would be permitted to do if he did It has become increasingly clear that it is not always what is done but who does it that determines the morality of a given act

The interlocking directorate between hospitals and medical schools is a natural and long established fact Fifty years ago doctors figuratively taught medicine with one hand and practiced it with the other Professors found the time and pains that teaching cost them were perhaps well repaid by the prestige of their titles and by the generations of students that grew up to be "feeders" to them

But then a grave question arose If the Departments of Anatomy and Physiology, for example, demanded the services of full-time, salaried professors, it was unthinkable that the dignity of the Departments of Medicine and Surgery should not command similar selfless full-time service

But then the problem of how the most brilliant representatives of those subjects could be weaned away from the rewards of private practice presented itself Some astute hospital trustee recognized a fact that must have been long evident to the majority of the discerning Doctors were not like most other people There was a curious, impractical Messianic streak in some of them They lived, some of them, in a world apart, yes, that was it, in a world of their own, like children playing in a nursery!

There was the nub of the problem Why not give them the most attractive nursery imaginable, fill it with the most modern and expensive toys, send them around the country to medical meetings, give them their offices and secretaries, a month's vacation with pay, and finally, give them a modest salary to live on? "Clean living and high thinking" should be their motto The scheme, in many cases, worked very well.

But then an obstacle arose Patients flocked to the professors' reputations in such numbers that there seemed to be a danger that the professors' attention might be somewhat deflected from the prime target of their careers teaching On the other hand, no one should conscientiously deprive the suffering public of the services of such learned, scientific behemoths

What to do? Up came another hypothetical trustee with a brilliantly simple solution Anything that the doctor earned over and above his salary would be collected by the hospital or university, and turned into the funds of his department Some sensitive spirits among the professors complained that the rising flood of private practice, whether or not they got the rewards from it, impinged seriously upon the time that they would like to be giving to research But did they not have all the young assistants any man could ask for to carry out the humdrum details of research, once they had posed the problem? Surely no professor could be of so niggardly a nature as not to wish to do his best to support his own department! A noteworthy solution, nearly approaching perpetual motion

It works extraordinarily well Of course, there are occasional reorganizations, inevitable for progress, and amalgamations between hospitals and universities because of which duplicating facilities must be eliminated In such cases, of course, a few doctors who thought themselves secure for life find themselves again at the bottom of the ladder But what would you? The juggernaut of progress will always claim its victims

We recently saw a letter which represented the apotheosis of this system It was written to a staff member of many years standing in one of our oldest and most respected institutions It was about to merge with another hospital, but before the final step was taken the trustees would like to know how much the doctor would contribute personally to the maintenance of the hospital as a separate institution

We hope we are not old fashioned or fusty, but we should like our readers to consider carefully whether or not they think the picture here drawn can be described as that of "Free Enterprise in the Practice of Medicine"

---

President's Page

I propose to use the unofficial medium of the "President's Page" from time to time to express some personal opinions to the members of the Medical Society of the State of New York It is hoped that these might invoke discussion and have some value as we continually work toward our common goal of professional dignity, competence, and independence

The practice of medicine is no longer the simple performance of an individual physician caring for an individual patient, important as that item still is It ranges far beyond this, and includes not only the wonderful activities of our public health services and the research and teaching functions of our medical schools and great clinics, but also the various phases of medicine in which the government itself is engaged It is the physicians who are the main actors on this stage It is they who are able to translate the results of research into the clinical practice of medicine They are the indispensable ones around whom the whole elaborate machinery revolves Great numbers of physicians are engaged in these activities The practice of medicine to them is not the same as it is to the private individual practitioner It is more abstract and less personal They are physicians, however, and members of our great profession

Our profession, as you well know, has been and is now under attack from many sources In my opinion, this attack will be long sustained, no member of the profession can stand aloof and refuse to take an active part in the ensuing engagement

It is my opinion, also, that neither the public nor the profession will gain if physicians are regimented We will all lose in those things we value most as citizens of a free country —independence and individual dignity So I appeal to all doctors, irrespective of the capacity in which they function, to be alert, and to be with our profession wholeheartedly in its legitimate struggle to maintain and further the public interest with respect to health matters and the practice of medicine We must cooperate or perish

There is comparative quiet at present in the propaganda on the part of those who would regiment the medical profession, but it would be a great mistake were we lulled into inactivity because of this

I can assure you that the proponents of compulsory health insurance are not inactive—on the contrary, I believe that they are intensifying their efforts We must therefore intensify our own educational activities and never miss an opportunity to strike a blow for the ideals of the medical profession, either by private counsel or by public speech. We should, in addition, endeavor to have our efforts translated into the writing of letters of protest to our senators and congressmen in Washington, when measures we feel are not in the public interest are under discussion

This is one phase of the matter and a direct one The other is not so direct

It may be that our antagonists are not so hopeful as they were of initiating compulsory health insurance in one great and sudden move We must be prepared to recognize and combat other moves that might be made that would ultimately end up in compulsory health insurance

We are endeavoring to maintain a high quality of medical care and service With our present number of trained physicians and nurses, compulsory health insurance cannot be established without a disastrous lowering of the quality of care and service It is not selfishness on our part when we oppose compulsory health insurance It would increase the quantity but lower the quality of medical service, and the latter would be repugnant to our people They are entitled to and should have the best medical care possible

In times like these criticism becomes rampant and all kinds of panaceas are suggested. Remedies are confidently proposed, for which there is no guarantee offered except that the person who prescribes the remedy says that he is sure it will work But there is no virtue in change unless for the better, and when, in our best judgment, any proposed change in the system of distribution of medical care would react against the welfare of the public, it is our duty to proclaim our views I think it is no distortion of the truth to say that the role of the physician in modern society also has the attributes of a public trust We are the trustees of society for preservation of health and the cure of disease, and we have not been recreant to that trust We shall continue to cooperate with all agencies, both public and private, interested in improving the health of our people It is our aim today, tomorrow, and always to strive for improvement of the quality of medical care and the better distribution of medical care to all our people That shall always be our goal

As a State Society and as individual members of a profession whose roots go back to antiquity, we will continue to endeavor to serve humanity to the best of our ability Our people's health, as well as the excellence of our hospitals, our medical schools, our institutions of research, and our public health agencies, are the envy of the world But we are not satisfied—will never be satisfied—as long as there is the possibility of further progress The status quo has no place in the vocabulary of the medical profession The nation's health is our responsibility Come what may, we shall not fail the people

JOHN J MASTERSON, M D

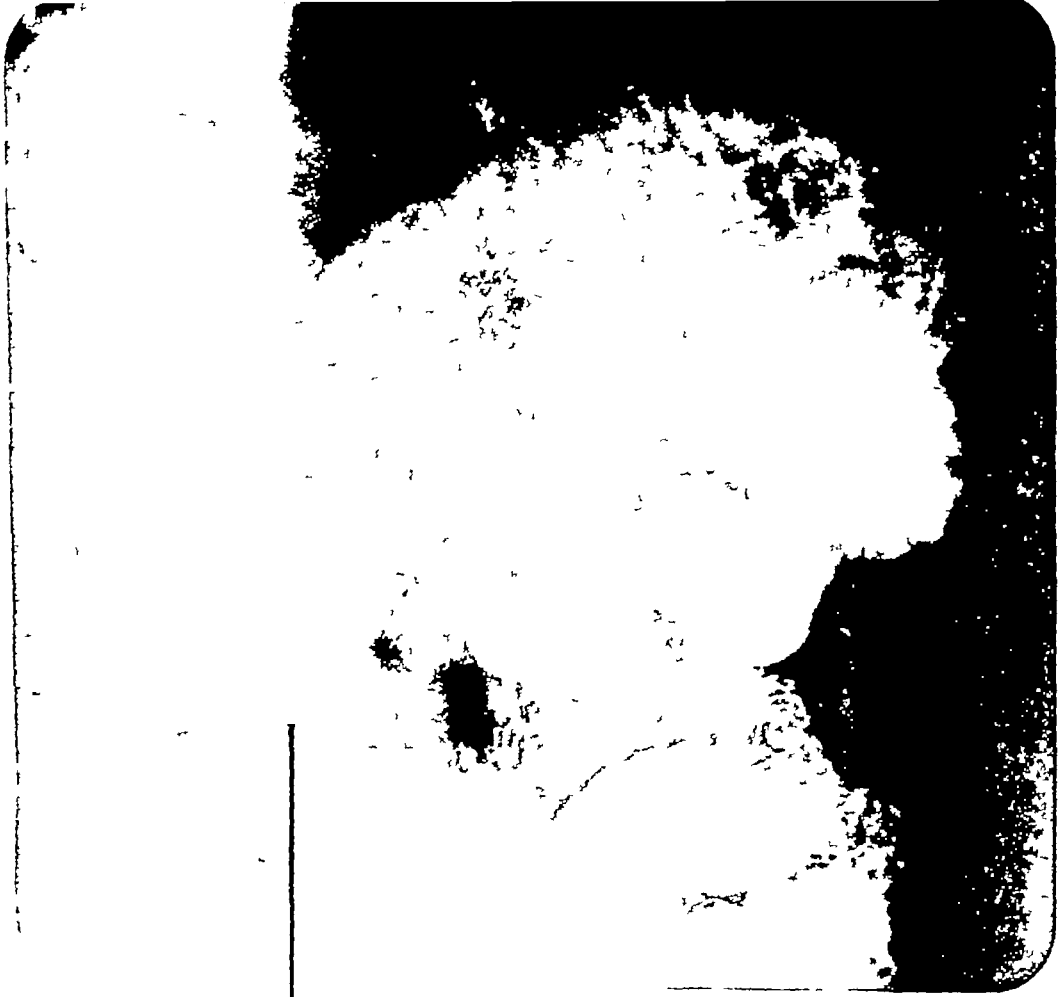
PRIZE ESSAYS

The Merrit H Cash Prize and the Lucien Howe Prize will be open for competition at the next Annual Meeting of the Medical Society of the State of New York, May 8, 1950, in New York City

The Lucien Howe Prize of $100 will be presented for the best original contribution on some branch of surgery, preferably ophthalmology The author need not be a member of the Medical Society of the State of New York.

The Merrit H Cash Prize of $100 will be given to the author of the best original essay on some medical or surgical subject. Competition is limited to the members of the Medical Society of the State of New York, who at the time of the competition are residents of New York State

The following conditions must be observed



Essays shall be typewritten or printed with the name of the prize for which the essay is submitted, and the only means of identification of the author shall be a motto or other device The essay shall be accompanied by a sealed envelope having on the outside the same motto or device, and containing the name and address of the writer

If the Committee considers that no essay or contribution is worthy of a prize, it will not be awarded

Any essay that may win a prize automatically becomes the property of the Medical Society of the State of New York "to be published as it may direct."

All essays must be presented not later than February 1, 1950, and sent to the Chairman of the Committee on Prize Essays of the Medical Society of the State of New York, 292 Madison Avenue, New York 17, New York

SEARLE

Research in the Service of Medicine

New type antacid

Carmethose

for better management of peptic ulcer

Carmethose gives prolonged control with no adverse effects

Carmethose promptly lowers gastric acidity, and its protective tenacious coating has been observed in the stomach for as long as three hours [1]

Adult dose is 2 to 4 tablets or teaspoonfuls 4 times daily between meals

Carmethose Tablets *sodium carboxymethylcellulose, 225mg and magnesium oxide, 75mg Bottles of 100*
Carmethose Liquid *5% concentration of sodium carboxymethylcellulose Bottles of 12 oz.*

Advantages over adsorbent gels:

1 *Non-constipating*—hydrophilic gel promotes normal elimination [1 2]

2 *Reduction of acidity in two ways*—prompt action by ion exchange is followed by classical buffering action

3 *Palatable*—small, easily swallowed tablets and pleasantly flavored liquid—preferred by patients [2]

Advantages over soluble alkalis:

1 *No acid rebound*—effectively inhibits acid-pepsin activity, with no secondary hypersecretion

2. *Protective coating*—mucin-like gel is rapidly formed and clings to ulcer crater and gastric mucosa

3 *Non-systemic*—cannot disturb acid-base balance because it is non-absorbable

THE CEREBRAL PALSIES THEIR DIAGNOSIS, CLASSIFICATION, AND TREATMENT

WILLIAM D DUGAN, M D , Buffalo, New York

(*From the Buffalo Children's Hospital*)

THE cerebral palsies are a group of diseases due to lesions in the brain substance characterized by various motor deficits as a result of altered neuromuscular function These affect persons of all ages In about half the cases, the disease is present at birth Of these, most are due to a congenital developmental defect and a minority result from prenatal and postnatal brain hemorrhage or anoxia The Rh factor and kernicterus determine the damage in a small number of cases Various infections of the infant, child, and adult may leave permanent brain damage which manifests itself as a cerebral palsy Head injuries at any age and cerebral accidents of older persons are causative agents

There has been a great public awakening of interest in this condition What is the reason for this? There have always been many persons afflicted with cerebral palsy—almost as many new cases occurring annually as are handicapped during a like time as a result of poliomyelitis The reason for this intense interest is that doctors and mothers and fathers of children with the disease and friends and families of adults with the disease have been brought to the realization that something can be done to improve their lot This is a new line of thought

Dr Winthrop Phelps of Baltimore has devised a classification which, at the present time, is the most practical basis for treatment Let us examine it briefly

The cerebral palsies are divided into five general types spasticity, athetosis, rigidity, tremor, and ataxia The spastic is a child who has had damage to or maldevelopment of the motor cortex, internal capsule, or some portion of the pyramidal tract system Muscles are affected in groups rather than singly The resulting paralysis may be spastic or flaccid or a mixture of both There are always some spastic muscles present, even when flaccidity predominates Flaccid muscles in a spastic are also called zero cerebral

A spastic muscle is one which has increased tone and irritability and which demonstrates a stretch reflex, its presence being the most important single point in the diagnosis of a spastic type of cerebral palsy For example, the quadriceps is known to be spastic With the patient prone, the knee is fully extended, putting the quadriceps in its position of greatest shortening The knee is then passively flexed, causing quadriceps stimulation by stretching Being hyperirritable, it contracts momentarily at some point in the arc of flexion and then releases, permitting the remainder of the range to be completed without hindrance This contraction is a stretch reflex It occurs on every examination and always at the same point in the range of joint motion

Spastic muscles overpull their antagonists and render them weak through stretching and disuse Thus, the spastic presents a picture of strong, weak, and flaccid muscles with complicated possibilities of imbalance and resulting true contractures or deformities Involvement may be of any voluntary muscles of the head, neck, trunk, and extremities It may be monoplegic, diplegic, triplegic, or quadriplegic

The athetoid may at first glance be indistinguishable from a spastic Both may drool, have defective speech, be awkward of hand movements, and be unable to walk However, either may be so mild as to be scarcely distinguished from the normal The athetoid's difficulty is basically entirely different, as are his physical findings on closer inspection. His trouble is due to a defect in the basal ganglia A function of the basal ganglia is to act as a selector of impulses coming from cortical or cerebellar levels If this selective function is impaired, impulses in a fantastic number may reach the skeletal muscles, causing all sorts of bizarre and involuntary motions This motion is the cardinal finding identifying an athetoid It is irregular, unrhythmic,

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York Buffalo Section on Orthopedic Surgery May 6 1949

and unpredictable It may be fast or slow, constant or infrequent It disappears during sleep

Considerable numbers of athetoids show tension in uninvolved groups of muscles Its presence depends upon a conscious effort of the child to control his athetosis As this effort becomes habitual, it eventually becomes involuntary and in the final analysis increases the total disability It is not known why some athetoids have a great deal of tension while others have little or none Athetosis and tension will disappear momentarily when an extremity is shaken vigorously This is an important diagnostic characteristic Usually, athetoids have normal intelligence Speech defects are inconstant in nature, differing from the spastic in whom they are constant

Rigidity is thought to be the result of diffuse brain involvement The extent and severity of its peripheral effects may vary as in the spastic and athetoid This type is much more likely to have severe mental impairment than are any of the others Diagnosis rests upon one cardinal finding the presence of lead-pipe-like resistance (and make it a pipe of small caliber) in one or more muscle groups There may be minor elements of athetosis, spasticity, or ataxia present The differentiation between a tension athetoid and a rigidity may be difficult and rests upon experience in detecting the difference between a rigid muscle group and a tension muscle group Rigidity may be constant or intermittent

Ataxia is due most often to cerebellar dysfunction However, other components may be at fault, for example, the vestibular component of the eighth nerve The cerebellar ataxic lacks kinesthetic muscle sense He does not know what muscles to use to perform an action, he does not appreciate the relative position of his muscles in space For example, he may walk well on a flat surface If he suddenly strikes a downward incline, he will run to regain his balance, for he pitches forward, due to a failure to appreciate the gravitational change which has occurred His outstanding characteristics are incoordination and lack of balance His muscles are flabby, his joints hypermobile, and his tendon reflexes diminished or absent, whereas the tendon reflexes of the athetoid and the rigid type are normal and those of the spastic are hyperactive Again, the severity of the condition varies greatly

Tremor is the last type to be considered It is thought to be due to involvement of the red nucleus It is the rarest of the cerebral palsies seen in children, although it is rather common in older persons in the form of paralysis agitans It is characterized by rhythmic flexor-extensor motions Usually the joints involved go through an extensive range, being carried each time as far into flexion as extension by the abnormal muscle action Tremor movements show a common rate of speed throughout the body, which differentiate them from athetosis Tremor may occur constantly or appear on intention or disappear with intention Muscle power is essentially normal Emotional disturbances are frequently present Characteristically, the tremor child does heavy activities more readily than light ones and walks better than he uses his arms. He tends to talk in a loud voice as his speech muscles work better that way

Treatment of cerebral palsies is a highly complex, expensive, and prolonged process Some severe cases can be effectively treated only on a resident basis under the care of a full-time staff of therapists, nurses, teachers, house mothers, carriers, kitchen personnel, and administrative personnel Experience has shown that their total numbers must be approximately equal to the number of patients Less severe cases may be treated on a home basis with weekly visits to a treatment center and with a planned program being carried out by therapists in the center and by the parents at home Mild cases may be treated entirely at home with parents carrying out a treatment plan in which they have been instructed Treatment should begin as soon as the condition is definitely recognized, which is rarely sooner than six months of age

The specially trained physical therapist, occupational therapist, and speech therapist, working under the guidance of a physician, form the backbone of a treatment program Braces, drugs, and surgery are treatment adjuncts given in the order of their importance Special neurologic, pediatric, ophthalmologic, otolaryngologic, and psychiatric help are often needed

Treatment aims vary tremendously, depending on the degree and type of involvement a patient may have, his age, his mentality, and an estimate of the improvement that can be expected Important things should be taught first to the severely handicapped These are speech, hand skill for self help, and walking Sometimes the handicap is such that one of these aims must be ignored For example, a boy of sixteen with a spastic type of cerebral palsy is seen He is completely helpless, has never had treatment, and has been taken care of by his mother to the best of her ability He cannot walk, he talks quite well, and he has little use of his hands He can sit His legs are tight and severe contractures are present, muscle atrophy is severe, and muscle power is nil through stretching and disuse This boy cannot be taught to walk. But he can be taught hand skill sufficient to get himself about and be in a measure independent in a wheel chair He can be taught to feed himself and perhaps even to type-write As a general rule, however, one aims to

train a child to comparable skill in talking, hand use, and walking

Now to discuss briefly methods of treatment, with attention first to the field of physical therapy in which the principal aim is to teach walking For this, muscle strength, a pattern of reciprocal leg motion, and balance are essential Various modalities such as passive motion, confused motion, relaxation, motion from the relaxed position, balance, reciprocation, and reach and grasp are used Weak muscles are strengthened, abnormal muscle characteristics are eliminated, and new pathways of neurogenic control are established by repetition and training

In a spastic, the special problem of the stretch reflex is tackled By repetitive training, the range of a spastic muscle can be gradually increased without eliciting the stretch reflex. Occurring only in the spastic is confused motion This refers to the involuntary contraction of certain flaccid or zero cerebral muscles when an apparently unrelated muscle action occurs The most common example of this is contraction of the tibialis anticus when the hip flexors act against resistance The explanation for this is not known By careful and prolonged training this involuntary confusion of action can be trained into a useful and voluntary one Other confusions exist and may be utilized in any spastic with flaccid muscles

Because spastic muscles produce weak antagonists and because flaccid muscles produce strong antagonists, balance is poor Weak muscles are strengthened by active exercises Balance is taught by training successively in sitting, kneeling, standing, and walking with and without the use of special apparatus such as braces, standing tables, parallel bars, crutches, and others

Thus, in physical therapy a patient is carried through a program of muscle training first recumbent on a plinth for the simpler modalities, and then sitting, standing, and ambulatory, using combinations of modalities and a variety of aids Programs are devised so that at all times the patient does things that are easy, others that are difficult, and still others which are a bit beyond his ability but which he will soon achieve Thus, a certain momentum, pace, and push are given to his program without forcing him to the point of frustration or discouragement

With the athetoid, the initial stress falls on relaxation which is of minor use in the spastic Relaxation consists of elimination of involuntary motion and tension by actively learning to "let go" It must be learned muscle by muscle, beginning with the least involved first, and is a process of many months duration Following relaxation, the athetoid learns motion from the relaxed position He is trained in a pattern of walking and balance while he is still working with relaxation. Like the spastic he will often need muscle strengthening

The rigidity type of patient is trained much as is the spastic, save that there are no stretch reflexes with which to deal The rigid muscles must be "worked through," so to speak, and muscle strengthening, reciprocation, and balance are learned individually and then together

In the tremor cases, relaxation is important The program of physical therapy need differ little from that of the athetoid

The ataxics are entirely different In physical therapy no table work should be done except in the learning of reciprocation. Balance work daily is the basic training of an ataxic By using weighted shoes he can be brought rapidly to walking Treatment in all phases of the uncomplicated ataxic is very effective

Occupational therapy uses the modalities of physical therapy It is concerned with arm-hand skills such as eating, dressing, writing, and toilet needs The patient must learn reach, grasp, and release Special equipment is used tables, chairs, blocks, buttons, spoons, typewriters The treatment is varied for the different types of cerebral palsy, according to the same principles that are followed in physical therapy The ataxic concentrates on eye-hand coordination, using combined motions

Speech therapy has special problems The spastic tongue differs from the athetoid Deafness, partial or total, complicates many cases of cerebral palsy Hearing aids, lip-reading, and other special technics are used

The classroom teacher should be advised when these children have visual and auditory handicaps. She should be told that the spastic is introspective and sensitive and talks and moves slowly, that the athetoid is extroverted, amiable, and usually bright, that the rigidity patient is frequently feeble-minded and may be unteachable, and that the ataxic suffers from nausea and then vomiting if he does close eye-work without frequent rest He should be given a seat at the rear of the room and preferably one where he can look out the window

Braces are very useful They must be of robust and accurate construction Their purposes are to prevent and correct deformities, to support, to control involuntary motions, to assist in training in wanted motion, and occasionally to predetermine the effect of surgical arthrodesis of a joint In the spastic, braces must be rigidly made and without elasticity If a brace is used to correct an equinus foot, for example, and if it acts springily against the soleus, it will elicit constant and repeated stretch reflexes in the muscle, only serving to strengthen it and making the equinus more

and unpredictable It may be fast or slow, constant or infrequent It disappears during sleep

Considerable numbers of athetoids show tension in uninvolved groups of muscles Its presence depends upon a conscious effort of the child to control his athetosis As this effort becomes habitual, it eventually becomes involuntary and in the final analysis increases the total disability It is not known why some athetoids have a great deal of tension while others have little or none Athetosis and tension will disappear momentarily when an extremity is shaken vigorously This is an important diagnostic characteristic Usually, athetoids have normal intelligence Speech defects are inconstant in nature, differing from the spastic in whom they are constant

Rigidity is thought to be the result of diffuse brain involvement The extent and severity of its peripheral effects may vary as in the spastic and athetoid This type is much more likely to have severe mental impairment than are any of the others Diagnosis rests upon one cardinal finding the presence of lead-pipe-like resistance (and make it a pipe of small caliber) in one or more muscle groups There may be minor elements of athetosis, spasticity, or ataxia present The differentiation between a tension athetoid and a rigidity may be difficult and rests upon experience in detecting the difference between a rigid muscle group and a tension muscle group Rigidity may be constant or intermittent

The rigidity type of patient is trained much as is the spastic, save that there are no stretch reflexes with which to deal. The rigid muscles must be "worked through," so to speak, and muscle strengthening, reciprocation, and balance are learned individually and then together

In the tremor cases, relaxation is important The program of physical therapy need differ little from that of the athetoid

The ataxics are entirely different In physical therapy no table work should be done except in the learning of reciprocation Balance work daily is the basic training of an ataxic By using weighted shoes he can be brought rapidly to walking Treatment in all phases of the uncomplicated ataxic is very effective

Occupational therapy uses the modalities of physical therapy It is concerned with arm-hand skills such as eating, dressing, writing, and toilet needs The patient must learn reach, grasp, and release Special equipment is used tables, chairs, blocks, buttons, spoons, typewriters The treatment is varied for the different types of cerebral palsy, according to the same principles that are followed in physical therapy The ataxic concentrates on eye-hand coordination, using combined motions

Speech therapy has special problems The spastic tongue differs from the athetoid Deafness, partial or total, complicates many cases of cerebral palsy Hearing aids, lip-reading, and other special technics are used

The classroom teacher should be advised when these children have visual and auditory handicaps. She should be told that the spastic is introspective and sensitive and talks and moves slowly, that the athetoid is extroverted, amiable, and usually bright, that the rigidity patient is frequently feeble-minded and may be unteachable, and that the ataxic suffers from nausea and then vomiting if he does close eye-work without frequent rest He should be given a seat at the rear of the room and preferably one where he can look out the window

Braces are very useful. They must be of robust and accurate construction Their purposes are to prevent and correct deformities, to support, to control involuntary motions, to assist in training in wanted motion, and occasionally to predetermine the effect of surgical arthrodesis of a joint In the spastic, braces must be rigidly made and without elasticity If a brace is used to correct an equinus foot, for example, and if it acts springily against the soleus, it will elicit constant and repeated stretch reflexes in the muscle, only serving to strengthen it and making the equinus more

severe Long leg braces with a pelvic band make possible training in walking, when, for example, one knee locks behind the other, making leg practice impossible Other bracing indications in the spastic are flexed knees, overpull of hip rotators and adductors, wrist and finger flexion position, and pronator overpull in the leading forearm. Some of these need only be braced at night, others day and night, depending on their severity Spastics must continue bracing for deformity prevention or correction until growth is finished

In the athetoid there is frequent indication for a full-control brace Shifts occur which make this necessary If an athetoid has pronounced involuntary movements in his legs and if the legs are fully braced, the athetosis will or may shift to the hips The full-control brace controls the presenting athetosis and whatever shifts may occur It allows only straight reciprocation and the motions necessary for walking Thus it serves to strengthen necessary muscles and weakens unnecessary ones

In the rigidities, bracing is similar to that in the spastic save that stretch reflexes are not considered Deformities are not so severe and are more easily corrected.

Tremors are usually not subject to bracing This is because constant repetitive motions rub the skin off

Ataxics require a minimum of bracing Occasionally, a full brace is needed for directional control Short leg braces and heavy shoes are used to stretch out tight heel cords and to lend weight and stability to the leg, ankle, and foot This alone may enable an ataxic who has never taken an independent step to walk

Drugs are important in some cases Curare (tubocurarine) may be helpful in the spastic facilitating muscle response It is useless in other types Tolserol (myanesin) has value as a relaxant in athetosis in the presence of tension Prostigmine has limited value in the rigidities, but is of no value in any of the others, despite its recent vogue It speeds up muscle action. In tremors, which are usually acquired conditions, hyoscine hydrobromide has definite value It has the ability to recall the use of previously learned actions It works best in postencephalitic states Dosage may be massive, for example, 6 mg daily to be effective, and should be achieved gradually Benzedrine may be given concurrently to combat its depressant action without reducing its beneficial effect Drug therapy plays no part in the treatment of the uncomplicated ataxic Any of the cerebral palsies may be complicated by grand mal, petit mal, or epileptic equivalents. Phenobarbital, dilantin, myzantoin, tridione, and glutamic acid are used to control them.

Peripheral surgery plays a minor role in the treatment of the cerebral palsies In the spastics it is rarely indicated until growth has been obtained Deformities usually recur if surgery is done sooner because tendon growth does not keep pace with bone growth A short heel cord, which is the most common spastic deformity, can always be corrected by proper bracing The rigidities can be regarded as similar to the spastics as far as surgery is concerned, save that deformities are less severe

In the athetoids surgery is usually disastrous because of the amazing shifts which occur Suppose that a varus foot is corrected by tarsal surgery The hip postoperatively will assume a position of internal rotation to put the foot in the same relative position This is an unexplainable phenomenon, but it occurs repeatedly Surgery may be done after very careful bracing of a part in a position of correction for some months to show that no unfavorable shift occurs

Ataxics do not need surgery

In summary, the purpose of classification of cerebral palsies is to serve as a guide to treatment Physical therapy, occupational therapy, and speech therapy are the most important fields of treatment Important things—speech, necessary hand skills, and walking—should be taught first Personnel must be highly trained It requires a large organization to treat severe cases effectively Supervised programs can be effective with parents carrying out the therapy at home Braces are important, drugs and surgery less so Thirty per cent are feeble-minded, and the value of treatment in these cases is limited A portion of the remainder can be made independent Ideally treatment should begin at less than twelve months of age

Discussion

Mark R. Harwood, M.D., Syracuse—With the increasing number of alert pediatricians on the lookout for these children, we see a good many cases at an earlier age It is very difficult to make a differential diagnosis of the type of cerebral palsy before the age of one year It is also difficult to treat these children under the age of two years away from home, either at an inpatient or outpatient clinic Therefore, in these young children outline a program at home, giving the parent a definite objective in Gesell's scale of the development of behavior pattern

Remember that you must teach the cerebral palsied a learned function to take the place of an automatic one. The activity must first be carried out passively and repeatedly until the child begins to take an active part In this connection Temple Fay has pointed out that the reciprocal motions are most easily learned and performed in a prone instead of a supine position [1]

Hearing defects in particular can interfere with the rehabilitation program. It is difficult to get

reliable audiometrics on cerebral palsied children, on the young child it is practically impossible The skin galvanic audiometer records the activity of the sympathetic nervous system in response to acoustic stimuli and seems to offer a fairly reliable means of estimating the auditory status of the handicapped child

You are all primarily interested in surgical indications Phelps has seen over 50,000 cases of cerebral palsy and states that 75 per cent of those operated on have been failures [2] Undoubtedly, the failures were not due to the operative procedures themselves but to the improper indications There is a place for surgery in the treatment of cerebral palsy of the spastic type but in no other

Some general principles are well kept in mind. Steindler says, "Surgery is only an episode in the life of a cerebral palsied."[3] It must be followed by the same intensive physical therapy as before Go as far as you can with conservative means before operative interference is considered. Be sure to look at the antagonist of the muscle group you are going to correct They may be flaccid or spastic Most scissors gaits are due to the flaccidity of the abductors. An Achilles tendon lengthening for equinus in the presence of spastic dorsiflexors will result in a calcaneus deformity If you can't do a good muscle test on the antagonist, inject the spastic muscle belly with novocaine. It loses its irritability by blocking its kinesthetic sense but not its contractility

Try to correct the deformities of the foot, knee, or wrist by active bracing, then if that works, arthrodesis will probably work too Bracing will stretch out contractures and allow you to go ahead with a muscle re-education program at the same time Wedged casts are faster but must be abandoned if you stir up the stretch reflex.

To mention specific operative procedures, derotation osteotomy of the femur is all right when performed for anteversion of the neck but not when the deformity is due to spasticity of the internal rotators without femoral torsion

If internal rotation is due to the tensor fascia femoris, it can be sectioned by a Soutter procedure The Durham operation should be done only if the anterior half of the gluteus medius is spastic and posterior half has good power Otherwise, it substitutes a Trendelenburg for an internal rotator limp

Chandler's transplantation downward of the patellar ligament for flexed knees with a high patella does not work in children and will only work in adults if you also do a neurectomy of the hamstrings

Neurectomy is valuable where there is ankle clonus on weight-bearing Usually, the clonus is only due to one or two of the seven branches which go to the soleus If due to the gastrocnemius, it will decrease or disappear on flexion of the knee At operation according to Phelps' technic, a curved transverse incision in the popliteal space with the apex up for the branches to the gastrocnemius and down for the soleus avoids the keloid which sometimes results from a vertical incision The branches which are overactive can be picked out by pinching or electrical stimulation, while the foot is held as much dorsiflexed as possible The patient must be light enough to respond. Avulse this nerve completely by cutting it at the sciatic and pulling it out of the muscle Finally, reserve your surgery for the end of the growth period, your results will be more gratifying to you and more beneficial to the patient

ROLE OF HEREDITY IN GLAUCOMA*

In about one of seven cases, glaucoma is inherited and usually follows the particular familial pattern involved, such as congestive, chronic simple, or chronic simple with congestive attacks. A person with inherited glaucoma probably should not marry into a family with the same disease.

Potentially glaucomatous subjects may be detected by pupillography, which indicates the state of the autonomic system and particularly of the hypothalamic center Close relatives of every patient with the disease should have pupillography and provocative tests so that latent or early disease may be detected.

Routine examinations by Adolph Posner, M.D., and Abraham Schlossman, M.D , of the Manhattan E. a. Ear and Throat Hospital, New York, representing 30 families In addition, 48 other members of the same families were known to be affected. These figures increase the number of reported pedigrees by one third, since only 90 families with such heredity have been previously listed.

Hereditary glaucoma is often associated with constitutional disease in the family, especially vascular hypertension and diabetes or arteriosclerosis, toxic goiter, psychoneurosis, cataract, convergent strabismus, or obesity

Some apparently sporadic cases may actually be genetic, or familial disease may occasionally remain dormant for a lifetime At times the defect seems to skip a generation and return in the next.

TREATMENT OF COMMINUTED COLLES' FRACTURE BY ULNAR STYLOID RESECTION

C F Freese, M D , Hempstead, New York

(*From the Orthopedic Service of Nassau Hospital*)

THE poor end result of many Colles' fractures demands that more attention be paid this lesion Fractures of the lower radius in children are not included in this paper, however

I was first taught to reduce the fracture and immobilize with a wristlet for three weeks Later I was taught to obtain an anatomic reduction and immobilize with long arm plaster for eight weeks The position of the elbow was at a right angle, with forearm in supination and wrist in slight flexion and ulnar deviation Stress was placed on active muscle exercises of the fingers and shoulder every hour from the day of injury The plaster was changed to prevent it from becoming loose as the swelling subsided

Active physiologic muscle use of all the muscles of the extremity were a "must" for 20 to 30 times an hour daily

All fractures of the lower end of the radius, except the extreme comminuted type, gave good results In the comminuted Colles' fracture there was slipping of the original reduction with shortening and radial deviation of the hand and prominence of the lower end of the ulna.

After reviewing our end results, we decided to prevent this deformity in the comminuted Colles' fracture In this type of fracture, after reduction, there is a defect in the radial shaft The slipping that occurs is the shortening of the radius to close this gap We decided to remove the lower one inch of the ulna at the time of reduction in these fractures After removal of the lower portion of the ulna, the gap in the radius does not occur, and no secondary shift of the fragments occurs The fracture of the radius is then reduced and immobilized in a long arm plaster One caution is that over-reduction of the radius can easily be done with the ulnar styloid process missing This must be prevented

During the past three years 286 fractures of the lower end of the radius have been treated on our service, of which 61 have had ulnar resection

There have been no infections from the operation One patient had an increase of ulnar deviation of the hand Three patients had no clinical deformity, but the x-ray showed that the articular surface of the radius was tilted backward This gave limitation of flexion of the wrist However, the loss of this portion of the ulna does not weaken the grip

In summary, we feel that fewer malunited comminuted fractures of the lower end of the radius will be obtained if the lower one inch of the ulna is resected at the time of reduction of the fracture

131 Fulton Avenue

Discussion

Richard S Farr, M D , *Syracuse* —In Colles' fracture, the extent of the deformity depends upon the force applied to the hand. The radius which is longer and cancellous fractures and the distal fragment is displaced. It may be comminuted and impacted. The severe deformities usually have little impaction They are often comminuted, and the care of this type should be easy In reduction, the distal end of the ulna is used as a fulcrum and the fragments of the radius are brought into position with traction to re-establish length and alignment Then some retentive apparatus must be applied.

In the comminuted type it is difficult to hold the fragments in position There may be absorption of bone with subsequent radial shortening As swelling subsides, posterior displacement or tilting may occur

How can we prevent this? By traction? I concur with Dr Freese regarding wire traction Secondary immobilization changes are often severe, and residual restriction of motion is frequent

In comminuted fractures a long period is required to secure solid bone at the distal end of the radius This usually requires six weeks Often when healing is complete, there is radial shortening and prominence of the distal end of the ulna. Many of these patients get excellent function in spite of deformity

Pain at the radioulnar joint is a disturbing complication and is due to disruption of this joint. When this pain is severe, excision of a portion of the distal end of the radius is sometimes necessary

Dr Freese presents an operation which is unique and radical Certainly, open operation on a simple Colles' fracture is unusual By removing the end of the ulna the fulcrum for reduction is lost, and over-reduction may result Check x-ray in two weeks, as is recommended, should be made in all cases, and revision or correction may be made at that time

The series reported is interesting About 20 per cent had ulnar resections These cases were carefully chosen, and results were excellent

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York, Buffalo, Section on Orthopedic Surgery, May 6 1949

FRACTURES OF THE FEMUR IN CHILDREN

FRANK N POTTS, M D , and WYLLYS A DUNHAM, M D , Buffalo, New York

(*From the Department of Orthopedic Surgery, Children's Hospital*)

A CRITICAL review of 83 fractures of the femur, seen at the Children's Hospital over a period of ten years, led us to the following conclusions Fractures of the femoral neck are the most difficult ones to treat, fractures of the proximal and middle thirds of the shaft do very well, and those of the distal third, likewise, do not cause a great deal of trouble Relatively few of these fractures require open reduction, and most are adequately treated by traction The result in all these cases was excellent with one exception—a case that had an open reduction, followed by osteomyelitis and sequestrum formation.

We noted that, even though most of these fractures healed with some shortening, within about two years this difference in length decreased Because of this and the very satisfactory results obtained, we thought it worth while to call attention again to this subject, thinking that perhaps the presentation of our methods of treatment might be of some value

We then undertook an intensive review of the literature of the past thirty years and found that our experience was about the same as that of practically all writers Therefore, we have nothing at all new to add to the subject of the treatment of fractures of the femur in children However, methods of treatment giving such good results from one end of the country to another over a period of many years must be so good that it is of value to refresh one's memory on the subject The basic principles of treatment of these fractures must be followed in any method we use Principles do not change There are, however, occasional differences that a man presents in method or in application of his technic

Birth Fractures

These have been treated in mainly two ways One is based on the recognition of the fact that the fragments over-ride and that the proximal fragment is pulled anteriorly It seems logical, therefore, to place the lower extremity across the abdomen and chest, with the foot over the shoulder Padding is placed between the extremity and the body, and a bandage is wrapped around both to maintain this position These infants appear to become comfortable quickly, they are easily cleaned and in this position can be handled fairly easily for nursing

Union is firm in three or four weeks, so the dressings can be discarded X-rays at that time are very discouraging because of union with over-riding and shortening It has been our experience, however, that over a period of several years the evidence of fracture disappears and that the alignment has been universally good, discrepancy in leg length has never been a disturbing factor

Others have chosen to dress these small legs in traction, using frames, or splints with overhead bars to which the traction straps are attached [1–3] Another method utilizes a plaster cast about the upper part of the body with an arm projecting from this for traction [4] Most of these methods interfere with the nursing of the child, unless it started its career as a bottle patient Some variations would lessen the nursing problem and the difficulty in keeping the infant clean However, we have no reason to believe, from perusal of the literature, that these methods have any advantage, in the long run, over fastening the leg up over the chest and abdomen. The latter has been our preference in the few cases we have seen and we have no reason to deviate from that choice

Fractures of the Neck of the Femur

These fractures have given us considerable concern, and apparently we are not alone in this [5–7] They are difficult to reduce and difficult to maintain in reduction The best method for us has been considerable traction with the leg in the abducted position in a Thomas splint In the few cases we have had this has brought about a fairly good and, at times, a perfect reposition of the fragments with solid union and a good result

Fractures of the Upper Third of the Shaft

The major problem here is that there is usually a combination of flexion and abduction of the short upper fragment This is best solved by following the old principle of bringing the distal fragment into alignment with the short proximal one Strong traction with the thigh abducted and flexed about 45 degrees realigns the fragments and restores, to a large extent, the length of the leg The fracture proceeds to union with a very good result If the child is young enough to

TREATMENT OF COMMINUTED COLLES' FRACTURE BY ULNAR STYLOID RESECTION

C F Freese, M D , Hempstead, New York

(*From the Orthopedic Service of Nassau Hospital*)

THE poor end result of many Colles' fractures demands that more attention be paid this lesion Fractures of the lower radius in children are not included in this paper, however

I was first taught to reduce the fracture and immobilize with a wristlet for three weeks Later I was taught to obtain an anatomic reduction and immobilize with long arm plaster for eight weeks The position of the elbow was at a right angle, with forearm in supination and wrist in slight flexion and ulnar deviation Stress was placed on active muscle exercises of the fingers and shoulder every hour from the day of injury The plaster was changed to prevent it from becoming loose as the swelling subsided

Active physiologic muscle use of all the muscles of the extremity were a "must" for 20 to 30 times an hour daily

All fractures of the lower end of the radius, except the extreme comminuted type, gave good results In the comminuted Colles' fracture there was slipping of the original reduction with shortening and radial deviation of the hand and prominence of the lower end of the ulna.

After reviewing our end results, we decided to prevent this deformity in the comminuted Colles' fracture In this type of fracture, after reduction, there is a defect in the radial shaft The slipping that occurs is the shortening of the radius to close this gap We decided to remove the lower one inch of the ulna at the time of reduction in these fractures After removal of the lower portion of the ulna, the gap in the radius does not occur, and no secondary shift of the fragments occurs The fracture of the radius is then reduced and immobilized in a long arm plaster One caution is that over-reduction of the radius can easily be done with the ulnar styloid process missing This must be prevented

During the past three years 286 fractures of the lower end of the radius have been treated on our service, of which 61 have had ulnar resection

There have been no infections from the operation One patient had an increase of ulnar deviation of the hand Three patients had no clinical deformity, but the x-ray showed that the articular surface of the radius was tilted backward This gave limitation of flexion of the wrist However, the loss of this portion of the ulna does not weaken the grip

In summary, we feel that fewer malunited comminuted fractures of the lower end of the radius will be obtained if the lower one inch of the ulna is resected at the time of reduction of the fracture

131 Fulton Avenue

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York, Buffalo Section on Orthopedic Surgery May 6 1949

Discussion

Richard S Farr, M.D , *Syracuse* —In Colles' fracture, the extent of the deformity depends upon the force applied to the hand The radius which is longer and cancellous fractures and the distal fragment is displaced. It may be comminuted and impacted. The severe deformities usually have little impaction They are often comminuted, and the care of this type should be easy In reduction, the distal end of the ulna is used as a fulcrum and the fragments of the radius are brought into position with traction to re-establish length and alignment. Then some retentive apparatus must be applied

In the comminuted type it is difficult to hold the fragments in position There may be absorption of bone with subsequent radial shortening As swelling subsides, posterior displacement or tilting may occur

How can we prevent this? By traction? I concur with Dr Freese regarding wire traction Secondary immobilization changes are often severe, and residual restriction of motion is frequent

In comminuted fractures a long period is required to secure solid bone at the distal end of the radius This usually requires six weeks Often when healing is complete, there is radial shortening and prominence of the distal end of the ulna. Many of these patients get excellent function in spite of deformity

Pain at the radioulnar joint is a disturbing complication and is due to disruption of this joint When this pain is severe, excision of a portion of the distal end of the radius is sometimes necessary

Dr Freese presents an operation which is unique and radical Certainly, open operation on a simple Colles' fracture is unusual By removing the end of the ulna the fulcrum for reduction is lost, and over-reduction may result Check x-ray in two weeks, as is recommended, should be made in all cases, and revision or correction may be made at that time

The series reported is interesting About 20 per cent had ulnar resections These cases were carefully chosen, and results were excellent

Fractures of Lower Third of the Shaft

Fractures in this location are not commonly seen in children under the age of five but occur in the older age group They are best treated with Russell's traction, a second sling being placed under the distal fragment, usually posteriorly displaced

Overgrowth of the Femur Following Fracture

One of the most interesting aspects of the problem of the fractured femur in the child and one that has caused considerable discussion is that of longitudinal overgrowth of the shaft following a fracture This was described in five cases by Truesdell in 1921 and since that time has been repeatedly observed and studied by others, namely, David, Cole, Compere, Bisgard, and Aitken and their coworkers [17] Earlier writers believed that this increased growth was a so-called compensatory phenomenon, called forth by the "need" of the body to equalize the leg lengths [14,18] Others have shown that this overgrowth occurs even when the fracture is anatomically reduced so that it could not be compensatory [19,20]

We know that the type or site of the fracture and the method of treatment have little effect on this increased growth [14,19–21] There is some evidence that those femurs healed with the greatest over-riding show the greatest increase in growth [21]

Aitken has shown that, on the average, this increase in growth amounts to about 1 cm , and most of this occurs in the first year following fracture [19,21] His studies also indicate that although the vast majority of children under thirteen years of age show an increased growth of the fractured femur, those over thirteen do not enjoy this advantage

Apparently, the trauma involved and the increased blood supply present in the period of healing and restoration of the bone causes an accelerated growth We know this is true in other conditions in or near bone that are associated with an increased vascularity, as osteomyelitis, tuberculous arthritis, arteriovenous aneurysms, etc

We must settle for the fact that, if there is over-riding, there is a tendency to approach normal length if the fracture occurs in a child under the age of thirteen We are, therefore, justified in our anticipation of making up bone length when there is healing with shortening Open reduction is, then, not justified for shortening

Conclusion

Having reviewed many articles, we found the consensus of opinion to be that fractures of the femur in children are best treated conservatively with some form of traction The functional results are universally good Any discrepancy in length present when active treatment is discontinued is made up to a very large extent, in the majority of cases, within a period of a year and a half During growth, there is a great tendency to correct any malalignment

It seems, in brief, that we should make every reasonable effort to obtain a good alignment rather than to go to extremes to obtain normal length A good alignment, we believe, is more important than length Adequate traction will give good alignment with relatively little shortening

We make no apology for presenting this subject to you It is gratifying to know that the treatment of this type of fracture almost invariably gives a good result if we adhere to simple principles These principles have not changed in the period that we reviewed, but there have been *numerous modifications in the ways that they* have been applied

89 Bryant Street

Discussion

William E Gazeley, M.D , *Schenectady* —I believe it would be of advantage to have more papers of this type, for certainly few papers can be more valuable than a critical résumé of clinical experiences in a large group of cases For the most part, my own treatment parallels that of Dr Potts

In reviewing the literature it is interesting to note the many methods employed in the treatment of these fractures Usually where there are many methods of treatment for the same condition, there is no single treatment which is completely satisfactory, fractures of the shaft of the femur seem to be the exception, since most methods prove satisfactory with the exception of open methods

In the few birth fractures that we have treated we have used the method described by Dr Potts We have also placed them in a cast, in the frog position, similar to that used in congenital dislocation of the hip, but we really prefer to use a simple overhead portable frame with the legs held up by rubber traction bands We feel that we can better control rotation of the fragments in this way, with the position of the feet in sight, and feel that this is important because rotation is not one of the deformities that corrects itself well with growth.

We feel that over-riding of $\frac{1}{2}$ inch is desirable In children under five years of age and under 50 pounds in weight Bryant traction is used.

I have seen considerable bowing in the upper third correct itself well, but angulation in the middle third has not done as well in our experience, therefore, we can heartily subscribe to Dr Potts' advice that alignment is much more important than over-riding

In all cases traction is applied by means of flannel glued to the skin by ACE Adherent

tolerate an overhead traction, this handles the situation well

Fractures of the Middle Third of the Shaft

This is by far the most common location These are spiral, oblique, or transverse fractures, depending largely on whether they were sustained from indirect or direct trauma Here again, our method of treatment is dependent on age We prefer the overhead or Bryant's traction in those children under four years of age Anatomic reduction has been rare The transverse fractures show slight over-riding with bone contact only along the cortex, the oblique fractures perhaps show a better alignment

These fractures become reasonably solid in about four weeks, and it has been our custom to discontinue traction at that time, and allow the child to go home in a well-applied hip spica In those instances where the parents did not request this, we have continued traction for a total of six or seven weeks when there is firm union

We have been inclined to put both legs up in overhead traction if the child is small If he is a little larger, we have used only the one leg We realize how children squirm and wiggle about, even in traction, but this has not apparently disturbed the relation of the fragments to any degree Overhead traction, in our opinion, is an efficient and satisfactory method of treatment for the age group indicated

There has been no single method used in our treatment of the older child We may have a preference for one or the other, depending on the type of fracture, the amount of over-riding, the size and age of the child, or associated injuries It appears to be the opinion of most men that there is no one method of treatment Any of several methods of treatment, if carefully selected and carried out, will give a good result in the vast majority of cases

Many years ago, the late Dr Willis Campbell advocated manipulation of transverse fractures of the femur and demonstrated that reduction could be accomplished by traction and angulation.[8] Application of a hip spica then allowed the child to be cared for at home It has been satisfactory as far as alignment has been concerned but has not been satisfactory, in our experience, in maintaining end-to-end apposition, especially in the child over ten years of age Even though the fragments were initially well entangled, over-riding occurred later In spite of this, the end result was just as good as in those cases treated by traction

There have been a few cases of oblique fractures with very little over-riding that we have chosen to treat initially by a hip spica These patients were sent home at an early date, and their fractures united in good alignment The end result was good, although healing occurred with a little more over-riding than was present when the child left the hospital One or two of the cases treated in this manner developed considerable angulation, which was satisfactorily corrected by wedging the plaster

We have frequently used the Hoke well leg traction splint, with very satisfactory results An architectural restoration was not obtained, but the general alignment remained good, and the fractures went on to solid union Patients are easily transported in this apparatus, and their parents can take them home, if they watch the traction to see that it does not get loose or slip

Blount *et al*, in an excellent report of a series of 281 fractures of the femur in children, found that 69 per cent of these were in the middle third This figure corresponds to those reported in other series [10–13] Greenstick fractures here are less common than in the distal third, and comminution is much less common than in adults In his experience, Russell's traction for four to six weeks was an effective method of treatment for those children over four or five years of age In the few cases in which we have used this method, it has worked well, but it needs more attention than most other methods

Many authors have stressed the fact that open reduction of these fractures in children is rarely, if ever, necessary [9–11 14,15] Many complications are reported following such a procedure, including osteomyelitis, malunion and nonunion, multiple refractures, growth disturbances, septicemia, and death The plea that interposition of tissue between the fragments will interfere with union is not a valid justification for open reduction in the child In the few cases where satisfactory position cannot be obtained by skin traction, skeletal traction usually obviates open reduction

Le Mesurier describes a simple and effective method of treatment, utilizing fixed traction.[16] A Thomas splint is applied, and the traction straps are fixed to the end of the splint which, in turn, is tied to the foot of the bed The child is placed on a Bradford frame with the foot of the frame elevated about 30 degrees The tendency of the child to slide down the incline creates a traction force, since the leg, and thus the distal fragment, is fixed

Whether one uses fixed traction, as in this method, or a pulley and weight traction is a matter of personal preference We have seen patients treated in this manner with excellent results, but the latter is probably the choice of more men

ORTHOPEDIC X-RAY PROBLEMS IN CHILDREN

G NEWTON SCATCHARD, M D , Buffalo, New York

(From the Children's Hospital of Buffalo and the Department of Radiology, University of Buffalo Medical School)

THIS discussion of osseous lesions in children and infants is not intended to present anything new in the realm of lesions or diseases It is for the purpose of calling attention to some of the problems which frequently cause concern to the radiologist, orthopedist, or general practitioner who is not primarily concerned with the care of children and who is apt to be misled or puzzled by some of these relatively simple problems

In order to evaluate properly and understand x-ray findings in the bony structures in children, it is necessary to remember that the epiphyseal, growing portions of the infant's and child's skeleton differ from the bony structures of the adult It is particularly important to make comparative films of the normal, or uninjured side, in order to have an accurate evaluation of the normal appearance of the joint or structure in the individual being studied.

Rarely a day goes by that some doctor from the surrounding area does not bring films related to one of the problems to be discussed We have selected for this paper those anatomic regions which most commonly are puzzling

The diagnosis of congenital dislocation of the hips in young infants is often difficult When a proper diagnosis is established and proper treatment instituted in early infancy, the prognosis is excellent When the diagnosis is not made until the age of several years, treatment is necessarily prolonged and tedious with a relatively poor prognosis Whenever asymmetric gluteal folds are noted or abnormal position or motion of one or both legs is observed, x-ray examination is indicated The criteria which we find useful, after having obtained good, symmetric radiographs, are as follows The angle of the roof of the acetabulum is measured When this angle is over 30 degrees, in an infant over six weeks of age, we consider it a potential dislocation

Another indication of dislocation is the relationship of the femoral head to a line erected perpendicular to another line drawn through the inferior medial edge of the roof of the acetabulae The perpendicular is erected from the upper outer corner of the acetabulum It has been shown that normally the femoral head lies medial to the perpendicular line, whereas, the dislocated hip lies with its head lateral to the line The dislocated hip usually lies above the base line

Another indication, in slightly older children, is the size of the upper femoral epiphysis When these are ossified, the one on the side with the dislocation is invariably smaller

A cause for a dislocated hip in a young infant, which may be easily, and mistakenly, diagnosed as congenital dislocation of the hip, is osteomyelitis of the femoral neck In this condition, it is not unusual for the hip to be dislocated as a result of the large amount of pus in the joint capsule This can occur before any definite bony lesions of osteomyelitis are visible in the x-ray film.

The differential points are easy if they are considered In the first place, the roof of the acetabulum is normal, and the hip is painful The second point is a fullness of the soft tissues around the hip joint Such a hip will automatically slip back into place following aspiration of the pus

In older children, the point of fusion of the ischii with the symphysis is apt to mislead those who are not familiar with the appearance of these bones in the age group between seven and ten years and occasionally up to twenty-one years We have seen this normal point of union diagnosed as fracture, bone cyst, bone tumor, and exostosis These odd appearances may occur on both sides or only on one side Cases in which the odd appearance is unilateral are most likely to cause confusion We feel that actual bone lesions at this point are very rare

Other lesions of the hip which may be frequently confused are Perthe's disease, slipped femoral epiphysis, and tuberculosis of the hip joint These three are usually rather easy to differentiate

1 The Perthe's disease shows flattening of the upper femoral epiphysis, with increased density, widening of the joint space, and a translucent area in the upper portion of the femoral neck adjacent to the epiphyseal line This usually occurs in children under the age of ten years

2 Slipped femoral epiphysis occurs in older children The density of the head remains normal, and the slipping is obvious if both anteroposterior and lateral views are taken. The age range is usually between twelve and fourteen years

3 Tuberculosis of the hip can occur in any

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York Buffalo, Section on Orthopedic Surgery May 6 1949

Under twelve years of age we expect firm callus in six weeks under four years in two to three weeks.

Skeletal traction is used only after a manipulation for malunion, and it is well to remember, as Dr Walter Blount points out, that following such a manipulation the shaft will grow about one inch longer than if no second manipulation was necessary This applies also to the use of pins near the site of fracture and to open reduction

Greenstick fractures in our experience have all been in the lower third and in this location we believe that the angulation takes care of itself with growth

Subtrochanteric fractures have at times presented a serious problem, and I believe they require much more attention than other fractures of the shaft. Fractures of the neck of the femur present all the difficulties encountered in the same fracture in adults with the additional hazard of an increased number of cases of a vascular necrosis.

At the present time we feel that as good reduction as possible should be obtained and blind pinning with beaded wires used for fixation They are stronger than Moore's pins and less likely to break and wander

We are in thorough accord with Dr Potts that open reduction under the age of eighteen is to be condemned except in very unusual instances. The interposition of muscle rarely prevents union.

When a child has to be transported to some other city before union is complete, Hoke traction is a most satisfactory method.

SCIENTIFIC EXHIBITS
1950
ANNUAL MEETING

Applications for space for the scientific exhibits should be made directly to the Chairman of the Subcommittee on Scientific Exhibits of the Convention Committee

Dr J G Fred Hiss
505 State Tower Building
Syracuse 2, New York

The Annual Meeting will be held May 8 to 12, 1950, at the Hotel Statler in New York City

No applications can be considered after January 1, 1950

There will be two groups of awards

Awards in Group I are made for exhibits of individual investigation, which are judged on the basis of originality and excellence of presentation.

Awards in Group II are made for exhibits which do not exemplify purely experimental studies and which are judged on the basis of excellence of presentation and correlation of facts.

W P Anderton, M.D., *Secretary*

ORTHOPEDIC X-RAY PROBLEMS IN CHILDREN

G Newton Scatchard, M D , Buffalo, New York

(From the Children's Hospital of Buffalo and the Department of Radiology, University of Buffalo Medical School)

THIS discussion of osseous lesions in children and infants is not intended to present anything new in the realm of lesions or diseases It is for the purpose of calling attention to some of the problems which frequently cause concern to the radiologist, orthopedist, or general practitioner who is not primarily concerned with the care of children and who is apt to be misled or puzzled by some of these relatively simple problems

2 Slipped femoral epiphysis occurs in older children. The density of the head remains normal, and the slipping is obvious if both anteroposterior and lateral views are taken The age range is usually between twelve and fourteen years

3 Tuberculosis of the hip can occur in any

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York Buffalo, Section on Orthopedic Surgery May 6 1940

age group There is narrowing of the joint space, bone atrophy, and destruction

The wrist joint rarely causes serious diagnostic problems in children Greenstick fractures are common and readily diagnosed The evaluation of damage at the epiphyseal line is somewhat more difficult We feel that often this evaluation is impossible without comparative films The careful comparison of the epiphyseal line on the uninjured with that of the injured side will frequently demonstrate a widening, or very slight slipping, at this point We feel that this accurate evaluation is important in order that the injured epiphysis may be properly protected

One of the more difficult areas in which to evaluate injury is the elbow joint We take comparative films of the normal elbow as a routine In older children the medial epicondyle is the most frequent site of injury which is difficult to recognize The epiphyseal portion of the medial epicondyle is easily knocked off and may even float loose in the elbow joint and be hidden behind other bony structures Comparative films, properly studied, are most important in this situation Slight displacement of the medial epicondyle is relatively common and, we believe, impossible to recognize without carefully-made, comparative films Greenstick-type fractures in the supracondylar region, as well as epiphyseal injuries to the head of the radius, also fall into this same category

The knee joint causes difficulty much less often than the elbow joint We do feel, however, that comparative films are often of importance This is particularly true in evaluating the nontraumatic, painful knee We recently were confronted with a knee, painful for several months, which looked normal at first glance However, in comparing the contour of the lower femur with that of the normal knee, it was obvious that the medial half of the joint surface of the lower femur on the involved side was markedly flattened, and showed several, small areas of reduced density in the bone This lesion, with a rather small area of subcartilagenous bony softening, was felt to be a very early case of osteochondritis dissecans

The clavicles and shoulders in young infants, as you are probably well aware, are frequently very difficult to visualize well Here, again, comparative films are of value The problem frequently becomes a technical one of having the patient straight in relation to the X-ray beam, and of getting sufficient penetration to visualize the entire length of both clavicles Fractures of the medial end of the clavicles are those which are most frequently missed

One lesion of the shoulder which is rare, but extremely important, may be mentioned at this point This is the Codman tumor, which, in its early stages, has the radiographic appearance of osteomyelitis, and which later comes to look like a malignant bone tumor, usually an osteogenic sarcoma This particular tumor, microscopically as well as radiographically, is apt to be mistaken for a highly malignant tumor, and an unnecessary amputation of the shoulder, and probably the scapula as well, may result from inaccurate diagnosis These tumors respond beautifully to x-ray therapy or curettage and should certainly be kept in mind by all of us Osteomyelitis in any region may be easily mistaken for a bone tumor, especially Ewing's tumor

In discussing this problem of the osseous system in young children, there is one other extremely important point to bear in mind Trauma in young infants and children is very common, even without a history of injury We frequently study children because of a slight limp or a questionable swelling, to find unsuspected fractures When such obscure fractures are discovered, it often pays to examine the rest of the skeleton It is not infrequent to find other fractures in completely unsuspected areas For instance, a little child with a swollen foot, with only an x-ray of the foot ordered, has later been found to have a fractured femur as well Another child with a sore knee, who was thought to have scurvy, had the lower femoral epiphysis displaced This finding is consistent with scurvy and mild trauma However, because there were some ecchymoses of the head, also thought to be an indication of scurvy, skull films were made, which showed extensive skull fractures The most extreme example of this type was seen in twins, several months old, brought into the hospital with a diagnosis of scurvy because of painful extremities and scattered ecchymoses In x-raying the long bones for evidence of scurvy, it was found that each twin had four or five fractures of the extremities, and each had a fractured skull

Conclusion

Examples have been cited in an attempt to simplify the interpretation of x-ray films of the osseous lesions in infants and children The important rules, we feel, are as follows

1 Always take comparative films when possible

2 If there is any doubt as to the extent of the examination, it is always best to err on the side of studying too many parts too thoroughly

3 Most osseous lesions peculiar to children will be recognized if kept in mind

Discussion

Lee Hadley, M.D, *Syracuse*—The x-ray study of orthopedic problems in the child as contrasted with the adult presents many interesting problems pecu-

lar to that age period In general, these may be grouped, with some overlapping, as Dr Scatchard has shown, as congenital, nutritional, or developmental.

The speaker has described how injury to the epiphysis constitutes one of the major problems and has well demonstrated the value of comparative studies. He recommends that one "always take comparative films when possible" I appreciate the value of comparative films and use them in many cases, but I must take exception to his use of the term "always" It would be unfortunate indeed if the profession in general, the students, and even the lay public came to expect comparative studies to be made of all child injuries In case of the elbow, with its eight possible epiphyses appearing and uniting at different ages, the use of comparative studies becomes quite helpful, although, here again, by the use of lines, as the essayist has so well described under hip dislocation, the true evaluation of the injury is often clearly shown I refer to the lateral view of the elbow whereon a line corresponding to the axis of the shaft of the humerus will normally lie entirely posterior to the capitellar epiphysis

Diagnosis of a displaced epiphysis which has not yet shown a center of ossification offers some difficulty The upper femoral epiphysis at birth is a single cartilaginous mass including the head, neck, and both trochanters The ossification center does not develop until about the fifth month Some 20 or 30 cases have been reported where separation of this epiphysis has occurred at birth during breech extraction either with or without podalic version.* Rotation and traction on the leg causes a detachment of the bony shaft, leaving the cartilaginous femoral head within the acetabulum. Clinically, there is pain, swelling, limitation of motion, and external rotation X-rays show early massive callus and marked subperiosteal bone formation The upper end of the shaft becomes club-shaped Gradual resorption of the callus takes place If the upper end of the shaft has been displaced upward and laterally to a point above the level of the acetabulum, the prognosis is poor, and coxa vara is the end result

Epiphysitis, whether we attribute it to trauma, infection, disturbed nutrition, or some other cause, constitutes another problem in explaining some of the painful conditions of childhood. Known as proper name diseases, we have Legg-Calve-Perthe's disease of the hip already mentioned, Osgood-Schlatter's disease of the knee, and Scheuerman's juvenile kyphosis of the dorsal spine as probably the three most common I should also like to mention a painful and disabling condition sometimes encountered in children of this age group At about ten years, there develops an epiphysis within the sacroiliac joint between the ilium and the sacrum. Epiphysitis of this structure may be visualized as a fuzzy, blurred articulation and require definite orthopedic treatment.

In closing, may I call attention to the so-called secondary ossification centers In my own special field of interest, that of the spine, these may be of some clinical or medicolegal importance On each vertebra there are seven of these accessory centers, one each at the tips of the spinous process, the two lateral processes, and the four articular processes These small secondary ossification centers first appear at about ten years and should unite before twenty, however, they frequently remain ununited and in that state may be the site of an epiphysitis, form a movable ossicle within one of the posterior joints, or, following injury, be mistaken for a fracture

These are some of the features which make the x-ray examination of children an interesting challenge

* Kennedy P C Am. J Roentgenol 51 707 (1944)

DOCTORS FIND WAY TO PICK BABY'S SEX

Scientific evidence that prospective parents may be able to choose between having a boy or a girl has been found in the Duke University Department of Surgery The choice has nothing to do with surgery, and is something any married couple can try The choice is not certain, but in the Duke studies the percentage is slightly over twenty-five in favor of having a baby of the sex wanted

The difficult part is for a woman to know her fertile period, which is a matter of two or three days only, once a month In the Duke studies, conceptions in the early part of the fertile period favor female births. Conceptions late in the period seem to show a preponderance of males.

The Duke studies were made by Drs Deryl Hart and James D Moody, and are reported in *The Annals of Surgery*, a Philadelphia medical publication.

Medical scientists in the last decade discovered surprising results of 9,489 artificial inseminations The usual ratio in human sex is 105 males to 100 females. But in these inseminations there were 5,676 males This, says *The Annals* article, is a 48 per cent increase in males over the theoretically expected number In artificial insemination, fairly exact knowledge of the fertile period is essential. Whether this result might have been caused by chance, Drs Hart and Moody do not say They cite it as a possible result of timing The series was reported by Drs. Francis F Seymour and Alfred Koerner in *The Journal of the American Medical Association —Herald Tribune, August 9, 1949*

DIPHTHERIA IMMUNITY IN HIGH SCHOOL SENIORS

EDWARD A LANE, M D , and WILLIAM A HOLLA, M D , White Plains, New York

(From the Westchester County Health Department)

FOR a number of years following the introduction of toxin-antitoxin and, at a later date, of toxoid, it was customary to speak of the active immunity so induced as developing in the course of a very few weeks and as probably lasting for many years Although only about 50 per cent of patients recovered from diphtheria are said to be Schick-negative a year later, it was surmised that frequent subclinical infection resulting from contact with mild, missed cases and carriers probably not only accounted for the Schick-negative state not infrequently discovered in adults without a history of recognized diphtheria in past but also served to fortify and prolong the artificially induced active immunity Assuming such to be the case, it was quite natural to wonder what effect the great decrease in diphtheria cases and the concomitant reduction in diphtheria carriers during recent years would have on the immunity status of children treated with diphtheria toxoid

Another factor in this question of diphtheria immunization has had to do with the antigenic potency of the preparation and the number, size, and spacing of injections needed to obtain the optimum results When the use of toxoid was still more or less in the experimental stage during the early 1930's, its employment was quite varied, probably with equally varying results Both the unprecipitated and precipitated types were tried in one, two, and three doses of 0 5 or 1 0 ml , each at intervals ranging from one to four weeks Largely through experiments carried out under the auspices of the American Public Health Association, the most effective method of treatment has been determined to be two injections of 1 0 ml. each of precipitated toxoid at an interval of four weeks to be followed by one or more "booster" doses of 1 0 ml. each at about three-year intervals When combined with tetanus toxoid and/or pertussis vaccine, the method of administration may have to be altered in accordance with the accompanying instructions

As indicated by the recommendation of booster doses, it was found, as time went on, not only that a few children failed to respond to a single, primary course of treatment, but that an appreciable number of those who did lost their Schick-negative status after one or more years As has been stated above, this loss of *initial immunity* is supposed to have been influenced unfavorably by the recent drop in diphtheria cases and carriers

While it has now become customary for most children to be given a primary course of treatment with diphtheria toxoid in early childhood, the need for periodic "booster" doses to maintain immunity is just beginning to be appreciated by the public In an effort to popularize further the administration of the "booster" dose, the Westchester County Health Department this spring (1949) undertook to conduct "booster" immunization clinics in the schools With such treatments limited to children under ten years of age who had not received an injection of diphtheria toxoid for at least three years, 2,699 children received such a "booster" injection in the school clinics The school nurses reported that additional children were so treated by private physicians When plans for the school clinics were made, it was decided to include some Schick testing of the older, school-age group to discover how well their immunity had carried over from a previous immunization in most of the cases dating back to early childhood Whenever a school system included a high school, a Schick test was offered to all members of the senior class Nine high schools participated in the study for a total of 588 tests Two hundred eighty-five of those tested were boys, and 303 were girls Eighty-four per cent of the group were seventeen or eighteen years of age The returns showed that 82, or 14 per cent, had received a booster injection at some time subsequent to the primary immunization Six had never received the diphtheria immunization treatment Information as to previous immunization was obtained from two sources (1) The school health records which are started with a record of immunization when a child enters school, and (2) a questionnaire circulated among the homes when the consents for the Schick test were obtained

Of the total number tested (588), 229, or 3[illegible] per cent, were found to be positive to the Schick test An attempt was made to grade the reactions as weak, moderate, and strong On the basis 23 per cent of the 229 positive reactions were strong, 44 per cent moderate, and 32 per cent weak. All of the tests were given and read by one of the authors, and all of them included a control injection

Two of the six pupils who had never been immunized had negative reactions Of the four positives, two were moderate, and two weak.

There were 87 pupils about equally divided between positive (42) and negative (45) reactions

for whom the information regarding previous immunization was either not stated or was questionable. It is very probable that most, if not all, of these individuals had been immunized at some time, the uncertainty having to do with the date of immunization which would have been many years ago

Excluding the "not immunized" and the "immunization not stated or questionable," there remain 82 pupils who had received a "booster" injection and 413 who presumably had not Of the former, 18 per cent had positive reactions, and of the latter, 41 per cent were positive

The numbers by individual schools were too small to be of much significance The percentages of positive reactions ranged from 32 (41 tested) in one school to 64 (22 tested) in another The school with the largest number tested (185) had 36 per cent positive In the entire group of 588 there were but 16 pseudoreactions and four combined reactions

There is a very unequal distribution according to length of time since the last immunizing treatment was received Of 364 pupils whose treatment dated back from 10 to 20 years, 40 per cent were positive, whereas of 60 who had received injections of toxoid, mostly as "boosters," within the previous ten years only 20 per cent were positive

Two recently published studies of diphtheria immunity afford a basis for comparison with our findings Cohen *et al* found 41 per cent of 234 adult females (seventeen to twenty-five years) to have a positive Schick test [1] They also report a reversion of the Schick test from negative to positive one year later in 3 per cent of previously susceptible and immunized children. This percentage increased rapidly so that by the end of five years about 35 per cent had become Schick-positive During the war Sellers *et al* found that approximately 50 per cent of all enlisted personnel in the Royal Canadian Air Force were susceptible to diphtheria as measured by the Schick test [2] Loss of immunity following immunization increased progressively with time, but even three to six months later, almost 10 per cent were Schick-positive

Faced with the knowledge that approximately 40 per cent of our young adults are susceptible to diphtheria as indicated by a positive Schick test, the question arises as to what, if anything, should be done about it The present low incidence of diphtheria bears on the problem from two angles The danger of infection is correspondingly low but with an apparent shift to the older age groups, however On the other hand, as already mentioned, the lessened opportunity for subclinical infections is probably affecting adversely the degree and duration of the artificially induced immunity If children could be given periodic "booster" injections at, say, three-year intervals during their preschool and early school life, it would seem reasonable to expect that they would develop a more prolonged immunity that would carry over in a greater percentage of individuals into adult life In the figures cited above, 41 per cent of the seniors without benefit of a "booster" dose were Schick-positive, whereas but 18 per cent of those who had received such an injection gave a positive reaction

Summary

1 Thirty-nine per cent of 588 high school seniors in nine scattered high schools in Westchester County gave a positive Schick test But six of the pupils were known never to have been immunized against diphtheria

2 Of 495 pupils for whom the information is reasonably reliable, 82, or 17 per cent, had received a "booster" dose of diphtheria toxoid at some time subsequent to the primary immunization. The percentages of Schick-positives among those who had and those who had not been so treated were 18 and 41, respectively

3 The more general employment of periodic "booster" injections of diphtheria toxoid during childhood appears indicated to insure more widespread immunity to diphtheria in adult life Two factors lending added support to such a course are the declining influence, in recent years, of subclinical infection in augmenting immunity and the shift in diphtheria incidence toward the older age groups

POLIOMYELITIS AT MEADOWBROOK HOSPITAL, 1948

G F Robertson, M D , Hempstead, New York

(From the Department of Medicine, Meadowbrook Hospital, Nassau County General Public Hospital)

THE experience with poliomyelitis at Meadowbrook Hospital in 1948 has provided a further study of a disease that has again reached epidemic proportions in 1949 Even if a slightly better control of the disease has been achieved, no satisfactory measures of prevention have been found In fact, it has been suggested that improvement in sanitation, by sparing the younger individual the lighter immunizing dose, may have increased the number of susceptible older persons, in whom, as this study reveals, the disease runs a more severe course

Unless darvisul (phenosulfazole) or some other drug proves to be effective, there is no specific treatment In the early stage the disease seems to run its varied course largely unaffected by the efforts of the physician

There is one important measure that can be taken, and that is the early institution of rest This, in turn, depends on early diagnosis, often difficult to establish. A definite impression has been gained in this and other studies, that those who continue to be active after the first symptoms appear develop a more severe form of the disease Therefore, the importance of early diagnosis and early institution of rest in the acute phase of poliomyelitis, is well established A record of the activity of some of the patients in this series illustrates this danger Three football players, who continued their strenuous physical exercise after symptoms appeared, a man who went to a dance after the onset of headache and pain in the legs, and others with a similar story, all developed extensive paralysis

In the year 1948, 101 cases of poliomyelitis were admitted to Meadowbrook Hospital in Nassau County, New York Of these, 50 were nonparalytic, 23 were paralytic, and 24 revealed a weakness of some muscle group, 19 had the bulbar form of the disease, two were classified as polioencephalitis, and there were four deaths

There were 33 over the age of twenty and 68 under twenty Of those under twenty years of age, 23 were over twelve and 45 were under twelve years Table 1 shows the age grouping and indicates the greater incidence of paralytic and fatal cases in the adult group

TABLE 1.—Classification of Cases of Poliomyelitis at Meadowbrook Hospital in 1948 According to Age Group

Age	Number	Non-paralytic	Paretic	Paralytic	Fatal
Over 20 Years	33	16 (48%)	4 (12%)	9 (27%)	4 (12%)
Under 20 Years	68	34 (50%)	20 (28%)	14 (21%)	0 (0%)

A comparison of some of the findings in the 1948 epidemic with those of 1944 and 1935 is contained in Table 2 There is a remarkable similarity in the figures with only one real exception—age incidence The percentage of adults in 1948 is 33, or almost three times that of 1944 and ten times that of 1935 The mortality is almost exactly the same for all three years, with 4 per cent for 1948, 4 7 per cent for 1944, and 4 8 per cent for 1935 (Table 2)

The distribution of cases according to month, likewise, is very nearly parallel, with September having the largest number of cases in 1948, and August being the peak month in 1944

Symptoms

The symptomatology in 1948 was similar to that of 1944, with headache and stiff neck prominent Gastrointestinal symptoms were slightly less frequent, and the symptoms of an upper respiratory infection slightly more Diarrhea was relatively infrequent There appeared to be little or no correlation between the type and severity of the early symptoms and the final outcome

The average duration of symptoms before admission to the hospital was five days in 1948, as against three days for 1944 This longer period of symptoms led to a slight difference in the spinal fluid findings but appeared to have no effect on the course of the disease or on the mortality

Another significant symptom in some cases was a generalized hypersensitivity and irritability, with more apprehension than could be explained on a basis of fear of the disease alone These patients were sensitive even to light touch, difficult to examine, and, needless to say, offered considerable resistance to the performance of a lumbar puncture It was gratifying in many cases to note a remarkable psychologic change after the first few days Children, who were apathetic, crying, irritable, and unresponsive would become more alert and smile on the fourth or fifth day, appear to take an interest in their surroundings, and regain appetite and inclination to play In the adult, the worried facies

TABLE 2.—A COMPARISON OF POLIOMYELITIS FINDINGS AT MEADOWBROOK HOSPITAL FOR THE YEARS 1935 1944 AND 1948

Year	Total Cases	White	Negro	Adults	Male	Female	Headache	Stiff Neck	Vomiting	Nausea	Upper Respiratory Infection	Paralysis	Deaths
1935	82	94	6 1	3 8	60	40	97	90 3	64 6	80 5	17 8	40 0	4 8
1944	171	97	1 7	12 8	58 6	41 4	53 8	51 5	34 6	7 0	16 9	19 2	4 7
1948	101	99	2 0	33 0	63	38	54	66	39		27	23	4

and despondence, the unreasonable complaining and fault-finding would give way to a more cheerful and optimistic outlook and cooperative behavior, and this even in the face of obviously paralyzed limbs

Diagnosis

In the absence of a specific rapid test for poliomyelitis, the diagnosis in the mild or nonparalytic case was difficult Of the various symptoms and signs seen in the acute stage of poliomyelitis, none is pathognomonic Since the spinal fluid may be normal, the spinal fluid findings do not prove or disprove the diagnosis Weinstein states that in about 10 per cent of cases the spinal fluid remains normal throughout the course of the disease [1] This figure seems high, since in the series considered in this report there were only three cases in which the spinal fluid was normal Three other patients with a normal spinal fluid on the day of admission developed an increase in cell count, total protein, or both, in a spinal fluid examination done a few days later

Spinal Fluid

The spinal fluid findings are found in Tables 3 and 4 The presence of more than five cells or a total protein of over 45 mg per cent was considered abnormal.

A comparison of the spinal fluid findings in 1948 with those of 1944 reveals that in 1948 the cell count tended to be slightly lower, while the protein values were almost identical

A few cases illustrate the variable clinical picture and spinal fluid findings, and the unpredictable nature of the disease

TABLE 3.—SPINAL FLUID CELL COUNT 1948

Number of Cells	Number of Cases
0	6
1-5	12
6-9	4
10-200	63
200 or over	11
No spinal tap	4
Not recorded	1
Total	101

TABLE 4.—SPINAL FLUID PROTEIN 1948

Total Protein (Mg. Per Cent)	Number of Cases
45 or less	21
46-60	17
Over 60	55
No spinal tap	4
Not recorded	4
Total	101

Case Reports

A five-year-old girl gave a six-day history of fever, headache, sore throat, and anorexia but was never acutely ill. There were 12 cells, all lymphocytes, and a normal protein in the spinal fluid She developed a definite weakness of the left shoulder muscles, especially the deltoid.

Another child, a five-year-old boy, representing the case that was seen more often, had the symptoms of an upper respiratory infection for a week prior to admission, two days before admission, he developed a headache, fever, and irritability The physical findings included a temperature of 102 F, nuchal rigidity, positive Brudzanski reflex, and positive Kernigs He was acutely ill. His spinal fluid contained 230 cells, 60 per cent lymphocytes, and a protein of 100 mg per cent He made a complete recovery with no muscular weakness demonstrable at any time and was discharged on the twentieth hospital day

These two cases provide an interesting contrast The little girl with mild symptoms and signs and whose spinal fluid showed only slight changes developed muscular weakness, while the boy, who had the manifestations of an acute illness with marked changes in the spinal fluid, was discharged well.

Two more cases are cited An eight-year-old boy with a two-day history of headache, fever, and dysphagia had a temperature of 103 F, hamstring spasm, and a diminished gag reflex. His spinal fluid contained 11 cells, 90 per cent lymphocytes, and total protein of 40 mg per cent. His course was one of progressive improvement, and he was discharged with only slight palatal weakness on the eleventh hospital day

In contrast to this boy's case, is that of a twenty-seven-year-old woman, who was two and one-half months postpartum. A week before admission she had a dizzy spell, three days before admission she had headache, fever, and dysphagia. Her temperature was 105 F, there was marked nuchal rigidity and difficulty in speech and in swallowing Her spinal fluid contained 7 cells, of which 5 were polymorphonuclear leukocytes and 2 were lymphocytes, and the protein was 165 mg per cent. During the first twenty-four to thirty-six hours she appeared to be improving The temperature fell to 101 F, and some recovery of swallowing was noted A few hours later the respiratory center of the brain be-

came involved, and she expired About ten days elapsed between the onset of her first symptom and her death

Both of these patients had similar symptoms and signs, but one made an almost complete recovery and the other died

Treatment and Management

Treatment under the joint supervision of the medical and orthopedic departments was largely symptomatic with absolute bed rest, fracture boards, and hot packs

Because of the psychic changes, especially in the first few days, it seemed very important to reassure the patients, possibly postponing a discussion of the diagnosis until later, or explaining that the disease in most cases runs a mild course

When there was respiratory embarrassment, relief of apprehension and prevention of panic were especially needed Reassurance and good nursing care were essential

After the acute symptoms subsided and the temperature returned to normal, early passive, then active muscle exercise was instituted, gently at first and gradually increasing, often in conjunction with the hot packs Even during a comparatively short stay in the hospital (the average duration was ten days, as it was in 1944 also), a considerable return of muscle function was observed before the patients were transferred to other hospitals for the prolonged treatment required for muscle re-education, for general rehabilitation, and for orthopedic measures

Thirty patients were transferred

A follow-up examination at one month from the day of discharge and again at six months was advised, since weakness not elicited in the hospital may become apparent on more strenuous activity Muscle evaluation was performed by a trained technician both in the hospital and at the follow-up examinations Reports were made to the County Health Department

In no instance was tracheotomy considered advisable

The administration of oxygen and the use of the suction apparatus proved to be helpful on several occasions

In one case, tube feeding was of benefit

The respirator, or "iron lung," served a useful purpose in only one instance This was a twenty-year-old white man whose intercostal muscles were affected

In the bulbar cases, the respirator was ineffective In one man, whose respirations had ceased, it extended life for a few hours

Complications

There were several noteworthy complications in the 1948 epidemic In seven cases, urinary retention was a disagreeable symptom and difficult to overcome Fortunately, in most instances control of the bladder was recovered in a few days

One mild urinary infection was encountered

In four patients the disease was complicated by pregnancy, three of them in the third trimester One of these, a thirty-six-year-old white woman, had the bulbar form and expired on the third hospital day A postmortem cesarean section was performed, but the baby was stillborn A similar situation arose in 1944, and a live baby was obtained The other case that terminated fatally was that of a twenty-seven-year-old white woman who was two and one-half months postpartum

These two cases suggested a connection between pregnancy and the severity of the illness. However, the other three pregnant women had a mild form of the disease

A serious complication was acute appendicitis, which occurred in a fourteen-year-old boy with bulbar poliomyelitis who previously had had marked respiratory embarrassment Fortunately, when the appendicitis manifested itself, the boy had greatly improved and had regained almost normal respiratory function An appendectomy was successfully performed, and the postoperative course was uneventful

Among other complications were the following Horner's syndrome (one case), pneumonia (two cases), and pleural effusion (one case)

Comment

Perhaps the most valuable feature of this experience with poliomyelitis was the opportunity afforded to study the symptoms and signs and early course of the disease

The psychic disturbances observed in many of the patients have been of particular interest Goldbloom has suggested an organic basis for some of the changes in behavior associated with poliomyelitis, and his electroencephalographic studies have tended to confirm his belief that encephalitis, especially in children, is more common in poliomyelitis than is supposed [3]

The larger number of adults in the 1948 epidemic is probably the most significant difference between this epidemic and previous ones

The higher percentage of paralysis in the adults and the fact that all the fatalities occurred in the adult group bear out the impression that the disease is more serious in the older individual

The higher mortality recorded for poliomyelitis in the earlier years, as high as 42 3 per cent in 1915 in some parts of the United States, was undoubtedly due, in part, to a failure to recognize the mild case

Summary

1 One hundred one cases of poliomyelitis were admitted to Meadowbrook Hospital in Nassau County in 1948 Of these, 50 were nonparalytic, 24 paretic, and 23 paralytic, 19 had the bulbar form of the disease, two had polioencephalitis There were four deaths

2 The epidemics of 1948, 1944, and 1935 in Nassau County are compared The findings are similar except for age incidence, with 33 per cent adults in 1948, which is three times the adult percentage for 1944 and ten times that for 1935 The mortality for the three years is about the same with 4 per cent for 1948 and 4 7 per cent for 1944. The distribution of cases according to month is similar also, with September having the peak incidence in 1948 and August in 1944

3 The disease was found to be more severe in the adult group, since 39 per cent of the adults either were paralyzed or died, while only 21 per cent of those under twenty years of age were paralyzed and none died

4. The symptoms and signs of the disease are discussed with some emphasis on the psychic manifestations

5 The diagnosis and management is discussed

6 The importance of the early institution of rest is emphasized

REPORT GOOD RESULTS IN TREATING TOXIC GOITER WITH RADIOIODINE

Patients with toxic goiter for whom surgery, x ray therapy, or antithyroid drug therapy is unsuitable can be treated successfully with radioactive iodine, four Los Angeles researchers reported in the July 30 *Journal of the American Medical Association* Sixteen out of eighteen cases of toxic goiter complicated by heart disease, extreme emotional instability, extreme toxicity, recurrence after surgery of the thyroid, and malignancy of the thyroid were successfully managed by administration of the chemical, according to Myron Prinzmetal, M.D , Clarence M Agress, M.D , Benjamin Simkin, M.D , and H. C Bergman, Ph.D One of the patients still had mild toxic symptoms after treatment, and the patient with a malignant condition showed no significant improvement. Although radiation sickness from larger doses of radioiodine has been reported, no such reaction was observed from doses used in this study, according to the article

Radioiodine therapy has several advantages, the researchers point out It can be administered to patients able to be out of bed without causing them loss of time from work. As compared with antithyroid drugs, the patient does not need repeated laboratory tests and daily medication and is not subjected to the risk of certain unfavorable reactions that occur in some cases The lowest reported mortality rate in thyroid surgery in the postoperative period is 0 5 per cent, but the rate in most institutions is probably higher There has been no death as a direct result of the therapeutic use of radioiodine The cost to the patient of treatment with radioiodine is much less than the cost of operation, and the administration of the chemical is not followed by complications such as postoperative pneumonia, shock, paralysis of the larynx (voice box), unsightly scars, and emotional strain of major surgery

So far, evidence points to a decreased incidence of progressive abnormal protrusion of the eyeball with radioiodine therapy as compared with its incidence with surgery

The new treatment still has several disadvantages, however, the article indicates. The correct dosage of radioiodine is not accurately known. As a result, in some cases months of treatment are necessary before a favorable result is obtained. In other cases, too much of the chemical has been administered with resulting deficient action of the thyroid Further experience should aid doctors to gauge the dosage. Certain unknown dangers from radiation exist, and, as in any new form of therapy, unforeseen difficulties may occur as more cases are treated

A PRACTICAL OPEN-SCALE THERMOMETER FOR TIMING HUMAN OVULATION

EDWARD FRANCIS KEEFE, M D , New York City

(From the Department of Obstetrics and Gynecology, St Vincent's Hospital)

A THERMOMETER is now available specifically for daily measurement of body temperatures by women in determining their time of ovulation and studying ovarian activity, developed to overcome the difficulties with ordinary fever thermometers Its feature is an open scale with about $^1/_2$ inch to each Farenheit degree, permitting precise and easy reading This is effected by a larger bulb and a stem of smaller bore than is used in making fever thermometers It is further unusual in having less than 0 1 degree F error

Accuracy better than 0 2 degree F is not necessary in ordinary clinical thermometry, nor is it practical to make fever thermometers with greater accuracy [1] However, for determining the time of ovulation from changes in body temperature the readings must be precise [2] Previous studies on these changes have disregarded or considered unimportant the accuracy of the thermometers used [3–5] Without being absolutely accurate, a thermometer will show relative temperatures However, it must be possible for one to read it accurately, and the instrument itself must be capable of giving consistent registrations

CS 1-42 of the U S Bureau of Standards, in the directions for testing clinical thermometers, reads in part "In making readings, allowance should be made for the width of the graduation marks the width of a broad mark on a thermometer having 10 degrees F to 1 inch would correspond to about 0 1 degree F"[6] A thermometer with scale so compact may be certified to be accurate, but few patients could read it accurately, even with a magnifying glass

Clinical thermometers certified by the manufacturer to meet the specifications of CS 1-42 are permitted to have errors of 0 2 degree F at 98 and 102 F (0 1 degree C at 37 and 39 C), and repeated registrations at the same temperature may vary 0 15 degree F from each other One test of the capacity of a self-registering thermometer to give consistent registrations is to observe its registration after immersion in a constant-temperature bath, shake it down, reimmerse it, and reobserve its registration [7] The second reading will vary from the first if the constriction is not made correctly [8] To the error due to the constriction will be added those due to parallax and to reading the instrument to only the nearest 0 2 degree F Combined, these errors may be plus or minus 0 3 degree F , making indefinite the ovulatory rise in temperature

More significant than the errors, many women, when asked to take their temperature every day, find they are unable to use an ordinary fever thermometer at all In the past, attempts to improve clinical thermometers have been toward making the mercury readily visible by having a flattened stem, red-reflecting mercury, or special guides indicating the face of the stem These features are helpful to the occasional thermometrist, but women who take their temperature every day quickly learn to find the index, their problem is to read it accurately They are confused by the numbering, or the scale is so compact they can not read it even to the nearest 0.2 degree

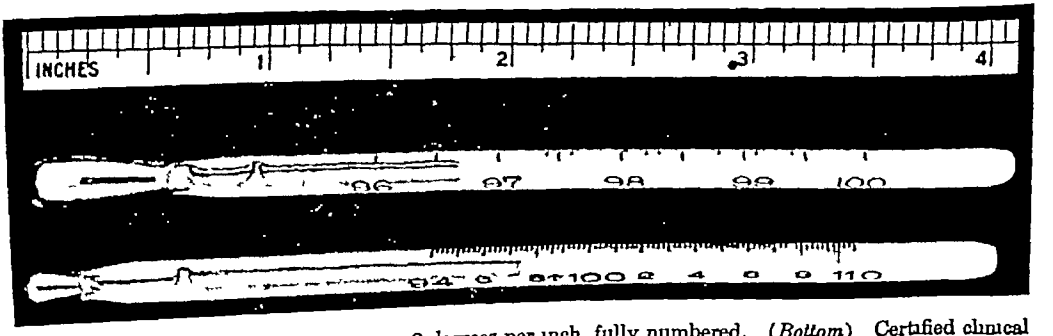

FIG 1 (*Top*) Ovulindex thermometer, 2 degrees per inch, fully numbered. (*Bottom*) Certified clinical thermometer, 9 degrees per inch, even degrees numbered.

F Despite careful instruction, they become discouraged and stop taking temperatures Two fever thermometers, if used simultaneously, may differ from each other as much as 0 6 degree F Breaking a thermometer, which happens frequently in practice, means a patient must use the new one for a few cycles until she has it standardized

Difficulties with fever thermometers led to the design of a special one for the normal range alone (Fig 1) * It is a mercury-in-glass, maximum self-registering thermometer, about 4 inches long, of the same etched-stem pattern as the clinical thermometers used in this country [9] Its special features are contrasted with those of the ordinary fever thermometer in Table 1 Oral readings are usually adequate, but the bulb is blunt enough for rectal temperatures Maximum registration is reached in three minutes, but four should be allowed Basal[5] or standardized conditions *must precede the temperature If the* waking temperature is taken at an hour later than her usual one, a patient should allow for the diurnal variation, subtracting, as a rule, 0 1 degree F from the reading for each one-half hour that she has overslept

The centigrade scale was tried on this thermometer and abandoned The centigrade degree is too large, and when graduated in 0 1 degree (the only practical graduation), it requires interpolation for accuracy A special scale numbered 60, 65, 70, 75, etc (corresponding to 96 0, 96 5, 97 0, 97 5, F etc) can be read and recorded without decimals In time, it may be the most practical.

Seven patients who were unable to use a fever thermometer kept useful records with the "Ovulindex" thermometer It simplifies instruction, and patients are more enthusiastic about using it Twelve subjects, using the "Ovulindex" and a fever thermometer simultaneously, found the "Ovulindex" easier to read and record, and it showed the shift in temperatures at the time of ovulation more clearly

In most women, after eight hours of sleep the oral temperature at 7 30 A M is, on days before ovulation, below 97 5 F and, on days after ovulation, above 98 0 F This uniformity of preovulatory and postovulatory temperatures suggests that they might be used absolutely without graphing them. A "dip," described by some writers as occurring just before ovulation, seems to be an artifact

Since many subjects can be taught to read this thermometer accurately to 0 02 degree F by interpolation and since corrections are available at 97, 98, and 99 F through the serial number, it lends itself to research on body temperatures It *expands the applications of body temperature* observations in the diagnosis of early pregnancy, in the study of corpus luteum activity, and in the management of threatened abortion, as well as in timing ovulation Its advantages are easy readability, increased precision, and interchangeability if a thermometer in use is broken

THE FAILURE OF ANTIHISTAMINIC DRUGS TO INHIBIT DIODRAST REACTIONS

SEYMOUR B CREPEA, M D , and JAMES C ALLANSON, M D , Ithaca, New York, and LORRY DELAMBRE, M D , New York City

(From the Divisions of Allergy and Urology, Roosevelt Hospital)

DRUGS administered for therapeutic or diagnostic purposes not infrequently produce untoward reactions In some cases the symptoms may be mere quantitative variations of the normal action based upon the greater or lesser degree of individual susceptibility, in others they may result from improper technic, as the too rapid rate of injection, especially with the intravenous therapy, from impurities (pyrogens) in the solution, or lack of cleanliness in equipment

However, in those cases where symptoms bear no apparent relation to the pharmacologic action of the drug, a qualitative variation, the attempt is often made to explain the reaction on the basis of allergy which properly means an antigen-antibody reaction, and this is especially true when the symptoms exhibit a similarity to such well known allergies as vasomotor rhinitis, urticaria, dermatitis, or asthma However, substantial proof of allergy to drugs of nonprotein nature is rare, although in a few instances antibody to organic compounds and some simple chemicals has been shown by Landsteiner, Kern, Feinberg and Watrous, Sherman, and others [1–4] In the case of biologicals of protein structure the antibody mechanism is not infrequently shown, and the allergic nature of the ensuing reactions is established through such well-recognized technics as the direct or indirect (passive transfer) skin, precipitin, and Schultz-Dale tests In analyzing untoward reactions all the various possibilities mentioned must be considered and, where possible, their nature ascertained, since it is through such knowledge that reactions may be avoided

Although certain mild reactions to intravenous Diodrast are quite common, the severe or fatal ones fortunately are rare, in view of the diagnostic usefulness of this drug Mild flushing of the skin, a generalized feeling of warmth, giddiness, nausea, an occasional sneeze, or a few urticarial lesions occurring separately or in any combination are the common signs and symptoms They are generally not noted on hospital records, hence it is diffiult to obtain accurate statistics on their incidence

The severe reactions give more marked manifestations of the above-mentioned symptoms, and in addition vomiting, angioedema, dyspnea (asthma), shock, and syncope may occur, occasionally ending in death Allergy is the explanation offered for these effects Analysis of such case reports, however, does not reveal adequate reason for suspecting that the reaction was due to allergy, other than that the patient died shortly after the administration of the drug and that there was no other satisfactory explanation [5–10] However, the occasional cases with prompt and serious dyspnea or collapse do resemble the anaphylactic response, and in these an allergic hypothesis may be on a sounder basis Pendergrass *et al* reviewed a large series of intravenous pyelograms and found 11 fatalities following the procedure [8] In seven of the 11 cases, however, critical analysis reveals either insufficient evidence for suspecting an anaphylaxis or other complicating factors, such as high blood urea nitrogens or multiple pulmonary infarctions at autopsy However, two of their patients did have asthma, a typically allergic manifestation, as part of the terminal picture Other reports of fatalities present similar problems as to the allergic bases for the fatality [5–7 9 10]

It would be of inestimable value if a prediction of serious Diodrast reaction could be made By judging published case reports and utilizing accepted procedures of an allergy study, warnings of the difficulty in the use of Diodrast might be found through the use of a careful family and personal history, especially a personal history of asthma, skin, and mucous membrane (eye or tongue) tests, or intravenous trials with minimal and diluted doses of the drug

Studies on the value of these methods have been made, and the results are quite interesting [11–14] About 14 per cent of the patients tested by intradermal injection of Diodrast give a positive reaction [11,13] Sixteen per cent of the patients with a positive skin test and but 4 per cent of the negatives had a systemic reaction to the intravenous administration of Diodrast About 6 to 7 per cent of the patients had a personal history of allergy, and 16 per cent of these had systemic reactions in contrast to about 5 per cent of the negatives Seventy per cent of the patients with both a positive skin test and a history of allergy had systemic reactions

Although these studies are promising, they leave much to be desired Patients with positive

† Patients premedicated with 50 mg of Trimeton one hour prior to administration of Diodrast.

tests may tolerate the administration of Diodrast without untoward reactions, and the patients with negative skin, eye, tongue tests may show typically anaphylactic reactions and may even die.[6,7,11] In one instance a patient had a fatal anaphylaxis following a small, trial dose of Diodrast intravenously. Testing cannot, therefore, give a definite answer to the problem of Diodrast reaction in the individual case.

Since certain of the reactions to Diodrast could conceivably be of an allergic type, measures used in alleviating known allergic manifestations might be of value in obviating these side-effects.

Recently, a group of drugs called the antihistaminics have been utilized for symptomatic relief of allergic manifestations which are presumed to depend in part on histamine release, and, in addition, they often convey sedative and atropine-like effects. Because of these pharmacologic actions it was felt that they might be of value in obviating the various untoward reactions due to Diodrast. With this in view the following studies were carried out.

A series of 108 consecutive urologic patients who were given Diodrast slowly, intravenously, in the course of diagnostic renal studies were used as a control group. An analysis reveals that 29 patients had untoward side-effects (Table 1). Seventeen patients of the series had had previous intravenous pyelograms with Diodrast, four of whom had mild reactions. These four and two others had mild reactions with the second administration. Seven patients had a history of definitely allergic responses to various known antigens, and of these three had reactions to Diodrast. A breakdown of these various reactions is presented in Table 2. In this series sneezing and urticaria occurs with equal frequency in patients with and without a known allergic background. One patient with negative history and no previous contact developed a shocklike state and fainted a moment after the Diodrast was administered.

Another group of 102 consecutive patients receiving intravenous pyelograms were given 100 mg. of Pyribenzamine by mouth one hour before the administration of Diodrast. Because this study was carried out on hospital patients, mild or moderate drowsiness due to the Pyribenzamine could not be evaluated. However, seven patients complained of nausea before the Diodrast was given, hence they were not included as Diodrast reactions. In this group there was a total of 34 patients having reactions to the Diodrast (Table 1). Of the 23 patients who had previous Diodrast nine gave reactions with the first injection, and seven of them reacted similarly on this second series, even with Pyribenzamine. Seventeen patients of the group

had a history of allergy, and 11 of these had symptom reactions A breakdown of the reactions reveals that sneezing and urticaria seemed more frequent in the group having allergic histories (Table 2) In general, reactions were more frequent than those seen in the untreated controls No obvious benefit was derived from the premedication with Pyribenzamine

A third group of 100 consecutive patients were premedicated with 50 mg of Trimeton, one hour prior to the intravenous pyelogram, and the results are shown in Tables 1 and 2 Here a total of 53 patients had untoward reactions, four of which were considered quite serious Three patients had syncope shortly after the injection of Diodrast These responded promptly One patient developed shock None showed any sign of asthma Ten patients in this group had had previous intravenous Diodrast, seven had systemic reactions on the first injection, and all seven plus two others reacted again on the second injection Eleven patients had a history of allergy, and of these seven had reactions Trimeton also seemed to have no beneficial effects in warding off reactions to Diodrast

Comment

These three groups of patients, totaling 310, are roughly comparable The controls had fewer side-reactions than either of the two antihistamine groups In order to get a truer incidence of these various reactions, a far larger series would have to be evaluated However, the results are nonetheless interesting Certainly, one cannot deny that a large percentage of patients had untoward reactions of all types, in spite of premedication Urticaria and sneezing, symptoms which, when due to allergy, are most efficiently treated with antihistaminic drugs, occurred in spite of the premedication Although no patient receiving Pyribenzamine showed shock or syncope, one patient, premedicated with Trimeton, did develop shock and three others syncope We have, therefore, no evidence of any real benefit to be derived from routine premedication with antihistaminics given in the hope of obviating untoward reactions It is of interest that none of our patients with or without antihistaminic drugs developed asthma or dyspnea

If one analyzes our group as a whole, certain features may be observed Of the 310 patients 116, or about 37 per cent, had untoward reactions Fifty patients had had previous Diodrast injections, and 20, or about 40 per cent, of these had reactions on the first injection of Diodrast Of the 20 patients who had had previous reactions 18 had a similar response on readministration of the drug Of the 35 patients with a general history of allergic manifestation, 21, or about 60 per cent, had a reaction in contrast to the 275 nonallergics with 95 reactions (32 per cent) The higher incidence of reactions where there is a history of previous reaction or especially where there is a personal history of allergy is noteworthy There was also a strong correlation in our group between the types of reactions, that is, a patient having nausea on one injection of Diodrast was quite likely to be nauseated by a second trial of the drug Utmost care should be exercised in administering Diodrast to patients with a personal history of allergy, especially asthma, and most particularly if there has been a reaction to the drug on previous contact Symptoms such as sneezing, urticaria, and shock occurred about equally in allergic and nonallergic persons and on first or multiple injections of diodrast, and, therefore, no conclusion can be drawn about the cause of these manifestations in this group

Summary

1 The nature of reactions to intravenous Diodrast was reviewed The evidence that, for the most part, they are allergic is not convincing, although allergy to iodine is recognized

2 Three groups of patients receiving Diodrast in the course of intravenous pyelography were analyzed Two of the three groups had premedication with a known potent antihistaminic drug Premedication with Pyribenzamine or Trimeton did not seem to influence the incidence, severity, or type of reactions to Diodrast

3 Patients having multiple injections of Diodrast, particularly that group having previous reactions, were most apt to have reactions Patients with a personal history of allergy, especially asthma, were also more apt to have reactions than patients without such a history

4 Skin or mucous membrane tests do not appear reliable Patients with positive test may tolerate the drug without ill effect Those with negative skin tests may have fatal reactions

HIGH CERVICAL ESOPHAGOGASTROSTOMY FOR CARCINOMA OF THE CERVICAL ESOPHAGUS EXTENDING INTO THE SUPERIOR MEDIASTINUM. VALUE OF A RIGHT-SIDED COMBINED THORACO-ABDOMINAL APPROACH

JERE W LORD, JR, M D, and S ARTHUR LOCALIO, M D, New York City

(From the Department of Surgery, New York University-Bellevue Medical Center, Post-Graduate Medical School, and University Hospital)

ALTHOUGH the patient referred to in this report expired on the fourth postoperative day, certain observations made during the course of the operation, during the postoperative period, and at autopsy may be of value to other surgeons interested in the surgery of lesions involving the midcervical esophagus with extension into the superior mediastinum. Malignancies limited strictly to the cervical esophagus may be managed successfully by the procedure described by Wookey and more recently by Watson and Pool.[1,2] However, as will be brought out in this case, the carcinoma of the midcervical esophagus was found at exploration of the neck to extend 3 cm. into the superior mediastinum. It seemed unlikely that a satisfactory margin below the tumor could be developed by the cervical approach alone. For that reason, a right transthoracic approach with an abdominal extension was employed to bring the stomach through the thorax into the neck and anastomose it on the right side to the stump of esophagus 1 cm. from the hypopharynx. The patient withstood the procedure well, his condition remained excellent for seventy-two hours, but evidence of patchy atelectasis and pneumonia developed which failed to respond to intratracheal suction and death occurred on the fourth postoperative day.

Case Report

T. R., a fifty-six-year-old hospital engineer, entered the New York Post-Graduate Hospital on July 23, 1948, complaining of difficulty in swallowing solid food, of five weeks duration. A barium swallow revealed a filling defect 2 to 3 cm. from the epiglottis, interpreted to be a malignant lesion. Prior to admission, Dr. Milton Schlesinger had performed an esophagoscopy and estimated that the upper end of the lesion was 3 cm. below the hypopharynx. The biopsy proved the lesion to be a squamous cell carcinoma. Four weeks elapsed between the time of the esophagoscopy and the third operation to be described below, at which time the near total esophagectomy was performed. At this operation a margin of 1 cm. was allowed above the lesion, and at autopsy only 1 cm. of esophagus remained above the esophagogastric anastomosis. The discrepancy between the esophagoscopy and the operative and autopsy findings may possibly be explained by the extension of the lesion during the lapse of four weeks.

Following admission to the hospital, the patient was given a high-vitamin, high-protein diet, and a Witzel jejunostomy was carried out through a left rectus muscle-splitting incision on the fourth hospital day. Postoperatively, a moderately severe mucopurulent tracheobronchitis developed which cleared without specific treatment in three or four days. On August 4, the ninth day after the jejunostomy, the cervical esophagus was explored by the method described by Wookey. A large skin platysma flap, based on the right side of the neck, was fashioned, the right sternocleidomastoid muscle removed and the neurovascular bundle mobilized by dividing the superior and inferior thyroid arteries and the lateral thyroid vein. The esophagus was partially mobilized and carefully palpated. A firm, smooth tumor mass could be felt to extend from the lower border of the thyroid cartilage to a point 3 cm. below the suprasternal notch. Although the upper limit presented no problem, we believed that the caudad extension of the carcinoma was beyond the level at which a resection by the method of Wookey was possible. Therefore, the wound was closed by replacing the flap.

It was fortunate timing that a paper by Macmanus appeared shortly before this patient presented himself.[3] Macmanus described a technic in which lesions of the midthoracic esophagus may be satisfactorily handled through separate abdominal and right transthoracic incisions either in one or two stages. Macmanus gave credit to Lewis as the originator of this approach.[4] Another helpful factor was the personal communication from Dr. Wylie that he and Berry had carried out successfully an esophagastric anastomosis on the left side of the neck for lesions extending as high as the midcervical esophagus by a left-sided transthoracic approach.[5] They brought the stomach up behind the arch of the aorta after mobilizing the descending part by dividing two sets of intercostal arteries. One of their patients expired on the third postoperative day from pulmonary complications, while the other completely recovered and has done well for several months.

On August 11, 1948, one week after the cervical exploration, the esophagectomy was carried out. Preliminary streptomycin, 0.5 Gm. intramuscularly four times a day, was administered for thirty-six hours and penicillin 300,000 units intramuscularly every four hours during the same period. The patient was placed on his left side with the right side up, tilting backwards 30 degrees. The right pleural space was entered through the bed of the resected seventh rib, and excellent exposure was obtained by

fracturing the sixth and eighth ribs The incision was carried through the costal arch across the right rectus muscle to the linea alba, midway between the umbilicus and xiphoid. The diaphragm was divided from the point of its attachment to the costal arch to the inferior vena cava After division of the azygos vein and incision of the mediastinal pleura, the entire thoracic esophagus was readily seen Complete mobilization of the upper third of the thoracic esophagus was carried out well into the lower part of the neck The stomach was mobilized with care to preserve all of the vessels along both curvatures, dividing the left gastric artery near its origin from the celiac axis The gastrohepatic ligament was divided, preserving the right gastric artery The first and second portions of the duodenum were mobilized so that the only restraining structures appeared to be the hepatic and right gastric arteries and the common duct The pyloric ring was elevated to the level of the diaphragm without tension

Following mobilization of the stomach, the esophagus was divided just above the diaphragm and the distal end pulled through, cut flush with the stomach, and inverted in two layers by a continuous catgut suture and interrupted cotton sutures The esophageal hiatus was closed with several interrupted sutures of cotton The entire thoracic esophagus was then mobilized Two sutures, left long at the apex of the cardia, were tied to the lower end of the mobilized esophagus and the cardiac end of the stomach placed at the apex of the thorax. The diaphragm was closed snugly around the pylorus, and several sutures were taken between the diaphragm and pylorus to prevent tension or rotation. On expansion of the right lung, the stomach lay behind it and did not seem to interfere with its expansion or motion. The incision was closed in layers with cotton and two pericostal sutures of number 2 chromic catgut were also employed. A rubber mushroom catheter was placed through the ninth interspace in the midaxillary line for underwater drainage One hundred cubic centimeters of saline with 1 Gm. of streptomycin and 100,000 units of penicillin were placed in the pleural space

The patient was placed on his back, and the skin platysma flap, fashioned at the time of the cervical exploration, was elevated. The thoracic esophagus and the cardiac end of the stomach were drawn into the neck. By sharp and blunt dissection, the entire cervical esophagus was mobilized. There was one point of adherence between the growth and the posterior aspect of the trachea 2 cm below the cricoid cartilage Sharp dissection separated the two structures, but subsequent examination of the trachea at autopsy revealed two or three nests of malignant cells microscopically Prior to division of the esophagus above the lesion, the first row of the posterior suture line was placed between the stomach and esophagus, employing fine interrupted cotton sutures The esophagus was partially cut across, the stomach opened, and a second row of interrupted cotton sutures was placed. A number 20 French Levin tube was passed from the nose down through the anastomosis into the stomach. The anterior portion of the anastomosis was completed in similar fashion, employing two layers of interrupted cotton sutures. The esophagus was divided 1 cm. above the lesion, and it was estimated that 1 cm. of esophagus remained Postmortem examination confirmed the accuracy of this estimate. The stomach was sutured at several points to the prevertebral fascia, the right lobe of the thyroid, and the fascia around the neurovascular bundle The color of the entire stomach was excellent, except for a cyanotic zone 2 cm. broad at the apex. On incising the stomach for the anastomosis, active bleeders requiring clamping and tying were noted The skin platysma flap was sutured in place after 30 cc of saline with 1 Gm. of streptomycin and 100,000 units of penicillin had been placed in the wound and a thin strip of rubber tissue placed in each corner of the wound for drainage The entire procedure required seven and one-half hours and 2,000 cc of blood were given.

Postoperatively, the patient was placed on oxygen administered by a nasal catheter, continuous suction was applied to the Levin tube and the chest catheter attached to underwater drainage Streptomycin, 0 5 Gm., and penicillin, 300,000 units, both administered every four hours intramuscularly, were resumed postoperatively The patient's course was entirely uneventful for seventy-two hours Temperature averaged 101 6 F rectally, the pulse 110 per minute, and respirations 33 per minute There was no cyanosis, and the breath sounds came through satisfactorily over both lung fields. A portable chest plate showed no evidence of mediastinal shift and the tip of the Levin tube was near the pylorus. The catheter into the right pleural space was removed on the second postoperative day, having drained less than 100 cc of bloody fluid The patient was able to talk only in a whisper for two days, but then his voice returned rapidly toward normal Intratracheal aspiration by a catheter passed through a nostril was carried out daily, but little material was present until the evening of the third postoperative day when the temperature rose to 103 F , pulse to 120, and respirations to 40, and moderate cyanosis developed The Levin tube was removed and the trachea aspirated again Temporary improvement was followed by deterioration of his condition the next morning, and, in spite of further aspiration, the patient expired, apparently from pulmonary insufficiency, at noon on the fourth postoperative day

Autopsy was limited to the operative areas without removal of other organs There were 650 cc of bloody fluid in the right pleural space The anastomosis was clean, healing well with complete viability of the stomach The mucosal surface of the stomach at the site of inversion of the esophagus showed some superficial erosions. As stated above, only 1 cm. of esophagus remained below the hypopharynx (Figs. 1 and 2) The pyloric ring lay 2 cm. below the diaphragm and showed no evidence of kinking or constriction The trachea at the point of adherence revealed two or three nests of tumor cells on microscopic study The lungs showed patchy areas of atelectasis and bronchopneumonia throughout with moderate edema of both lower lobes The heart was not examined because of restriction imposed by the permission for autopsy

FIG 1 Photograph showing the epiglottis, hypopharynx, esophagus, stomach, and duodenum The top arrow points to the epiglottis, the middle arrow to the operative anastomosis between the esophagus and the stomach, and the bottom arrow to the pylorus

FIG 2 The close-up photograph, the upper arrow of which shows the epiglottis, the lower arrow points to the operative anastomosis between the esophagus and the stomach

Comment

During the management of the case reported in this paper, certain observations were made which may be useful to other surgeons interested in the surgery of lesions lying low in the cervical and high in the thoracic esophagus

Favorable Factors —First, the combined thoracoabdominal incision on the right side through the bed of the seventh rib carried across the costal arch to the linea alba provides excellent exposure of the entire esophagus and stomach Second, by mobilizing the left lobe of the liver and the first and second portions of the duodenum, the stomach can be brought in a straight vertical line in the shortest possible distance to the neck In fact, the apex of the cardia will easily reach the tip of the mastoid process There was no tension on the stomach or duodenum when the anastomosis was carried out between the 1-cm stump of cervical esophagus and the apex of the cardia at a level above the thyroid cartilage Third, as Lewis pointed out, the possibility of entering the left pleural space, when mobilizing the esophagus, is much less with the right transthoracic approach than the danger of entering the right pleural space when the left side is employed Fourth, there was no need to mobilize the aorta when the approach was on the right side Fifth, by tying the mobilized, cut distal end of the esophagus to the apex of the cardia, no difficulty was encountered on drawing the stomach into the cervical wound following closure of the chest

Unfavorable Factors —The problem, emphasized by Lewis and by Wylie and Berry, of keeping the tracheobronchial tree free of secretions is a serious one [4,5] The larynx and trachea suffer considerable trauma during mobilization of the esophagus, which, added to a long period of anesthesia with an endotracheal tube and an inlying Levin tube for gastric suction postoperatively, provide the bête noir of this operative procedure It was the opinion of all physicians concerned with

this patient that he nearly made a full recovery from the operation, and the only postoperative problem was the accumulation during the first three postoperative days of small amounts of secretion sufficient to account for the development of a patchy atelectasis and then a bronchopneumonia which resulted in his death One means which might have prevented this unfortunate outcome would have been a tracheostomy at the completion of the anastomosis In that way, repeated suctioning could have maintained a clear tracheobronchial tree and, hence, less chance for the development of a patchy atelectasis Watson and Pool discuss favorably the desirability of a tracheostomy in local removal of the cervical esophagus, as does Wookey [2,6]

One other problem presented by this patient requires solution The esophageal cancer was adherent at one point to the trachea Radical laryngectomy, including a segment of trachea, in addition to the extensive procedure of esophagectomy would be considerably more formidable Further, speech would be lost without either a larynx or esophagus On the other hand, the possibility of excising a small segment of the tumor-bearing trachea, followed by end-to-end anastomosis, might be worth while if technically feasible In dogs, resection of segments of trachea up to 1 5 cm , followed by end-to-end anastomosis employing a continuous everting mattress suture of 0000 silk, has been uniformly successful [7] In one animal only was there slight narrowing at the anastomotic site

Although the patient in this report sought medical aid within four weeks of the onset of his symptoms and although the lesion was resected within another four weeks, there was extension of the growth beyond the confines of the esophagus. Once again, it is clear that patients must be educated to report promptly within one or two weeks of the onset of symptoms, and the time between the initial examination and definitive surgical removal must be shortened considerably if resectable, curable lesions are to be found

Summary

A patient with carcinoma of the esophagus involving the cervical and upper thoracic region, in which the stomach was anastomosed to the cervical esophageal stump 1 cm from the hypopharynx on the right side, is presented The favorable factor of the right-sided combined thoracoabdominal approach is discussed The unfavorable aspect of the problem of postoperative atelectasis and pneumonia developing during the early postoperative period and resulting in death of the patient is considered and analyzed as the most important problem remaining to be solved in surgery of the cervical and upper thoracic esophagus.

"DOCTOR JONES" SAYS—

This session we've been having with polio—it sort of set me thinking back When our big epidemic started, in 1916, and spread over the country, it'd been creeping up on us for a long time. The disease had been described way back in 1840 It must've existed long before that In fact Sir Walter Scott, in 1773, when he was two years old, had what, from the description, probably was polio Two Swedish doctors had reported localized epidemics in 1890, and, somewhere around that time, a few outbreaks were reported in our New England states

Along about 1910 the disease began perking up From then through 1914 nearly 19,000 cases were reported in this country In 1916 our New York State epidemic started, in early summer, in and around New York City It gradually spread up the Hudson and then, along the main lines of travel, out toward the Western part of the State.

In the years since then when polio has been unusually prevalent—'44, '45, and '48—places that'd been involved in previous epidemics seemed to be more or less immune, and it's been mainly in new places Another interesting thing in all those years, including 1916, the epidemics have lighted up in July and dropped off in October "Why?" Well, I haven't heard anybody say In between times, of course, there've always been cases, the year around

To most folks, in 1916, polio was a new disease and, when they saw it spreading, they got panicky Mostly, I think, it was that name "infantile paralysis" It was what you might call alarmingly misleading The majority weren't infants and weren't left with paralysis Since we've gotten better acquainted with poliomyelitis—well, it's some like a horse I had once If he saw a newspaper in the road he was ready to climb a tree When I got him up where he could get a good look at it he discovered that, while it maybe wasn't a paper he favored, it was, after all, just a newspaper —*Paul B Brooks, M.D , September 12, 1949*

CANCER AND CARDIOVASCULAR DISEASES

EUGENE FOLDES, M D , New York City

(From the Polyclinic Hospital)

SINCE in humans both cancer and cardiovascular diseases are observed in an increasing frequency from youth to old age, investigation of the occurrence of hypertension and coronary disease in association with cancer appears to be of interest

Cancer and Hypertension

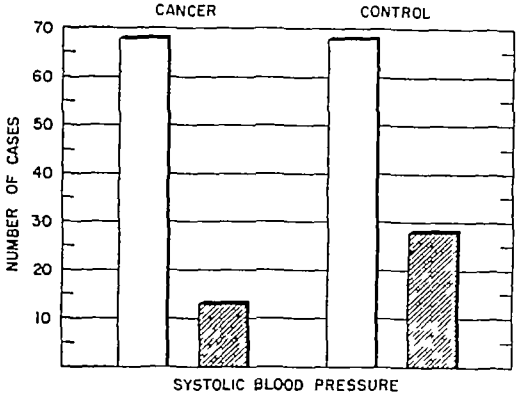
Histories of cases of cancer of a certain period were taken from the files, and the age and sex distribution and the blood pressure readings were tabulated. From the same period histories of noncancerous patients were taken at random Attention was paid only to an age and sex distribution similar to that of the former group, and age and sex distribution and blood pressure readings were again tabulated (Table 1, Fig 1)

The table shows that in all age groups of both sexes, with a blood pressure reading of 140 mm. and over being considered hypertensive, hypertension was found in 13 out of 68 cases of cancer (19 per cent) In the control group of the same number of patients and the same age and sex distribution there were 29 cases of hypertension (43 per cent) Among men in the cancer group the number of hypertensives was eight out of a total of 35, and in the control group it was 17 out of the same total of 35 Among women, out of 33 cases there were five hypertensives in the cancer group and 12 in the control group Infrequency of hypertension in cancer is apparent also when a single age group of either men or women is considered For example, among 16 men in the age group of fifty to fifty-nine years, four are hypertensive in the cancer group and eight among the controls Preponderance of relatively low blood pressure in cancer is noted also when various blood pressure levels of the two groups are compared Out of 68 cases of both sexes and all ages the systolic blood pressure reading was less than 120 mm in 22 cases of the cancer group and in 12 cases of the control group A blood pressure reading of 160 mm or higher was obtained in seven cases of the cancer group and in 14 cases of the control group

Tabulation of the diastolic blood pressure (Table 2, Fig 2) showed an even greater preponderance of relatively low blood pressure in cancer A diastolic blood pressure of 90 mm or higher occurred six times out of 68 cases of cancer (9 per cent) and 21 times in 68 control cases (31 per cent) In the men diastolic blood pressure of 90 mm or higher was found in five out of 35 cases of cancer and in 13 out of 35 control cases In women diastolic blood pressure of 90 mm. or higher was observed once in 33 cases of cancer and eight times in 33 control cases In cancer a diastolic blood pressure higher than 110 mm was not observed at all while it occurred in three (all men) of the control group

Cancer and Coronary Disease

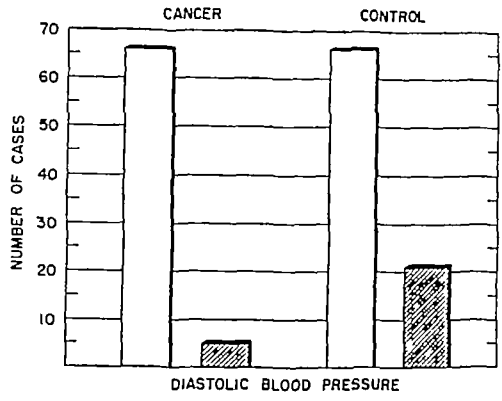
Similar to the relative infrequency of hypertension is the relative infrequency of coronary disease in cancer In the cases of cancer which are under discussion here, coronary disease appears in the history of two patients (one man and one woman), while in the control group it appears 13 times (11 men and two women)



Comment

It appears that such cardiovascular diseases as arterial hypertension and coronary disease occur in a frequency which is considerably smaller in cancer than in the control group In other words, it appears that cancer is negatively associated with cardiovascular diseases. In support of this finding the following experimental and statistical observations can be cited

A cystine-poor diet protects mice from the development of induced leukemia (it occurred in 10 per cent of the animals) but is associated with frequent occurrence of sclerosis of the aorta (in 80 per cent of the animals) A high cystine diet on the other hand affords no protection from leukemia (it occurred in 90 per cent of the animals), but sclerosis of the aorta is absent [1] Attention is called to the fact that induced leukemia in animals is a condition closely related to neoplasms



The negative association between cancer and cardiovascular diseases described in this paper was found when patients, representing the varied diseases occurring in practice, were used as controls It is noteworthy that the negative association between cancer and cardiovascular disease is found also when the control group consists of cases of diabetes, syphilis, and tuberculosis exclusively [2]

When an interpretation is attempted, the first thought is that lowering of the blood pressure level may be caused in cancer by the characteristic malnutrition (cachexia) Such a theory would be unsatisfactory because it would not add to the understanding of the mechanism which leads to low blood pressure in cancer It would

merely substitute one unknown for another, and it is contradicted also by actual observations These show that in individuals in whom blood pressure readings were obtained throughout years, blood pressure readings low in relationship to the age of the patient were found several years prior to the appearance of cancer

Case 1—A. H died from cancer of the prostate at the age of fifty At the age of forty-three, his blood pressure was 110/60 mm , and at the age of forty-six the blood pressure was 104/70 mm.

Case 2—G W had cancer of the rectum, discovered at the age of fifty-nine Blood pressure at that time was 120/70 mm. At the age of fifty-six, his blood pressure was 104/50 mm.

Case 3—A. H. had cancer of the pancreas, discovered at the age of sixty-two At that time the blood pressure was 140/80 mm. At the age of fifty-nine the blood pressure was 88/60 mm.

Case 4.—S F had gastric cancer discovered at the age of one hundred one Blood pressure at the age of ninety-eight was 130/70 mm

Case 5—B S was found to have lung cancer at the age of seventy-four Blood pressure at that time was 150/80 mm. At the age of sixty-four the blood pressure was 126/74 mm.

In several cases simultaneously with progression of cancer or after palliative surgical operation the blood pressure even increased

Case 6—N K. noted the first symptoms of pancreatic cancer at the age of fifty-four At that time body weight was 176 pounds, blood pressure 142/100 mm. At the age of fifty-six in a worse condition, the weight was 164 pounds and blood pressure 158/-100 mm.

Case 7—E L , age sixty-seven, had a retroperitoneal sarcoma Blood pressure before surgical exploration was 138/80 mm. Five days after laparotomy the blood pressure was 170/90 mm.

Case 8—E B , age forty-eight, had cancer of the breast Body weight was 125 pounds Blood pressure was 120/80 mm. Three months following mastectomy and at the time of discovery of lung metastases, the weight was 117 pounds and blood pressure was 160/90 mm

Another explanation which may be advanced is that hypertension and coronary disease is relatively rare in cancer because cancer causes death before elevated blood pressure and coronary disease could have developed There is no evidence to support the inference that cancer develops at an earlier age than hypertension and coronary disease In fact, according to recent statistical evaluation of obituaries of physicians published in the *Journal of the American Medical Association* in 1948, the average ages at death were sixty-five and six-tenths years for coronary occlusion and sixty-seven and four-tenths for cancer and other malignant tumors The implication that death from cancer occurs at an earlier age than from cardiovascular diseases is further invalidated by the method which is here applied in selecting controls They represent age groups identical to those found in cancer

It seems that one must look in another direction for an answer to the question here raised A working hypothesis which offers an explanation of this and other problems of cancer will be the subject matter of another paper

If the observations which are here described are confirmed on large material, it appears that it will be possible to use arterial hypertension and coronary disease as a differential diagnostic sign inasmuch as the presence of one or the other of these diseases in doubtful cases would seem to make the occurrence of cancer improbable

Summary

1 Systolic and diastolic blood pressures are relatively low, and hypertension is infrequent in cancer

2 Coronary disease is infrequent in cancer

STATE DEATH RATE DROPS TO 10 8, A RECORD LOW

The State Health Department has reported that there were fewer deaths from most of the leading causes of death, especially heart disease, pneumonia, tuberculosis and nephritis, during the first six months of this year, as compared with corresponding period last year

The total death rate was 10 8, lowest ever experienced in the State

New low records were established by infant mortality, twenty-seven deaths to 1,000 live births, and maternal mortality, eight deaths to 10,000 liver and stillbirths.

During the first six months of the present year, 150,000 births were recorded in New York State, which was more than in the corresponding months of any previous year, except 1947, when the number was greater by 19,000 The birth rate for January to June, 1949, was 20.5 per 1,000 population, and, except for 1947, the highest in a quarter of a century—*Herald Tribune, August 29, 1949*

CLINICOPATHOLOGIC CONFERENCES

FOURTH MEDICAL DIVISION OF BELLEVUE HOSPITAL, NEW YORK CITY

Date December 8, 1948

Conducted by Maurice Goodgold, M D

Mediastinal Cystic Necrosis of the Aorta and Dissecting Aneurysm with Rupture into the Pericardial Sac

THIS is the history of a thirty-nine-year-old Negro woman who was admitted to Bellevue Hospital November 2, 1948 At the time of her admission, she complained of pain in the abdomen and chest which persisted for three days Her illness was manifested by a sharp precordial pain immediately following a period of military drilling There was no radiation of the pain to either her back or arms However, marked weakness and fatigue were associated with the pain Shortly afterward, abdominal discomfort was noted Subsequently, the pain became localized in the right upper quadrant of the abdomen. The patient attended various clinics in connection with her complaint but was told there was nothing wrong Nevertheless, the pain became progressively worse and was aggravated by respiration On the third day of her illness, the pain in the right upper quadrant of the abdomen became increasingly severe and radiated to the right costovertebral angle The patient consulted her local physician who administered 100 mg of Demerol by hypodermic injection Immediately thereafter, she became nauseated and vomited In the act of vomiting, she was seized with a severe, crushing, suffocating pain in her chest associated with marked dyspnea Immediate hospitalization was advised

The history of the patient also reveals she had hypertension for a number of years Her systolic blood pressure varied from 180 to 160 mm and her diastolic blood pressure from 130 to 120 mm. She had no history of any previous chest pain or anginal syndrome Neither did she have any history of congestive heart failure as manifested by dyspnea, orthopnea, paroxysmal nocturnal dyspnea, or edema However, she was treated for persistent headaches She lost ten pounds in approximately three months

She had no chills, fever, or night sweats She did, however, have a chronic cough and brought up small amounts of yellowish-green sputum daily During the first few days of her illness, she coughed up approximately a teaspoonful of blood daily She was also afflicted with tuberculosis about ten years prior to her present illness and was confined to a tuberculosis hospital, from which she was discharged as an arrested case after treatment extending over a period of fourteen months

The patient suffered from chronic constipation Prior to her admission, she had no bowel movements for two days The use of a saline cathartic to overcome her constipation brought about blood streaks in the stool Her record, however, is devoid of any bloody or tarry stools on other occasions

Her menstrual history reveals the patient to have had regular periods and normal flow Her last period occurred one week prior to her admission. She was gravida II Para 1 A therapeutic abortion was performed one year prior to her admission because of her hypertensive condition

While the patient was under examination in the admitting office, she showed no symptoms of acute distress Subsequently, however, on examination in the medical wards, she was found to be cold, clammy, sweating profusely, and in a semicomatose state Her temperature was 101 F , and her blood pressure was unobtainable The pulse was barely perceptible The heart rate was rapid, and the sounds were distant The abdomen was slightly tender

Laboratory data on admission revealed the urine to be yellow in color with a specific gravity of 1 020, a pH of 4 0, and one plus albumin The urine contained no sugar, and there were one to three white blood cells but no red blood cells per high power field on microscopic examination The hemoglobin was 13 Gm , red blood count was 4,820,000, white blood count was 6,500 with 10 per cent band forms, 57 per cent polymorphonuclears, 32 per cent lymphocytes, and 1 per cent eosinophils The electrocardiogram showed a Q_3, T_3 pattern without an S_1 There was an inverted T in V_1 The unipolar limb leads were normal

Fifteen hundred cubic centimeters of plasma were administered intravenously during a period of a few hours Morphine and nasal oxygen were also given The patient responded to this therapy Her blood pressure rose to 120/50, and her pulse became fully perceptible but remained rapid Surgical consultation was

obtained The consultant stated that her pathology could be explained on the basis of some gynecologic condition However, this opinion was not supported by further consultations with the gynecologic service Examination of the patient by the latter service showed that she had deep tenderness in the lower abdomen and a tender palpable right ovary There was no mass in the cul-de-sac

On the following day the laboratory data were as follows red cells 3,670,000, white cells 12,750 with 4 per cent band forms, 70 per cent polymorphonuclears, 25 per cent lymphocytes, and 1 per cent monocytes, erythrocyte sedimentation rate 80 mm per hour, serum amylase 184 units The blood Wassermann reaction was negative A portable x-ray of the chest revealed the presence of an enlarged heart Free fluid or pneumothorax was not noted

The patient appeared comfortable The blood pressure was 120/80, the pulse was 180 per minute and regular, the respirations were 16 per minute, and the temperature was 102.8 F The head was normal Examination of the eyes revealed the sclerae to be clear The pupils were round, regular, and equal and reacted well to light and accommodation. The extraocular muscles were normal as were the fundi The pharynx was injected, and the tonsils were enlarged and inflamed The neck was supple, the trachea was in midline, and the thyroid was normal. The breasts were normal. Examination of the lungs revealed diminished breath sounds at the right base where rhonchi and postussis rales were heard There was suggestive bronchial breathing over the right midlung field Occasional fine crepitant rales were heard at the left base posterior The heart was enlarged, and the point of maximum impulse was felt at the sixth intercostal space at the anterior axillary line. No thrills were felt, and the rhythm was regular The heart sounds were of good quality The second pulmonic sound was tambour-like in quality and was greater than the second aortic sound No murmurs were heard. The abdomen was slightly distended. There was deep and rebound tenderness in the right upper quadrant of the abdomen The liver, spleen, and kidneys were not palpable The bowel sounds were present There was marked right costovertebral angle tenderness There was no edema of the extremities The dorsalis pedis pulsations were normal, and neither a Homans nor a Moses sign could be elicited

There was no change in the patient's condition during the next few days except for a drop in the temperature to normal on the fourth day of hospitalization On the morning of the fifth day, the patient menstruated No clots were noted The abdominal pain persisted but was not as marked as on previous days A second gynecologic consultation was had Tenderness was found in the right upper quadrant of the abdomen and at McBurney's point No distinct masses could be felt Pelvic examination revealed blood oozing from the cervical canal No erosion was seen. The cervix was smooth, firm, and slightly tender There was a tender mass present close to the right cornu of the uterus This was felt halfway up to the umbilicus but could not be outlined distinctly The left side was negative Surgery was considered, but before any steps could be taken the patient had a mild paroxysm of cough She sat up in bed and had convulsions, opisthotonos was noted, and she died suddenly There was no terminal episode of hemoptysis Postmortem physical examination revealed the presence of an enlarged tense abdomen.

Discussion

DR. ARNOLD KOFFLER The diagnostic problem presented by this case is extremely complicated ' The symptoms presented in the protocol may be divided into those referable to the chest and to those chiefly abdominal The only common ground on which we will try to make a simple diagnosis to fit these two groups of symptoms is on the basis of hypertensive cardiovascular disease We know this patient has had hypertension for a number of years, and we also know she did something very ill-advised She did some drilling, however extensive that may have been, and, immediately following this, had an episode of pain in the chest The natural thing to infer from this is that she had a coronary thrombosis with or without myocardial infarction This apparently was not too severe in character Evidently she had been able to be up and about and visited clinics because of the pain which appeared originally in the chest and subsequently in the abdomen The principal complaint, however, was of pain in the right upper quadrant There were no associated gastrointestinal symptoms

Following her rounds of private doctors and clinics, she had another episode which followed the administration of Demerol Demerol may make one vomit However, that was not the reason for the excruciating pain in the chest This apparently frightened the doctor, and he sent her to the hospital When she was admitted to the ward, the symptoms were not limited to the chest, but were in the abdomen chiefly

Our first differential diagnosis is whether or not this person had a coronary thrombosis She may have had an attack of angina at first, as

that pain was not too severe The subsequent pain was excruciating in character, and, therefore, she was admitted to the hospital Following her history in the ward, we find that at no time was there any characteristic radiation of the pain While she had some temperature, she had no leukocytosis, and the electrocardiographic pattern described here certainly was not characteristic of an acute episode She had the so-called "Q_3, T_3" pattern which may be present in hypertension without any coronary thrombosis She had an upright T_1 and a slightly inverted T_2 which might have been part of this picture and predated this episode Certainly this is not the picture of an acute coronary thrombosis

Another possibility, in view of our experience in recent years in thromboembolic phenomena, is pulmonary embolism The "Q_3, T_3" pattern is the type of electrocardiogram you expect to find, but there should have been a deep S in lead I which is not present in this case However, I do not think you can completely dismiss this possibility because the findings in pulmonary infarction are often very transient

Upon admission to the hospital the severe pain in the patient's chest had subsided, and she was relatively comfortable in the admitting office Between the time she was admitted and the time she arrived on the ward, something happened which threw her into acute shock. Her pulse was imperceptible She was cold and clammy

I will try to analyze the cause for shock in this case Since the pain was chiefly in the chest, the possibility of collapse from coronary thrombosis must be considered In spite of the electrocardiographic findings, this cannot be completely dismissed

It is also possible that the cause of the persistent abdominal pain produced shock Analyzing this, I have considered first the possibility of acute pancreatitis This will produce severe pain in the abdomen, sometimes radiating to the right upper quadrant, and give a picture of shock However, there is insufficient data to make that diagnosis There does not appear to have been enough rigidity and peritoneal irritation There seems to have been some retroperitoneal irritation as evidenced by the location of pain in the costovertebral region The amylase was probably in the upper normal limits

Surgical consultants bear me out that this was not a sufficiently acute abdominal condition to warrant operation There are other conditions that might have produced shock in this case The possibility of a ruptured viscus, such as is caused by a peptic ulcer or an inflamed gallbladder, is to be considered I think we have the feeling that the pain was never sufficiently severe nor the rigidity in the abdomen too marked to warrant these diagnoses

Hemorrhage is still another cause for shock. In this case two possibilities are to be considered First there is the picture of a complicated ectopic pregnancy and rupture The gynecologist found some tenderness in the right ovary However, we must also consider that there may have been tenderness in the right fallopian tube In addition, she also had an abnormal menstrual period, and a mass was located near the right cornu of the uterus at that time However, the cervix was found to be normal

A diagnosis which best fits the picture of chest pain, known hypertensive disease, abdominal pain, and hemorrhage is dissecting aneurysm with hemorrhage The patient had excruciating pain in her chest and abdominal symptoms I believe this patient had a dissecting aneurysm on a hypertensive arteriosclerotic basis with rupture and hemorrhage and a final episode with convulsive seizures The neurologic signs of the cerebral type are not uncommon in dissecting aneurysms

The possibility of coronary disease must be ruled out, and if there are any pulmonary infarctions, the original site is obscure The extremities were normal There is the possibility of pulmonary infarction arising from the pelvic veins or from within the heart There is also the possibility of paradoxical embolus with the production of pulmonary infarction However, I think the entire picture fits best with the diagnosis of hypertensive cardiovascular disease with dissecting aneurysm and rupture

DR ELLIOT HOCHSTEIN I have made diagnosis of dissecting aneurysm on the basis of hypertension This is a young woman, thirty-nine years old, who had precordial pain and pain in the abdomen with radiation to the back She then developed evidence of a mass in the abdomen Masses in the abdomen are not infrequently present in dissecting aneurysm A prior case of dissecting aneurysm had an episode of excruciating epigastric pain and then died within two or three days His method of death was similar in that it was sudden and simulated a hemorrhage There is evidence of some massive hemorrhage taking place in this woman The cerebral manifestation is also due to hemorrhage and the marked deficiency in cardiac output When one looks at the x-ray, there is a sign which is supposed to be characteristic of dissecting aneurysm One is likely to see a double aortic shadow, but this is not here However, there is a marked dilatation of the ascending aorta There was a drop in the red blood count, an elevation in the white blood count, and an increased sedimentation rate I think the other

possibilities to be mentioned again are coronary artery disease with multiple occlusions and a pulmonary embolism with thrombophlebitis on the periphery However, there is no evidence of peripheral thrombophlebitis, and the whole picture, as Dr Koffler presents it, fits in best with dissecting aneurysm

DR MARVIN KUSCHNER, (*Pathologist*) When we opened the chest cavity, the pericardial bulge occupied almost one third the diameter of the chest The pericardial sac contained 1,500 cc of clotted and liquid blood. Just above the sinuses of Valsalva, there was a 1-cm tear in the intima of the aorta This was apparently the site of origin of a dissection of the aorta which had extended down to the renal arteries and had apparently somewhat compressed and narrowed the lumen of the right renal artery The dissection involved, then, the entire aorta from the supravalvular portion to the renal arteries, a double aorta being found In the dissected portion there were large antemortem thrombi which indicated to us that the dissection was not a terminal event but was of some duration consistent with the patient's course following the initial episode The aneurysm had ruptured through the adventitia in the intrapericardial portion of the aorta with subsequent hemopericardium

Microscopically, at the edge of the area of dissection, one sees the typical areas of cystic degeneration of medial necrosis of the aorta which is the basis of the vast majority of cases of aortic dissection

Looking at the heart, we have evidence that some leakage into the pericardium occurred before death. There is a mild pericarditis with flakes of fibrin on the epicardial surface and numerous lymphocytes and plasma cells in the subepicardial fat A second, more massive hemorrhage may well have been the terminal episode in view of the nature and amount of blood in the pericardial sac The moderate degree of myocardial hypertrophy is consistent with the history of hypertension

In the right lung there were several subapical fibrocaseous tuberculous foci, well walled-off, and not in communication with the bronchi

We are hard put to explain the mass in the abdomen palpated during life There was no evidence of hemorrhage in the abdomen, retroperitoneal or intraperitoneal There was a corpus hemorrhagicum in the ovary and a small, 2-cm fibromyoma of the uterus which I am sure was not the abdominal mass palpated

Our final diagnosis was medial cystic necrosis of the aorta and dissecting aneurysm with rupture into the pericardial sac

---

PHYSICIANS' LETTER EXCHANGE

To the Editors The United Nations Council of Philadelphia has been working for some time on the promotion of international friendships by a Letter Exchange between America and the other countries of the world There has been a tremendous response from people in all walks of life and we feel sure that professional men, and physicians in particular, could help tremendously by exchanging ideas with foreign colleagues

American physicians, returning from abroad, tell of many discouraging conditions—lack of sufficient drugs and equipment and, most important, ignorance of the advances in various fields of medicine during the past ten years Foreign physicians are eager for correspondence with American colleagues. A British physician writes that he is anxious to "exchange views with an un-nationalized doctor" We have just received lists of hundreds of Japanese medical men and students interested in discussing all branches of medicine What better method of establishing international friendships than by exchanging ideas and discussing conditions with a foreign friend?

A physician can help by writing to one foreign physician Each correspondent will be matched according to age, background, and, as near as possible, field of medicine The foreign letters will be translated whenever necessary

Letters should be addressed to Letters Abroad, United Nations Council of Philadelphia, 1411 Walnut Street, Philadelphia 3

Surgical consultants bear me out that this was not a sufficiently acute abdominal condition to warrant operation. There are other conditions that might have produced shock in this case The possibility of a ruptured viscus, such as is caused by a peptic ulcer or an inflamed gallbladder, is to be considered I think we have the feeling that the pain was never sufficiently severe nor the rigidity in the abdomen too marked to warrant these diagnoses

Hemorrhage is still another cause for shock. In this case two possibilities are to be considered. First there is the picture of a complicated ectopic pregnancy and rupture The gynecologist found some tenderness in the right ovary However, we must also consider that there may have been tenderness in the right fallopian tube In addition, she also had an abnormal menstrual period, and a mass was located near the right cornu of the uterus at that time However, the cervix was found to be normal

A diagnosis which best fits the picture of chest pain, known hypertensive disease, abdominal pain, and hemorrhage is dissecting aneurysm with hemorrhage The patient had excruciating pain in her chest and abdominal symptoms I believe this patient had a dissecting aneurysm on a hypertensive arteriosclerotic basis with rupture and hemorrhage and a final episode with convulsive seizures The neurologic signs of the cerebral type are not uncommon in dissecting aneurysms

The possibility of coronary disease must be ruled out, and if there are any pulmonary infarctions, the original site is obscure The extremities were normal There is the possibility of pulmonary infarction arising from the pelvic veins or from within the heart There is also the possibility of paradoxical embolus with the production of pulmonary infarction However, I think the entire picture fits best with the diagnosis of hypertensive cardiovascular disease with dissecting aneurysm and rupture

DR ELLIOT HOCHSTEIN I have made diagnosis of dissecting aneurysm on the basis of hypertension This is a young woman, thirty-nine years old, who had precordial pain and pain in the abdomen with radiation to the back. She then developed evidence of a mass in the abdomen Masses in the abdomen are not infrequently present in dissecting aneurysm A prior case of dissecting aneurysm had an episode of excruciating epigastric pain and then died within two or three days His method of death was similar in that it was sudden and simulated a hemorrhage There is evidence of some massive hemorrhage taking place in this woman The cerebral manifestation is also due to hemorrhage and the marked deficiency in cardiac output When one looks at the x-ray, there is a sign which is supposed to be characteristic of dissecting aneurysm One is likely to see a double aortic shadow, but this is not here However, there is a marked dilatation of the ascending aorta There was a drop in the red blood count, an elevation in the white blood count, and an increased sedimentation rate I think the other

possibilities to be mentioned again are coronary artery disease with multiple occlusions and a pulmonary embolism with thrombophlebitis on the periphery However, there is no evidence of peripheral thrombophlebitis, and the whole picture, as Dr Koffler presents it, fits in best with dissecting aneurysm

DR. MARVIN KUSCHNER, (*Pathologist*) When we opened the chest cavity, the pericardial bulge occupied almost one third the diameter of the chest The pericardial sac contained 1,500 cc of clotted and liquid blood Just above the sinuses of Valsalva, there was a 1-cm tear in the intima of the aorta This was apparently the site of origin of a dissection of the aorta which had extended down to the renal arteries and had apparently somewhat compressed and narrowed the lumen of the right renal artery The dissection involved, then, the entire aorta from the supravalvular portion to the renal arteries, a double aorta being found In the dissected portion there were large antemortem thrombi which indicated to us that the dissection was not a terminal event but was of some duration consistent with the patient's course following the initial episode The aneurysm had ruptured through the adventitia in the intrapericardial portion of the aorta with subsequent hemopericardium

Microscopically, at the edge of the area of dissection, one sees the typical areas of cystic degeneration of medial necrosis of the aorta which is the basis of the vast majority of cases of aortic dissection

Looking at the heart, we have evidence that some leakage into the pericardium occurred before death There is a mild pericarditis with flakes of fibrin on the epicardial surface and numerous lymphocytes and plasma cells in the subepicardial fat A second, more massive hemorrhage may well have been the terminal episode in view of the nature and amount of blood in the pericardial sac The moderate degree of myocardial hypertrophy is consistent with the history of hypertension

In the right lung there were several subapical fibrocaseous tuberculous foci, well walled-off, and not in communication with the bronchi

We are *hard put to explain the mass in the* abdomen palpated during life There was no evidence of hemorrhage in the abdomen, retroperitoneal or intraperitoneal. There was a corpus hemorrhagicum in the ovary and a small, 2-cm fibromyoma of the uterus which I am sure was not the abdominal mass palpated

Our final diagnosis was medial cystic necrosis of the aorta and dissecting aneurysm with rupture into the pericardial sac

---

PHYSICIANS' LETTER EXCHANGE

To the Editors The United Nations Council of Philadelphia has been working for some time on the promotion of international friendships by a Letter Exchange between America and the other countries of the world. There has been a tremendous response from people in all walks of life and we feel sure that professional men, and physicians in particular, could help tremendously by exchanging ideas with foreign colleagues

American physicians, returning from abroad, tell of many discouraging conditions—lack of sufficient drugs and equipment and, most important, ignorance of the advances in various fields of medicine during the past ten years Foreign physicians are eager for correspondence with American colleagues. A British physician writes that he is anxious to "exchange views with an un-nationalized doctor" We have just received lists of hundreds of Japanese medical men and students interested in discussing all branches of medicine What better method of establishing international friendships than by exchanging ideas and discussing conditions with a foreign friend?

A physician can help by writing to one foreign physician Each correspondent will be matched according to age, background, and, as near as possible, field of medicine The foreign letters will be translated whenever necessary

Letters should be addressed to Letters Abroad, United Nations Council of Philadelphia, 1411 Walnut Street, Philadelphia 3

Case Reports

VITAMIN B_{12} EFFECTIVE IN PERNICIOUS ANEMIA WITH COMBINED SYSTEM DISEASE AND LIVER SENSITIVITY

MARIE Y MURRAY, M D , and SIMON PROPP, M D , Albany, New York

(*From the Department of Medicine, Albany Medical College*)

SENSITIVITY to liver extract in patients with pernicious anemia occurs with sufficient frequency to be a serious medical problem Schwartz and Legere, reporting on 396 cases of pernicious anemia treated with liver extract injections, found evidence of sensitivity in 17 per cent [1] They felt that with replacement of liver by synthetic preparations (oral folic acid) and with the use of oral antihistamine drugs that the problem of liver sensitization might lose its significance Folic acid (synthetic pteroylglutamic acid) has already been discontinued as a therapeutic agent in the treatment of pernicious anemia due to its failure to prevent combined systemic disease [2] Antihistamine substances, although extremely valuable, have failed to control many allergic conditions, especially when of great severity

Castle and Minot in discussing the etiology of pernicious anemia with respect to the hematologic, gastrointestinal, and central nervous systems long ago stated that "until the hematopoietic principle of liver is isolated, it will be impossible to find by therapeutic test whether it is also specific for the neural disturbance, or whether multiple factors, either intrinsic or extrinsic, are involved."[3] Vitamin B_{12}, a crystalline substance recently obtained from liver extracts and found to produce hematologic and neural remissions in pernicious anemia, promises to be the hematopoietic principle postulated by Castle and Minot.[4–7] The question of crude versus refined liver extract in the treatment of combined systemic disease may be answered The problem of liver sensitivity may now be solved also by the use of this crystalline vitamin

Berk and associates have recently reported on the effective treatment of a patient with pernicious anemia sensitive to liver extract who was treated inadequately with folic acid and developed severe anemia and combined system disease.[7] Vitamin B_{12} produced a hematologic remission and rapid and marked improvement in the neurologic picture *

The case herein reported is that of a patient with pernicious anemia who developed severe sensitivity to liver extract and in whom desensitization, changes in types and dosage of liver, and use of substitutes and antihistamine substances failed Folic acid maintained fair, although not perfect, blood values, but rapid, progressive, combined system disease threatened to incapacitate the patient until vitamin B_{12} was administered The rapid neurologic improvement, cure of the severe gastroenterologic disturbance, blood response, and relief from allergic manifestations which followed the use of this new form of therapy, prompt the report of this case

Case Report

The patient was a fifty-seven-year-old white businessman on whom the diagnosis of pernicious anemia was first established in 1932 At this time he received liver injections without any difficulty He first began to develop reactions from beef liver extract in 1933 These allergic manifestations consisted of symptoms of coryza, lacrimation, shortness of breath, wheezing, severe occipital headache, and nitritoid reactions requiring adrenalin for relief Some reactions were of the nature of anaphylactoid shock. Subsequently, he received pork liver extract for one year before allergic symptoms recurred. Following this, he was tried on various types of preparations of liver but was found to be sensitive to all of them. During this time also he had had several relapses because of inadequate therapy

This patient has been treated by the author (M Y M) since 1945 Attempts were made to maintain him on Ventriculin, Extralin, and Lilly's concentrated liver extract by mouth without success An effort was also made to desensitize him by administering increasing amounts of 1 100 dilution of Squibb (15 unit per cc) liver extract, then 1 10 dilution, and finally the undiluted extract. There was no reaction until a dose of 0 4 cc. of the latter was given Following this he developed delayed type of reactions, one-half to one hour after injection, characterized by coryza and occipital headache and occasionally accompanied by nausea and vomiting The dose was decreased to 0.25 cc , and he was also put on Benadryl, 50 mg three times a day This was later changed to Pyribenzamine, 50 mg three times a day, and he got along quite well with only an occasional mild reaction for seven months

The patient became restive on this regime, and at his insistence, in December, 1946, he was placed on folic acid, 15 mg daily by mouth. The dosage was later increased to 40 mg daily and supplemented finally in July and August, 1948, by raw liver and concentrated liver extract by mouth daily From

* Vitamin B_{12} was kindly furnished by Merck and Company, Rahway, New Jersey

December, 1947, he lost weight gradually from 147 to 132 pounds Hemoglobin values were maintained between 13 and 14 5 Gm. per 100 cc , and red blood cells were 3,110,000 to 4,250,000 per cu mm. Evidence of macrocytosis persisted, and there was fairly marked poikilocytosis and anisocytosis During this period he continued to work and did not complain of feeling badly in general.

His appetite began to fail in April, 1948, and he had considerable epigastric distress. A gastrointestinal series done in June, 1948, was reported normal. Occasionally he complained of slight numbness in his legs but had no difficulty in walking Physical examination in June, 1948, revealed a beefy red, fissured tongue and abnormal neurologic findings of sluggish knee and ankle jerks and markedly diminished vibration sense in the lower extremities

On August 15, he developed an abscessed tooth, and five days later, in the afternoon he had an episode of faintness with a severe occipital headache lasting for one-half hour Following this he began to complain of numbness in his legs and hands and some slight staggering in walking Reflexes were hypoactive to absent in the lower limbs, and vibration sense was absent in the lower and diminished in the upper extremities In ten days the symptoms had progressed so markedly that he could barely walk around in the house holding on to objects and was unable to walk alone The gait was very ataxic He found it extremely difficult to write and to perform fine movement with his hands He felt miserable, had marked anorexia, and complained of severe numbness in his hands and feet At this time the knee and ankle jerks were absent, vibration sense was absent below the iliac crest and in the upper extremities to the shoulder, and pinprick was not felt in the fingers and the lower extremities below the midcalf Both plantar responses were extensor from the outer border Position sense was absent in the great toes but was present in the ankles, knees, and fingers A feeling of numbness was present in both hands and distal to both knees The Romberg test was positive

A complete blood count on August 30, 1948, showed hemoglobin 14.5 Gm , red blood cells 3,810,000 per cu. mm, volume of packed red blood cells 45 per cent, mean corpuscular volume 117 cubic microns, mean corpuscular hemoglobin 38 micromicrograms, mean corpuscular hemoglobin concentration 32 per cent, white blood cells 5,600, segmented neutrophils 31 per cent, band neutrophils 9 per cent, lymphocytes 51 per cent, monocytes 7 per cent, eosinophils 1 per cent, basophils 1 per cent, and reticulocytes 1 per cent

Folic acid was stopped On August 31, he was started on 0 3 cc of Squibb's liver extract (15 units per cc) which was diluted 1 10 with physiologic saline This was increased 0 10 cc with each dose up to 1 0 cc This very small amount of liver was given without difficulty, but no improvement occurred except that the tongue was less sore and red Four days later, vitamin B_{12} was obtained, and he was given 5 micrograms intradermally to which there was no reaction Following this, he received 5 micrograms intramuscularly daily for six days, 10 micrograms daily for nine days, then 5 micrograms three times weekly, and finally after the twelfth week, 10 micrograms once weekly

The change in the patient was remarkable Within four days following the use of vitamin B_{12} he felt much better and was able to walk three blocks to the office with some help His appetite had improved, taste was beginning to return, his tongue had healed and was a normal pink. He had gained three pounds in weight Neurologic examination remained the same except that pinprick sensation had returned in the hands and was absent in the lower extremities only distal to the ankle

By the seventh day following treatment the patient was able to walk to the office without assistance, and his gait was much steadier However, there was practically no change in the neurologic examination On the tenth day, pinprick perception had returned to the hands except for the tips of the index and middle fingers Vibration sense had returned in the right arm and was present to the elbow on the left The patient swayed when doing the Romberg test but did not fall. He was definitely less ataxic

By the thirteenth day, pinprick recognition had returned to the upper and lower extremities except for a small triangular area on the outer aspect of the right foot Vibration perception was present in the upper limbs and was felt in the iliac crests but remained absent in the legs The feeling of numbness was less marked. The Romberg test showed a little swaying

On the twenty-fourth day of treatment, vibration sense was first perceived in the left patella and the tibia but remained absent on the right Numbness was slight Plantar reflexes gave a normal flexor response The knee jerks were more active, and the right ankle jerk was present There was only an occasional swaying in the gait, and the Romberg test was negative

By the thirty-third day, vibration sense was barely perceptible in the tibia and external malleolus of each leg Pinprick perception, position sense, and plantar reflexes were normal. At this time the patient walked quite well. His appetite was good, and he had gained 4 pounds in weight

Reticulocytes rose to 9 per cent on the eighth day following treatment with vitamin B_{12} On the fourteenth day the reticulocyte count was 3 2 per cent. The red blood cell count was 5,100,000 per cu. mm. and hemoglobin 15 Gm per 100 cc on the twenty-ninth day

On December 21, one hundred eight days after therapy was started, a complete hemogram showed normal findings Hemoglobin was 15 5 Gm. per 100 cc , red blood cells 5,670,000, white blood cells 8,840, volume of packed red blood cells 48 per cent, color index 0 95, mean corpuscular volume 84 cubic microns, mean corpuscular hemoglobin 27 micrograms, and mean corpuscular hemoglobin concentration 32 per cent. At this time the patient felt well, had an excellent appetite, and weighed 140 pounds There was no further change in the neurologic examination

Comment

It would appear that folic acid therapy, although apparently well borne by the patient, failed to prevent glossitis and the progress of serious gastrointestinal symptoms. Although no severe anemia occurred, evidence of macrocytosis persisted. After about one year and a half of treatment with folic acid signs of combined system disease appeared The neural changes remained minimal for two and one-half months, then progression was so rapid that the patient became completely incapacitated within a period of ten days. After folic acid had been stopped for four days and small amounts of liver extract

given, the glossitis improved, but the neural symptoms were unchanged.

Following the administration of vitamin B_{12}, there was dramatic neurologic improvement, and the gastrointestinal disturbance was completely relieved. A reticulocytosis was obtained, and the blood values rose to normal. This improvement was maintained over a period of one hundred eight days. No sensitivity to the treatment could be observed

The response to vitamin B_{12} obtained in this patient was certainly similar to that observed regularly in the treatment of cases of pernicious anemia with liver extract. Although complete reversal of the neural changes was not obtained, a return to normal of the disturbances of more recent onset was effected * As with liver extract therapy, intensive treatment over a period of many months may be required for maximal neurologic recovery Effectiveness of vitamin B_{12} in the treatment of pernicious anemia was demonstrated in this patient by the production of a state of well-being and by relief from the hematologic, gastrointestinal, and neural disturbances

* Dosage of vitamin B_{12} was kept at a minimum because of difficulty in obtaining this material One wonders whether the neurologic response would have been enhanced by increased amounts of vitamin B_{12} comparable to the present system of treatment with liver extract.

Summary

A patient with pernicious anemia acquired a refractory sensitivity to all forms of liver extract and was being maintained on adequate dosage of folic acid with a fair but not perfect hematologic response He developed severe gastrointestinal symptoms and a rapidly progressive subacute combined degeneration of the spinal cord. He was treated with crystalline vitamin B_{12} which produced, without reaction, marked improvement of the combined system disease, relief from the gastrointestinal symptoms, and normal blood values

It is hoped that vitamin B_{12} will be the answer to allergic manifestations complicating the treatment of pernicious anemia with liver extract and that it will prove to be the hematopoietic principle of liver extract effective in maintaining a remission of the complete pathologic process in this disease.

NEW YORK STATE MEDICAL LIBRARY

Doctors of New York State are reminded of the facilities of the State Medical Library at Albany They are invited to visit, telephone, or write to the Library where a trained staff of librarians will take care of their requests

Upon request, a copy of the regulations will be sent, which lists the services of the Library, including the compiling of bibliographies, sending material on specific subjects, or filling requests for definite book or journal references

A collection of over 57,000 books and the receipt of approximately 600 current medical journals enable the Medical Library to offer a real service to the doctors of the State

Letters may be addressed to Miss Maude E Nesbit, Librarian, New York State Medical Library, Education Building, Albany 1, New York.

CHRONIC THYROTOXIC MYOPATHY

SEYMOUR H RINZLER, M D , and MAXWELL J MARDER, M D , New York City

(From the Medical Service of Beth Israel Hospital)

CHRONIC thyrotoxic myopathy is a disease of muscle associated with hyperthyroidism It usually occurs in men past middle age and is characterized by loss of weight and marked weakness, fatigability, wasting, and coarse fasciculation of the skeletal muscles There is no pyramidal tract involvement The symptoms of muscle weakness dominate the clinical picture, and the evidences of thyrotoxicosis are, in many instances, masked Thyroidectomy or medical therapy with the thioureas is followed by recovery Eighteen such cases have previously been reported in the literature [1 2]

The importance of reporting another case of chronic thyrotoxic myopathy and reviewing its clinical findings lies in the fact that this disease represents one of few instances of chronic muscular disorders associated with atrophy which is amenable to therapy The masked hyperthyroidism and the necessity for evaluation of the muscular atrophic state makes this an interesting clinical problem

Case Report

S L , a seventy-two-year old white man, was first seen in the medical clinic on July 9, 1947, with a three-month history of exertional dyspnea accompanied by substernal, nonradiating, pressing pain of five minutes duration relieved by rest Orthopnea and nocturnal dyspnea were also present He also complained of substernal heartburn of two to three months duration not related to meals and occurring mainly at night Because of this latter complaint, a milk diet was recommended A subsequent loss of about 50 pounds in the three months prior to examination at the clinic was attributed by the patient to strict adherence to this diet Three years ago, the patient had suffered a "stroke" involving the left upper and lower extremities

Physical examination revealed a poorly nourished patient who weighed 116 pounds. The tongue was beefy The neck veins were moderately distended The thyroid gland was not palpable The chest was barrel-shaped with a few moist rales at the base of the right lung posteriorly The heart was not enlarged There were no murmurs, and the ventricular and pulse rates were equal at 76 beats per minute The rhythm was regular The blood pressure was 130/74 The liver was enlarged two fingers beneath the costal margin. There was a 1 plus pretibial and ankle pitting edema bilaterally

A diagnosis of arteriosclerotic heart disease with angina of effort and congestive heart failure was made No definite gastrointestinal diagnosis could be made, and the roentgen examination of the stomach, duodenum, and small intestine was normal. An x-ray plate of the chest on July 10, 1947, revealed signs indicating healed tuberculosis in the left upper lobe extending down to the second rib anteriorly The nodes of both hili showed calcified deposits The heart was normal in size and shape An electrocardiogram revealed evidences of myocardial damage The rhythm was regular, rate 100

The patient was digitalized and given 1 to 2 injections of 1 cc of Mercuhydrin intramuscularly per week. His weight fell to 105 pounds by August 21, 1947, but because his general condition did not improve, he was admitted to the Beth Israel Hospital on this date On admission, the ventricular rate was noted to be 136 beats per minute and irregular with a pulse deficit of 6 beats per minute The heart was enlarged with the point of maximum impulse in the sixth intercostal space at the anterior axillary line There were no murmurs. The blood pressure was 160/80 The venous pressure was 13 cm. of water The circulation times were normal with a calcium gluconate time of nineteen seconds and an ether time of nine seconds The combination of marked loss in weight, paroxysmal auricular fibrillation, tremor of the outstretched hands, and normal circulation times prompted the diagnosis of a masked hyperthyroidism. The basal metabolic rate was found to be plus 78 per cent with a blood cholesterol of 88 mg per cent. A gastrointestinal series revealed an apple-sized hiatus hernia. A barium enema was negative

On September 10, 1947, the patient was placed on a daily dose of 150 mg of propyl thiouracil. By September 26, the basal metabolic rate had fallen to plus 48 per cent, the blood cholesterol had risen to 167 mg per cent, and the weight was 114 pounds Repeat electrocardiograms showed a variation of the rhythm between normal sinus and auricular fibrillation The patient was discharged to the Thyroid Clinic on September 27, 1947

In the Clinic the maintenance dose of propyl thiouracil was increased to 200 mg daily on September 29, 1947, and then to 300 mg daily on October 27, 1947 By November 12, his basal metabolic rate was plus 19 per cent, and his weight was 126 pounds

He did not appear for his next monthly visit, and it was learned that in November he had reported to the Orthopedic Clinic because of pain and marked limitation of motion of the right shoulder of three weeks duration He stated that he first noted that the contours of his shoulders and arms were becoming flattened about eight months ago and that this had been overlooked during his first admission

Physical examination revealed marked limitation of motion of the right shoulder joint with atrophy of the muscles of the shoulder girdle and upper arm bilaterally, the right being greater than the left. Gross fasciculations of the right triceps were noted. The forearm and hand muscles were normal. There was no atrophy of the muscles of the pelvic girdle or muscles of the lower extremities. The facial musculature appeared wasted, but the absence of dentition made the diagnosis of atrophy of the cheek muscles difficult The deep reflexes of the upper extremities were somewhat hyperactive with a bilaterally positive Hoffman. Knee and ankle jerks were normal The Babinski was negative The abdominal and cremasteric reflexes were present and active Roentgenograms of the cervical spine showed considerable kyphosis, slight spondylitis, and a moderate degree of osteoporosis.

Roentgenograms of the shoulder girdles both forearms, and wrist joints showed moderate osteo-

porosis. The cause of the muscular atrophy was not entirely clear to the neurologist, and the patient was readmitted to the Hospital on January 6, 1948, for electrical studies of the muscles He had not taken any propyl thiouracil for two months

Physical examination this time revealed a thin, chronically ill white man There was a slight stare to the eyes with no lid lag and no weakness on convergence The fundi showed slight narrowing of the arterioles The disks were normal. The ears revealed an old perforation of the left tympanic membrane The right drum was normal. There was a diffuse hyperplasia of the thyroid gland A nodule was palpated in the left lobe On talking, the veins of the neck became prominent, and the thyroid gland itself appeared to bulge The voice was hoarse The physical examination of the heart showed no change from that of the previous admission Auricular fibrillation was present, with a ventricular rate of 120 and a pulse rate of 116 Reaction of the muscles of the right shoulder to galvanic and faradic current was normal indicating no reaction of degeneration No change in the hand grip or elevation at the shoulder was noted after subcutaneous injection of 1 5 mg of prostigmine

The diagnosis of hyperthyroidism with chronic thyrotoxic myopathy was made The basal metabolic rate on admission was plus 91 per cent, and the patient was started on 200 mg daily of propyl thiouracil. The fasting blood sugar was 92 mg per cent, the blood nonprotein nitrogen 41 mg per cent, the blood carbon dioxide 57 1 volumes per cent, the blood acid phosphatase 4.6 units, the blood calcium 10 0 mg per cent, and the blood phosphorus 3 6 mg per cent A Sulkowitch test revealed greater urinary calcium excretion than normal. A twenty-four-hour urine specimen showed spontaneous creatinuria of 319 mg

A repeat basal metabolic rate during this hospital admission was plus 79 per cent. Because of this the dose of propyl thiouracil was raised to 300 mg daily His weight had risen to 124 pounds from an admission weight of 117 pounds He signed out without permission after he had refused a biopsy of his muscles Within a month following his discharge, his weight had risen to 134 pounds while his basal metabolic rate remained elevated at plus 62 per cent On February 20, 1948, he was started on 300 mg daily of cyclopropyl thiouracil. By March, 1948, the patient stated that he felt stronger than at any time since the onset of his illness However, no clinical change in the musculature was yet apparent

The patient was followed periodically during the next year in both the Cardiac and the Thyroid Clinics His medication was continued at 300 mg daily of cyclopropyl thiouracil until May, 1948, when he was started on 100 mg three times daily of cyclohexylmethylthiouracil * This was increased to 600 mg daily in divided doses in October, 1948 The basal metabolic rates during 1948 showed a gradual diminishing level and by February, 1949, it was plus 24 per cent His weight at this time was 136 pounds The range of motion in his right shoulder improved gradually over the year until it almost equalled the range of motion of the left shoulder Clinically there was an increase in strength and a filling of the flattened contours of the shoulders and upper arms

Comment

Starling, Darke, Hunt, and Brain have classified the myopathies associated with hyperthyroidism as follows [3]

1 Exophthalmic ophthalmoplegia.
2 Thyrotoxic myopathy
  (*a*) Acute thyrotoxic myopathy
  (*b*) Chronic thyrotoxic myopathy
  (*c*) Thyrotoxic periodic paralysis.
3 Myasthenia gravis and thyrotoxicosis

The case reported represents an instance of chronic thyrotoxic myopathy It was first described by Bathhurst in 1895 [4] The disease is characterized by marked muscular atrophy which is symmetric and most frequently involves the shoulder and pelvic girdles McEachern and Ross and Thorn and Eder have summarized the 18 cases reported in the literature [1,2] The distribution according to sex shows 13 men and five women The age range is from twenty-two years to sixty years with an average of forty-seven years Our patient is the oldest reported instance The duration of symptoms was between seven weeks and three years with an average of eight months Thyroid enlargement was present in 12 of these patients Exophthalmos was found in eight of the patients Fasciculations were found in ten of the patients The basal metabolic rate varied between plus 14 and plus 100 per cent in 16 instances in which it was taken, with an average of plus 44 per cent All but one of the patients (Case 3 of McEachern and Ross) showed muscular wasting, and this included face and temple, shoulder girdle, small muscles of the hands, and calves [1] In most instances, the musculature of the shoulder girdle and upper extremities was involved The clinical symptoms were characterized by progressive weakness and fatigue, weight loss, and muscular twitching Occasionally, there was associated nervousness and sweating Tremor of the outstretched hand was present in 16 of the patients. A blood cholesterol was taken in seven instances. They varied between 83 and 186 mg per cent with an average of 147 mg per cent

Prostigmine, given in the dose of 1 5 mg subcutaneously, had no effect on the muscular strength in four of the cases reported by Thorn and Eder This was likewise our finding This conclusion is in contrast to that of McEachern and Ross who demonstrated the return of a myogram toward normal after intramuscular injection of 1 mg of prostigmine with concomitant improvement in muscle power, the patient being able to get out of bed and walk for several hours Spontaneous creatinuria (mg per twenty-four hours) occurred in five instances out of six in which the test was done Impaired retention of ingested creatine occurred in two instances in which the test was done, the figures being 62 and 28 per cent [2] Recovery or marked improvement is reported in 14 cases The other four died, two being due to respiratory paralysis. Thorn and Eder also studied the urinary 17-ketosteroids [2] Two men patients with gonadal atrophy had excretions of 8 3 and 8 6 mg per twenty-four hours, respectively The normal for men is 12 to 20 mg One woman patient excreted 2 7 mg of 17-ketosteroid per twenty-four hours, whereas another woman patient excreted

* Supplied by Winthrop-Stearns Inc.

9 4 mg per twenty-four hours The normal for women is 9 15 mg Our patient excreted 14 6 mg

The treatment consists of therapy directed at the thyrotoxicosis which is surgical or chemotherapeutic by the use of the thioureas In cases where the urinary 17-ketosteroid is low, methyl testosterone orally or testosterone propionate parenterally is given

The muscular pathology includes marked atrophy with the replacement of muscle fiber by fibrous connective tissue and infiltration of lymphocytes.

Summary

Clinical findings in a seventy-two-year-old white man with chronic thyrotoxic myopathy along with a review of 18 such cases found in the literature are reported. This disease is characterized by loss of weight, weakness, and wasting of the skeletal musculature The associated hyperthyroidism is frequently masked

Therapy for this muscular disorder is aimed primarily at the treatment of the thyrotoxic state

STUDY OF SLEEPING BABIES OFFERS HOPE TO PARENTS

Parents who pace the floor with their infants during the early hours can look with hope to a new research project at the University of Chicago Scientists there have a $10,000 grant from *Swift & Co* for a study of the sleeping habits of babies

The scientists will seek to determine whether a 25 per cent increase in protein content of the infants' diet will induce a more restful slumber The babies will have specially prepared meats An apparatus attached to the crib will record every movement made by the child, indicating the soundness of his sleep

Infants from six to twenty-six weeks old will be observed Scientists said practically no studies of sleep characteristics of this age group have been made to date. They added that distraught parents might receive some welcome news this fall —*New York Times, August 7, 1949*

WARNS OF TREND TO CENTRALIZE CHARITY AND WELFARE ACTIVITIES

"Can the Red Cross Survive?" the *Journal of the American Medical Association* asks in an editorial in the July 30 issue Discussing a speech by Basil O'Connor, New York, president of the American National Red Cross, to the 24th annual convention of the organization recently, the editorial says Tracing the trends of development and action of voluntary association for the alleviation of human suffering, he inquired as to whether or not this is an outmoded and inefficient method

"Must we consider the possibility," he asked, "that a compulsory system of humanitarian activity under state control is the best solution?" Mr O Connor considered that the expansion of governmental authority has taken place in the main because of the failure of private individuals or private groups to do certain jobs which society feels must be done "Modern fascist and communist dictators," said Mr O'Connor, "have risen to power on the ruins of the political or religious groups, the trade unions, and the fraternal orders." They had to destroy these in order to clinch their power over the masses Totalitarian systems of government dare not risk the existence of free and spontaneous action such as that resulting from voluntary associations "In a democracy voluntary associations must play an essential role," warned President O'Connor, "in preserving freedom in a society which our industrial technology is driving into an ever greater centralization A part of the mission of the Red Cross is to protect free association because it is vital to free society

Pursuing this theme, the president of the American Red Cross sounded a warning against the tendency to remove from voluntary associations the spirit of individualism that animates them in their work "Some high-minded citizens today are taking another view They believe that the collection of funds for health and welfare purposes should be centralized, that individual organizations should lose identity, and that private humanitarian activity should thereby be put on a consolidated and allegedly more efficient basis The motives behind this proposal may be good, but its proponents overlook the dangers inherent in its denial of the fundamental philosophy "

WELL WATER METHEMOGLOBINEMIA

I Robert Wood, M D , Plattsburg, New York
(*From the Department of Pediatrics, Champlain Valley Hospital*)

FOR the past few years attention has been given to cyanosis in infants under three months of age who consume well water of high nitrate content Cases of methemoglobinemia attributable to the consumption of such well water have been reported from the midwest, from Virginia, from Canada, and from Belgium.[1–6]

The pathogenesis of this condition has been ascribed commonly to an immaturity of metabolism in young infants by which nitrates are not successfully broken down into ammonia. Nitrites are formed which combine with hemoglobin to form methemoglobin giving rise to apparent cyanosis. However, the recent work of Cornblath and Hartmann has shed further light on the mechanism[7] These authors have demonstrated that the ingestion of nitrates will produce methemoglobinemia only in infants who have a low gastric acidity (pH of 4 0 or higher) This low acidity permits the growth of several micro-organisms which are capable of reducing nitrates to nitrites in the upper gastrointestinal tract The absorption of this nitrite into the blood stream produces methemoglobinemia. The normally high values of gastric acidity in adults explain why they never exhibit cyanosis from drinking well water with high nitrate content

The following is the first case reported in New York State

Case Report

A female infant, aged seventeen days, was brought to the family physician in April, 1949, because of gradual onset of generalized cyanosis of several hours duration The doctor made a careful physical examination and found no obvious cause for the cyanosis He admitted the infant to the hospital and ordered continuous oxygen therapy Within twelve hours the cyanosis had gradually disappeared The physician asked the author to examine the baby prior to discharge from the hospital.

The infant, weighing 8 pounds at birth, was a normal full-term spontaneous delivery She was fed a powdered milk formula and gained weight progressively The formula consisted of 12 tablespoons of powdered milk and 24 ounces of water, she consumed 3 to 4 ounces every four hours. The powdered milk was diluted with well water

The family history is remarkable in that a sister had cyanosis and mild generalized convulsions at the age of two weeks These disappeared after the mother changed the formula of powdered milk diluted with well water to cow's milk. Another sibling was fed powdered milk diluted with well water and experienced no obvious difficulties

I first saw the patient the day after admission to the hospital, and at that time physical examination revealed no abnormalities There were no respiratory or cardiac abnormalities The baby was alert and responsive, with good color, cry, and activity The mother was extremely anxious to take the baby home and was allowed to do so She was instructed to bring in a sample of the well water from which the formula was made and to use city water in preparing the infant's formula until a report of the water analysis was received

The well water was analyzed by the laboratory of the New York State Department of Health at Albany, New York The nitrate concentration was found to be 60 parts per million, six times the generally accepted upper limit of safety and in excess of that which has been reported to have caused cyanosis in young infants Repeated analyses of water from the same well revealed the nitrate content to be quite variable but consistently high and well above the safe limit

The infant has had no further attacks of cyanosis since changing the source of water supply

Comment

When a physician encounters cyanosis in a young infant, especially one under three months of age, who consumes well water and presents no other obvious physical abnormalities, the diagnosis of well water methemoglobinemia should be considered The condition is probably of frequent occurrence, most cases being misdiagnosed as heart, lung, or thymus abnormalities Boiling the water does not reduce the nitrate content, if anything, this are concentrated by the evaporation of water If well water must be used, a whole milk formula would, of course, be preferable to one using evaporated milk, and especially to a powdered milk formula. Review of reports on well water analyses, made over the past years by the New York State Department of Health, indicates that significantly high nitrate levels are not commonly encountered in this State[8]

Extensive laboratory studies are not necessary for diagnosis Analysis of the water for nitrate content is sufficient Blood studies can be undertaken to demonstrate methemoglobin spectroscopically Grossly, the venous blood is chocolate brown in color

In early mild cases, the only treatment necessary is a change in the water used, although occasionally oxygen therapy is indicated In the more severe cases, 1 per cent methylene blue, 0 5 to 1 0 cc intravenously, or 100 to 200 mg of ascorbic acid intramuscularly will rapidly alleviate the condition The prognosis of severe or untreated cases is bad In Iowa, for example, 10 per cent of the patients died[1]

Summary

A case of methemoglobinemia attributable to the consumption of well water containing a high concentration of nitrate is reported Physicians should be on the lookout for similar cases

MASSIVE INTESTINAL RESECTION FOR REGIONAL ILEITIS

MANDEL WEINSTEIN, M D , and MORTON ROBERTS, M D , Jackson Heights, New York

WITHIN the past few years, many reports have appeared in the surgical literature describing the successful removal of large segments of bowel The three most extensive intestinal resections on record were performed as emergency operations for embolism of the superior mesenteric artery, where the presence of gangrenous intestine made the operation of massive resection imperative [1-3] On the other hand, most of the elective wide resections have been accomplished for regional ileitis, but none has been as extensive as the two cases of ileitis described here

The purpose in reporting our two cases of massive resection for regional ileitis is twofold (1) To demonstrate the feasibility of such wide intestinal resections and (2) to record the apparent lack of serious functional disturbances in both patients from whom, at operation, most of the small and large intestinal tract were removed Both patients have returned to their usual occupations within a short time after operation and at present are enjoying excellent health

Case Reports

Case 1 —F B , a white man, forty-seven years of age, was admitted to the Boulevard Hospital on February 2, 1947, complaining of abdominal pain and distention

The significant facts in his past history were as follows Six years prior to admission, in 1941, the patient was operated upon for appendicitis, but at operation the terminal ileum was involved A short-circuiting operation was done, anastomosing the ileum to the sigmoid An uneventful operative recovery resulted, and he was symptom-free for two years In 1943, periodic attacks of right lower quadrant pain developed, lasting for three hours, occurring about every three weeks and associated with nausea and constipation The attacks would end with diarrhea, and the pain would then disappear Five months before the present admission he suffered a severe attack, and for a period of almost three months he had similar attacks daily He was admitted to a New York hospital on January 7, 1947, where, after several days of observation and preparation, a laparotomy was performed At operation there was noted "tremendous dilatation and distention of the terminal ileum Nothing was excised and another ileosigmoidostomy was performed excluding sixteen inches of ileum" He recovered sufficiently to be discharged from this hospital, but because of a progressively enlarging abdomen, fever, nausea, vomiting, and obstipation, he presented himself to us for hospital readmission four days after he left the other institution

Upon admission the patient appeared extremely wasted and thin, but the abdomen was markedly distended and tense Large, overdistended loops could be distinguished easily through a thin overlying abdominal wall He was in great pain, and breathing was restricted because of the extreme distention The temperature was 100 2 F , respirations 20 per minute, and pulse 94 per minute and regular The blood pressure was systolic 104 mm mercury, diastolic 50 mm mercury Laboratory studies disclosed essentially negative urinalyses, hemoglobin 12 Gm , erythrocytes 3,420,000 per cu mm , white blood cells 7,800 per cu mm., and polymorphonuclears 68 per cent A Miller-Abbott intestinal tube was inserted and within a few hours was located in the duodenum

After two weeks of intestinal decompression, transfusions, and other supportive therapy, the patient's condition was somewhat improved. The obstruction was slightly relieved, and patency of the bowels was again established However, intermittent abdominal cramps persisted, even though the patient was able to be ambulatory The abdomen was still greatly distended, chiefly in the upper half The evening temperatures reached 102 to 103 F consistently It became apparent that one could not hope to overcome completely such severe obstruction by conservative means alone

On February 26, 1947, after consultation with Dr Asher Winkelstein who studied this patient for many months, a hurried exploratory laparotomy for intestinal obstruction was done under general anesthesia, using sodium pentothal, nitrous oxide gas, and curare However, the operative findings were not only those of simple mechanical obstruction but also the end results of advanced chronic inflammation of the intestines No amount of mechanical intraluminal decompression could reduce the caliber of such distended intestinal loops, whose walls were rigid and stiffened by the fibrous tissue changes of longstanding chronic inflammation The contiguous mesentery was similarly involved and also required excision All of the small bowel (except the proximal jejunum for a distance of two to three feet from its beginning at the root of the transverse mesocolon) was distended, thickened, and indurated to as much as 4 and 5 inches in diameter The cecum, ascending colon, and transverse colon were similarly distended with gas and large hard fecal masses Coils of intestines were adherent to an old laparotomy scar Other loops with an ileosigmoidostomy were involved in a large inflammatory process, all of which was fixed and immobilized Fibrinous exudate covered many loops of intestine There were several constricting adhesions and firm bands, one of which closed the sigmoid lumen The poor condition of the patient did not warrant a long surgical procedure Therefore, several adhesions were severed, and a mushroom catheter was inserted into a large distended loop of small intestine, with its exit through a right lower stab wound incision of the abdominal wall Postoperatively, the patient showed some improvement, and decompression of the intestinal tract was enhanced somewhat by the draining ileostomy tube The Miller-Abbott tube also continued to function well, even though it never passed beyond the proximal jejunum Nevertheless, all these procedures did not reduce the size of the distended abdomen appreciably, and the high septic temperatures persisted In spite of the extreme wasted condition of the patient, further surgery was decided upon It was apparent that his only hope for recovery from this disease depended upon the excision of all involved loops of intestine and mesentery

On March 20, 1947, through a right rectus incision the abdomen was again opened The entire ileum

was found to be reddened, edematous, thickened, and covered with fibrinous exudate throughout Some intestinal loops were still distended up to 4 and 5 inches in diameter while others were collapsed The ileostomy tube was found in an area of collapsed loops, evidently the region it decompressed The ileosigmoidostomy performed in 1941 showed considerable evidence of spread of the inflammatory process across the anastomosis so as to involve a large segment of sigmoid and part of the descending colon A blind end of the ileum was seen which evidently represented the exclusion operation performed a few months previously at another hospital The cecum, ascending colon, hepatic flexure, and part of the transverse colon up to the splenic flexure were dilated, inflamed, and covered by fibrinous exudate Many adhesions fixed the loops of ileum, cecum, and ascending colon to the abdominal wall anteriorly and laterally The mesentery of the terminal small intestine was exceedingly thickened, edematous, and, together with many loops of intestine, formed a firm mass the size of a grapefruit

The operative procedure consisted of sectioning the proximal jejunum at a level where normal jejunal tissue was found, or at about a distance of two feet from the duodenojejunal junction This proximal end of jejunum was closed with three layers of silk sutures Then the following portions of intestine were removed with their involved thickened mesentery remaining jejunum, ileum, cecum, ascending colon, hepatic flexure, and transverse colon up to the splenic flexure The involved loops of intestine with their attached thickened mesentery were so large that the excised viscera were removed in three sections Each section of excised intestine filled a large round white enameled operating room basin to overflowing A side-to-side anastomosis was then made between the distal portion of the remaining two feet of jejunum and the left transverse colon Silk suture technic was used throughout Because of the extreme distention and inflammatory condition of the left colon in the area of anastomosis with the ileum, 8 inches of diseased sigmoid and descending colon were mobilized and removed by the Rankin double-barrelled colostomy method The crushed cut ends of the left colon with attached clamps were delivered outside of the abdomen through a separate left lower abdominal wall incision, since this procedure consumed very little time At the end of this massive resection, it was possible to peritonealize most of the denuded areas of the posterior abdominal wall The incision was closed with interrupted "far and near" wire sutures, grasping peritoneum, muscle, and fascia in one layer

On the following day the crushing clamps on the left colon were removed, and subsequently gas and liquid stool escaped The stool pouring from the colostomy now lacked the benefit of the water-absorbing surface of the cecum, ascending, and transverse colon After six days, a special effort was made to suppress this profuse watery drainage by crushing the intervening spur Intravenous amino acids, saline, glucose, and transfusions were used in generous quantities, as well as large doses of penicillin (100,000 units every three hours) Within twenty-one days the spur was completely crushed, and the fecal stream was deflected downward with resulting formed stools per rectum The patient's general condition immediately improved, and he began consuming an enormous quantity of food Not only did he eat several portions at each meal, but he ate heartily between meals On the fifteenth postoperative day, a large quantity of foul-smelling pus broke through the operative wound, and the temperature fell to normal limits where it stayed until his discharge from the hospital on April 19, 1947

One month later, on May 20, 1947, the patient was readmitted for closure of the colostomy This was easily accomplished under general anesthesia, three layers of black silk sutures were used. The patient was discharged from the hospital four days later

Pathology Report—Examination of the excised intestine revealed extensive serosal thickening, general muscular hypertrophy, abundant friable exudate, and distortion of the serosa by scarring Pathologic diagnosis was chronic and subacute nonspecific ileitis and colitis

Postoperative Course—This patient has enjoyed unusually good health since his discharge from the hospital His appetite has been excellent, and his weight at present is 153 pounds, a gain of about 60 pounds since operation He is completely free of pain and abdominal discomfort and works as a carpenter eight hours a day The stools are loose and sometimes semisolid They number four to five per day and one during the night This may account for his more than average thirst The color varies from normal to lighter than normal On November 24, 1947, chemical analysis of his stools revealed total fat 11 9 Gm. per cent, fatty acids 5 0 Gm. per cent, neutral fat 6 9 Gm. per cent, total nitrogen 13 6 Gm per cent, microscopic—crystals, no fat, occasional vegetable cells, occasional muscle fibers These findings are consistent with normal bowel function

The patient notices much gas and tries to keep his bowels constipated by dieting He eats almost everything but omits such foods as fresh fruits which, he believes, encourage loose stools and gas. Examination of his abdomen reveals moderate distention in the lower half Here the few feet of intestine remaining are readily seen through the skin as considerably dilated Peristalsis is also evident Recent roentgenographic studies confirm the presence of the marked distention of the jejunum and colon left behind Such distention and increase in the size of the remaining intestine may be an attempt to compensate for the large amount of missing intestine

Comment—For a case of extensive regional ileitis of six years duration, an operative procedure was performed resulting in the removal of all small intestine except two feet of jejunum, all of the ileum, cecum, ascending colon, hepatic flexure, transverse colon up to splenic flexure, and 8 inches of sigmoid. The spread of this disease across an ileosigmoidostomy anastomosis indicates only one of its bizarre characteristics A one and one-half year follow-up of this patient reveals good health, complete freedom from abdominal pain, and a minimum disturbance of intestinal function The postoperative compensatory mechanism of intestinal dilatation is evident, a condition similar to that of the distended jejunum which follows subtotal gastrectomy and the dilated common bile duct after gallbladder removal.

Case 2—J V, a white man, twenty years of age, was admitted to the Boulevard Hospital on August 20, 1947, complaining of abdominal pain for six years He was operated upon three times within the previous three years for his present condition The important facts in his past history were as follows In September, 1945, a laparotomy was performed at which time a left abdominal incision was made Nothing was done, and the findings were

reported as regional ileitis One week later at the same institution his appendix was removed through a McBurney incision for persistent abdominal pain In April, 1947, four months before this present hospital admission, an attempt was again made to resect the involved intestine, but this was discontinued soon after opening the abdomen His parents were then informed that it would be useless to make further attempts to eradicate his disease by surgery

The abdominal pains were located always in the right lower quadrant, dull in nature, never doubling him up, even though he obtained relief by bending forward. For a few weeks prior to admission, the pain was constant day and night, occasionally interfering with his sleep There was no associated nausea or vomiting The stools were mucoid in character, never contained blood, and there had been no diarrheal urgency or cramps Sometimes he had two or three loose stools daily Since this illness the patient had a loss of appetite, fever, weakness, and easy fatigue Within the year prior to admission he lost 13 pounds, with his weight upon admission being 117 pounds

Upon physical examination he presented the picture of a wasted individual, with sunken cheeks and dried skin. The abdomen showed three operative scars, one in the left upper area, another over McBurney's point, and the most recent one in the lower right rectus region There was a large, hard, firm mass to the right of the midline occupying the entire length of the abdomen from the costal margin to the iliac region This mass was fixed, immobile, and only slightly tender

The temperature upon admission was 102 F , the pulse 100 per minute and regular, and the respirations 20 per minute The blood pressure was systolic 90 mm. mercury and diastolic 50 mm. mercury The blood count was erythrocytes 4,010,000 per cu mm., hemoglobin 12 Gm , leukocytes 23,300 per cu. mm., polymorphonuclears 95 per cent, lymphocytes 4 per cent, and monocytes 1 per cent The urinalysis was essentially negative The total blood chlorides were 592 8 Gm. per cent, the total protein 6 2 Gm. per cent, albumin 3 9 Gm. per cent, globulin 2 3 Gm per cent A thorough roentgenologic study by Dr Samuel Feuerstein summarized the diagnosis preoperatively as "regional ileitis involving several loops of ileum, multiple fistulous formation, walled off abscess with induration of cecum and ascending colon" (Fig 1)

After five days of preliminary treatment with blood transfusions, amino acids intravenously, intestinal decompression, penicillin, and sulfasuxidine, an abdominal operation was performed under fractional spinal procaine anesthesia supplemented with sodium pentothal. Upon excising the right rectus scar and approaching the peritoneum it became evident that the large abdominal mass was thoroughly adherent to the whole of the abdominal wall anteriorly Posteriorly, the mass occupied the right lateral gutter and extended over to the left side of the abdomen in front of the vertebral column. The mass was completely covered over by and adherent to the omentum, with firm attachments to the urinary bladder, sigmoid, rectum, and proximally to the liver In fact, there was fixation of the mass to almost every structure and part of the abdominal cavity

After sharp dissection of this smooth mass with its enveloping omentum from the anterior abdominal wall, it was evident that the tumor mass contained all the loops of the small intestinal tract and right

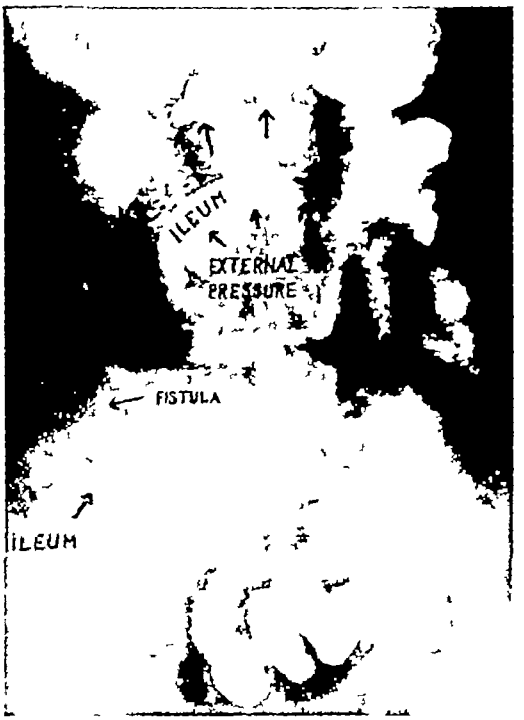

FIG 1 Preoperative roentgenogram demonstrating regional ileitis involving several loops of ileum, multiple fistulous formation, walled-off abscess with induration of cecum and descending colon

colon The omentum formed a firm covering sheet for all of this Further examination revealed that the mesentery of the ileum and jejunum was exceedingly thickened by chronic inflammation, and at the terminal ileum it reached a width of 3 to 4 inches At this point a greatly thickened and distended cecum and ascending colon were found adherent to these structures and comprised a large part of the abdominal mass Careful inspection revealed that all of the small intestine was involved except $1^1/_2$ to 2 feet of the jejunum, as measured from its origin at the duodenojejunal junction at the ligament of Treitz Only the transverse colon, descending colon, and sigmoid were free of disease and in good condition. The duodenum was buried in many adhesions, but no ulcerations were seen or palpated The duodenal deformity suspected in the x-ray pictures may be accounted for by adhesions of the duodenum

Procedure.—With much difficulty, an exploratory opening was found in the adherent omentum, and the mass was slowly dissected in its entirety from the right abdominal wall anteriorly and laterally and from the right gutter posteriorly This step succeeded in mobilizing the mass in its right lateral aspect. Adhesions to the rectum and sigmoid were also separated. The dissection was now shifted to the transverse colon which was sectioned at the junction of its middle and right thirds The mesentery and peritoneal attachments of the dissected

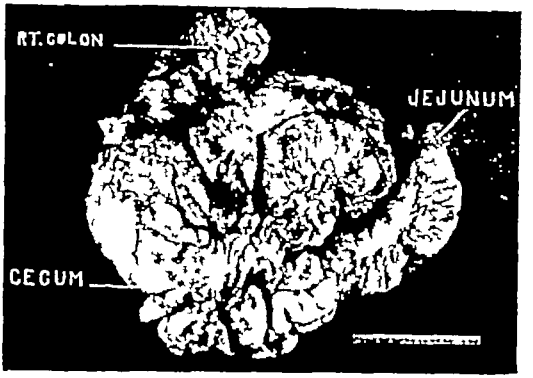

FIG 2 Specimen of jejunum, ileum, cecum, ascending and right colon removed en masse with large abscess due to perforation Of the small intestine only the duodenum and 1½ feet of jejunum were left behind Of the large intestine only the left colon was spared

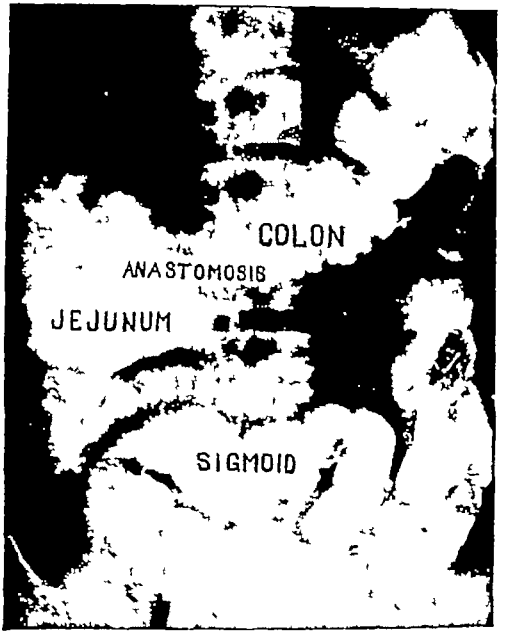

FIG 3 Postoperative colonic roentgenogram showing the following well-functioning anastomosis, enormous dilatation of remaining 1½ feet of jejunum to compensate for excised areas of intestinal tract, and general absence of barium-filled intestinal loops

colon were freed from above downward towards the cecum The next operative step was directed to the proximal jejunum where the jejunal intestine was sectioned 18 inches from its beginning at the ligament of Treitz An attempt was now made to remove all diseased jejunum and ileum down to the cecum by incising and ligating the entire mesentery of the small intestine from above downward In the same manner all remaining posterior attachments and mesentery of the colon were sectioned, thus lifting the entire intestinal mass away from the posterior abdominal wall. The right ureter and spermatic vessels were looked for and identified on the posterior aspect of the mass as it was being freed They were easily dissected off without injury The open jejunum and transverse colon ends were closed with three layers of black silk sutures, and a side-to-side anastomosis was made between the distal end of the jejunum and the left transverse colon The remaining intact mesenteries were approximated by sutures to avoid subsequent herniation, and considerable peritonealization of the raw surfaces posteriorly was accomplished Two Penrose drains were inserted down to the right gutter and pelvis Interrupted alloy steel wire "far and near" sutures were placed in the abdominal wall, grasping peritoneum, muscle, and deep fascia in one layer The operative time was three hours The patient tolerated the operation well A continuous intravenous infusion of glucose and citrated blood throughout the operation was accomplished through a cannula placed in the internal saphenous vein at the ankle The patient left the operating table in fairly good condition.

Pathology Report—Examination of the removed specimen revealed the following "Specimen consists of loops of small and large bowel adherent to each other in most instances, measuring 25 by 22 by 9 cm in its largest diameters Included with the bowel is abundant mesentery and omental tissue The ileocecal junction can be recognized after dissection of the mass The terminal ileal mesentery shows extreme induration and from the surface simulates a solid tumor However, on multiple sectioning, the lumina of the adherent loops of bowel can be recognized Of the entire mass of bowel only about 13 cm. of large bowel and 16 cm. of small bowel in the fixed state are uninvolved by deforming adhesions, and these two loops are situated at each end of the specimen The involved loops show considerable rigidity of the walls, the result of a diffuse fibrous thickening that leaves the mucosal surface relatively intact Mesenteric lymph nodes found deep within the mass are moderately enlarged. Pathologic diagnosis was regional ileitis, ileocolic adhesions, mesenteric lymphadenitis, reactive" (Fig 2)

Postoperative Course—This patient experienced an unusually mild and symptom-free postoperative course in the hospital The temperature never exceeded 100 F except for one evening, twenty-four hours after operation, when it rose to 103 F This was in sharp contrast to the preoperative period during which the temperature rose every evening to 102 F He thus demonstrated an immediate beneficial effect from the removal of the excised inflammatory tissues He was ambulatory the day after operation and discharged on the twelfth postoperative day in excellent condition with a healed wound He was followed closely for a period of fourteen months after operation and enjoyed good health The stools, which after the operation were seven to eight per day and loose, became only two a day and semisolid His weight increased from 110 pounds immediately after operation to 150 pounds The blood pressure was systolic 106 mm. mercury and diastolic 70 mm mercury Hematologic study revealed hemoglobin 11 5 Gm., red blood count 3,610,000 per cu mm, white blood count 10,300 per cu mm

Two months after the operation the following laboratory data were recorded total protein 6 9 Gm. per cent, albumin 4.6 Gm. per cent, globulin 2 3 Gm. per cent, urea nitrogen 24 mg per cent, creatinine 2 7 mg per cent, uric acid 5 3 mg per cent Stool examination showed total fat 14.6 Gm. per cent, fatty acids 3 9 Gm. per cent, neutral fat 10 7 Gm. per cent, total nitrogen 8 6 Gm. per cent microscopic—no fat, moderate vegetable cells and fibers, occasional red blood cells, occasional muscle fibers, and crystals

Moreover, the patient enjoyed perfect health and comfort and was employed full time Recent examination revealed a soft abdomen with no tenderness anywhere Abdominal examination was negative and roentgenographic studies revealed the same compensatory intestinal dilatation as the previous patient (Fig 3)

Comment—An extensive intestinal resection was made for regional ileitis involving the removal of all of the following parts of the intestinal tract the jejunum except for 18 inches, all of the ileum, the cecum, ascending colon, and the right third of the transverse colon All symptoms have disappeared, and almost no alteration of intestinal function has resulted

Summary

1 Two cases are reported of massive intestinal resection for regional ileitis, in one patient the disease had spread over an ileosigmoidostomy anastomosis to involve the sigmoid

2 The first patient had all of the jejunum removed except for the proximal two feet, together with ileum, cecum, ascending colon, two thirds of the transverse colon, and portions of the descending colon and sigmoid

3 In a second patient, 18 inches of jejunum were left behind, and the remaining jejunum, ileum, cecum ascending colon and one third of the transversus were excised

4. Both patients have little or no bowel disturbance and no impairment of their digestive functions Roentgenographic studies reveal compensatory dilatation of the remaining intestinal loops

5 Radical excisional procedures are indicated for extensive disease in chronic regional ileitis patients as the only hope for relief More recent advances in chemotherapy, newer anesthesia methods, preoperative and postoperative nutritional aids, parenteral and vitamin therapy, improved and simplified surgical technics, and early ambulation make it possible to achieve such successes

"DOCTOR JONES" SAYS—

What we call conscience—that "still, small voice" that's supposed to steer us on what's right and what's wrong—did you ever study out what it is and why? I recall a discussion over whether people were born with a conscience I don't think so I figure it's a collection of indelible memories that've been recorded in our unconscious minds, mainly in childhood They represent the youngster's understanding of experiences things that happened or were said. He did something and it got him into trouble or he was scolded, something else and he was praised. He was told that certain things were naughty The recording system is hooked up, as you might say, with a memostat In later life, when there's a question of right or wrong, it clicks automatically and recorded memories come up They're still unconscious, but they may influence the decision

The kind of conscience a person has depends some on his understanding, as a child, but mainly on the kind of people he was closely associated with They say, sometimes, 'Let your conscience be your guide" Well, with the average person, in ordinary situations, it's a fairly safe guide—certainly better than nothing But there's a lot of good people that have "overactive" consciences that, in some respects at least, are liabilities

We need to remember that most of these mental recordings were made by individuals with practically no experience in life, very little reasoning power and limited understanding of the language spoken around them. What was recorded was their interpretations of what happened or was said Very often their interpretations were wrong For example, a man I knew—his friends said he was "over conscientious" He made himself miserable for fear he'd do something wrong That reaction could've been stirred up by childhood guilt memories based on misconceptions

Keeping a conscience under control and using it to best advantage—it's some like driving a car it helps if we know how it was made and how it works Conscience or car, it still needs someone with judgment "at the wheel"—*Paul B Brooks, M D*

STEVENS-JOHNSON SYNDROME (ERUPTIVE FEVER WITH STOMATITIS AND OPHTHALMIA)

WILFRED M ANNA, M D , and W W PIERCE, M D , F A C S , Lockport, New York

(*From the Lockport City Hospital*)

IN 1922, Stevens and Johnson first reported this syndrome which, up to that time, had also been called erythema multiforme [1] It was reported as erythema multiforme of Stevens-Johnson variety, which is an entity apart from erythema exudative multiforme (Hebra) These authors introduced the disease as "a new eruptive fever associated with stomatitis and ophthalmia"

On July 23, 1948, a patient was admitted to the Lockport City Hospital suffering from a disease that was diagnosed as Stevens-Johnson syndrome, which exhibited all the classic signs of this clinical entity

Case Report

This seventeen-year-old white boy was admitted with the chief complaints of cough, sore throat, sore mouth, and swollen painful eyes with discharge. The onset of the present illness was apparently on July 18, 1948, at which time the patient complained of feeling tired He was a counselor at a boys' camp in this vicinity The following day he returned to camp and was seen by the nurse there At that time his only complaint was that "he did not feel good." He had a slight fever Two days later, on July 20, 1948, he complained of being drowsy and sleepy and ached as though he had the grippe At this time he went home Two days later, on July 22, 1948, he first developed pain and redness of both eyes with some purulent discharge, a sore mouth, a cough, and a temperature of 102 F He had been given a cathartic, aspirin tablets, and some home cough remedies A physician was called to see him that evening, and the following day he was admitted with a temperature of 104 F , a marked purulent conjunctivitis, and an extremely fetid mouth with many aphthous ulcers and bullae involving the mucous membranes The family history is essentially noncontributory other than that the paternal grandmother had asthma In his past history, he had had measles and mumps as a child but no other serious illnesses and only tonsillectomy and appendectomy operations The systemic review was noncontributory and cast no light on the present condition

Physical examination showed an apathetic, very drowsy, and acutely ill young man The conjunctivae were very injected and ecchymotic, showing a profuse purulent discharge The lids themselves were thickened and reddened with an extreme amount of discharge on the free borders with crusting The corneae were clear and presented no evidence of ulceration His nose anteriorly was essentially negative The breath was extremely fetid, the entire mucous membranes of the mouth, the linings of the cheeks, and hard and soft palate were the sites of a bullous eruption which was covered by a foul exudate beneath which were numerous aphthous ulcers. This process extended to the oropharynx where it abruptly ceased The tonsillar fossae were involved He had a loose bronchial cough. The lungs showed a few scattered rales The heart and blood pressure were normal There were no palpable masses in the abdomen Neurologic examination showed no abnormalities

Two days after admission, on July 25, 1948, he began developing a balanitis and urethral discharge together with a multiform rash on his arms and body The following day he showed more bullous lesions on the right arm which were becoming umbilicated.

The laboratory findings were as follows hemoglobin 100 per cent, red blood cells 4,900,000, white blood cells 17,300, differential polymorphonuclears 80 per cent, small lymphocytes 12 per cent, monocytes 7 per cent, and eosinophils 1 Urine was cloudy and acid with specific gravity 1 020, no albumin, white or red blood cells, sugar or casts, there were occasional amorphous deposits. The throat smear showed numerous pus cells, predominating organism was gram-negative diplococcus with no diphtheroids. In addition, the gum smear showed numerous fusiform bacilli and spirellae Gram stain of pus from the right eye showed numerous pus cells, no organisms, left eye showed numerous pus cells, no organism seen Four days after admission the white blood count had dropped to 14,200 with 54 per cent polymorphonuclears, small lymphocytes 25 per cent, large monocytes 2 per cent, and eosinophils 19 per cent

Under conservative treatment of boric acid compresses to the eyes, penicillin eye drops, and oil compresses to keep the lids from sticking, the eyes rapidly improved He was given Mapharsen 0 03 Gm first dose, 0 045 second dose, and 0 06 third dose for the spirillum infection in the mouth. Penicillin was administered at the rate of 40,000 units every three hours, and two days after admission he was given streptomycin 2 Gm for the original dose and then 1 Gm daily In view of this boy's extreme dehydration he was given one unit of plasma in addition to fluids and a supportive Sippy diet In the hospital the dermatitis began on July 25 with a few discreet macules and papules which became bullous and finally umbilicated These involved especially the upper extremities, the chest, and the neck. The urethritis and balanitis, as previously mentioned, began on July 25, 1948, with the rash Foreskin became moist and ulcerated but soon began to clear At all times the corneae remained normal and clear, although the conjunctivitis and purulent discharge were *persistent, notwithstanding all local treatments.* His temperature gradually began to subside by lysis, falling to 104 F on the second and third day after admission, 103 6 F on the third and fourth day, 102 F on the fifth day, 101 8 F on the sixth day, 101 F on the seventh, and gradually on downward to normal He was discharged on the eighteenth day

Comment

This is a typical case of Stevens-Johnson syndrome fulfilling all of their criteria of ophthalmia, stomatitis, and exudative rash, especially involving the genitalia The syndrome had as the onset an apparently mild respiratory infection There was no allergic background in this case

WORKMEN'S COMPENSATION

J STANLEY KENNEY, M D , New York City

(Chairman, Council Committee on Workmen's Compensation, Medical Society of the State of New York)

AT THIS time in our medical year, county medical societies are resuming their activities, and the district branches have held their annual meetings It is timely, then, to inform county secretaries, chairmen of compensation committees, district branch officers, and our membership in general of the current status of Workmen's Compensation problems and what your bureau is attempting to do to resolve them.

Following the informative and excellent digest of the New York State Disability Benefits law presented by the Honorable Mary Donlon before the annual meeting of the House of Delegates last May in Buffalo, there was circulated to the delegates the amended fee schedule as of May 1, 1949 This has since been mailed to all the doctors throughout the State It aroused a storm of protest immediately because of certain reductions in the fees of specialists and no adjustments for the inequities in the fees allowed general practitioners, which have been in effect since May 1, 1947, (see Sections 1–9, chiefly) A resolution was introduced by Dr Arthur Bedell of Albany objecting to the promulgated revision and the Reference Committee brought in the following report, which was adopted

"Therefore your Reference Committee recommends that the Council Committee on Workmen's Compensation of the Medical Society of the State of New York, with such other well-informed members of the Medical Society of the State of New York whom the president may see fit to appoint, meet with the chairman of the Workmen's Compensation Board or with whomsoever she may desire to appoint, to urge the correction of these inequities as soon as possible and to advise and assist in the implementing of the recommendations made in the report of your Reference Committee and adopted by the House of Delegates in session on May 3, 1949" [Section 173, also 138, proceedings of the House of Delegates, NEW YORK STATE J MED 49 Part II, page 106 (Sept 1) 1949]

Accordingly, on June 21, your chairman conferred with Miss Mary Donlon in New York in the furtherance of carrying out the instructions of the House As the direct outcome of this meeting, the chairman of the Workmen's Compensation Board on June 22 wrote the president, Dr John J Masterson, requesting appointment of a committee of four, two general practitioners and two surgeons, to consider the matter and make recommendations

I believe this represents the important first step in carrying out the purport of the above quoted action of the House

Another significant change which should materially assist us in our efforts to execute the mandates of the House of Delegates is the enlargement of the Council Committee on Workmen's Compensation This has been increased to 11 members and was effected by amendment to the Bylaws of the Medical Society of the State of New York at the last annual meeting Dr Masterson has named the following to serve on this committee Drs J Stanley Kenney, New York, *chairman*, Joseph P Henry, Rochester, James Greenough, Oneonta, Fenwick Beekman, New York, Joseph A. Manzella, Brooklyn, Stanley E Alderson, Albany, Walter S Bennett, Granville, Dwight V Needham, Syracuse, Charles D Squires, Binghamton, Joseph A. Lane, Rochester, Guy S Philbrick, Niagara Falls

We convened this committee for organization and assignment of work on October 13, at which time a conference with representatives of the insurance carriers was also held

We would invite your attention to the Proceedings of the House of Delegates published in full as Part II of the September 1 issue of the JOURNAL. This is a detailed compilation, splendidly edited, and should be read by every member of the Society For your information please note in this issue the index on page 6 under Workmen's Compensation where all references are minutely annotated.

The resolution passed by the House of Delegates advocating free choice of physician under the Federal Workmen's Compensation Law was introduced by your chairman at the House of Delegates meeting of the American Medical Association last June in Atlantic City This was referred to the Reference Committee on Legislation and Public Relations, which approved the resolution and referred it to the Board of Trustees for action Dr Lull has since communicated with both Dr Kaliski and your chairman requesting further information and details, and these were forwarded to him on August 26, stating the reasons for urging an amendment to the Federal law to insure Federal employes free choice of physicians as in New York State

In addition, your Committee is considering and will, to the best of its ability, attempt to implement the many resolutions referred to it by the Council as the result of actions by the House of Delegates Among these are the proposals to simplify the forms for reporting, to secure revision of fees for roentgenologists and physiotherapists, to secure legislation which would revise the method of settlement of disputed medical bills by the Medical Practice Committee, to make further efforts to abolish the Medical Practice Committee and to have returned to the counties of populations of over one million the privileges and responsibilities of all other counties within the Society, to simplify arbitration procedures, to work for the establishment of thoracic surgery with the symbol M-17 as a specialty, and to seek amendment to the present law to harmonize the provisions of the Workmen's Compensation Law and the Education Law concerning group practice

As instructed, Dr Anderton has already forwarded to Miss Donlon a copy of the resolution in which the House voted to support the chairman of the Board in her efforts to obtain the necessary funds

needed for study and tabulation of the medical records available in the department so that the end results of treatment in terms of disability and periods of time may be made available to the profession A letter has also been transmitted to her requesting favorable consideration of the proposal to establish the special subdivision, thoracic surgery

There is much more that might be said which the limitations of space prevent in an article such as this We would again remind our members of the significance of the Workmen's Compensation and Disability Benefits Laws as outstanding examples of social medicine They are in sharp contrast to "socialized medicine" and "statism" as these philosophies are viewed today Pressures for socialization of everything are apparent on all sides. They would include our traditional insurance structures. Here in New York State we have adhered to the private insurance pattern without Federal interference We have the cherished principle of free choice Compensation medicine as practiced in our State is a joint effort of government and private industry It is a State-administered, privately financed program which preserves all the basic liberties of our voluntary, free enterprise system. Let us all cooperate in making it work successfully and well

---

DR. WILLIAM OSLER EPISODES RECALLED IN MEMORIAL ISSUE

The centenary of the birth of the world-renowned physician and scientist, Sir William Osler, is commemorated in the July issue of the *Archives of Internal Medicine*, published by the American Medical Association. The entire issue is devoted to intimate accounts of the physician who helped found the Johns Hopkins University Medical School, Baltimore, and who revolutionized the teaching of medicine by revising the courses to include bedside study as well as the study of textbooks Physicians from the United States, Canada, and England who were associated with Dr Osler or who studied under him contribute episodes in his life

Dr Osler, born in Canada on July 2, 1849, received his M.D degree from McGill University, Montreal, in 1872 He early became interested in medical research. In 1884, he became professor of clinical medicine at the University of Pennsylvania His influence was felt in the opening of the Johns Hopkins Medical School in 1893, when stress was put on abundant clinical instruction and bedside education. With the publication of numerous books on new technics and findings in many phases of medicine, his name became a symbol of progress in the medical profession He took an interest in the establishment of medical libraries in Baltimore, Boston, New York, and Toronto and was a prime mover in the National Medical Library Association

In 1905, he went to England to become regius professor of medicine and fellowship at Christ Church, Oxford He was created baronet by King Edward VII in 1911 He died in Oxford, December 29, 1919

The *Archives'* articles describe Dr Osler as a man who was fond of pranks One of his childhood episodes was responsible for his being transferred from one school to another and for an eventual shift in his ambitions from the clergy to the medical profession His writings and sayings are pointed to as examples of picturesque descriptions of medicine A few examples given are

"The pharynx is the garbage dump of the bronchial tubes and nasal passages The street sweepers (ciliated epithelial cells) are constantly on duty and especially busy at night removing the debris from the air passages, to be carried away the next morning"

"Temperature charts—typhoid fever has a 'Pennsylvania Railwaylike' directness, in distinction to the zigzag 'Baltimore and Ohio' chart of aestivo-autumnal fever"

"The physics of a man's circulation are the physics of the waterworks of the town in which he lives, but once out of gear, you cannot apply the same rules for the repair of the one as of the other"

"Huge blocks of coal that would grace the doorstep of any multimillionaire coal dealer as a sign are carried into the lungs from our coal-polluted air, and tubercle bacilli ride in on coal black chargers three abreast Coal barges equal to those on the Susquehanna are constantly passing through unbroken mucosa and along lymph ducts to the bronchial lymph nodes"

Commenting editorially, the *Archives* says, "Without question, the development of internal medicine in this country during the last half century, as traced in the *Archives*, has been notably colored by his [Dr Osler's] personality It is especially appropriate that this journal, devoted to internal medicine and published by an association representing the medical men of this country, should thus honor the man who brought so much honor to American medicine Osler's skill as a clinician, his ability as a teacher and leader of men, his learning, his contributions, not only to medical science but also to literature, through many essays reflecting a broad culture and a sympathetic understanding of men and events—all have set an example of scholarly achievement and have been a source of inspiration to physicians everywhere"

The memorial issue was prepared under the direction of Dr N C Gilbert of Chicago, chief editor of the *Archives*, and members of the editorial board Drs Arthur Bloomfield, San Francisco, Russell M Wilder, Rochester, Minn., Reginald Fitz, Boston, George E Burch, New Orleans, and Paul S Rhoads Chicago Among the United States physicians contributing episodes in the life of Dr Osler was Dr Rufus Cole, Mount Kisco, New York

DEPARTMENT OF MEDICAL CARE INSURANCE

CONDUCTED BY GEORGE P FARRELL, DIRECTOR

Sixty Million Members Protected by Health Insurance

A RECENT survey of health and accident coverage in the United States by the Health Insurance Council indicates that over sixty million persons were protected by voluntary insurance plans in the United States at the end of 1948

During the year 1948 there was an increase from fifty-two million to sixty million for hospital expense, or a gain of 16 per cent Under surgical expense, it increased from twenty-six million to thirty-four million, or 30 per cent Medical expense increased from eight million to twelve million, a gain of 45 per cent Insurance protection against the loss of income due to illness or accident increased from thirty-one million to thirty-three million, or 7 per cent

The Council pointed out that the group entitled to benefits under voluntary plans for loss of income due to disability, the basic type of protection sold by private insurance organizations writing accident and health insurance, now comprises well over half the entire labor force Taking hospital expense under group insurance and the Blue Cross plans, it is found that only about three and a quarter million persons were covered at the end of 1939, a mere ten years ago The coverage now for these two types of organizations is over forty-six million, which is fifteen times the number covered in 1938 and more than double the figure of five years ago

For surgical expense under group insurance and plans sponsored by medical societies or affiliated with the Blue Cross, there were only 100,000 members ten years ago, and at the end of 1948 a tremendous gain resulted in a total of twenty-four million

As for medical expense insurance, it was practically unknown ten years ago, whereas membership increased to seven and a half million at the end of 1948

Membership in the Blue Cross plans as of June 30, 1949, was thirty-four and a half million Membership in the nonprofit voluntary medical plans which are approved by county or state medical societies now exceeds eleven million.

The six nonprofit voluntary medical care plans in New York State approved by the Medical Society of the State of New York have made tremendous progress during the past three and a half years (Tables 1 and 2) As of December 31, 1945, total membership was 268,000, and each year has shown a progressive increase During 1946 the increase was 329,000, in 1947, 425,000, and last year over a half-million During the first six months of this year the increase in membership was over 347,000 and, at the present rate of growth, should show an increase of over 700,000 at the end of 1949 As of June 30, 1949, New York State had the largest membership of any state in the Union with a total of 1,886,000 members, and benefits to subscribers have shown corresponding increases During 1946 benefits amounted to approximately $2,000,000, in 1947, $3,681,000, and last year were in excess of $6,000,000, and, at the present rate of membership increases, benefits to members in 1949 will be approximately $10,000,000

NOTE During 1948 Buffalo made payments from unassigned surplus to member physicians covering unpaid fees for the years 1941–1945 in the amount of $57 159

CONTAMINATED MEAT AND MILK CAUSE SUMMER FOOD POISONING

"Food poisoning' of the milder type called food infection, which is prominent in summer, usually comes from eating contaminated meat or milk, says James A Brussel, M D , assistant director of Willard State Hospital, New York Writing in the August issue of *Hygeia*, health magazine of the American Medical Association, Dr Brussel points out that food infection can be attributed especially to meat from diseased animals and dairy products This condition can often be traced to meat pies, salads, and unsupervised milk and milk product manufacturing Items handled in the kitchen and allowed to stand some time before serving are also to be suspected, he indicates

Food infection is caused by germs which the foods contain. Symptoms of the disease are fever, gastrointestinal irritation, vomiting, and diarrhea The disease usually is mild and recovery is rapid without complications in the common, less serious, infections Another form of "food poisoning," food intoxication, has no seasonal identification but is a very severe disease It is caused by poisons produced by germs in food, not by food itself These germs may enter food during preparation and multiply if it is stored without refrigeration

"Beware of homemade products, particularly such products as sausage meat and beef and pork products manufactured without the supervision and approval of the United States Public Health Service and kept awaiting sale in places without proper refrigeration," Dr Brussel advises "Carefully wash all foods eaten raw, first making certain your own hands are clean Don't eat uncooked or wild items unless you are sure you know what you are depositing within your body The hazards here include poisonous mushrooms, certain fish, and bivalves

"If you are swayed by the prejudice of cow-to-consumer milk and milk products, remember that only clean dairies that scrupulously follow the most rigid aseptic technic, pasteurization, and refrigeration, together with mechanical bottling, bring you dairy products you can confidently feel are free from tuberculosis, diphtheria, streptococcus, and other disease organisms

"The home-preserved food not properly sealed at time of making is a prime source of spoilage Beware of the can whose ends are bulging because of the putrefactive gases within When a canned food has a rancid odor, gas bubbles, or unappetizing, softened parts, throw it out!"

NECROLOGY

Simon Davis, M.D , of Brooklyn, died on September 26 at his home at the age of sixty-five Dr Davis was graduated from the Long Island College Hospital Medical School in 1904 and had practiced in Brooklyn for forty-four years He was a member of the Kings County and New York State Medical Societies and the American Medical Association

Harry Percy Dawe, M.D , of Pawling, died on September 25 at his home at the age of eighty-six. Dr Dawe received his medical degree from the New York University School of Medicine in 1886 and had practiced in Brooklyn before moving his practice to Pawling For thirty-five years, before his retirement, Dr Dawe was health officer for the town and village of Pawling and also served for thirty years as police justice of the village He was an instructor for the Red Cross

Edward Gillespie, M D , of Binghamton, died on September 23 at the Binghamton City Hospital at the age of seventy-seven Dr Gillespie was graduated from the Albany Medical College in 1896 and for forty-one years, prior to his retirement in 1937, was psychiatrist at the Binghamton State Hospital At the time of his retirement he was first assistant superintendent of the State Hospital He was also consulting psychiatrist at the Binghamton City Hospital

Dr Gillespie was a member of the Binghamton Academy of Medicine, the Binghamton Psychiatric Society, the Broome County and New York State Medical Societies, and the American Medical Association

John Gromann, M D , of Utica, died on September 23 at St Luke s Hospital, Utica, at the age of seventy-two Dr Gromann received his medical degree from the Jefferson Medical College in Philadelphia, Pennsylvania, in 1900, and interned in the Faxton Hospital in Utica. For thirty-six years Dr Gromann had served as a surgeon on the staff of St Luke's Hospital. A Fellow of the American College of Surgeons, Dr Gromann was a member of the Utica Academy of Medicine, the Utica Medical Society, the Oneida County and New York State Medical Societies, and the American Medical Association

Francis Bernard Hart, M D , of Brooklyn, died on September 22 at his home at the age of sixty-eight Dr Hart was graduated from the College of Physicians and Surgeons, Columbia University, in 1905 He was a World War I veteran, and served in World War II as consultant to an examining board Dr Hart was attending pediatrician at St Mary's and Holy Family Hospitals in Brooklyn He was a member of the Brooklyn Pediatric Society, the Kings County and New York State Medical Societies, and the American Medical Association

Verner Kennedy, M.D , of Utica, died suddenly at his home on September 27 at the age of fifty-nine, after a heart attack. Dr Kennedy was graduated from the New York Homeopathic Medical College and Flower Hospital in 1913 and served overseas during World War I as a captain in the medical corps He began his practice in Utica in 1919 In 1924 Dr Kennedy was elected departmental surgeon of the Veterans of Foreign Wars at the State encampment in Binghamton He was attending surgeon at the Utica Memorial Hospital and a member of the American Institute of Homeopathy, the Military Surgeons' Association of the United States, the New York State Homeopathic Medical Society, and the Utica Homeopathic Medical Society

Julius Henderson Kevand, M D , of Syracuse, died on September 29 at the Mayo Clinic, Rochester, Minnesota, at the age of seventy-two Dr Kevand was graduated from the Syracuse University College of Medicine in 1898 He was consultant in ophthalmology at the Syracuse General and University Hospitals and was a member of the Syracuse Academy of Medicine, the Onondaga County and New York State Medical Societies, and the American Medical Association

John Wesley Munro, M.D , of Syracuse, died on June 15 at the age of seventy-three Dr Munro received his medical degree from the University of Buffalo School of Medicine in 1903

Joseph Rosenthal, M.D , of Brooklyn, died on September 24 at his home after a heart attack, at the age of sixty-five Dr Rosenthal was graduated from the College of Physicians and Surgeons, Columbia University, in 1906, and interned at Mount Sinai Hospital, New York City, before starting his practice in Brooklyn For many years Dr Rosenthal was attending physician at the Jewish Hospital of Brooklyn In 1947 he retired as attending physician there and became consultant in medicine and president of the medical board. He was also consultant at the Brooklyn Hebrew Home and Hospital and the Jewish Sanitarium and Hospital for Chronic Diseases and chief of the department of medicine and president of the medical board of Israel Zion Division of Maimonides Hospital.

Dr Rosenthal had been clinical professor of medicine at the Long Island College Hospital and was past president of Phi Delta Epsilon, national medical fraternity He was a Diplomate of the American Board of Internal Medicine and a member of the Kings County and New York State Medical Societies and the American Medical Association

Francis J Ryan, M D , of Syracuse, died on October 2 at the age of seventy-four Dr Ryan received his medical degree from the Syracuse University College of Medicine in 1899 He was one of the first presidents of the New York State Society of Industrial Surgeons Dr Ryan was a member of the Syracuse Academy of Medicine, the Onondaga County and New York State Medical Societies, and the American Medical Association

Ralph Douglas Skinner, M.D , of New York City, died on June 5 at the age of sixty-seven Dr Skinner was graduated from the Baltimore Medical College in 1905 and was consulting physician at the Knickerbocker Hospital in New York City

Lawrence Henry Smith, M D , of East Aurora, died suddenly on September 25 at his home at the age of seventy Dr Smith received his medical degree from the University of Buffalo School of Medicine in 1907 and had practiced in East Aurora for the past forty-five years During World War I he served as a captain in the medical corps Dr Smith was a member of the Erie County and New York State Medical Societies and the American Medical Association.

Pier Giuseppe Spinelli, M.D , of New York City, died on May 10 at the age of seventy-seven Dr Spinelli received his medical degree from the University of Naples Medical School in 1898

William Warren Spiro, M.D , of Long Island City,

HOSPITAL NEWS

New York City's Hospital Construction Program

HIGHLIGHTS of the program for new municipal hospitals for the City of New York have been outlined by Mayor William O'Dwyer, Dr Marcus D Kogel, commissioner of hospitals, and Mr Frederick H. Zurmuhlen, commissioner of public works A $150,000,000 future hospital construction program, and a $42,000,000 current hospital construction program are described

The Department of Hospitals plans a construction program for hospitals urgently needed to replace many obsolescent and inadequate structures and to increase hospital services in areas now inadequately served A bond issue by the City of New York, outside its constitutional debt limit, will provide the $150,000,000 needed to complete this stage of the long-range program.

On November 8, 1949, the voters of the City and the State, through a referendum, will be given an opportunity to sanction this urgently needed bond issue to be used solely to build new municipal hospitals and related facilities

The following projects are included in the program

Five New General Care Hospitals—The replacement of Bellevue and Metropolitan Hospitals in Manhattan, the replacement of New York City Hospital (now located on Welfare Island) in Queens, the replacement of Coney Island Hospital in Brooklyn, and a new 750-bed general hospital in the East Bronx.

Extensive Alterations and Additions to Three Existing General Care Hospitals—Additions to increase the bed capacity at Queens General Hospital in Queens and Morrisania Hospital in the Bronx, and completion of the Outpatient Addition at Lincoln Hospital in the Bronx.

Two New Nurses Homes and Schools—Replacement of the existing nurses home at Bellevue Hospital in Manhattan, and a new school and home at Queens General Hospital in Queens

New Chronic Disease and Tuberculosis Hospital on Welfare Island—A new hospital which will serve all five boroughs of the City

Three New Tuberculosis Hospitals—Replacement of Seton Hospital in the Bronx, a new tuberculosis hospital in the Harlem area in Manhattan, and a tuberculosis hospital in conjunction with the new general hospital in the East Bronx These institutions will give city-wide service

Two Related Hospital Facilities—A new laboratory and morgue at Kings County Hospital in Brooklyn, and a new Borough Laundry at Kingston Avenue Hospital in Brooklyn which will serve all Brooklyn municipal hospitals

Modernization and Alterations—All hospitals in the five boroughs

The current $42,000,000 municipal hospital construction program, funds for which have been provided by the present City administration, is the first municipal hospital construction to take place since before World War II The program includes the following hospitals now under construction Francis Delafield Hospital, Manhattan, James Ewing Hospital, Manhattan, Tuberculosis and Chronic Disease Hospital, Brooklyn, Bird S Coler Memorial Hospital, Welfare Island, laundry, garage, and firehouse, Welfare Island, and outpatient building and ambulance station, College Point

The current and future hospital facilities of the New York City Department of Hospitals are designed and constructed by the Department of Public Works in collaboration with the Department of Hospitals

Hospitals Under Construction in State

CORNERSTONE laying and dedication ceremonies have been held recently for several new hospitals in New York State, and reports have been made on additions and construction for several others *Among these are the following*

Jewish Sanitarium and Hospital for Chronic Diseases, Brooklyn—Dedication ceremonies for the new hospital building of the Jewish Sanitarium and Hospital for Chronic Diseases in Brooklyn were held on Sunday, September 18 The addition of this new building increases the institution's capacity to over 800 beds, with special emphasis on treating persons in the acute stages of chronic diseases The new building includes medical research laboratories, a cerebral palsy center, a tumor detection clinic, a rheumatic fever ward, and the rehabilitation division

Letchworth Village, Thiells—On October 13 Governor Thomas E. Dewey laid the cornerstone of an infirmary at Letchworth Village in Thiells, Rockland County, in a ceremony which marked the formal opening of the State's construction program to increase the capacity of its overcrowded mental institutions Participating in the ceremony were Dr Harry C Storrs, director of Letchworth Village, and Dr Frederick MacCurdy, State commissioner of mental hygiene

Bird S Coler Memorial Hospital, Welfare Island—The cornerstone ceremony for the new Bird S Coler Memorial Hospital on Welfare Island was held on October 10 with Mayor William O'Dwyer officiating and Dr Marcus D Kogel, City commissioner of hospitals, presiding The 2,000-bed hospital for chronic diseases is the second of three units for the care of long-term patients which will eventually designate Welfare Island as a medical center for the care and treatment of long-term cases The hospital will be affiliated with the New York Medical School and Flower Fifth Avenue Hospitals, which will provide the professional staff

Columbia-Presbyterian Medical Center, New York City—Construction was started in September on Columbia University's $2,000,000 cancer research center atop the Vanderbilt Clinic building at the Columbia-Presbyterian Medical Center, New York City Officials representing the University, Presbyterian Hospital, and the U S Public Health Service

were present as workmen began the task of adding five floors to the nine-story clinic building Four of the new floors will house the research unit, and a fifth will be used by the hospital. Officiating at the ceremony was Dr Willard C Rappleye, dean of Columbia University's faculty of medicine

Montefiore Hospital, the Bronx—A $990,000 construction and modernization repair project is now under way at Montefiore Hospital, the Bronx, with the construction of two new wings planned to provide expanded facilities One of the units will house operating rooms to help meet the hospital's increased surgical case load, and the second will contain x-ray facilities for diagnostic examinations

Wyckoff Heights Hospital, Ridgewood, Queens—Ground was broken in August for a six-story, $1,500 000 addition to the Wyckoff Heights Hospital in Ridgewood, Queens, with special ceremonies and guest speakers The addition will add 107 beds to the hospital's capacity

Inventory of Professional Registered Nurses Available

A COMPLETE inventory of registered professional nurses in the United States and its territories is being released by the American Nurses' Association at the request of the National Security Resources Board.

The inventory of nurses, which has been secured by the A.N A. through cooperation with state nurse-licensing boards and state nurses' associations, provides data on the number and location, age, marital status, responsibility for dependents, whether the nurse is actively engaged in nursing and the field of employment and position, type of preparation, and experience in special fields

Paper bound copies of the inventory are available from the American Nurses' Association, 1790 Broadway, New York 19, New York, at $1 00 per copy

Brooklyn Observes Hospital Sunday

TWENTY-ONE voluntary hospitals in Brooklyn participated on October 9 in the first annual Hospital Sunday, with each hospital demonstrating for visitors a special phase of its work Included were demonstrations of the giant magnet for removing foreign bodies from the eye at Brooklyn Eye and Ear Hospital and actual treatment of a child polio patient at St Charles Hospital.

Visitors were greeted at each hospital and taken on a guided tour of the plant The purpose of the event was to enable residents to know more about their voluntary hospitals Hospitals taking part included

Beth-El, Brooklyn Eye and Ear, Brooklyn Thoracic, Bushwick, Holy Family, St Giles the Cripple, Jewish, Jewish for Chronic Diseases, Long Island College, Lutheran, Maimonides, Methodist, Norwegian Lutheran, Prospect Heights, St Catherine's, St Charles, St John's, St Mary's, St Peter's, and Wyckoff Heights

NEWS NOTES

Dr William Gazeley of Schenectady has been named chairman of the medical board of St Clare s Hospital, Schenectady Dr Gazeley is a former president of the Schenectady County Medical Society

Other members of the board include Dr Glen Smith, secretary, and Dr H M Rozendaal, Dr H E. Reynolds, Dr William H Mallia, and Dr S C Meigher

Dr Melba Antonetti of Troy has been appointed resident in anesthesia at the Albany Hospital, effective November 1

Dr Milton A. Jacobs, supervising psychiatrist at the St. Lawrence State Hospital in Ogdensburg for the past twelve years, is now assistant director of the Willowbrook State School, Staten Island

Dr Victor Drucker, formerly of Teaneck New Jersey, has been appointed radiologist at the Binghamton City Hospital, Binghamton, effective October 1 Dr Frank M Dyer was recently elected vice-president of the board of the Hospital

Dr Leo R Tighe, formerly connected with the Hudson River State Hospital at Poughkeepsie, has been appointed manager of the Veterans Hospital at Augusta, Georgia.

The Clinical Pathologic Conferences at Mount Sinai Hospital were resumed on October 5, and are being held each Wednesday afternoon at 3 30 P M. in the Blumenthal Auditorium of the Hospital

The weekly Gastroenterologic Conferences at Bellevue Hospital were resumed Monday, October 10, at 3 30 P M , in the G 6 amphitheater, under the supervision of Dr Jacob Buchstein As in previous years, these conferences consist of a clinical, pathologic, and radiographic presentation of the gastrointestinal cases that have come to operation or autopsy

Establishment of a special thirty-week course in hospital construction and alteration has been announced by Dr John Gorrell, associate professor of hospital administration at Columbia University's School of Public Health Open to hospital executives and administrators, the course is sponsored by the Greater New York Hospital Association, the Hospital Council of Greater New York, and the United Hospital Fund

MEDICAL NEWS

To Hold Annual Christmas Seal Sale

THE forty-third annual Christmas Seal sale will be conducted this year from November 21 to December 25, under the supervision of the National Tuberculosis Association

Three thousand affiliates of the national tuberculosis group are working to obtain funds to eradicate tuberculosis through programs of education, case finding, and rehabilitation, and through support of medical research

Christmas seals are distributed each year at the holiday season for use by all donors who annually support the drive for funds to combat tuberculosis.

Dr R D Thompson is president of the National Tuberculosis Association

Announce Grants for Mental Health Research

PUBLIC Health Service grants for research on causes and methods of preventing and treating mental and emotional disorders have been announced The grants total $139,023 and are in addition to 54 research projects totaling $974,944 which have received support since 1947 when Federal aid for mental health research first became available The grants were made by the National Institute of Mental Health of the National Institutes of Health, research branch of the Public Health Service, following recommendation by the National Advisory Mental Health Council and approval by Surgeon General Leonard A Scheele of the Public Health Service

The following have been assigned to institutions in New York State

Dr Fred A Mettler, associate professor of anatomy, Columbia University, College of Physicians and Surgeons, New York City a grant of $7,128 for study of "Space-controlled Neural Lesions"

Dr George N Daniels, clinical professor of psychiatry, Columbia University, New York City a grant of $7,344 for study of "Psychologic Factors in Amenorrhea", also a grant of $13,700 for study of "The Psychosomatic Aspects of Ulcerative Colitis"

Dr Morris B Bender, associate professor of neurology, New York University College of Medicine, New York City a grant of $3,726 for study of "Changes in Perceptual Functions in Organic Psychoses"

Dr Lauretta Bender, associate professor of psychiatry, New York University College of Medicine, New York City a grant of $21,276 for study of "Childhood Schizophrenia."

Dr Benjamin Malzburg, director of the bureau of statistics, New York State Department of Mental Hygiene, Albany a grant of $7,000 for "Studies Giving Rates of Discharge and of Mortality (on a Life Table Basis) for Patients Admitted to the New York Civil State Hospitals, by Sex and Major Groups of Mental Disorders"

Masonic Grants for Rheumatic Fever Research

SEVEN New York State medical colleges and research groups received grants totaling more than $200,000 from the Masonic Foundation for Medical Research and Human Welfare at a ceremony September 28 in the Grand Lodge Room of Masonic Hall, New York City

The grants are to go toward discovery of the cause and cure of rheumatic fever—a work which the seven colleges have been engaged in since last October—and the sums applied to this work are based on the estimated needs of the laboratories concerned Checks were presented by Mr Raymond C Ellis, manager of the Home Life Insurance Company and president of the Masonic Foundation

Recipients were Dr Arthur Christian DeGraff, of the New York University College of Medicine, director of the Irvington House for Cardiac Children, Irvington on Hudson, $21,276, Dr John H Talbott, dean of the University of Buffalo, School of Medicine, $17,820, Dr Currier McEwen, dean of the New York University College of Medicine, $62,532, Dr J G Fred Hiss, of the Syracuse University College of Medicine and the Welting Johnson Memorial Hospital for Children, Syracuse, $27,000, Dr Ralph H Roots, of the College of Physicians and Surgeons, Columbia University, $21,600, Dr Russell L Cecil, of the Cornell University Medical College and the Arthritis Clinic at New York Hospital, $17,280, and Dr William S McCann of the University of Rochester, School of Medicine and Dentistry, and the Strong Memorial Hospital, Rochester, $34,608

Elect Officers for District Branches

NEW officers were elected at meetings of the District Branches of the Medical Society of the State of New York, held recently at central points in the respective districts Officers are chosen for two-year terms, and will take office at the adjournment of the meeting of the 1950 House of Delegates of the State Society

Officers elected include

Fifth District Branch Dr Wardner D Ayer, Syracuse, president, Dr Arthur F Gaffney, Clinton, first vice-president, Dr Richard B Cuthbert, Jr, Canastota, second vice-president, Dr Donald C Tulloch, Ogdensburg, secretary, and Dr Olin J Mowry, Minetto, treasurer

Seventh District Branch Dr George H Gage, Rochester, president, Dr Samuel A. Munford, Clifton Springs, first vice-president, Dr Glenn C Hatch, Penn Yan, second vice-president, Dr James J Yanick, Hornell, secretary, and Dr Everett H. Wood, Auburn, treasurer

Eighth District Branch Dr John C Kinzly, North Tonawanda, president, Dr Henry S Martin, Warsaw, first vice-president, Dr Sydney L McLouth, Corfu, second vice-president, Dr Henry W Ingraham, Jamestown, secretary, and Dr Lawrence C Older, Cuba, treasurer

MEDICALLY SPEAKING—

Prize Essay on Poliomyelitis—The *New England Journal of Medicine* announces a prize essay contest open to all members of the class of 1950 of any approved medical school. The subject will be "Recent Advances in the Recognition, Treatment, and Control of Poliomyelitis" The prize for the best essay will be $100, and papers must be sent to the editor of the *Journal* by March 15, 1950 For further particulars apply to the *New England Journal of Medicine*, 8 Fenway, Boston 15

A.E.C Approves 18 Research Proposals in Biology and Medicine—The Atomic Energy Commission Division of Biology and Medicine has approved 18 research proposals in the field of biology and medicine during the past three months Among these was a study of the defenses against hemorrhage by Dr Eugene L Lozner, Syracuse University

Army Commissions 169 Civilian Medical Interns—Commissions as first lieutenants in the Army Medical Corps Reserve have been given to 169 medical graduates who have been accepted for internship training in approved civilian hospitals, it was announced by Major General R W Bliss, the Surgeon General They have been sworn in and called to active duty, with full pay and allowances of their grade, and will remain in the civilian hospitals for the completion of their internship

With this group the Army Medical Department inaugurates the second year of civilian intern training under its Graduate Professional Training Program. Additional rosters of selected candidates will be announced from time to time

Under the provisions of the Civilian Intern Training Program, a medical school graduate who has been accepted for internship by a civilian hospital approved by the Council on Hospitals and Medical Education of the American Medical Association may apply for a commission as first lieutenant in the Medical Corps Reserve If accepted, he is called to duty and assigned in a training status at the civilian hospital of his choice. On completion of his internship, he serves two years for each year of training he has received as a Reserve officer

Another phase of the Graduate Professional Training Program is military intern training, in which selected medical graduates complete their internship in one of 10 Army general hospitals approved for medical teaching

Applications for either phase are invited from prospective graduates who will be not less than twenty-one nor more than thirty-two years old on the date their internship will begin, who are citizens of the United States with high moral character, and who meet the physical requirements for a commission in the Regular Army

Detailed information can be received from any Army recruiting office, or by writing The Chief, Personnel Division, Office of the Surgeon General, Department of the Army, Washington 25, D C

Subjects for Salmon Lectures Announced—Dr Stanley Cobb, psychiatrist-in-chief of the Massachusetts General Hospital, Boston, has announced the subjects of the Salmon Memorial Lectures which he will deliver on November 8, 9, and 10 at the New York Academy of Medicine The program is as follows under the general topic of "Emotions and Clinical Medicine"

Lecture I—November 8, 8 30 P M —"Semantics—Definitions" and "Primitive Brain and Comparative Anatomy"

Lecture II—November 9, 8 30 P M —"Physiology of the Emotions" and "Pathology"

Lecture III—November 10, 8 30 P M.—"Clinical Implications."

The 1949 lectures are the seventeenth series presented in memory of Thomas William Salmon, M D Each year, the Salmon Committee on Psychiatry and Mental Hygiene, appointed by the New York Academy of Medicine, selects as lecturer a specialist in psychiatry, neurology, or allied fields either in this country or abroad, who has made an outstanding contribution to his specialty

Ground-breaking Ceremony for New Sharp & Dohme Laboratories—Sharp & Dohme held an official ground-breaking ceremony for its new $4,000,000 Medical Research Laboratories at West Point, Pennsylvania, on September 27 before a distinguished group of officials of Montgomery County and civic, church, and business leaders from the nearby communities Also on hand for the occasion were officers of Sharp & Dohme, scientific directors in the company's Medical Research Division, and employes at the West Point plant

Announcement of Vacancies—Psychiatrists, psychiatric residents, and registered nurses are needed for Central State Hospital in the city of Indianapolis, Indiana Vacancies exist for several classifications of staff membership to bring to full complement the personnel needed to complete the expansion program now activated. The hospital is approved for residency training, is associated with the Indiana University Medical Center (student teaching), conducts active therapeutic programs and seminars for diagnosis, management, and disposition of patients, conducts a follow-up clinic for patients on six months convalescent leave from the hospital, has the advantage of very progressive social service and psychology departments, complete clinical laboratory, research director, comprehensive library, pharmacy, occupational and recreational therapists, dentists, etc Starting salaries range from $4,500 for residents to $7,200 with complete maintenance for self and family Include pertinent biographic data in first letter Address communications to Acting Director, Indiana Council for Mental Health, Fair Grounds, Indianapolis, Indiana.

Second Postgraduate Course in Diseases of the Chest—The second postgraduate course in Dis-

eases of the Chest will be given at the Hotel New Yorker from November 14 through 18, 1949 The course is given under the auspices of the American College of Chest Physicians in cooperation with the members of the staffs of all the New York City medical schools and hospitals Last year the course was attended by 75 doctors

Various modern aspects of chest diseases will be discussed, including physiology, pathology, etiology, and treatment Half a day will be devoted to the problem of industrial diseases of the chest

Bequests to New York Medical College, Flower and Fifth Avenue Hospitals—Dean J A. W Hetrick of the New York Medical College, Flower and Fifth Avenue Hospitals, has announced a bequest of $500,000 to be used as a special endowment for the division of surgery in the Medical College and Hospitals The Valentine Professorship of Surgery has been established, and Dr James M Winfield, professor of surgery and director of the Department of Surgery has been named to that Professorship The bequest was made through the generosity of the late Eliza and Samuel Valentine Another bequest of $240,000 from the late William Nelson Cromwell was also announced.

The charter of the New York Medical College has been amended upon recommendation of the Board of Regents of the State of New York so that in addition to the degrees of Doctor of Medicine, Master of Medical Science, and Doctor of Medical Science, Bachelor of Science degrees in specified fields may be granted to qualified students, and honorary degrees of Doctor of Science and Doctor of Humane Letters may be conferred by the College

New York Academy of Medicine Donates 12,000 Volumes to Southwestern Medical College—Miss Janet Doe, librarian of the New York Academy of Medicine, recently made public the Academy's donation of 12,000 volumes to the Southwestern Medical College in Dallas, Texas These volumes are the larger portion of a gift of 20,000 volumes received by the New York Academy of Medicine from the New York Public Library

The 20,000 volumes donated represent the original collection of medical books accumulated by the New York Public Library during the nineteenth century, when Dr John Shaw Billings, earlier noted for his association with the Army Medical Library, was connected with the New York institution

In connection with the Academy's gift of 12,000 volumes to the Southwestern Medical College in Dallas, Texas, Miss Doe stated that all of the larger medical libraries are located east of the Mississippi, and it seemed not only useful but imperative to hasten the growth of a good medical collection in a new area in our West

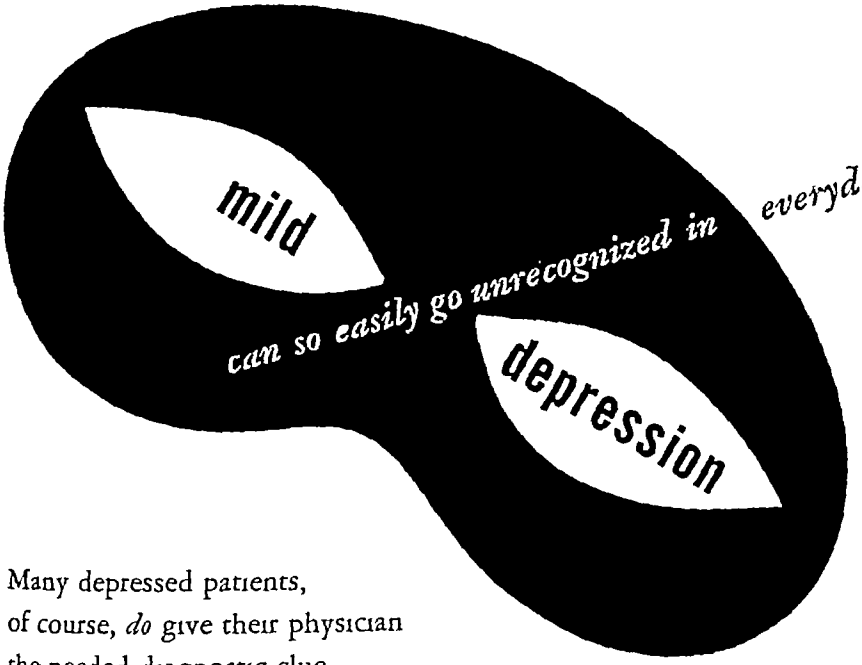
New Publications of the American Heart Association—A new official monthly publication of the American Heart Association, to be known as *Circulation—The Journal of the American Heart Association*, will begin publication in January, 1950, according to a joint announcement by Dr H M Marvin, president of the Association, and Henry M Stratton, president of Grune & Stratton, medical publishers.

With the new publication, the American Heart Association will terminate sponsorship of the monthly *American Heart Journal* with the December, 1949, issue

In the inaugural issue of the quarterly journal, *The American Heart*, in September the allocation of $700,000 for heart research this year was announced Research awards from the national office totaled $250,000 in 1949, it was stated, while research funds spent by affiliates include $213,000 distributed by the New York Heart Association and $144,000 by the Chicago Heart Association. The American Heart Association's own allocations this year were from funds raised during its 1948 campaign, a minimum of $380,000 from 1949 campaign funds has already been earmarked for future research wards, according to the publication

U S Representatives Attend Conference on Radiation Tolerances—A group of 11 leading radiologists and health physicists represented the United States at a three-nation conference on radiation tolerances held at the Canadian Atomic Energy Establishment at Chalk River, Ontario, September 29 and 30 The conference was under the Technical Cooperation Program of the United States, the United Kingdom, and Canada, which was established early in 1948 and does not include weapons information. One of the primary purposes of the conference was to hold discussions leading toward the establishment of uniform radiation tolerance standards among the atomic energy projects of the three nations

Among the U S representatives were Dr G Failla, professor of radiology, College of Physicians and Surgeons, Columbia University, and Dr Bernard S Wolf, Medical Division, Atomic Energy Commission, New York Operations Office



Pennsylvania Medical Society Postgraduate Education Courses—Postgraduate education courses sponsored by the Medical Society of the State of Pennsylvania have been announced Registration is open to any member of the Medical Society of the State of New York for the usual $25 fee, and it is hoped that these courses will be of some interest to New York physicians living close to the borders of Pennsylvania. For further information address inquiries to Committee on Graduate Education, Medical Society of the State of Pennsylvania, 230 State Street, Harrisburg, Pennsylvania

Age Limits for Lay Boards of Hospitals

To the Editor

The editorial, "Tenure of Hospital Staff Appointments," in the issue of August 1, 1949, invites thought and comment Physicians and surgeons who serve or have served on the "visiting staff" or "attending staff" of a voluntary (nonprofit) hospital are fully aware of the status of their appointment, the public, in large measure, is not

The governing body of directors or trustees, laymen, writes and enacts its own constitution and bylaws Any constitution and bylaws which the medical board may be authorized to enact must conform thereto and be approved by the lay board Power of appointment to the professional staff rests ultimately with the lay board Such appointment is, moreover, for one or two years only and subject to renewal or discontinuance, at the pleasure of the lay board Whereas many such boards have set up an age limit (varying from sixty to sixty-five) for the professional staff, I am not aware of any such limitation upon members of the lay board

Usually a committee made up of lay board and of medical board members deals with medical matters, including staff appointments In some instances the medical members are chosen freely by the medical board, but in others they are practically designated by the lay board in its constitution and bylaws While in discussions of this committee upon medical staff matters such as appointments, the medical members may have a voice and a vote, the committee's decisions and recommendations are subject to review by the lay board and in the last analysis the decision on all professional matters including appointments, renewal of appointments, or otherwise rests solely with the lay board The paragraph on page 1777, "The usual remedy for persons dissatisfied will furnish the remedy," is, therefore, deserving of special comment

Time was, in the City of Greater New York, when many voluntary hospitals and other charitable institutions were supported by a membership body or association The members had the right annually to nominate and elect their directors and officers who were given responsibility for the management of their institution Under such circumstances it was possible for public opinion to express approval or disapproval of the management in open session and to change the managing group if so desired In some hospitals, at least, that state of affairs no longer obtains. The board of directors or trustees had its charter changed by the Legislature so that it became a self-perpetuating body no longer responsible to its supporters Fund-raising activities were, moreover, delegated to central agencies such as United Hospital Fund, Greater New York Fund, Federation of Jewish Philanthropies, etc

Now the public which contributes and thus supports a great many institutions has no control whatever over an individual institution or over its particular board of directors The public surely could not and would not withhold such general funds as a protest against the directors of one individual institution In fact, the boards of these central agencies for fund-raising are likewise either self-perpetuating bodies or appointed representatives from the constituent institutional boards

It may well be that the charter of Olean General Hospital provides a method for electing a new board of directors, but I doubt that supporters of the institution would withhold funds as a means of effecting a change of management The public cannot and should not be advised to endanger the community's welfare by closing its general hospital, or even threatening its closure, in order to protest against an isolated act of its board of directors

Mr Justice Davis' suggestion as to the remedy, if quoted correctly, hardly seems practicable

In conclusion, may I suggest that the relationship of the public, which supports a hospital, to the governing board of that hospital is a subject for urgent consideration and clarification

Extrapleural Dissection Discussed

To the Editor

It was gratifying to read of the increasing attention being given to the value of extrapleural resection both in chronic nonspecific empyema and in empyema associated with pulmonary tuberculosis. The recent case reports of Drs M S Lloyd and E Naclerio in your JOURNAL on June 1, 1949, undoubtedly represent but one of numerous experiences with this advance in technic now in progress [1]

Extrapleural dissection in thoracic surgery, of course, has long been known However, this maneuver has been utilized by thoracic surgeons as a matter of operative convenience, especially where the visceral and parietal pleurae had become adherent and could not be separated

The deliberate and planned use of extrapleural dissection, on the contrary, is of recent date and has been most extensively used since its introduction, at Sea View Hospital in New York. Drs Lloyd and Naclerio are inadvertently in error in mislabeling their reported cases with "priority," since a number of such operations have been done before and have indeed been the subject of a number of reports published some time ago [2-4] The use of the planned procedure of pneumonectomy and pleurectomy for nontuberculous pulmonary *disease had been* performed at least as early as 1942 by Dr Irving A. Sarot of New York This surgeon then performed the first pneumonectomy and pleurectomy for uncomplicated pulmonary tuberculosis at Sea View Hospital on February 21, 1947 The first pneumonectomy and total pleurectomy for uncontrolled

In Treating Para-nasal Infection **ARGYROL** Affords

multiple action without reaction

Bacteriostatic, demulcent and detergent in its positive actions, ARGYROL constantly demonstrates its advantages for effective control of infection and restoration to normal function.

Additionally, its use does not handicap the restoration process by compensatory congestion, the experience so often suffered with many vasoconstrictors

The ARGYROL Technique

1. The nasal meatus by 20 per cent ARGYROL installations through the naso-lacrimal duct
2. The nasal passages with 10 per cent ARGYROL solution in drops
3. The nasal cavities with 10 per cent ARGYROL by nasal tamponage

Its Three-Fold Effect

1. Decongests without irritation to the membrane and without ciliary injury
2. Definitely bacteriostatic yet non toxic to tissue
3. Stimulates secretion and cleanses thereby enhancing Nature's own first line of defense

ARGYROL —*the medication of choice in treating para-nasal infection*

[Continued from page 2594]

pulmonary tuberculosis and empyema were performed by Dr Sarot on April 1, 1947, and he followed this with pneumonectomy and total pleurectomy for uncontrolled pulmonary tuberculosis, empyema, bronchopleural fistula, and empyema sinus on May 10, 1947 These procedures, performed on the surgical service of Sea View Hospital, have, as noted above, already been reported Further extrapleural procedures have since been performed at this institution by Drs Sarot, Bailey, L R. Davidson, L Hochberg, I Fink, and others, and the indications for extrapleural resection have been extended Thus, the reports of Drs Lloyd and Naclerio of excision of a localized encapsulated nonspecific empyema on April 14, 1947, and of pneumonectomy and pleurectomy for pulmonary tuberculosis on August 26, 1947, indicate that these operations had been well antedated. Indeed, Dr E. H Robitzek, who discussed the procedure with Dr Lloyd in consultation, had become aware of pneumonectomy and pleurectomy and its planned value at Sea View Hospital where, as attending physician, he had seen the results of its use

Pneumonectomy with total pleurectomy has been successfully utilized, as noted above, for several years, but its importance and the rationale for its value has only recently been brought out [5]

We have pointed out what we believe to be an observation of the greatest importance Extrapleural pneumonectomy, by removing the pleura, removes a source of serious postoperative complications The parietal pleura has no function after the removal of the lung and should be removed with it even in cases in which it is not involved in the disease process It should be removed as completely as possible in every pneumonectomy for tuberculosis We have reviewed the first 100 consecutive pneumonectomies for tuberculosis performed at Sea View Hospital and have called attention to the fact that of 65 patients operated intrapleurally (i e , the pleura was allowed to remain), eight (12 3 per cent) died of empyema postoperatively Thirty-five patients had extrapleural pneumonectomy (i e , the parietal pleura was also removed during the operation), none died of empyema—indeed, this complication did not occur The highly sensitive pleura had not been left behind to become infected

The Sarot operation (extrapleural pneumonectomy and pleurectomy) for pulmonary tuberculosis, especially when complicated by empyema, constitutes an important advance in the surgery for this disease [6] We have proposed, for the reasons above, that all pneumonectomies for tuberculosis should be done extrapleurally

Reply by Dr Lloyd

To the Editor

I am grateful to you for the opportunity to reply to the above letter from Drs Tchertkoff and Selikoff In my reply, I use first person singular pronouns throughout, because, although the article referred to was submitted under the co-authorship of Dr E A Naclerio, I wish to assume full responsibility for what was said.

I am not a seeker of "priorities" and I would suggest that those who are examine the remarks of Dr Hyman I Goldstein which appear on page 437 of the *Journal of the American Medical Association* for February 12, 1949

To be accused of seeking "priority" in an article which carries the same references to prior authors as are quoted by Drs Tchertkoff and Selikoff is a little difficult to understand Perhaps the use of the word "first" leads to a misunderstanding But the context indicates that this word refers to specific features of the cases reported and not to the operation of combined pleuropulmonary resection Both in the body of and in the references appended to my article, I give full credit to the pioneer work of the physicians and surgeons of Sea View Hospital

However, my praise, apparently, was not high enough, and I am happy herewith to redouble it for the benefit of those who ask for more.

Milton S Lloyd M D

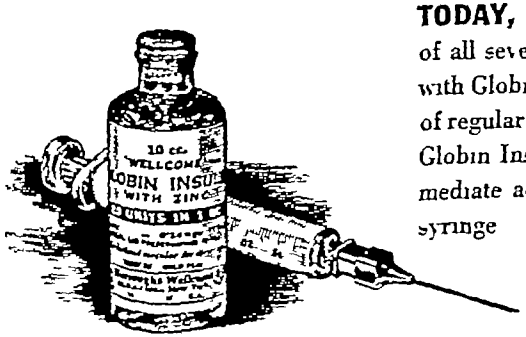
2 ILL OF BUBONIC PLAGUE

Illness of two New Mexico residents has been found to be bubonic plague, the black death of the Middle Ages Only twenty-one cases of the disease had been listed in the United States during the last twenty-five years. The diagnosis was reported by Dr Vernon Link of the Western Contagious Disease Control Center in San Francisco

The victims are a ten-year-old boy treated at Taos and a thirty-seven-year-old man in the Veterans Hospital at Albuquerque They are residents of two widely separated villages in northern New Mexico

The Taos case was treated with streptomycin and sulfadiazine and the Albuquerque patient with penicillin and aureomycin —*New York Times, August 11, 1949*

GLOBIN INSULIN



'B.W.&CO.'

was developed to fill the "need for an insulin with activity intermediate between that of regular insulin and that of protamine zinc insulin"[1]

IN 1939, Reiner, Searle and Lang described a new "intermediate acting" insulin

IN 1943, after successful clinical testing, the new substance was released to the profession as 'Wellcome' brand Globin Insulin with Zinc 'B W & Co'

TODAY, according to Rohr and Colwell, "Fully 80% of all severe diabetics can be balanced satisfactorily"[2] with Globin Insulin 'B W & Co'—or with a 2 1 mixture of regular insulin protamine zinc insulin *Ready to use* Globin Insulin 'B W & Co' provides the desired intermediate action without preliminary mixing in vial or syringe

In 10 cc vials U-40 and U-80

BOOKS

Books for review should be sent to the Book Review Department at 1313 Bedford Avenue Brooklyn, N Y Acknowledgment of receipt will be made in these columns and deemed sufficient notification. Selection for review will be based on merit and interest to our readers.

BOOKS REVIEWED

Control of Pain in Childbirth, Anesthesia, Analgesia, Amnesia. By Clifford B Lull, M D , and Robert A. Hingson, M D Third edition Octavo of 522 pages, illustrated Philadelphia, J B Lippincott Co , 1948 Cloth, $12

This is easily the standard textbook on caudal anesthesia written by those who know the most about it. All other forms of anesthesia are described, some briefly The authors generously give credit far and wide to others who appear to have interest or knowledge Particularly good on nervous pathways, obstetricians should read this book

CHARLES A GORDON

Cardiology By William Evans Octavo of 310 pages, illustrated New York, Paul B Hoeber, 1948 Cloth, $7 50

Dr Evans' new book on diseases of the heart is a welcome addition to the general practitioner's library It is authoritative, well written, and beautifully illustrated. In short, although therapy is only sketchily covered, it is probably the best one-volume cardiology intended for other than those who specialize in the field.

MILTON PLOTZ

Blood Clotting and Allied Problems Transactions of the First Conference, February 16–17, 1948, New York, N Y Edited by Joseph E Flynn Octavo of 179 pages, illustrated. New York, Josiah Macy, Jr , Foundation (1948) Paper, $3 25

Blood-clotting is still a very mysterious subject which is being studied intensively all over the world. This volume, which includes the work of some outstanding men, helps to clarify a few points, while leaving a good many unanswered. It is recommended for the student of hematology

ANDREW BABEY

A Doctor Talks to Teen-agers A Psychiatrist's Advice to Youth. By William S Sadler, M D Octavo of 379 pages St Louis, C V Mosby Co , 1948 Cloth, $4.00

Dr Sadler is a psychiatrist of experience and erudition who has been practicing his profession for some forty years and has had the opportunity of talking with several thousand young men and women about their experiences and troubles of one sort or another during their teen-age period. He therefore wrote a book addressing these young folks on various phases of this part of life so as to lighten the burden and to offer constructive guidance

It is a good and practical book, taken from a wealth of experience, written in a clear, simple, and yet instructive manner that should be of tremendous help to teachers, educators, and physicians who deal with teen-agers It is highly recommended to all

Experimental Immunochemistry By Elvin A. Kabat, Ph.D , and Manfred M Mayer, Ph D Octavo of 567 pages, illustrated Springfield, Ill. Charles C Thomas, 1948 Cloth, $8 75

Ever since Landsteiner's classic work *Specificity of Serological Reactions* appeared there has been need for a book of methods in the field of immunochemistry The excellent book by Kabat and Mayer satisfies that need

Although Landsteiner's work maintains its position as the classic on *qualitative* immunochemistry, the present work will no doubt become the classic on *quantitative* immunochemistry The authors were especially well qualified for the task because they had worked in collaboration with such giants in the field as Professor T Svedberg, Professor Arne Tiselius, and Dr Michael Heidelberger, the latter having written a preview at the beginning of the book.

Although the book contains ample theoretical material, it is essentially a book of methods for the immunochemist It summarizes adequately not only the contributions of the authors themselves but also of other workers in the field The vast subject is systematically presented in a series of 53 chapters divided into four sections This book is indispensable not only to the specialist but also to other workers in the general field of immunology, and is ideal for use in universities where courses in advanced immunology and biochemistry are given.

A. S WIENER

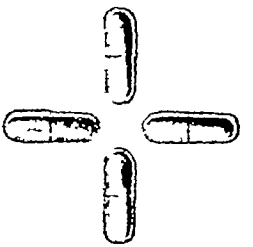
Plaster of Paris Technic. By Edwin O Geckeler, M D Second edition Octavo of 216 pages, illustrated. Baltimore, Williams & Wilkins Co , 1948 Cloth, $3 00

This volume fills a definite need It embraces the art of plaster-of-paris application in all its phases Many new illustrations have been added, the reader sees as well as reads about the different uses of plaster

MEYER E ROSS

Essays on Historical Medicine By Bernard J Ficarra, M D Octavo of 220 pages, illustrated New York, Froben Press, 1948 Cloth, $5 00

Dr Ficarra has gathered eight short essays in medical history in this brief volume The papers are slight and contain little original material, but they are entertaining and authoritative. Members of the medical profession in the metropolitan area will be especially interested in *"Walter Reed at Kings* County Hospital."



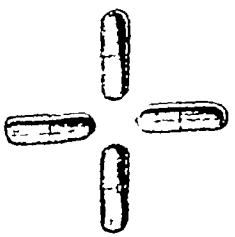
MILTON PLOTZ

The March of Medicine. The New York Academy of Medicine Lectures to the Laity, 1947 Octavo of 109 pages New York, Columbia University Press, 1948 Cloth, $2 00

This book presents an entirely different approach to medicine The role of the medical man in war is

to correct those ill-defined
secondary anemias which resist treatment
with iron alone, write:

Feosol Plus
1 cap. t.i.d.-p.c.



S K F now offers FEOSOL PLUS,
a delicately balanced,
broad-range formula
to combat those ill-defined
secondary anemias where
the deficiency is multiple

Each FEOSOL PLUS capsule contains

Ferrous sulfate exsiccated 200 0 mg , liver concentrate powder (35 1), 325 0 mg folic acid, 0 4 mg thiamine hydrochloride (B_1), 2 0 mg , riboflavin (B_2) 2 0 mg nicotinic acid (niacin), 10 0 mg pyridoxine hydrochloride (B_6), 1 0 mg , ascorbic acid (C), 50 0 mg , pantothenic acid, 2 0 mg

Feosol Plus by no means replaces Feosol
Feosol is the standard
therapy in simple
iron-deficiency anemias

Dosage 3 capsules daily,
one after each meal
Available in bottles
of 100 capsules

Smith, Kline & French Laboratories, Philadelphia

[Continued from page 2598]

first discussed by Major General Norman T Kirk, Surgeon General of the U S A. He discusses the use of plasma, the use of tantalum in neurosurgery, the use of antibiotics and sulfa drugs

A rather provocative lecture on the mother's role in an infant's life is given by Arthur K. Solomon, Ph D

Dr Nolan D C Lewis lists fifteen important emotional disturbances which were found at the Walter Reed General Hospital, and states that six or more of these traits in the personal history should allow one to expect a breakdown or distress, and that any four of them predispose the individual to some degree of instability

Anti-infectious agents of natural origin are discussed by Rene F Dubos, Ph D

VINCENT ANNUNZIATA

Kurze Klinik der Ohren-, Nasen- und Halskrankheiten By Dr Erhard Lüscher Octavo of 513 pages, illustrated Basel, Switzerland, Benno Schwabe & Co (New York, Grune & Stratton), 1948 Cloth, 54 fr

This book, written in German, is meant for the student, the general practitioner, and the practicing otolaryngologist The author presents a wealth of knowledge gained from his experience as director of the otolaryngology university clinics both in Bern and Basel, as well as from his private practice

The technics used in various operations by the specialist are described, and the role of the general practitioner, regarding therapy and postoperative care, is delineated

In spite of its brevity, this treatise with its many illustrations presents an excellent general picture of this specialized field There is a comprehensive index at the end, thus facilitating the orientation of specific illnesses

This volume is profusely illustrated with photographs and anatomic specimens in color

SAMUEL ZWERLING

Factors Regulating Blood Pressure Transactions of the Second Conference, January 8–9, 1948, New York, N Y Edited by B W Zweifach and Ephraim Shorr, M D Octavo of 170 pages, illustrated New York, Josiah Macy, Jr, Foundation (1948) Paper, $2 75

This volume is a report of the second conference held by noted specialists, particularly research men, in the field of hypertension It covers a good deal of interesting and controversial material and is recommended for its theoretic implications

ANDREW BABEY

Drug Research and Development. Edited by Austin Smith, M D, and Arthur D Herrick Octavo of 596 pages New York, Revere Publishing Co, 1948 Cloth, $10

This interesting presentation of the various phases involved in the development and marketing of drugs is well written and throws much light and understanding on the industry It was contributed to by 20 authors and is interesting, light reading

IRVING GREENFIELD

Neuroanatomy By Fred A Mettler, M D Second edition Quarto of 536 pages, illustrated St Louis, C V Mosby Co, 1948 Cloth, $10

This second edition of Dr Mettler's fine textbook shows considerable revision, and the material is quite up-to-date. The bibliography at the end is both recent and well selected By far the greatest value of this book lies in the excellent series of drawings and diagrams which are clear and lucid and go far to help one grasp this difficult subject One nuisance, to this reviewer, is the constant attempt to include the synonyms and Latin names for each anatomic term as it appears in the text This is distracting, and the same purpose might be served better by an appended glossary of terms at the end of the book On the whole this is a useful introduction to the subject and can be recommended for the use of students, neurologists, and neurosurgeons

I S FREIMAN

Gynaecological and Obstetrical Anatomy By C F V Smout, M.D With Chapters on the Histology of the Female Reproductive Tract and Its Endocrine Control by F Jacoby, M D Second edition Octavo of 248 pages, illustrated Baltimore, Williams & Wilkins Co, 1948 Cloth, $11

This reviewer had the pleasure of reviewing the first edition of this very excellent book, then under the title of *The Anatomy of the Female Pelvis*

Considerable new material has been added to this second edition, namely, chapters on "Ovarian Endocrine Function and its Control", "The Anatomy of the Uterine Tube", "The Anatomy of the Fetus in Relation to Childbirth."

Throughout, the authors lay emphasis not only on the anatomy, but also on the histology, development, physiology, and endocrinology of the pelvis and female generative organs

The reviewer highly recommends this book to all interested in obstetrics and gynecology

JACOB HALPERIN

Abdominal Operations By Rodney Maingot, F R C S (Eng) Second edition Octavo of 1,274 pages, illustrated New York, Appleton-Century-Crofts, 1948 Cloth, $16

This book on abdominal surgery is a remarkably good one The text is lucid, terse, and informative The illustrations are excellent The subject matter is up-to-date and presented in a practical fashion The chapters on stomach and duodenum, gallbladder and bile ducts, and intestines are particularly commendable, and portray with great skill the diseases involved as well as the surgical technics in modern use The other subjects are also well managed There are numerous references to the current literature

WILLIAM I SHEINFELD

Your Diet for Longer Life By James A Tobey, Dr P.H Duodecimo of 280 pages New York, Wilfred Funk, 1948 Cloth, $3 50

This is a well-organized and well-written book It describes all phases of longer living which are influenced by diet The dangers of drugs used in connection with losing weight are stressed The need for medical direction in relation to food from early

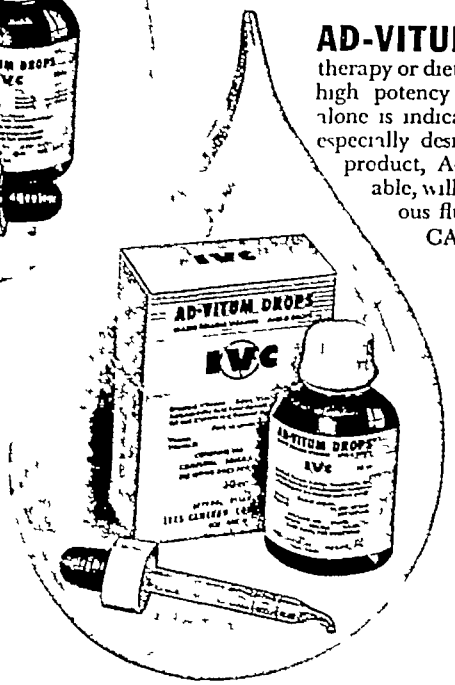
TWO PRODUCTS OF OPTIMUM ACCEPTABILITY



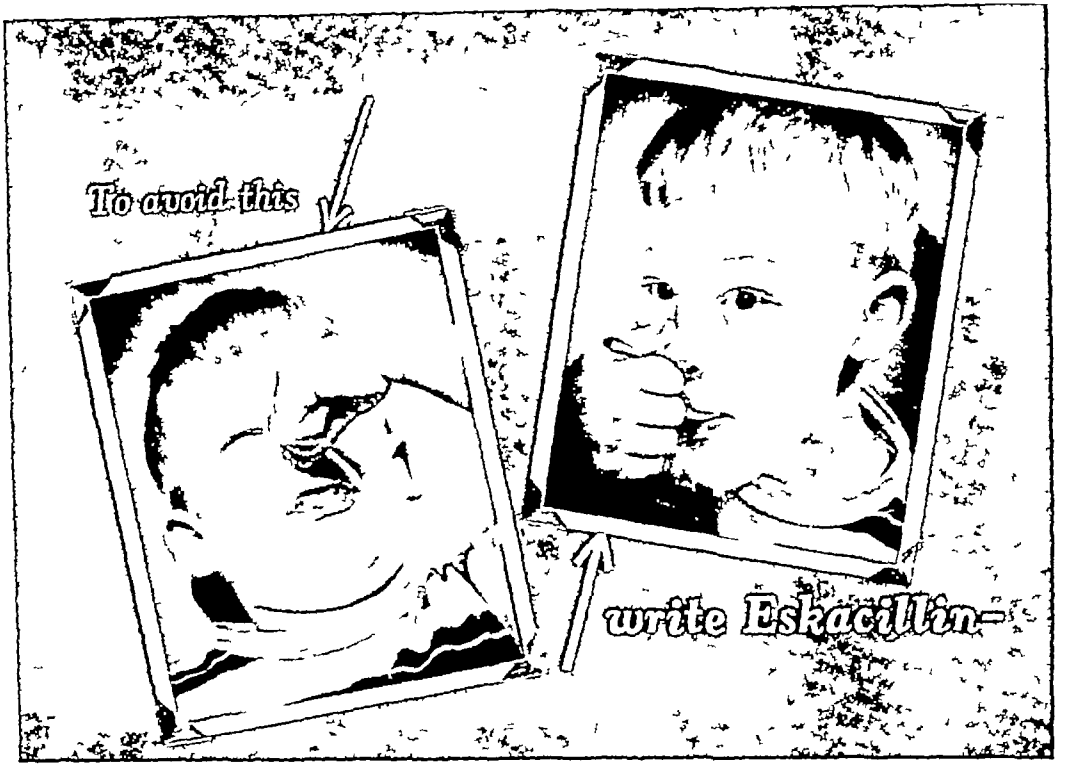
OL-VITUM Drops. For a highly palatable multi-vitamin dietary supplement, that is completely dispersible in food or any aqueous fluid, Ol-Vitum Drops are meeting a gratifyingly high professional acceptance Like all IVC products, they are found to be CLINICALLY ECONOMICAL

Each cc contains

Vitamin A ..10,000 USP Units	Vitamin B_6 .....1 6 milligrams
Vitamin D ...2,000 USP Units	Niacin Amide ...15 milligrams
Vitamin B_1 .....3 milligrams	Natural Mixed
Vitamin B_2 .....0 8 milligrams	Tocopherols .... 3 milligrams
Vitamin C .....100 milligrams	(Equivalent to 2 25 milligrams alpha Tocopherol Acetate)

AD-VITUM Drops. In vitamin therapy or dietary supplementation where high potency of the A-D combination alone is indicated, Ad-Vitum Drops are especially desirable. Like its companion product, Ad-Vitum Drops are palatable, will mix with food or any aqueous fluid and again are CLINICALLY ECONOMICAL

Distilled Vitamin A Ester, Viosterol in Oil, Sorbitan Fatty Acid Ester derivative, Vegetable Oil and Glycerin in a flavored aqueous vehicle



Each cc contains

Vitamin A
30,000 USP Units

Vitamin D
5,000 USP Units

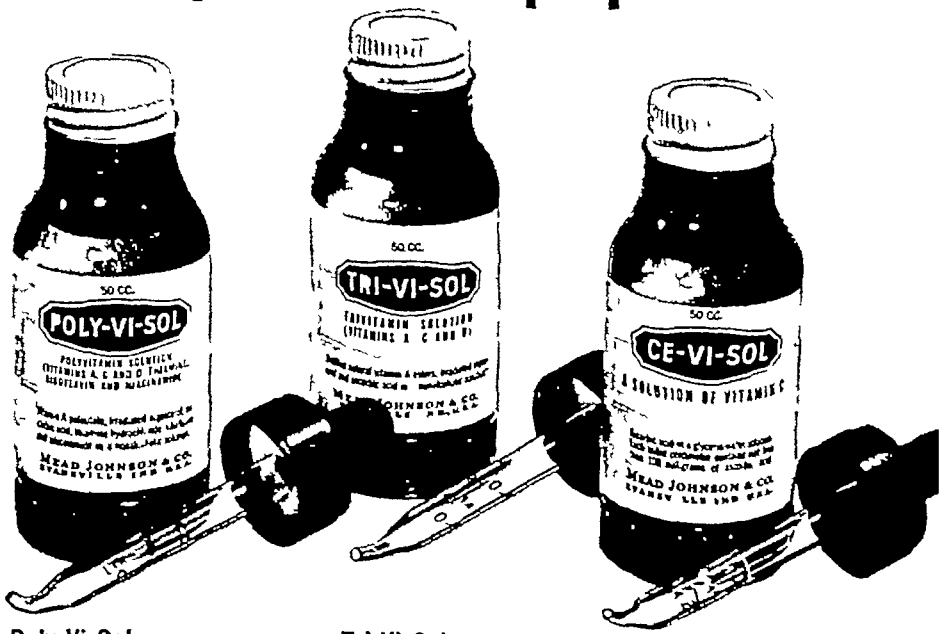
The liquid oral penicillin that tastes good!

ESKACILLIN tastes so good that even young children actually like to take it



But palatability is not ESKACILLIN'S only advantage Unlike most extemporaneous "fruit syrup" mixtures, ESKACILLIN maintains its potency for 7 full days under refrigeration

Each teaspoonful of ESKACILLIN contains 50,000 units of crystalline penicillin G—and produces a blood level equivalent to that obtained with a 50,000 unit penicillin tablet. ESKACILLIN is supplied in 2 fl oz. bottles —containing 600,000 units of penicillin.

Eskacillin *the unusually palatable liquid penicillin for oral use*

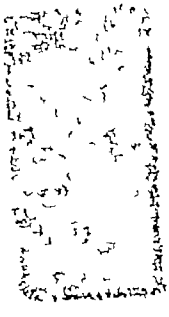
Gives the cough relief your patient wants...



Leaves the cough reflex he needs

In the average case, it's usually possible to control the patient's cough—but often it's a real problem to do it without impairing the cough reflex he needs to keep bronchioles and throat passages clear That's where you'll find pleasant-tasting Mercodol unique!

For Mercodol contains the cough-controlling narcotic[1] that gives better antitussive action than codeine or heroin, yet keeps beneficial cough reflex a superior bronchodilator[2] to relax plugged bronchioles an effective expectorant[3] to liquefy secretions And you'll find Mercodol notably free from nausea, constipation, retention of sputum, and cardiovascular and nervous stimulation

MERCODOL®

AN EXEMPT NARCOTIC

THROAT SPECIALISTS REPORT ON 30-DAY TEST OF CAMEL SMOKERS—

"Not one single case of throat irritation due to smoking CAMELS!"

YES, these were the findings in a total of 2,470 weekly examinations of hundreds of men and women from coast-to-coast who smoked only Camels for 30 consecutive days! And the smokers in this test averaged one to two packages of Camels a day!

According to a Nationwide survey

MORE DOCTORS SMOKE CAMELS

than any other cigarette!

Doctors smoke for pleasure too! When three leading independent research organizations asked 113,597 doctors what cigarette they smoked the brand named most was Camel!

A Review of the Diagnosis of Malignant Cells in Serous Fluids, Sputa, and Bronchial Secretions, *Anthony B Constantine, M D* , and *Dorothy N Shaver, M D* 267
Needle Biopsy of the Liver in Alcoholic Patients, *Samuel Sanes, M D , Robert C Bahn, M D , William H C Chapple, M D* , and *Norman Chassin, M D* 267
The Toxicology Laboratory and Its Importance to the Community, *Niels C Klendshoj, M D* , and *Milton Feldstein, B S* 268
Application of Sponge Biopsy for Cancer Diagnosis in Office Practice, *Sidney A Gladstone, M D* 268

(*Continued on page 2612*)

Long lines of black ants attracted to madhumeha, "honey urine," led the ancient Hindu wise men to observe and recognize diabetic urine, which they described as "astringent, sweet, white and sharp" Avid insects became an acknowledged means of diagnosis Almost equally primitive methods of urine-sugar detection remained in effect for a score or more of centuries, until modern copper reduction tests were perfected, refined and simplified

Simplest of all today is the reliable *Ames* tablet method, performed in a matter of seconds Urine-sugar levels are determined by direct, easily-learned steps The use of *Clinitest* (Brand) reagent tablets has eliminated the inconvenience of external heating Interpretation of routine urine-sugar testing follows readily from color scale comparison.

when MIGRAINE attacks

FIRST EFFECTIVE
oral TREATMENT
OF MIGRAINE ATTACK

Sandoz proudly announces the first *effective oral* treatment of migraine—

Clinical investigation[1] demonstrated that 80% of a series of cases experienced good results Best results were obtained in migraine, histamine and tension headaches

Friedman,[2] in a large series of migraine cases, found Cafergone 55% more effective than ergotamine tartrate alone

Later reports[3 4] were equally favorable

Cafergone

(ergotamine tartrate 1 mg, caffeine 100 mg)
(Experimentally identified as E.C. 110)

★ *Epileptic Men of Genius* ★

The Dutch painter Vincent Van Gogh, one of the masters of Post Impressionism suffered from the psychic equivalent type of epilepsy During one of his many periods of confusion he cut off one of his ears and presented it to a lady friend

Comparative studies have shown that in some cases better control of grand mal as well as petit mal seizures can be obtained with Mebaral than with corresponding doses of other antiepileptic drugs Mebaral produces tranquillity with little or no drowsiness It is particularly desirable not only in epilepsy but also in the management of anxiety states and other neuroses The fact that Mebaral is almost tasteless simplifies its administration to children Average dose for children ½ to 3 grains, adults 3 to 6 grains daily Tablets ½, 1½ and 3 grains.

RELIEF IN 80-90% OF CASES *by the* PERENNIAL METHOD OF SPECIFIC HYPOSENSITIZATION

DIAGNOSTIC AND TREATMENT SETS

State Pollen Diagnostic Sets ($7.50) Dry pollen allergens selected according to state 1 vial house-dust allergen. Material for 30 tests in each vial.

Stock Treatment Sets ($7.50) Each consisting of a series of dilutions of pollen extracts for hyposensitization, with accompanying dosage schedule. *Single pollens or a choice of 21 different mixtures* Five 3 cc. vials in each set—1 10,000 1 5,000 1 1000 1 500 and 1 100 concentrations.

Special Mixture Treatment Sets ($10 00) Mixtures of pollen extracts specially prepared according to the patient s individual sensitivities. Ten days processing time required.

Arlington offers a full line of potent, carefully prepared and properly preserved allergenic *extracts* for diagnosis and treatment—pollens, foods, epidermals, fungi, and incidentals.

Literature to physicians on request.

Arlington

THE ARLINGTON CHEMICAL COMPANY
YONKERS 1, NEW YORK

For most *effective results* in *controlling pollinosis, specific hyposensitization* should be continued *throughout the year.* Authorities agree that "desensitization treatment is still the method of *choice,* and the antihistaminic drugs cannot be considered as substitutes."[1]

ORDER YOUR ALLERGENIC MATERIALS NOW

if she is one of your patients...

She depends on your help for a speedy return to gainful occupation Women seeking employment who are nervous, apprehensive and generally distressed by symptoms of the climacteric, may find it difficult to meet competition **"Premarin"** *offers a solution Many thousand physicians prescribe this naturally-occurring, oral estrogen because*

1. *Prompt symptomatic improvement usually follows therapy*
2. *Untoward side-effects are seldom noted*
3. *The sense of well-being so frequently reported tends to quickly restore the patient's confidence and normal efficiency*
4. *This "Plus" (the sense of well-being enjoyed by the patient) is conducive to a highly satisfactory patient-doctor relationship*
5. *Four potencies provide flexibility of dosage 2 5 mg , 1 25 mg , 0 625 mg and 0 3 mg tablets, also in liquid form, 0 625 mg in each 4 cc (1 teaspoonful)*

Ayerst

While sodium estrone sulfate is the principal estrogen in "Premarin" other equine estrogens estradiol equilin equilenin hippulin are probably also present in varying amounts as water soluble conjugates

"PREMARIN"®

ESTROGENIC SUBSTANCES (WATER SOLUBLE)
also known as CONJUGATED ESTROGENS (equine)

for the successful treatment of . . .

LEG ULCERS

the DAXALAN-DOME-PASTE BANDAGE TECHNIQUE

AS INTRODUCED BY DR. WILLIAM M. COOPER Director Department of Peripheral Vascular Diseases—New York Polyclinic Medical School and Hospital

This technique is based on a 3 point program—

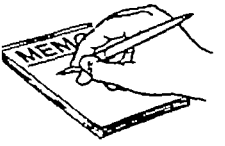
1. Reduction of dermatitis with wet dressings of DOMEBORO TABS *(BUROW S SOLUTION)*
2. Combat local infection and stimulate healing with thick application of DAXALAN in the center of the ulcer and surrounding areas.
3. Overcome venous insufficiency stasis and edema by wrapping DOME PASTE BANDAGE around the entire leg to supply compression.

DOCTOR! You may now prescribe SOOTHING Modernized Simplified Fresh and Stable BUROW S SOLUTION 1 20 in four forms DOMEBORO Tablets Packets Powder Ointment Write for samples and reprints from medical literature

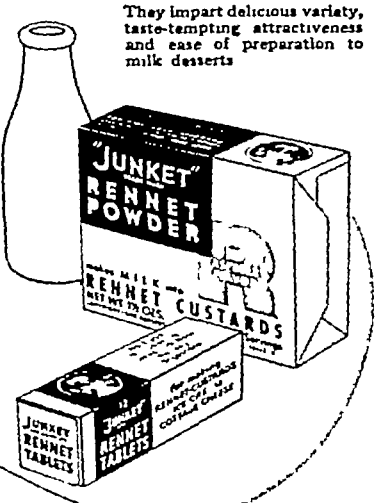
DOME CHEMICALS INC. 123 West 64th Street New York 23 N Y
Makers of the Soothing, Modernized Form of Burow's Solution
DOMEBORO—Tablets Powder Packets Ointment

Daxalan is our trademark for a rigidly standardized whole crude tar paste (low in naphthalene content) uniform in color free of coal tar specks and aged for six months.

Dome paste bandage is a flesh colored 4" x 10 yd. gauze bandage impregnated with a modified Unna s Formula" consisting of zinc oxide glycerine gelatine and calamine. This Unna s Boot comes to you in a soft condition and is ready for instant use.



. . RENNET-CUSTARDS



Psychologic Anorexia

In *tempting*, rather than forcing, rebellious or flagging appetites, delicious rennet desserts (easily made from "Junket" Brand Rennet Powder or Tablets) prove most helpful Retaining all of milk's nutritive values, yet possessing varied flavor and color appeal—these simple, attractive, eggless custards are almost invariably consumed without bribe or persuasion. Besides pleasantly disguising uncooked milk, rennet-custards produce soft, finely flocculent, easily digested curds in the stomach. More and more physicians are thus finding rennet desserts a valuable means of counteracting the "finicky behavior" often attached to milk.

Just a reminder Doctor! Mothers will appreciate your inclusion of rennet desserts on your diet recommendations.

They impart delicious variety, taste-tempting attractiveness and ease of preparation to milk desserts

"JUNKET" BRAND FOODS
PRODUCED BY
Chr Hansen's Laboratory, Inc.
LITTLE FALLS N Y
C 15-119

Make delicious rennet desserts with either

"Junket" Rennet Powder — sweetened, in six flavors (vanilla, chocolate lemon, orange raspberry maple)

"Junket" Rennet Tablets — unsweetened unflavored (particularly for very young infants and diabetics)

"JUNKET" is the trade-mark of Chr Hansen's Laboratory Inc. for its rennet and other food products.

the wide-angled approach in

arthritis therapy

With the growing concept of arthritis as a "systemic disease with joint manifestations,"[1] most clinicians today appreciate that constipation and common gastrointestinal dysfunctions are "not only susceptible of betterment but should be included in any wide-angled approach to the [arthritis] problem"[2] Which is why Occy-Crystine is more and more utilized for its dependable (yet non irritant) cathartic and cholagogue action

Composition Occy Crystine is a hypertonic solution of pH 8 4, made up of the following active ingredients — sodium thiosulfate and magnesium sulfate, to which the sulfates of potassium and calcium are added in small amounts, contributing to the maintenance of solubility

WHEN OBESITY IS A PROBLE

Clinicians have long noted that the forward bulk of the heavy abdomen with its fat-laden wall moves the center of gravity forward As the patient tries to balance the load, the lumbar and cervical curves of the spine are increased, the head is carried forward and the shoulders become rounded Often there is associated visceroptosis Camp Supports have a long history among clinicians for their efficacy in supporting the pendulous abdomen The highly specialized designs and the unique Camp system of controlled adjustment help steady the pelvis and hold the viscera upward and backward There is no constriction of the abdomen, and effective support is given to the spine Physicians may rely on the Camp-trained fitter for precise execution of all instructions

If you do not have a copy of the Camp "Reference Book for Physicians and Surgeons", it will be sent on request

When *Energy Expenditure* is High

When vigorous sports and outdoor activities increase caloric energy requirements, candy proves nutritionally advantageous as well as satisfying It yields its contained carbohydrate promptly, permits of rapid replenishment of depleted or lowered glycogen stores, and aids the organism in recovering from fatigue Furthermore, virtually everyone likes candy, making it particularly enjoyable when energy expenditure is high during fall and winter

Many candies are composed of nutritionally desirable foods—butter and other edible oils milk, nuts, fruits To the extent these foods are contained, candies contribute their mite of protein, fat, B complex and other vitamins and minerals Candies not only are valuable as a source of readily available caloric food energy, but also serve to add a satisfying final touch to luncheon and dinner, enhancing the satiety value of these meals

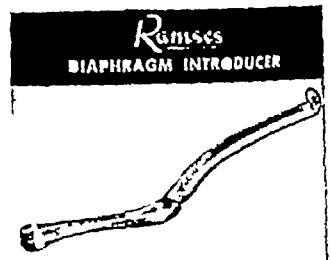
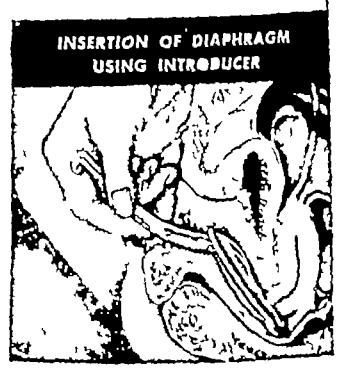
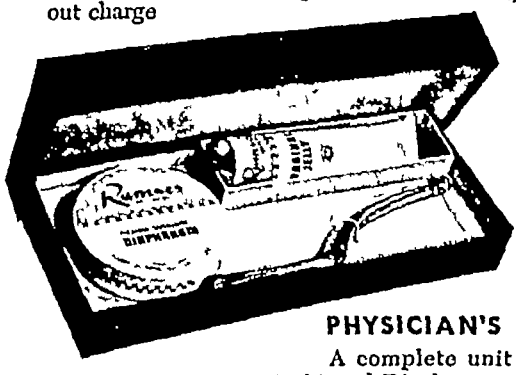
Facts About Conception Control



THE USE OF THE DIAPHRAGM INTRODUCER



Use of a diaphragm introducer is favored by many patients who find manual manipulation objectionable or difficult It facilitates the insertion and correct placement of the diaphragm, as well as its removal



The "RAMSES"* Diaphragm Introducer provides the following features

- Simplicity and convenience in use
- Safety — design minimizes possibility of injury to the cervix or accidental insertion into the urethra
- Smooth surface lessens bacterial proliferation — makes for easy cleaning
- Ease of removal assured by bluntly hooked end

The 'RAMSES' Diaphragm Introducer is supplied in the Physician's Prescription Packet No 501, without charge

Ramses
TRADEMARK REG. U.S. PAT. OFF.

PHYSICIAN'S PRESCRIPTION PACKET NO. 501

A complete unit for conception control Contains (1) a "RAMSES' Flexible Cushioned Diaphragm of the prescribed size, (2) a "RAMSES" Diaphragm Introducer of corresponding size, and (3) a tube of "RAMSES' Vaginal Jelly† (regular size)

* The word "RAMSES is a registered trademark of Julius Schmid, Inc.

† Active Ingredients Dodecaethylenoglycol Monolaurate 5% Boric Acid 1%, Alcohol 5%.

RAMSES' Vaginal Jelly is accepted by the Council on Pharmacy and Chemistry of the American Medical Association The RAMSES Diaphragm and Diaphragm Introducer are accepted by the Council on Physical Medicine of the American Medical Association.

Syrup Choline Dihydrogen Citrate

(*Flint*)

Continued patient acceptance of choline over prolonged periods can be assured by prescribing—

"Syrup Choline" (*Flint*)

25 per cent W/V—containing one gram of choline dihydrogen citrate in each 4 cc

Supplied in pints and gallons

"Capsules Choline" (*Flint*)

containing 0 5 gram of choline dihydrogen citrate.

Supplied in bottles of 100, 500 and 1000

"Choline (Flint)" is indicated in fatty infiltrations of the liver associated with alcoholism, infectious hepatitis, early cirrhosis, diabetes, malnutrition

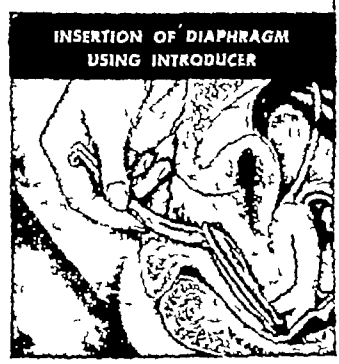
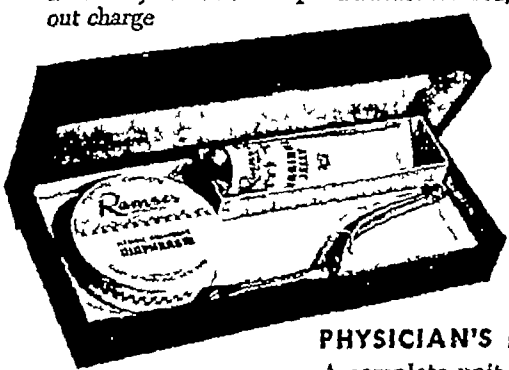
Facts About Conception Control

THE USE OF THE DIAPHRAGM INTRODUCER



Use of a diaphragm introducer is favored by many patients who find manual manipulation objectionable or difficult It facilitates the insertion and correct placement of the diaphragm, as well as its removal



The "RAMSES"* Diaphragm Introducer provides the following features

- Simplicity and convenience in use
- Safety — design minimizes possibility of injury to the cervix or accidental insertion into the urethra
- Smooth surface lessens bacterial proliferation — makes for easy cleaning
- Ease of removal assured by bluntly hooked end

The "RAMSES" Diaphragm Introducer is supplied in the Physician's Prescription Packet No 501, without charge

KONDREMUL
(PATCH)

An Emulsion of
MINERAL OIL and IRISH MOSS

1

Kondremul Plain—when regularity is to be obtained and maintained through softening of the feces by a colloidal emulsion of microscopically fine particles which are stable, indigestible, unabsorbable and which mix intimately with the fecal mass—non irritating non habit forming.
Dosage Adults, one tablespoonful children, one dessertspoonful.

2

Kondremul with non-bitter Extract of Cascara (4 42 Gm. per 100 cc.)—when the mild tonic laxative action of cascara extract combined with the soft bulk of Kondremul is needed for treating moderate, chronic or atonic constipation, especially in elderly patients.
Dosage. Adults, two to three dessertspoonfuls· children one dessertspoonful upon retiring

3

Kondremul with Phenolphthalein— 13 Gm (2 2 grs.) phenolphthalein per tablespoonful—for temporary use in the more obstinate cases. When the severe symptoms of constipation have subsided satisfactory action will usually be obtained by changing to Kondremul Plain.
Dosage Adults one tablespoonful children one to two teaspoonfuls upon retiring.

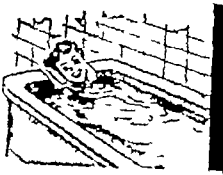
Because "SUDDEN" is a dangerous word in cases of hypertension...

it has become almost instinctive with physicians to prescribe Nitranitol. An ideal vasodilator, Nitranitol produces *gradual* reduction of blood pressure in essential hypertension. Nitranitol maintains lowered levels of pressure for prolonged periods. Virtually non-toxic, Nitranitol is safe to use over long periods of time.

NITRANITOL®



For gradual, prolonged, safe vasodilation

Merrell
1828
CINCINNATI U S A

When sedation is desired *Nitranitol with Phenobarbital* (1¼ gr Phenobarbital combined with ½ gr mannitol hexanitrate)

For extra protection against hazards of capillary fragility *Nitranitol with Phenobarbital and Rutin* (Combines Rutin 20 mg with above formula.)

When your patient needs

Spa Therapy...

The place is The Saratoga Spa

Have you a patient who needs

INHALATIONS

The results obtained in the treatment of 738 patients with inhalation at the New York State owned Saratoga Spa show interesting tendencies

Marked relief of the condition treated was noted in 38 patients (5 2%), moderate relief in 468 patients (63 4%), temporary relief in 46 (6 4%), and no change in 185 (25%)

Conditions for which the treatments were given included sinusitis, coryza, bronchitis, chronic rhinitis, bronchial asthma, laryngitis, allergic rhinitis, hay fever, and pharyngitis The treatments consisted of the inhalation of finely nebulized saline-alkaline, naturally carbonated mineral waters, and medicated oils

The relief obtained bore a definite relation to the number of treatments taken In acute conditions, from four to six treatments were necessary to obtain consistent improvement while in chronic conditions, twelve to fifteen treatments were usually required

Inhalations are taken without discomfort, which is an important factor in therapy

The safety of the therapy can be stressed Reactions of significance occurred in only three patients One patient may possibly have had a sensitivity to chlorenan, one developed an acute asthmatic paroxysm, and the third noted a general reaction to epinephrine

Attention to the general condition of the patients suffering from respiratory disorders is an important factor Inhalations have a definite place in the general "cure" regimen of a spa

As printed in the New York State Journal of Medicine 44:1214 (June 1) 1944.

When you recommend "a change of scene"

3 weeks at The Saratoga Spa will benefit, refresh relax your patients with such chronic conditions as Heart and Digestive disorders, Arthritis and related ailments, and Hypertension At your request, we will send list of local, private practicing physicians who will cooperate with you as to treatment, rest and diet Address Medical Director, The Saratoga Spa, 155 Saratoga Springs, N Y

Listed by the Committee on American Health Resorts of the Council on Physical Medicine and Rehabilitation of the American Medical Association

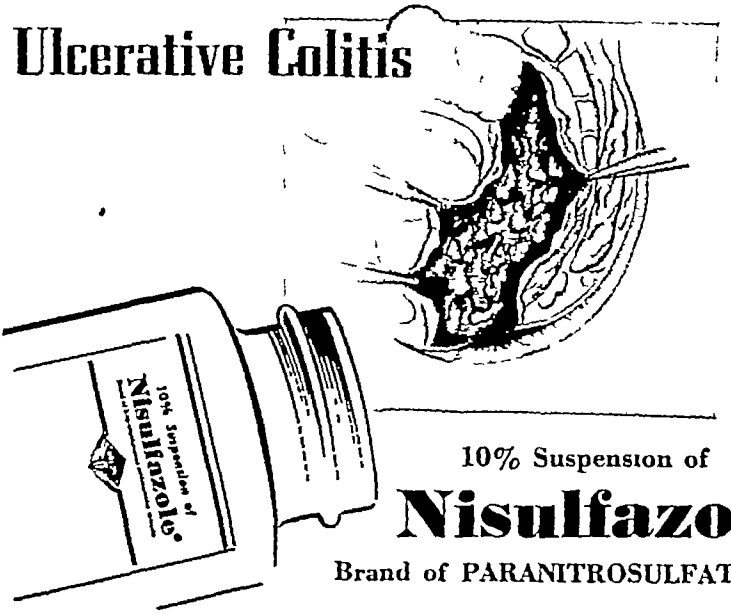
The Empire State's Contribution to the Medical Profession

● Now, there is an effective ally against the disease known for its rasping difficulties.



This is Nisulfazole — no recruit, but under trial for eight years — a sulfonamide which differs by carrying a substituted nitro radical It is given as a suspension, intrarectally, where in relatively high concentration it is in contact with the pathologic area

Of 47 chronic ulcerative colitis patients in an early series treated with Nisulfazole Suspension, 37 could be followed for five years, 34 were then symptom free, three were markedly improved Some received the drug for 26 months with frequent blood counts and urinalyses No untoward effects were seen [1]

BACITRACIN-NASAL

CSC

More Than Symptomatic Relief

IN ACUTE AND CHRONIC SINUSITIS

Bacitracin-Nasal-C S C is a valuable means of reducing the period of disability when acute sinusitis complicates coryza Bacitracin, through its specific antibiotic properties, destroys many of the pathogens which flourish in the nose and accessory nasal sinuses Desoxyephedrine, through its vasoconstrictor influence, improves ventilation and sinus drainage, thus enhancing the action of bacitracin Bacitracin-Nasal-C S C may be administered by means of a nebulizing spray or by the Parkinson lateral head-low position Available in ½ ounce bottles on prescription at all pharmacies

1 Nonallergenic, even on repeated administration
2 An aqueous solution which does not inhibit ciliary activity
3 Nonirritant, isotonic
4 May be administered to both adults and infants

CSC

When dispensed by the pharmacist each cc of Bacitracin-Nasal-C S C provides bacitracin 250 units, desoxyephedrine hydrochloride 2 5 mg (0 25%), sodium benzoate 1% The solution is stable at room temperature for 5 to 7 days, at refrigerator temperature for 3 to 4 weeks

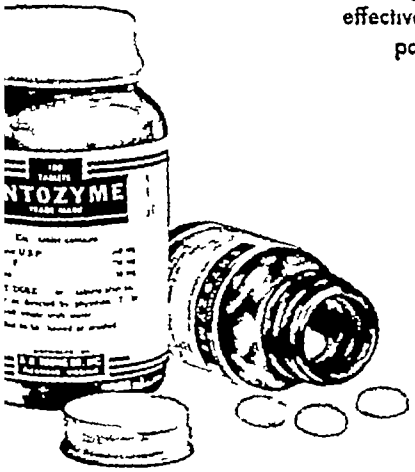
nnouncing another Robins' achievement



NEW TRIPLE-ENZYME DIGESTANT

with unique Peptomatic* Action!

ly soluble outer shell
epsin) enterically
ire contains
n and bile salts.

By the development of an entirely new type of coated tablet, consisting of a gastrically soluble outer shell containing pepsin, and an enterically coated core containing pancreatin and bile salts—Robins (with their new product Entozyme) now makes it possible to release these three important digestants *in fully active form* to that part of the gastrointestinal tract where pH conditions for optimum activity prevail. Clinical research[1] indicates that Entozyme's greatest field of usefulness is in chronic cholecystitis, post-cholecystectomy syndrome, subtotal gastrectomy, infectious hepatitis, pancreatitis and chronic dyspepsia—where its unique selective therapy restores more nearly physiological conditions in the gastrointestinal tract. It is also highly effective in nausea, anorexia, belching, flatulence and pyrosis. In peptic ulcer patients, too, pancreatin-pepsin therapy has produced excellent results.[2]

FORMULA: Each specially constructed tablet contains Pancreatin, U.S.P., 300 mg.; Pepsin, N.F., 250 mg.; Bile Salts 150 mg.

DOSAGE: 1 or 2 tablets after each meal, or as directed by physician without crushing or chewing.

SUPPLIED: Bottles of 25 and 100.

REFERENCES: 1. McGavack, T. H. and Klotz, S. D.: Bull. Flower Fifth Ave. Hosp., 9:61, 1946. 2. Weissberg, J., McGavack, T. H. and Boyd, Lina J.: Am. J. Digest. Dis., 15:332, 1948.

*A coined word to describe the unique mechanical action of Entozyme Tablet—whereby pepsin is released only in the stomach, and pancreatin and bile salts only in the small intestine.

Why Many Physicians Write It

CARSTAIRS

when whiskey is indicated

MORE and more well-informed physicians are recommending light blended whiskey to their patients when whiskey is medically indicated Reason

Neutral spirit blends contain few congeners such as fusel oil, tannins, aldehydes, esters, furfurals, acids, etc That means they're not only light but mild, too What's more, they're usually around only 86 proof (43% alcohol by volume)

One of America's leading whiskies of this type is Carstairs White Seal It is blended with care by expert distillers devoted to the highest quality standards Their insistence on perfection has made Carstairs famous as the Perfectly Balanced Blend

Whenever whiskey is indicated, may we suggest that you recommend that superb blend—Carstairs White Seal—to the patients in *your* care?

The Medical Man who Cares says

Good Nutrition..

A VITAL FACTOR IN THERAPY

The sound and wholesome nutritious diet is an integral part of modern day preventive and definitive therapy A steady stream of adequate amounts of all the essential nutritional elements is vital for good growth, maintenance of tissue structure and functioning, healing after trauma, and resistance to infection For maintaining this daily, steady stream of nutrients, however conditions both in health and illness often make imperative the use of an efficient food supplement along with the diet

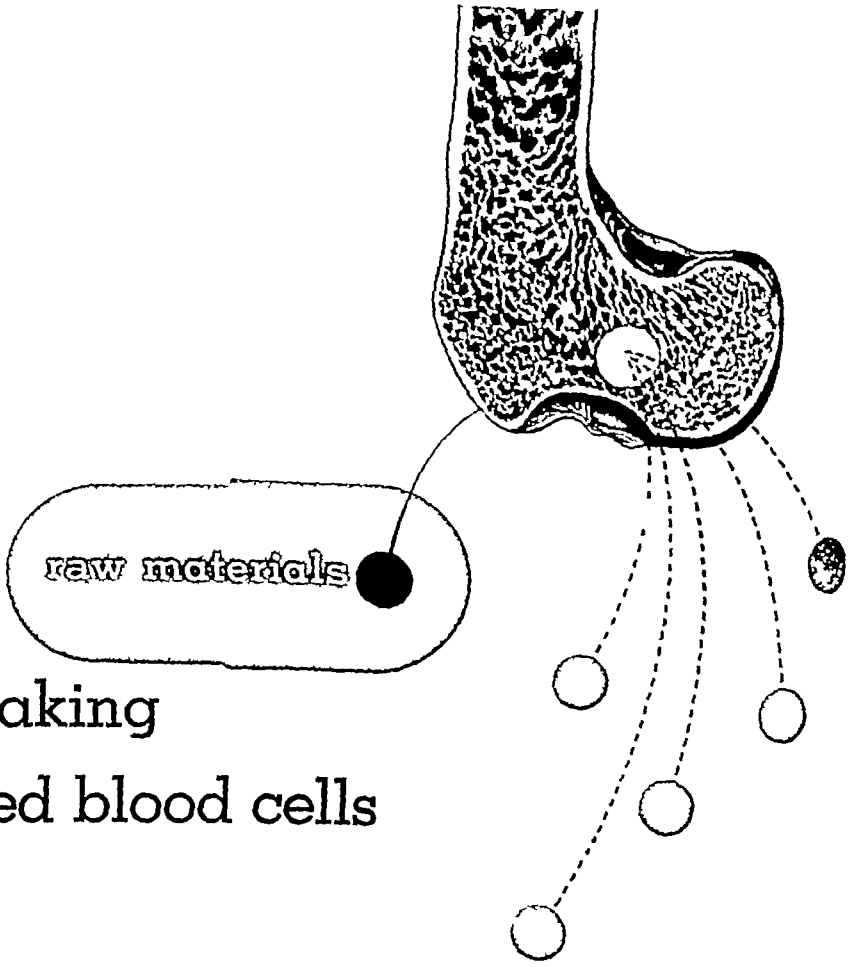
The *multiple dietary food supplement* Ovaltine in milk has wide usefulness for enhancing to full adequacy even nutritionally poor diets Its rich store of vitamins and minerals includes vitamins A and D ascorbic acid, thiamine, riboflavin and niacin, and calcium, iron and phosphorus Its nutritionally complete protein has excellent biologic rating

Since these vital nutritional values along with carbohydrate and easily emulsifiable milk fat are incorporated in liquid suspension or solution, Ovaltine in milk is also especially adapted to liquid diets The highly satisfying flavor makes for its ready acceptability when foods are often distasteful

The important overall nutrient contribution of three glassfuls of Ovaltine mixed with milk is presented in the accompanying table

THE WANDER COMPANY, 360 N MICHIGAN AVE , CHICAGO 1, ILL

Ovaltine



Three servings of Ovaltine each made of ½ oz. of Ovaltine and 8 oz. of whole milk,* provide

The Department of Justice Investigates the State Society

In the past thirty days, a statement from the Board of Trustees of the American Medical Association reveals that 16 state and county medical societies and other medical organizations, including the A.M.A. itself, have been made the subjects for investigations by the antitrust division of the Federal Department of Justice [1]

The medical groups suddenly brought under investigation, it was announced, include the following

American Medical Association, New York State Medical Society, Utah State Medical Association, Washington State Medical Society, Arkansas Medical Society and the Oklahoma State Medical Association, Michigan Medical Service, a Blue Shield Prepaid Medical Care Plan, and the Arkansas Blue Cross-Blue Shield Plan

Los Angeles County Medical Society, California, Beckham County Medical Society, Oklahoma, Wayne County Medical Society, Michigan, Harris County Medical Society, Texas, King County Medical Society, Washington, and the New York County, Nassau County, and Queens County Medical Societies in New York State

What is the purpose of the investigations? Under date of August 25, 1949, a letter from the Department of Justice addressed to the Secretary, American Medical Association, over the signature of Herbert A. Bergson, Assistant Attorney General, states "alleged violations of the Federal antitrust laws in the medical field" It is also "requested that you make available for examination by the bearer, an agent of the Federal Bureau of Investigation, such of your files as he may request"

On October 7, 1949, the *New York Times* carried a special dispatch by Louther S Horne from which we quote, in part

> In one of its strongest attacks on President Truman's compulsory health insurance proposal, the American Medical Association dis-

[1] October 6 1949

closed today that the A M.A and fifteen state and county medical societies, including four New York groups, were under investigation by the Department of Justice

In making this announcement, the A.M.A , which represents 143,514 physicians throughout the country, said

"This is an official statement of the board of trustees, protesting the use of a police arm of the Government—namely, the antitrust division of the Department of Justice—in the campaign to discredit American medicine and terrorize physicians into abandoning their opposition to compulsory health insurance"

The trustees' statement, issued at a press conference at A M A. headquarters, also disclosed that "in the early morning hours of February 10 the (trustees') board room was broken into and records of the board were thoroughly searched by persons unknown"

The membership of the Medical Society of the State of New York may not have seen, in the same issue of the *New York Times*, the following [2]

Investigation into alleged antitrust practices in the New York State Medical Society and medical societies of Queens, New York, and Nassau counties are being carried out here by the antitrust division of the Department of Justice, J Francis Hayden, chief of the division's New York office, made known yesterday

He said the investigation here was in connection with those elsewhere "on complaints that have been coming in from doctors and laymen throughout the country alleging restraints and attempts to monopolize prepaid medicine (*sic*) societies"

These actions have no bearing on the Administration's socialized medicine project, Mr Hayden said He said the investigations were being carried out with the possibility of inaugurating restraining suits similar to those against the Washington (D C) Medical Society in 1938 and the current suit against the Oregon State Society The Washington action also named as defendants the American Medical Society, the Washington Academy of Surgery, the Harris County Medical Society of Houston, Texas, and 21 officials of the Washington Society The A M.A and the Washington society were convicted of restraint practices and the conviction was affirmed by the United States Supreme Court

It will be noted that "investigation" here, in the State of New York, was inaugurated "on complaints that have been coming in from doctors and laymen throughout the country alleging restraints and attempts to monopolize prepaid medicine (*sic*) societies" So far, the complaints are cloaked with anonymity So far, alleged "restraints and attempts to monopolize prepaid medicine (*sic*) societies" are the reasons given for the investigations of the Medical Society of the State of New York

In order that our membership may be informed of the precedent events, we quote in part from an official statement of the Board of Trustees of the American Medical Association

> The chronology of events, since the American Medical Association decided to make a nationwide campaign against compulsory health insurance, and in behalf of voluntary health insurance, is, we believe, of real significance
>
> In November, 1948, the A M.A. at its mid winter meeting voted to collect funds from its members to finance a campaign of public education on this issue A public announcement was made to that effect
>
> Only a month later, in December, agents of the Department of Justice called on the Chicago Medical Society, seeking to check the Society's records in connection with an alleged antitrust investigation
>
> During the February session of the Board of Trustees of the A M.A in the early hours of February 10, the board room was broken into and records of the Board were thoroughly searched by persons unknown Brief cases of the trustees, left in the room, were also searched. Entrance was gained through a window The facts indicate this was a search for information, rather than an ordinary burglary *Certainly no friends of medicine would take this means of obtaining medical data* *
>
> A few weeks later, toward the end of February, administration leaders began threatening medical societies and medical men with "investigation" as part of their campaign to discredit and intimidate the medical profession Since then, there hasn't even been much attempt to disclaim the political nature of these investigations
>
> On February 28, 1949, for example, one of the national press associations carried a dispatch from Washington quoting government officials as stating that antitrust actions would be started against "several" medical societies soon after the compulsory health insurance drive was started in Congress

* Italics ours.—*Editor*

The implication was plain that the "investigations" would be part of the administration's campaign for its socialized medicine scheme

The threats made then are now realities An epidemic of "investigations" aimed at medical societies and voluntary medical care plans has broken out in widely separated cities and states all over the country

We want it clearly understood that we believe this attack on the medical profession stems from the antitrust division of the Justice Department and political string-pullers who have exerted influence on that agency We believe it to be an outrageous abuse of public power which far transcends in gravity the issue of compulsory health insurance, vital as that issue is

We recognize that politically motivated attacks have been made on many other groups by this division of the government, and we invite their cooperation with American medicine in an effort to alert the American people to the seriousness of this trend toward police state methods If the police arm of the government is used to intimidate doctors and others, and this abuse of power goes unchallenged, it may next be used to terrorize publishers or grocers, farmers or lawyers, Catholics or Jews, or any other minority in the nation

The foregoing are factual statements which we desire to place before the readers of the JOURNAL as a matter of information We believe that the membership of the State Society should be made aware of what is occurring In view of the fact that no suit has been filed, and this must await the results of the investigation now under way, we defer for the present any further comment

Veterans Hospitals

The recent report of the Committee on Public Health Relations of the New York Academy of Medicine on the hospitalization of veterans, addressed to the general public, the Eighty-first Congress, and the Veterans Administration, is a common sense plea that Federal responsibility for medical and hospital care be limited exclusively to these with service-connected disabilities, excepting only the tuberculous and the mentally ill [1] Says the *New York Times* [2]

> The report of the Academy's committee confirms conclusions reached long ago One year after the enactment of the 1924 enabling law, five out of six veterans in government hospitals had service-connected disabilities, in January, 1949, out of three veterans in government hospitals only one had a disability connected with war service The change in policy brought with it what the Academy's committee terms "the development of a hospital empire with 100,000 beds," to which additions are authorized that will cost three quarters of a billion dollars In January of this year 110,553 veterans were hospitalized at government expense—73,821 of these for conditions that bore no relation to their military service If government hospitals admitted only veterans who were victims of the war, facilities for only 36,732 would be needed

The recommendations of the Academy's committee are in substantial agreement with those of the Voorhees report of the Federal medical services of the Hoover Commission A certain number of veterans who are unable to pay for medical care would be accepted for teaching purposes, also regardless of the origin of their disabilities The 46,000 and more beds now available in government hospitals should be used for veterans before more hospitals are built Federal medical services should be integrated in the interest of economy Lastly, veterans medical services should be coordinated with those of voluntary hospitals and the procedures of voluntary hospitals adopted to reduce what comes close to malingering At a time when government expenditures here and abroad are mounting alarmingly, the reports of the Voorhees and Academy committees should not be ignored by Congress and the veterans organizations

In view of the information presented, the committee declares that the present facilities are adequate for all reasonable needs

[1] Bull. New York Acad. of Med. 25 557 (Sept.) 1949
[2] September 24 1949

of the veterans with service-connected disabilities and urges Congress not to delay the setting of a limit of 120,000 beds

The present report reiterates a recommendation of seventeen years ago, when the matter was under consideration by the Committee on Public Health Relations At that time the Committee recommended "That the hospitalization of veterans for non-service-connected disabilities be discontinued, not alone because it is wasteful, but also because it is reprehensible class legislation and totally unfair to the rest of the country"

We are wholly in agreement with the Academy's recommendations, if a little skeptical of their acceptance by Congress and the veterans organizations It is difficult to reverse a well-entrenched policy of free spending of public funds.

Toxic Drugs and Accidents Mounting rates of death and disability due to accidents are causing grave concern Research into possible origins for this growing fatality rate are being conducted intensively in many places One such inquiry in this State concerns the part which toxic drugs may play in the causation of injuries and poisonings which occur in homes and on farms

It is obvious that such a study must rely on source material from those physicians who see and treat such accident cases The University of Rochester School of Medicine and Dentistry is endeavoring to secure the cooperation of the physicians of New York State in obtaining case histories of these accident-prone individuals Its Department of Pharmacology and Toxicology, under the direction of Dr Harold Hodge, is undertaking a study to determine to what extent the effects of therapeutic drugs and exposure to toxic chemicals contribute to the high death and disability rates due to accidents

We are privileged to assist in this study by reprinting in our correspondence column in this issue a letter detailing the exact information desired (see page 2720) The letter appeared originally in the *J A M A*, issue of July 8, 1949, but may not have received the attention it undoubtedly deserves from the physicians of the Empire State We feel that any doctor possessing such records of accidents would be glad and more than willing to make them available for the purposes outlined on page 2720 of this issue

With the object of securing as much information on this subject as possible we solicit on behalf of the University of Rochester the careful reading of the four categories of case histories about which reliable information is wanted The assistance of every reader of this JOURNAL can help materially to reduce the accidents death and disability toll, the useless and probably avoidable wastage of human life now approaching staggering figures

The Legion Votes The American Legion and the Legion Auxiliary, at their recent national conventions in Philadelphia, reaffirmed the stand taken annually since 1945 by adopting a strong resolution against compulsory health insurance

The Legion, with a national membership of 3,500,000, and the Legion Auxiliary, composed of more than 1,000,000 women, passed the following resolution

> WHEREAS, the American Legion has always had as one of its objectives to foster and perpetuate a 100 per cent Americanism and to safeguard our liberties and freedoms as opposed to any form of compulsion and regimentation, and
>
> WHEREAS, there is now before the Congress of the United States the question of compulsory health insurance which in itself is a threat to our freedom, now therefore,
>
> *Be it resolved* by the American Legion in National Convention assembled August 29 to September 1, 1949, in Philadelphia, Pennsylvania, that this organization go on record as opposing any form of compulsory health insurance

The above item should be of great interest to our readers

DEVELOPMENTS IN PUBLIC HEALTH

From the New York State Department of Health

William A Brumfield, Jr , M D , Editor

The 1949 Outbreak of Poliomyelitis in New York City

Physicians in the State of New York will undoubtedly be interested in a consideration of certain aspects of the recent poliomyelitis flare-up While it is not possible at the present time to offer a complete account of developments in New York City, we feel that it would be of some value to describe the steps that were taken to deal with the outbreak

Each year as the summer approaches, two questions are raised in the minds of public health officials, physicians, and parents Will a poliomyelitis outbreak occur this year? If so, what can be done about it? Even in epidemic years the number of reported cases in the first six months may give no indication of what is to follow Therefore, any prognostication about the incidence of poliomyelitis before sometime in July is uncertain

Twelve cases of poliomyelitis were reported in New York City for the month of June, 1949 Although this number was slightly higher than average, there appeared to be no cause for alarm Nevertheless, Health Department officials were on the alert During the first week of July, twelve cases of poliomyelitis were reported in New York City The incidence was higher than usual and the possibility of an epidemic outbreak appeared greater By the end of the second week of July a sharp rise had occurred and 61 new patients were reported

The Department of Health immediately began to prepare for the possibility of an epidemic Health Commissioner Mustard appointed a medical advisory committee, which he called together on July 15 The situation was presented to them together with an outline of plans should the cases continue to increase

At the same time a set of questions and answers about poliomyelitis was approved, with minor changes, and then widely distributed to Department district health officers and practicing physicians for their guidance

In addition, on July 19, a Division of Poliomyelitis was established in the Bureau of Preventable Diseases This division was staffed by epidemiologists, statisticians, and clerks who collected data, made investigations and studies

Regular meetings were held several times each week, to discuss progress of the outbreak as well as steps to be taken in instituting necessary measures Weekly meetings were held, to which were invited the Commissioner of Hospitals, representatives of the United States Public Health Service and of the State Health Department

Concurrently, the number of poliomyelitis cases increased sharply Whereas the number of reported illnesses for July was but 260, almost 1,200 additional cases occurred in August The outbreak reached its peak during the second week of August, when approximately 300 new patients were reported By September 1, the total for the first eight months of the year had increased to 1,549 cases and 130 deaths

Every reported patient was visited by an epidemiologist and a detailed history obtained from the family and from the attending physician The data thus obtained will be studied for any light these may throw on the method of spread In addition to these visits, follow-up calls to determine the progress of the patient were made in each instance, approximately thirty days after the onset of illness

Concomitantly, studies were initiated to attempt to answer the many questions received by the Health Department These included the possible influence of various environmental factors, such as bathing at public beaches and pools, and the possible carrier role of the fly

of the veterans with service-connected disabilities and urges Congress not to delay the setting of a limit of 120,000 beds

The present report reiterates a recommendation of seventeen years ago, when the matter was under consideration by the Committee on Public Health Relations At that time the Committee recommended "That the hospitalization of veterans for non-service-connected disabilities be discontinued, not alone because it is wasteful, but also because it is reprehensible class legislation and totally unfair to the rest of the country"

We are wholly in agreement with the Academy's recommendations, if a little skeptical of their acceptance by Congress and the veterans organizations It is difficult to reverse a well-entrenched policy of free spending of public funds

White LABORATORIES INC., Pharmaceutical Manufacturers, Newark 7, N. J.

In view of the fact that a large portion of the public fears the possibility of the spread of poliomyelitis by bathing at public places, a study was initiated to determine the bathing habits of those ill with the disease At the same time, the bathing habits of a control group consisting of well people were also investigated This was done by canvassing a sample of 14,000 families, comprising 50,000 to 60,000 individuals in the metropolitan area Results of these investigations will be published at a later date

The outbreak was city-wide The distribution of illness by health districts, of which there are thirty in New York City, did not vary greatly, except in a few instances In Manhattan there appeared to be a concentration in the lower East Side In Brooklyn a similar concentration occurred in the Gravesend area, and in Queens it was more evident in the Flushing, Jamaica-West and in the Maspeth-Forest Hills areas

As in previous outbreaks, most of the cases have been in the younger age groups, children under fifteen making up about three fourths of the entire number It was noted, as in the past, that the nonwhite population was less affected than the white population Five eighths of the patients suffered some degree of paralysis Approximately 92 per cent of all patients were hospitalized, almost all of these had a spinal tap done to confirm the clinical diagnosis

The question of the opening of schools was brought up by a number of persons The point of view of the Department of Health was similar to that of other public health agencies, and of those engaged in the study of poliomyelitis No good reason exists for a postponement of the opening of schools All previous experience in this city and elsewhere indicates that an outbreak of poliomyelitis continues to abate whether school is open or not and that the delay of the opening of schools does not make it abate any faster

With poliomyelitis waning, emphasis by the Department is being shifted from the care of those in the acute stage to rehabilitation under the Health Department Division for Handicapped Children Nonparalyzed patients will be followed for a period of two years to ascertain if deformities will occur, those who are paralyzed for as long as is necessary Assistance will be given to provide home care by trained nurses and physiotherapists, or hospital care in recognized institutions Arrangements have also been made for the education of handicapped children Where necessary, special classes will be formed in the schools, hospitalized children will be taught in the hospitals, and, in the cases of home-bound children, teachers will be sent to the homes —MORRIS GREENBERG, M D , *Director, Bureau of Preventable Diseases, New York City Department of Health*

OFFICE MANAGEMENT OF VENEREAL DISEASES

"The time has now arrived when the diagnosis and treatment of venereal diseases should properly revert to the office of the private physician " are the words prominently displayed on the cover of a valuable and useful booklet recently issued by the Bureau of Social Hygiene of the New York City Department of Health, in cooperation with the New York State Department of Health and the United States Public Health Service This booklet outlines for the physician the management of venereal disease patients and is up-to-date on the new methods of treatment, including penicillin and other antibiotic agents, although the final word on these remedies cannot be written at this time

The publication is well worthy of the attention of the practitioner and may be obtained from the Department of Health, 125 Worth Street, New York 13, New York

THE MANAGEMENT OF THE SYMPTOM COMPLEX IN ACUTE POLIOMYELITIS

EMIL SMITH, M D , DAVID J GRAUBARD, M D , and PHILIP ROSENBLATT, M D , F A C P , Brooklyn, New York

(*From the Communicable Disease Service and Department of Laboratories, Kingston Avenue Hospital*)

DESPITE recent major advances in antibiotic and chemotherapy, specific means of combating the virus of acute poliomyelitis are as yet unknown As a consequence, treatment in this disease is symptomatic and directed toward minimizing pain, spasm, and deformity

In previous reports it was suggested that the sympathetic nervous system was being largely neglected in assaying the clinical picture of poliomyelitis [1-3] Histopathologic evidence was presented in support of theoretic considerations Clinical observations also substantiated the belief that vasospasm played an important role in the production of pain, muscle spasm, and vasomotor instabilities of varying types

It is the purpose of this report to evaluate the clinical response of 120 poliomyelitis patients treated with sympatholytic drugs at the Kingston Avenue Hospital during 1948 As a result of this study, impressions concerning the pathologic physiology involved in acute poliomyelitis crystallized more clearly, and additional histopathologic material became available for confirmatory observations

Pathogenesis of the Symptom Complex

Acute poliomyelitis is a specific inflammatory disease involving principally the gray matter of the spinal cord Characteristically, in fatal cases, lesions are found in the meninges and bulbospinal axis, chiefly in the gray matter of the anterior horn. The internuncial groups of neurons are often affected, and frequently lesions are seen in the posterior horns as well Inflammatory foci have also been found in pons, midbrain, cerebrum, and cerebellum. In the limited number of cases which we have observed by autopsy, lesions have been regularly seen in the sympathetic ganglia

With knowledge of the widespread distribution of inflammatory foci, it is possible to theorize and explain the symptom complex in acute poliomyelitis The pain, muscle tenderness, and vasomotor symptoms are undoubtedly central in origin resulting from focal inflammatory changes in the central nervous system, sympathetic ganglia, or both The early symptoms may be sharply localized to the involved nervous structures, but as the disease progresses, the areas involved become more widespread and diffuse For example, a focal lesion in the spinal

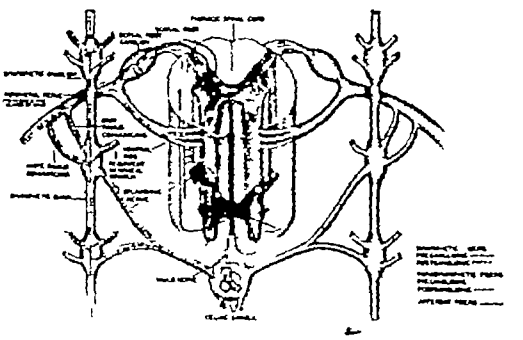

FIG 1 Anatomic schematization representing the pathology for the spreading waves of excitation An inflammatory lesion in the anterior horn cells may create an abnormal state of activity in the intra-, trans-, or intersegmental neurons in the spinal cord gray matter The disturbance thus created may express itself in an abnormal motor response from both lateral and anterior horn neurons of one or more segments of the cord The resulting *muscle spasm and vasomotor changes may furnish* new sources of pain and new reflexes The pathologic physiology may continue to spread and involve parts or all the muscles and blood vessels of the body, thus setting up the symptom complex.

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York, Buffalo Section on Pediatrics, May 5, 1949

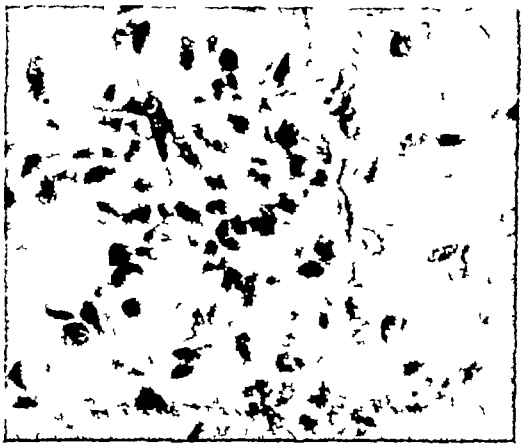

FIG 2 Infiltration of sympathetic ganglion with polymorphonuclear leukocytes and small round cells in poliomyelitis (hematoxylin-eosin stain, 400 ×)

cord may initiate a spreading aura of pain due to altered or accelerated conduction of impulses upward, downward, or trans-segmentally from the primary site of injury (Fig 1) In general, the more intense the noxious stimulation, the more widespread is the area of reference Hyperalgesia and hyperesthesia may also be the result of spreading waves of excitation

Not only is receptor activity involved in the spread of excitation in the nervous system but effector activity as well This is illustrated by skeletal muscle spasm, smooth muscle and gland effects, and modified reflex activity Secondarily contracted muscles may also give rise to local rigidity and tenderness, occurring in addition to the local tenderness attributable to the central modification of sensory impulses from an area of referred pain as described above. These additive stimuli may themselves act as centers for spreading waves of excitation with the production of secondary centers of stimulation

It can thus be readily appreciated that a focal inflammatory process in the spinal cord can set up a cyclic series of events leading to diffuse and bizarre clinical phenomena On this must now be superimposed the results of the concomitant inflammatory changes in the sympathetic ganglia (Figs 2, 3, 4) Lesions in these structures may result in angiospastic phenomena, hyperhidrosis, and dysfunctions of the gastrointestinal and urinary systems, to mention but a few

At this point, a case illustrating some of the features described above may be cited

B H, a nineteen-year-old white boy, was admitted to the Kingston Avenue Hospital, July 27, 1934, complaining of pain in the right side of the chest and abdomen of four days duration Three days prior to admission he developed pain and stiffness of the back and neck. That day pain radiated to the right lower extremity On the day of admission the right leg became paralyzed, and he developed weakness of the left leg as well

Examination in the hospital revealed stiffness of the neck and back, absent abdominal and cremasteric reflexes, and absent knee and ankle jerks bilaterally The right lower extremity was completely paralyzed, but the left could be lifted and rolled from side to side The femoral and popliteal

FIG 3 Degenerating sympathetic ganglion cell in poliomyelitis Note scalloped cytoplasm at periphery of cell and absence of Nissl substance and nucleus (hematoxylin-eosin stain, 450 ×)

FIG 4 Degenerating sympathetic ganglion cells in poliomyelitis showing satellitosis (hematoxylin-eosin stain, 450 ×)

arteries were painful to palpation as were the hamstring muscles Oval hyperesthetic areas were noted over the calf muscles medially The right leg perspired profusely, but the feet were cold Constipation was marked.

A diagnosis of acute poliomyelitis was made, and since no specific therapy was available, he was kept under observation so that the natural progress of the disease could be studied. His recovery was gradual and uneventful. At the end of two and one-half years residual findings were limited to slight atrophy of the muscles of the right thigh. However, it had taken many months for the pain, spasm, and vasomotor changes to revert to normal.

Probably this patient had minimal organic involvement of the spinal cord because of a slight degree of permanent damage The initial symptomatology, however, indicated a much more widespread process

It is possible to explain the bizarre symptomatology on the basis of spreading reflex impulses from small, primary focal areas of inflammation. In all probability, most cases of poliomyelitis fall into this group It is common clinical experience that patients are admitted with widespread paralytic and nonparalytic phenomena which clear up, leaving very few residua It is not enough to postulate sublethal ganglion cell damage, reflex stimulation of proximal and distal nerve cells must also play a role in the production of the varied clinical findings [4]

Therapeutic Approach to the Symptom Complex

Because of the feeling that much of the pain and spasm in acute poliomyelitis was directly or indirectly due to the spread of waves of nervous excitation along the sympathetic nerves with resultant vasoconstriction and ischemic changes, it was decided to direct therapeutic attempts at blocking or interrupting these pathways The drugs used were procaine hydrochloride, diethylaminoethanol hydrochloride, and Priscol hydrochloride *

Clinical Material and Methods

During 1948, 208 cases of acute poliomyelitis were admitted to the Kingston Avenue Hospital Early in this investigation cases were selected for sympatholytic therapy whose prognosis was deemed to be good Thus, encephalitic, bulbar, bulbospinal, and respirator cases were eliminated Extreme care was exercised not to use this method in cases which might have a fatal termination or develop complications, lest these complications be wrongly attributed to the method of treatment Also eliminated from therapy were those mild cases in which the sole neurologic finding was an absent reflex This group comprised 80 cases, of which seven died When it became evident that the drugs could be used safely, all patients admitted to the hospital received the drugs routinely Thus a total of 126 patients were treated, of which four were given procaine hydrochloride intravenously according to a technic previously described, two were given diethylaminoethanol hydrochloride orally, and the remaining 120 patients were treated with Priscol hydrochloride [2,3] Of the treated patients, two died It is of interest that in each of the fatal cases, both treated and nontreated, laryngoscopy prior to death revealed the vocal cords to be mobile and the larynx widely patent

Procaine was abandoned because of technical difficulties incident to intravenous therapy in children, and studies with diethylaminoethanol were not pursued because preliminary observations were indefinite

The 120 patients treated with Priscol encompassed both sexes and included individuals of all ages, varying from one and one-half to forty-five years The majority of patients were between five and twenty years of age

Best results with Priscol were obtained when the patient experienced a sense of body warmth or when the skin flushed The dosage necessary to produce these effects varied and had to be individualized As a result the following schedule was employed

Group 1 (Sixteen Years and Over)—If the patient was suffering with acute pain, hyperesthesia, or showed evidence of muscle spasm by refusing to straighten out an extremity, Priscol was given intramuscularly The initial dose was 50 mg If the patient flushed, he was given 50 mg every three or four hours However, if he did not flush, the dose was increased 12 5 mg every three or four hours until the amount necessary to produce the flush was found This amount or the next smaller dose was then used as a maintenance dose As soon as the pain and muscle spasm subsided, oral Priscol was substituted The oral dose was usually higher than the intramuscular The largest single dose given either intramuscularly or orally was 112 5 mg

Group 2 (Five to Sixteen Years)—The initial dose was 25 mg intramuscularly, otherwise the procedure was the same as above

Group 3 (Infants to Five Years)—In this group

* We are indebted to Ciba Pharmaceutical Co. Inc Summit New Jersey who kindly supplied us with Priscoline (R) for our investigations. Since presentation of this paper the name has been changed from Priscol to Priscoline

the Elixir of Priscol was given.* The initial dose was 10 mg (each dram contained 30 mg of Priscol) Otherwise the procedure was the same as above

The longest period of time that Priscol was administered was seven and one-half months The dose given was 75 mg every four hours Repeated blood counts and urine analyses on all patients did not reveal any changes from the use of this drug

No serious side-reactions were observed from the use of Priscol Five per cent of the patients developed nausea and vomited When this undesirable reaction occurred, the dehydration that developed was counteracted by intravenous infusions of 10 per cent glucose in isotonic saline solution It was soon noted that nausea and vomiting ceased when the patient became afebrile, at which time the intravenous infusions were discontinued None of our patients developed diarrhea

Results

Most of the patients with acute poliomyelitis who were admitted to the hospital were fretful and irritable The pain they suffered kept them awake at night and undermined their morale In most instances, analgesic drugs given prior to admission afforded little or no relief

When Priscol hydrochloride was administered in amounts sufficient to produce a therapeutic effect, there was a remarkable sense of well-being The patients rested more comfortably during the day and slept quietly at night The appetite improved, and they enjoyed their food The acute pain subsided quickly, and extremities, flexed because of pain or muscle spasm, were easily straightened The muscle twitchings present in some of the patients quickly disappeared The cold and clammy skin (so frequently seen on the extremities of acute poliomyelitis patients) disappeared and became warm Excessive sweating receded Oscillometric readings showed no return to normal for many weeks in the majority of cases Nevertheless, nearly all the patients showed some form of progress, and their clinical status improved so rapidly that it was possible to transfer the majority, relaxed and free of pain, to their homes or orthopedic hospitals in from seven to fourteen days In the past we were unable to accomplish this with any other form of symptomatic therapy

The following case reports are typical of our series

Case Reports

Case 1—L H., a twenty-eight-year-old white woman, was admitted to the Hospital September 24, 1948 Three days prior to admission she developed generalized aches and pains, stiff neck, and fever of 101 F This was followed by headache, backache, and pain radiating down both thighs. The pain later involved the lower chest, abdomen, and both lower extremities No relief was obtained by the administration of salicylates, demerol, codeine, and morphine On admission she was found to be pregnant, the date of the last menstrual period was June 10, 1948, the uterus being four fingers breadth above the symphysis pubis. The positive physical findings were stiffness of the neck and back and pain on flexion of the lower extremities All superficial and deep reflexes were present and hyperactive The skin over the lower chest area was so hyperesthetic that the bedclothes could not be tolerated The hamstring muscles were in spasm Bilaterally, the axillary, femoral, and popliteal arteries were extremely tender (oscillometric readings were unobtainable due to pain and tenderness) Spinal fluid examination revealed 490 cells and 146 mg of protein

On admission 75 mg of Priscol were given intramuscularly Flushing and a sensation of warmth developed within twenty minutes The hyperesthesia immediately began to subside, and within one hour there was absence of pain The spasm of the hamstring muscles subsided, and the patient was able to sleep for the first time since the onset of her illness. Therapy was continued 75 mg of Priscol were given every three hours during the day and every four hours during the night Two days after admission there was complete absence of pain, muscle tenderness, and spasm This form of treatment was discontinued on October 18, 1948 when she was discharged to her home, twenty-four days after admission and twenty-seven day after the onset of her illness. At the time of discharge there was still evidence of a viable pregnancy

Case 2—S C, a fourteen-year-old white boy, was admitted on October 7, 1948, with a history of onset of symptoms the night before hospitalization He complained of frontal headache, stiff neck and back, and pain radiating down both thighs His temperature was 103 F On admission all superficial and deep reflexes were normal, and no evidence of paralysis was noted. During the first hospital day the right leg became weak, and the right ankle, knee, and cremasteric reflexes disappeared On the second hospital day he developed weakness of the left lower extremity and a left foot drop All deep tendon reflexes were absent. By the morning of the third day the patient was extremely uncomfortable and complained of severe pain in both legs. Spinal fluid findings were 150 cells and 122 mg of protein

On the third day 75 mg of Priscol were given intramuscularly Although nausea and vomiting occurred, warmth of the skin and flushing developed. The dose was repeated every three hours during the day and every four hours during the night Within twenty-four hours the muscle spasm and tenderness subsided. He was able to straighten his legs with

* The Elixir of Priscoline was especially prepared for this study and is not available commercially It may be obtained for investigative purposes upon application to Ciba Pharmaceutical Products Inc. Summit, New Jersey

little or no pain by October 15, 1948, eight days after admission, when he was transferred for orthopedic aftercare He showed marked improvement, especially in muscle power and function

Case 3—V C a twenty-two year old white woman, was admitted on September 19, 1948, with a five-day history of malaise and low back pain which gradually increased in intensity and radiated down the thighs. On the day of admission she developed a headache and vomited The positive findings were stiff neck and back and intact superficial and deep reflexes. The muscles of the lower extremities were painful on motion and tender to palpation No tenderness could be elicited over the femoral or popliteal arteries There were small discrete areas of hyperesthesia over the medial aspects of both legs Her temperature was 99 F Spinal fluid studies showed increased pressure, 90 cells, and 86 mg. of protein The oscillometric readings taken below the knee were 2 5 on the right and 1 5 on the left.

The patient was given 50 mg of Priscol by mouth every three hours for twenty-four hours When flushing and warmth did not develop and muscle tenderness persisted, the dosage was increased to 62 5 mg every three hours. Because no response was obtained, the dosage was then increased to 75 mg of oral Priscol every three hours. A sensation of warmth was noted by the patient along with clinical evidence of flushing and diminution of muscle tenderness. On her fourth hospital day she was able to walk normally, and she was discharged on September 27, 1948, eight days after admission.

She returned for re-examination on October 30, 1948, with complaints of pain on walking. Oscillometric readings were 3 0 on the right and 2 0 on the left. By December 9, 1948 the oscillometric readings were 5 0 bilaterally There were no subjective complaints and no physical evidence of the disease. She was able to return to work.

Comment

It is generally known that back pain or pain in an area about to become paralyzed may be the first symptom of acute poliomyelitis This pain may be associated with or followed by a spreading stiffness or muscle spasm which, as a rule, involves the posterior muscles of the body Not infrequently, the muscle tenderness and spasm follow a segmental distribution [5] However, in most of our cases, the muscle tenderness and spasm was widespread and could not be distinctly localized segmentally Some of our cases showed hypersensitive areas which had no neurologic topography These sensitive areas were probably due to showers of impulses released within the gray matter of the spinal cord, thus affecting the sympathetic component of that particular segmental level, or of contiguous levels The resultant irritation was expressed in the periphery by tenderness and pain which were probably due to vasospasm Smith and his coworkers showed that the blood vessels were in spasm in acute poliomyelitis of the preparalytic, paralytic, and encephalomyelitic types [1]

Harpuder presented evidence indicative that painful stimuli were due to an increased concentration of potassium in ischemic muscle [6] Penfield suggested the axon reflex as a cause of peripheral pain and muscle spasm.[7] Davis and Pollock believe that liberated metabolites in the peripheral tissues stimulate the sensory nerve endings and are responsible for the muscle tenderness and spasm [8]

Whatever the cause of the pain and muscle spasm may be, the important factor is that sympatholytic or adrenalytic drugs diminish or abolish the pain and muscle spasm in acute poliomyelitis Meyer, Chess, Yonkman, Grimson, and others reported favorably on the use of Priscol hydrochloride in a variety of peripheral vascular diseases [9–14] Smith and Graubard used Priscol hydrochloride in acute poliomyelitis, Understeiner used it in subacute poliomyelitis, and Klare used it in chronic cases for the relief of pain and muscle spasm resulting from peripheral vasospasm.[3,15,16] Our results with 120 cases of acute poliomyelitis confirm these reports Lannon and Braudo, using another sympatholytic drug, obtained similar results [17] The optimum dosage seems to produce satisfactory circulatory changes in the vasospastic ischemic extremities of the acute poliomyelitic patient

Summary and Conclusion

The symptom complex of poliomyelitis has been analyzed from the point of view of pathologic physiology, and the role of the sympathetic nervous system has been emphasized

Symptomatic therapy with sympatholytic drugs, notably Priscol hydrochloride, has been used in a series of 120 patients with acute poliomyelitis admitted to the Kingston Avenue Hospital during 1948 Priscol has provided a favorable clinical response with early relief of pain and muscle spasm

The authors wish to express their sincere gratitude to Dr John A. Cahill and Dr Benjamin G Dinin superintendent and deputy superintendent of the Kingston Avenue Hospital for Communicable Diseases, respectively for their cooperation and assistance and also to Drs. Benjamin Kramer Irwin Schiff Leo Faske and Thurman Givan on whose services the study was carried out.

Discussion

Irving J Sands M D, *Brooklyn*.—For close to twenty-five years, I have followed Dr Smith's work at the Kingston Avenue Hospital for Contagious Diseases His inquiring mind does not permit him to be satisfied with current explanations of clinical phenomena that do not fit into anatomic or physiologic theories or facts His diligence, perseverance, and habit of thinking out loud and asking questions of his coworkers have impressed everybody He has long ago stressed the role played by the involuntary nervous system in the symptomatology of poliomyelitis. Some fifteen years ago, he demonstrated a method of prognosticating the parts of the extremities that develop paralysis He did so by passing the soft part of the tip of the finger along the skin, and pressing it gently but firmly, and then observing the red flare that develops, by studying the size of that flare and its duration, he has shown that certain segmental involvements of the nervous system bear the brunt of the pathologic process and that the muscles supplied by these particular segments will become paralyzed

Of late he has become interested in the pain and stiffness of the muscles in acute poliomyelitis. He explains it on the basis of vasospasm secondary to irritation of the sympathetic nervous system. He enlisted the aid of Dr Graubard who has had experience in treating similar symptoms in other diseases, and now he has secured the help of Dr Rosenblatt in order to prove histopathologically the validity of his thesis, namely, that the involuntary nervous system is responsible for the pain in poliomyelitis

I have followed the largest number of the 120 cases which he mentioned in his paper I can only testify to the truth of the claims that the patients have been relieved of the pain in the vast majority of instances by the administration of the drugs mentioned by Dr Smith His theory lends itself to experimental corroborative evidence, and I am confident that it will stand the test of time and of experiments Dr Smith and his coworkers have made a most valuable contribution to the understanding of some of the most baffling aspects of poliomyelitis. They are to be congratulated for a very fine piece of work.

SCIENTIFIC EXHIBITS
1950
ANNUAL MEETING

Applications for space for the scientific exhibits should be made directly to the Chairman of the Subcommittee on Scientific Exhibits of the Convention Committee
Dr J G Fred Hiss
505 State Tower Building
Syracuse 2, New York

The Annual Meeting will be held May 8 to 12, 1950, at the Hotel Statler in New York City

No applications can be considered after January 1, 1950

There will be two groups of awards
Awards in Group I are made for exhibits of individual investigation, which are judged on the basis of originality and excellence of presentation
Awards in Group II are made for exhibits which do not exemplify purely experimental studies and which are judged on the basis of excellence of presentation and correlation of facts.

W P Andebton, M.D, *Secretary*

DISSECTING (INTRAMURAL) DIVERTICULITIS

SAMUEL E COHEN, M D , Elmira, New York

(From the Arnot-Ogden Memorial Hospital)

THREE years ago the author called attention to a kind of diverticulum which had not previously been described [1] The usual forms represent an extrusion of a lumen through its retaining wall whereby the sacculation projects beyond the serosal surface of the bowel In the dissecting (intramural) type a herniation of the lumen occurs into the wall of the gut, and then this sacculation burrows its way along the wall It is the purpose of this presentation to review the instance reported in 1946 and to add further examples of dissecting (intramural) diverticulitis.

The basis for the original report was furnished by a specimen removed from a sixty-year-old man who underwent a laparotomy with the preoperative diagnosis of obstruction in the descending colon due to carcinoma The resected specimen comprised 16 5 cm. of the sigmoid and was 6 cm. in diameter The serosal surface was deeply injected, and the appendices epiploicae were thickly edematous On external palpation of the specimen the lumen was noted to be eccentric due to unequal thickness of the walls On section the lesser wall measured 1 5 cm., its layers appeared stratified, hypertrophic, and edematous (Fig 1A) The thicker portion of the wall measured 4 cm and was infiltrated with dense white tissue. The mucosa was smooth, intact, and hemorrhagic in places, the mucosal folds were swollen and coarse The initial line of incision to expose the lumen of the specimen fortuitously exposed a cavity in its thicker portion. Here the wall had become separated into two layers by a space which extended most of the length and part of the circumference of the specimen. A few centimeters from the oral end, a round mammilla-like stoma, 0 5 cm. in diameter, was present which easily admitted a probe and communicated directly with the intramural sinus This cleavage extended in the long axis of the specimen for a distance of 9 cm and was 2 to 3 cm in width Approximately in its middle third, the cavity disclosed an accessory space extending laterally and around a portion of the wall This lateral projection ran parallel to the transverse diameter of the specimen for a distance of 2 8 cm Some radiopaque material was borrowed from the roentgenologist, injected into the intramural cavity space, and an x-ray taken.

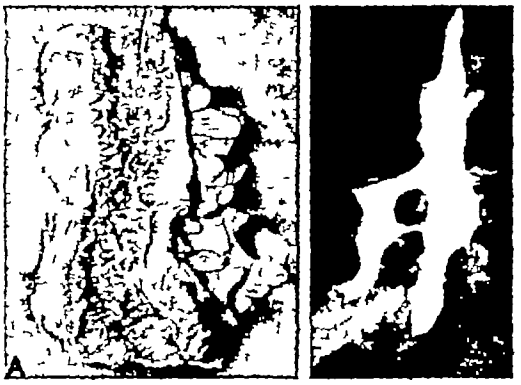

FIG 1 (A) Specimen of sigmoid (Case 1) A mammilla-like stoma admits a probe and is the entrance into an intramural cavity space. (B) Demonstrates the intramural diverticulum which has been delineated by radiopaque material.

Figure 1B shows the delineation of the intramural pathology The stoma is at the upper end, and the sinus widens as it extends downward Just past the middle, the diverticulum broadens appreciably and then bifurcates to end in two separate spurs The island in the center represents a pillar of intact wall. The specimen was transected and the oral portion of the intramural diverticulum exposed (Fig 2A) A probe is inserted into its cloaca and protrudes from the diverticulum In Fig 2B the aboral end of the specimen is demonstrated Again, you will note the intramural sinus running almost the whole length. At its distal end, the resected sigmoid

FIG 2 (A) Oral portion of the intramural diverticulum (Case 1) A probe is inserted in its cloaca and protrudes from the diverticulum which has been incised longitudinally (B) Aboral end. The intramural (dissecting) diverticulum extends almost the whole length. At the extreme end are three conventional diverticula.

Presented at the 143rd Annual Meeting of the Medical Society of the State of New York Buffalo Section on Pathology and Clinical Pathology May 4 1949

revealed one larger and two smaller ordinary diverticula, one of which was separated from the intramural dissecting diverticulum by a thin septum

Microscopically, the cavity space was lined with surfaces made up of chronic vascular granulation tissue which showed marked infiltration with polymorphonuclear leukocytes An occasional remnant of mucosal gland was still present The sinus space was situated outside of the circular layer of muscle between the layers of muscle and the subserosal adipose tissue The inflammation extended into the adjacent adipose tissue but was of mild character At the apex of the main diverticulum other islands of mucosal glands were noted, representing cross sections of the diverticula noted grossly

In reviewing the morbid changes encountered in this case, the following pathogenesis and interpretation of the clinical course can be formulated The patient had a diverticulosis comparable to that which is quite common One of these saculations, the most orally located, had its progression through the wall arrested, was turned distally, and then was propelled isoperistaltically within the wall of the bowel Diverticulitis set in which accelerated the dissection. The conversion of the diverticulum into a chronic sinus aggravated the condition, facilitated its extension, and led to the formation of the lateral components When this cavity became filled with feces and/or gas, the patient developed signs of obstruction. The degree of peridiverticulitis was not pronounced so that this feature was not appreciable in the onset of the ileus which caused admission to the hospital

Case Reports

Case 1—The patient from whom the specimen was removed was a sixty-year-old white man, a foreman-lumberman He was admitted to the hospital because of abdominal distention, pain in the left lower quadrant, and vomiting of feces-like material. For ten days there had been no defecation. The patient came as a transfer from an adjacent community hospital where he had been treated twice with a Miller-Abbott tube and enemas The ailment was of fifteen years duration, the initial symptoms including tympanitis, considerable flatus, borborygmi, and vague pains in the lower abdomen These grouped themselves into bouts during which attacks he was unable to have bowel movements or expel gas. He recalled that these episodes occurred approximately twice yearly, enemas brought some relief

At the time of the operation, little feces was encountered, and the intramural diverticulum was ballooned out by gas under pressure Its cloaca was edematous, causing closure and a ball-valve or tension mechanism. Had the dissection gone further, with the diverticulitis burrowing into one of the distal diverticula, spontaneous healing might have occurred In this event, the sigmoid would have shown a double-barrelled configuration, the feces and gas being propelled down the accessory canal as easily as through the main lumen

Thus, the sequence of events included sacculation, intramural diverticulum, isoperistaltic propulsion, diverticulitis, dissecting diverticulitis, tension pneumodiverticulum, and ileus

During the three-year follow-up the man has been hale and happy

Case 2—The second case to be presented was a fifty-eight-year-old man who consulted his surgeon because of a pain in the left lower quadrant of the abdomen. In this region the physician promptly palpated a tender movable mass which was elongated and firm. The patient gave a history of rapid deterioration of his strength and loss of considerable weight during a period of five to six months. There had been constipation alternating with diarrhea. In the last two months the constipation had become obstinate and required drastic cathartics for relief A few days prior to admission the patient vomited fecaloid material. Roentgenographic examination utilizing a barium enema revealed an obstruction in the lumen of the large bowel at the junction of the descending colon and sigmoid. An area of stenosis, 6 cm. in length, was reported by the radiologist who also described a diverticulosis The rectal examination was negative, a sigmoidoscope when introduced its full length did not reveal a tumor

A laparotomy was performed with the preoperative diagnosis of carcinoma of the colon. The surgeon resected 27 cm. of large intestine

In this instance, the gross specimen received in the laboratory again displayed inequality of the walls with narrowing of the lumen The mucosal folds were hypertrophied, edematous, and sprinkled with petechiae The mucosa was smooth and intact except for multiple small openings which communicated with eventrations of the lumen into the thicker side of the wall. Each could be easily probed, some were stuffed with fecaliths One of these diverticula revealed itself to be constituted differently Its stoma communicated with a tract that had burrowed its way along the wall and had separated the layers. This intramural diverticulum contained some mucoid exudate The specimen showed no evidence of tumor formation. The blood vessels were advancedly sclerotic

Microscopic sections from the specimen revealed multiple small diverticula of the conventional type, one of which was situated deep in the wall. Multiple lymph nodes were present in the mesocolon and showed simple reactive chronic lymphadenitis. A section through the dissecting (intramural) diverticulum included a portion of the adjacent mucosa which was normal. The mucosa was noted to dip down into the sinus tract, line the diverticulum for a distance, and then was destroyed. This diverticulum was in the manner of a spearhead, advancing and penetrating into the wall. The muscularis was disrupted and the dissection occurred, in this instance, within the muscle layers. The direction was toward another diverticulum of the simple kind. If the two had become conjoined, we would again have had an

FIG 3 Serial sections of appendix (Case 3) (1) Cross section showing the lumen extending almost the whole diameter of the specimen. At one end the lumen bulges and has herniated into a sacculation. (2) Gradual constriction of same. (3) Two separate lumens are apparent, a corridor of connective tissue separates the intramural diverticulum and the main lumen. (4) Main lumen is absent (chronic obliterative and granulomatous appendicitis), but the intramural diverticulum is still present.

accessory lumen with shunting and bypassing of the main lumen. Just above the apex of the spearhead was a ramification of still another diverticulum. The mesocolon contained some lymphadenoid accumulations with chronic lymphadenitis. The degree of periditerticulitis was moderate but more advanced than in the first case.

Dissecting (intramural) diverticulitis is a rodent form of diverticulum. It begins as an extrusion of the lumen. The mucosa which originally covered the sacculation disintegrates, but remnants are still scattered along the sides. These remnants identify the origin of dissecting diverticulitis and distinguish it from a simple sinus tract or fistula. Probably many of these erupt and spill into adjacent diverticula, thereby eliminating themselves This would account for seeing so few among our surgical material

The next examples are from appendices which were removed for the same reasons all others are and will be Figure 3 and - a granulomatous appendix with a lumen that extends almost the whole diameter of the cross section At one end the lumen bulges and has herniated into a sacculation (Fig 3—section 1) The mucosa is intact, another smaller diverticulum will be noticed below it Serial sectioning shows narrowing and constriction near the outpouching, and gradually two lumens appear to have become established (Fig 3—section 2) The smaller diverticulum is slightly longer, its mucosa is ulcerated In Figure 3—section 3, the new, accessory lumen is distinct and separate, a corridor of connective tissue intervenes between the diverticulum and the main lumen of the appendix. The diverticulum has become intramural This situation was observed in sections prepared from blocks of tissue cut below and above the level of eventration. In the tip of the specimen the main lumen is absent, having become obliterated, but the intramural diverticulum is still seen (Fig 3—section 4) Reconstructing our findings, we can conclude then that we have a case of a chronic obliterative appendicitis In its distal one third an extrusion of the lumen occurred, which sacculation runs up and down in the wall. This is an intramural diverticulum—no diverticulitis yet It consists of an ancillary space in the wall possessing an intact mucosa The ordinary appendiceal diverticulum is evident externally as a small projection which interrupts the contour of the organ. These can be multiple and are found anywhere along the appendix. The intramural diverticulum is different it is located in the wall, there are no pouches or irregularities on the surface

The second appendix was one with a well-formed lumen. Extending from a point near its mesenteriole, there was a projection of the lumen which was burrowing and infiltrating its way into the wall It had progressed for a considerable distance around the periphery and dissected the wall into layers The lesion was erosive in character, and the mucosa had been sacrificed. The diverticulitis was sickle in outline

In the third appendix, the dissecting diverticulitis was in the form of a crescent situated in the outer limits of the wall. In the tissue available the lumen of the appendix was complete and the mucosa hyperplastic The section was prepared from a block cut near the distal one third of the specimen. Serial examination revealed that the diverticulum had advanced from an origin in about the middle third The whole wall of the specimen showed subacute inflammatory changes

Comment

In the five cases presented the features of dissecting (intramural) diverticulitis are fairly constant If the author's thesis is valid it should be

possible for others to demonstrate such intramural and/or dissecting diverticula Also, wherever a lumen is present in the body, that organ should be capable of developing a comparable diverticulum under morbid circumstances

In December, 1947, Melamed and Walker presented a case of dissecting diverticulum of the pharyngoesophagus [2] This intramural diverticulum was situated posteriorly in the midline of the esophagus and was located between the mucosa and the muscularis The patient was a fifteen-year-old lad who gave a ten-months history of dysphagia The authors developed four radiologic characteristics to facilitate future clinical recognition of the entity At operation, the posterior wall of the esophagus at the level of the cricoid cartilage disclosed a pouch which admitted the index finger and could be emptied readily It extended for approximately 2 5 to 3 cm under the muscularis This mucosal pouch was turned inside out by the surgeon and excised The authors classified their case as a pharyngoesophageal pulsion diverticulum developing and extending intramurally They postulated a developmental abnormality which permitted the origin and growth of this diverticulum

Cooke reported on "Intramural Diverticulum of the Vermiform Appendix" [3] He wrote partly as follows

The clinical history of the case was that of a man aged forty-three who was admitted to hospital suffering from acute appendicitis There was no history to suggest a previous attack The appendix was removed, and the patient made an uneventful recovery

The appendix did not present any unusual feature except for intense injection of the serosa and tumefaction, as associated with an acute attack. There was no evidence, externally, of a diverticulum Sections of the proximal part presented the usual evidence of acute appendicitis The lumen was filled with exudate and necrotic musoca infiltrated with pus cells Near the lumen and running parallel to it was a diverticulum The wall of the diverticulum consisted of a muscularis mucosa and mucosa, which were infiltrated with round cells The section was taken 1/ inch from the proximal end of the appendix as it was received in the laboratory The proximal end showed the diverticulum in exactly the same position, so the point of its emergence from the main lumen must have been close to the cecum

The diverticulum extended distally, close to the main lumen and internal to the muscularis externa, for 3/4 inch Toward its termination it moved slightly outward and finally partially penetrated the muscularis externa at the mesoappendix attachment.

The whole course, except the extreme tip, was situated in the submucosal layer, which had evidently been the seat of previous inflammatory trouble because most of it had been replaced by fibrous tissue The length of the diverticulum in the appendix was estimated to be 1 1/4 inch

Cooke added further

Diverticula of the appendix are of importance clinically on account of the danger of rapid perforation during an attack of appendicitis and because the symptoms and signs in such attacks are often anomalous Pathologically they are of interest in the manner of their formation, and from the possibility of the development of mucoceles and pseudomyxoma peritonei

Finally, I should like to mention an article by March, "Visualization of the Rokitansky-Aschoff Sinuses of the Gallbladder During Cholecystography" [4] The article appeared in February, 1948 from which the following is quoted

In a series of studies dealing with the morphology of the gallbladder, Halpert clearly distinguished the so-called "Rokitansky-Aschoff sinuses" from "true Luschka ducts." He called attention to some historical confusion in the naming and recognition of these structures Rokitansky in 1842 described 'hernia-like outpouchings of the gallbladder mucosa" toward the external layers of the gallbladder Aschoff in 1905 described them in terms of modern histology, naming them "Luschka's ducts" and emphasized their pathological significance especially in connection with biliary stasis in the gallbladder and with the formation of gallstones. It was soon pointed out that these structures were not the aberrant bile ducts discovered by Luschka in 1863 in the wall of the gallbladder

The healthy human gallbladder rarely shows the presence of Rokitansky-Aschoff sinuses If present at all, they are shallow The name is applied to the deeper outpouchings or sinuses of the gallbladder mucosa which dip down into the muscularis or extend as finger-like processes through the muscular coat into the perimuscular layer It is thought that these are not proliferations, but are *herniations* into and through the interstices and delicate septa between the muscle bundles Halpert feels that the muscularis of the healthy gallbladder under ordinary conditions is dense enough to prevent such outpouchings When the gallbladder is pathologically involved, there occurs in it a more or less general loosening and weakening of the contractile elements with a widening of the intermuscular septa, under which circumstances extreme contractions which follow prolonged and repeated overdistentions of the viscus are most likely to play the leading part in the production of these herniations The length, diameter, and manner of penetration of the Rokitansky-Aschoff sinuses show infinite variations.

Figure 4A is a gallbladder showing a herniation of the lumen extending through the muscularis and almost to the serosal surface Unqualifiedly, what is demonstrated can be called a diverticulum Figure 4B is another gallbladder with a cluster of Rokitansky-Aschoff pouches in the wall The epithelium is intact, and the largest pouch (the lowermost) faintly communicates with the lumen The epithelium can become de-

FIG 4 Sections from gallbladders (author's cases 6 and 7) (A) Herniation of the lumen through muscularis (B) and (C) Illustrate clusters of Rokitansky-Aschoff pouches in the wall The epithelium is intact in (B) and the largest faintly communicates with the lumen, in (C) the epithelium is absent These sinuses and pouches are interpreted as identical with dissecting (intramural) diverticulitis as illustrated in previous figures

stroyed (Fig 4C) These structures can be detached and isolated and accompanied by much inflammatory infiltration They are extrusions of the lumen and are situated in the wall The Rokitansky-Aschoff pouches are veritably examples of intramural diverticula The term "Rokitansky-Aschoff sinuses" is used interchangeably with "pouches," implying that these can advance and burrow along in the wall The pathology is identical with the author's dissecting (intramural) diverticulitis

Summary

1 The usual form of diverticulum represents a protrusion of the bowel lumen through its retaining wall Such sacculation generally projects beyond the serosal surface of the intestine "Dissecting (intramural) diverticulitis" is a type whereby the extrusion of the lumen is into the wall of the gut The herniation then burrows its way along the wall and dissects between the layers of the bowel In the pathogenesis intramural diverticulum precedes dissecting diverticulitis, but the former may occur alone Two instances encountered in the colon and three in the appendix are presented

2 A case of dissecting (intramural) pharyngoesophageal diverticulum is cited

3 Information is given about another author's report of an intramural diverticulum of the appendix.

4 It is postulated that Rokitansky-Aschoff pouches and sinuses in the gallbladder represent examples of intramural diverticula and dissecting diverticulitis

Discussion

Alfred P Ingegno, M D, *Brooklyn* —The problem of diverticulitis is one of intense interest to the gastroenterologist Dr Cohen is to be congratulated for the careful study he has given to this unusual intramural type of diverticulum It is from such meticulous work of pathologists that the clinician learns to evaluate better his patients' difficulties and pursue more rational avenues of treatment I daresay that, under the stimulus of Dr Cohen's reports on the subject, it may well be that dissecting diverticula will be looked for and found more frequently than they have heretofore

Of course, diverticula in various parts of the gastrointestinal tract are very often incidental discoveries clinically, as they may be pathologically In the colon, for example, somewhere between 5 and 10 per cent of people may have diverticula demonstrable roentgenologically, and only about 20 per cent of these have symptoms which may be ascribed logically to their presence It is a curious clinical fact that whereas colonic diverticula may often be

possible for others to demonstrate such intramural and/or dissecting diverticula Also, wherever a lumen is present in the body, that organ should be capable of developing a comparable diverticulum under morbid circumstances

In December, 1947, Melamed and Walker presented a case of dissecting diverticulum of the pharyngoesophagus [2] This intramural diverticulum was situated posteriorly in the midline of the esophagus and was located between the mucosa and the muscularis The patient was a fifteen-year-old lad who gave a ten-months history of dysphagia The authors developed four radiologic characteristics to facilitate future clinical recognition of the entity At operation, the posterior wall of the esophagus at the level of the cricoid cartilage disclosed a pouch which admitted the index finger and could be emptied readily It extended for approximately 2 5 to 3 cm under the muscularis This mucosal pouch was turned inside out by the surgeon and excised The authors classified their case as a pharyngoesophageal pulsion diverticulum developing and extending intramurally They postulated a developmental abnormality which permitted the origin and growth of this diverticulum

Cooke reported on "Intramural Diverticulum of the Vermiform Appendix" [3] He wrote partly as follows

The clinical history of the case was that of a man aged forty-three who was admitted to hospital suffering from acute appendicitis There was no history to suggest a previous attack. The appendix was removed, and the patient made an uneventful recovery

The appendix did not present any unusual feature except for intense injection of the serosa and tumefaction, as associated with an acute attack. There was no evidence, externally, of a diverticulum. Sections of the proximal part presented the usual evidence of acute appendicitis The lumen was filled with exudate and necrotic musoca infiltrated with pus cells Near the lumen and running parallel to it was a diverticulum The wall of the diverticulum consisted of a muscularis mucosa and mucosa, which were infiltrated with round cells The section was taken 1/ inch from the proximal end of the appendix as it was received in the laboratory The proximal end showed the diverticulum in exactly the same position, so the point of its emergence from the main lumen must have been close to the cecum.

The diverticulum extended distally, close to the main lumen and internal to the muscularis externa, for 3/4 inch Toward its termination it moved slightly outward and finally partially penetrated the muscularis externa at the mesoappendix attachment

The whole course, except the extreme tip, was situated in the submucosal layer, which had evidently been the seat of previous inflammatory trouble because most of it had been replaced by fibrous tissue The length of the diverticulum in the appendix was estimated to be 1 1/4 inch

Cooke added further

Diverticula of the appendix are of importance clinically on account of the danger of rapid perforation during an attack of appendicitis and because the symptoms and signs in such attacks are often anomalous Pathologically they are of interest in the manner of their formation, and from the possibility of the development of mucoceles and pseudomyxoma peritonei.

Finally, I should like to mention an article by March, "Visualization of the Rokitansky-Aschoff Sinuses of the Gallbladder During Cholecystography" [4] The article appeared in February, 1948 from which the following is quoted

In a series of studies dealing with the morphology of the gallbladder, Halpert clearly distinguished the so-called "Rokitansky-Aschoff sinuses" from "true Luschka ducts" He called attention to some historical confusion in the naming and recognition of these structures Rokitansky in 1842 described 'hernia-like outpouchings of the gallbladder mucosa" toward the external layers of the gallbladder Aschoff in 1905 described them in terms of modern histology, naming them "Luschka's ducts" and emphasized their pathological significance especially in connection with biliary stasis in the gallbladder and with the formation of gallstones It was soon pointed out that these structures were not the aberrant bile ducts discovered by Luschka in 1863 in the wall of the gallbladder

The healthy human gallbladder rarely shows the presence of Rokitansky-Aschoff sinuses If present at all, they are shallow The name is applied to the deeper outpouchings or sinuses of the gallbladder mucosa which dip down into the muscularis or extend as finger-like processes through the muscular coat into the perimuscular layer It is thought that these are not proliferations, but are herniations into and through the interstices and delicate septa between the muscle bundles Halpert feels that the muscularis of the healthy gallbladder under ordinary conditions is dense enough to prevent such outpouchings When the gallbladder is pathologically involved, there occurs in it a more or less general loosening and weakening of the contractile elements with a widening of the intermuscular septa, under which circumstances extreme contractions which follow prolonged and repeated overdistentions of the viscus are most likely to play the leading part in the production of these herniations The length, diameter, and manner of penetration of the Rokitansky-Aschoff sinuses show infinite variations.

AN UNUSUAL CASE OF ANTHRACOSILICOSIS

FRED S PREUSS, M D , Cleveland, Ohio*

(From the Laboratory of the Cuyahoga County Morgue)

THE essential clinical and histopathologic features of silicosis do not appear to be controversial and were defined by the International Silicosis Conferences of Johannesburg and Geneva, by the National Silicosis Conference, and in papers of Gardner, Sweany, Belt, and others [1-7] The case which is the subject of this report, however, is unusual in several respects and, therefore, deserves to be reported The histologic picture is not that of the classic nodular or diffuse fibrosis but presents an extensive patchy organizing pneumonia and interstitial changes which, in spite of prolonged exposure to dust, resemble those found in the early stages of the disease It is a case of simple silicosis which is not complicated by tuberculosis, and nowhere does the histologic picture suggest infection with acid-fast bacilli The silica content of the lung is extremely high This case is of social and economic importance, since the pathologist who is not silicosis-minded may overlook the cause of the changes described and may deprive the family of the deceased of the industrial compensation which many states allow the silicosis victims

Case Report

History.—R J , a forty-nine-year-old Negro molder in a steel foundry was in good health until September, 1942, when he had a severe "cold" with coughing spells and several attacks of hemoptysis A roentgen film revealed "bronchopneumonia." In November, 1942, he was seized by a severe coughing spell and had to stop working Dyspnea, coughing, and weakness progressed until he was admitted to a local hospital on December 29, 1942 His chief complaints were marked dyspnea, precordial pains, and occasional night sweats

Past history revealed luetic infection in 1918 or 1919 After four treatments with "606" in 1922, his blood was still "positive " Since 1920, with the exception of two years, he had worked in steel foundries, mostly as a molder The atmosphere he worked in was always very dusty, since large amounts of sand are used in the process of molding Further inquiry disclosed other cases of silicosis to have been known among the workers.

Physical Examination.—The patient was a fairly well-nourished, Negro adult man, moderately dyspneic The heart was enlarged, apex impulse was felt in the sixth intercostal space Systolic and diastolic murmurs were heard at the apex and over the aortic area The pulse was of the Corrigan type, and a Durozier's murmur could be heard over the femoral arteries The vessels of the neck and the capillaries showed distinct pulsations The systolic blood pressure was 150 mm Hg , the diastolic pressure was 30 mm. Hg Pulse rate was 102 per minute, respirations 28 per minute Other physical findings were essentially normal

The urine was essentially negative Laboratory examination showed red blood cells 3,190,000 per cu mm., white blood cells 7,400 per cu mm , hemoglobin 9 95 Gm , polymorphonuclears 64 per cent, lymphocytes 32 per cent, monocytes 4 per cent Sedimentation rate was 10 mm Kline slide test for syphilis was 4 plus with diagnostic and exclusion antigens Spinal fluid had an initial pressure of 10 mm Hg , final pressure 4 mm Hg Kline diagnostic test was 1 plus, exclusion test 2 plus Cell count was 35 white blood cells, protein 71 mg per cent, sugar 58 mg per cent Gum mastic curve was 44332

Chest x-rays showed enlargement of the heart and moderately increased linear markings of the lungs with indication of aortic regurgitation and stasis in pulmonary circulation

Hospital Course.—On the basis of the physical findings, the diagnosis of mitral stenosis and insufficiency and aortic insufficiency was made The patient was treated with digitalis, Mercupurin, and occasional intravenous injections of 50 cc of 50 per cent glucose A series of antiluetic treatments was started with potassium iodide, bismuth, and mapharsen The patient improved slightly and was sent home on January 26, 1943, to be treated in the medical outpatient department, but he was able to stay home for one week only Dyspnea and precordial pains increased to such an extent that he was readmitted to the hospital, where he remained with the exception of short intervals until his death. His condition, with temporary remissions, grew steadily worse, and he lost considerable weight

In the later months, moist, crepitant rales were heard over both bases of the lungs, but no dullness was elicited. There was a to-and-fro murmur over the aortic area, a rumbling systolic murmur, and a blowing murmur throughout the diastole over the apex. An x-ray picture taken in June, 1943, showed again an enlarged heart "consistent with the clinical diagnosis of luetic aortic insufficiency and passive hyperemia of the lungs " At that time, the clinical diagnosis was cardiac failure due to luetic aortic insufficiency, mitral insufficiency, and possible silicosis Several attacks of paroxysmal dyspnea were relieved by intravenous injection of 7 5 grains of aminophylline The blood pressure varied between 170/50 and 190/50 Dyspnea and cough increased, and the patient expired on November 10, 1943

Autopsy Report.—Autopsy was performed on the embalmed body two days after death The body
